I ask the committee to approach the problem in whatever light it thinks wise, free from any deterrents, free from any political factors, with the sole object in mind of giving consideration to these millions of people throughout the country. They are in your district; they are in mine. They are not crackpots. There may be some few eccentric persons who follow every movement, who even follow a circus, and that sort of thing, but the rank and file, as I know them, are my neighbors and your neighbors, men and women who pay their debts, who have given their all to society, many of whom lost their life-savings with the closing of the banking institutions a few years ago. Today they find themselves in want and actually in the breadline.

The man on W. P. A. today is our brother. He is working with the pick and shovel. We have left him subject to a bitter economic situation. We have to help him raise his family and get for him the things that we are trying to get for our own families.

Now, Mr. Chairman, there are a few minutes remaining, and I shall be glad to submit myself to any questioning.

Mr. MCCORMACK. I do not know what other Members will say, but I think the record should be clear so far as the hearings of last year are concerned. Hearings were held in 1935 and every opportunity was given for witnesses to appear. With reference to last year, of course, there were no hearings given, on the recommendation of the administration itself, transmitted through the Social Security Board, so there were no hearings held at all on any social-security legislation last year. I think the record should show that.

I am putting that into the record because there has been a lot of feeling that the Ways and Means Committee gagged this bill. The Ways and Means Committee decided not to have any hearings on any legislation last year.

Mr. SWEENEY. Whatever be the reason, the statement has been made on more than one occasion by the distinguished chairman of the committee that ample hearings were given the Townsend group once before. I say that the record will show what I have stated. I do not know what the chairman construes to be ample hearings, but I have a distinct recollection of what took place. The record will show that less than 1 hour was allotted to Dr. Townsend, Mr. Hudson, his economist, and one or two witnesses on that occasion. That was in conjunction with the entire Social Security Act when it was first discussed.

Mr. COOPER. I know you want to be accurate and I know you want to be fair.

Mr. SWEENEY. Yes; that is right.

Mr. COOPER. You do not mean to make the statement that that was the only opportunity that was afforded for a hearing on the McGroarty bill, which was the bill before the committee at that time?

Mr. SWEENEY. I am certain according to my recollection. I may be in error, but I think the record will bear me out.

Mr. COOPER. Don't you know that later the committee was convened and a further opportunity was given to Dr. Townsend and his economist, Dr. Doane?

Mr. SWEENEY. No; I do not. I stand corrected, if that is true. Being on the committee you are more familiar with that than I am. But let us start de novo, as the lawyers say, and let us start right now.

Mr. MCCORMACK. I thought the record ought to be clear.

Mr. COOPER. And I know Mr. SWEENEY wanted to be clear about it.

Mr. MCCORMACK. The statement made that the committee gagged the Townsend-bill hearings last year is only a half-truth. The committee decided not to have any hearings on any legislation, and that included all of the recommendations of the Social Security Board.

Are there any questions?

Mr. DISNEY. This is a fair hearing that you are having now, is it?

Mr. SWEENEY. I said at the outset and I will emphasize again that it is a fair hearing, a very generous hearing. And if you will permit me I will say now to you Democratic colleagues that I hope you will put out this bill, whether you vote for or against it, or without recommendation, giving the country a chance to know how the Members of Congress stand on it, because if you do not you will have them saying, "Life begins in '40."

Mr. KNUTSON. What do you mean by that?

Mr. SWEENEY. I appreciate the fact that the dormant Republican Party is stretching itself. It has been hibernating for some time, but the last election gave them some encouragement.

Mr. DISNEY. I thought we had a ruling that when a man was asking questions he was not to be interrupted, and everybody agreed to it.

Mr. MCCORMACK. Mr. Disney is in order.

Mr. DISNEY. Do you consider that this is a fair hearing?

Mr. SWEENEY. I say that it is more than fair.

Mr. DISNEY. I might suggest that you might relieve the minds of some of us by saying that you have had a fair opportunity.

Mr. SWEENEY. I am not a mind reader, but I think it is the democratic thing to do in a constitutional democracy. It is the thing to expect. And we have a perfect right to demand, when we have 150 Members of Congress pledged to this legislation, that we have a hearing.

Mr. DISNEY. How far do you think the idea of enforced spending, if we adopt it, would be carried? I am thinking of the possibility of it being urged, that is, enforced spending, against those who have money, regardless of class.

Mr. SWEENEY. You mean how to control it?

Mr. DISNEY. Yes. How far are we liable to run into it? Suppose somebody comes along with the idea that we should enforce the spending of money now in the banks, that a plan be proposed that those people be required to spend that money.

Mr. SWEENEY. I think that is far-reaching, of course. I would not be for that sort of thing. But in this field we are not taking anything at the Government expense. The revenues are derived from a transaction or turn-over tax, which will be prorated to qualified annuitants with the proviso they must spend within a month. The Government has the responsibility of administering this measure, if it becomes a law.

Of course, in the operation of the act there will be some chiseling and hoarding but I think the recipients of the benefits would be honest citizens and would comply with the laws and regulations.

Mr. BUCK. Mr. Chairman, I want to get the record straight on this matter of hearings. Dr. Townsend first appeared before the committee on February 1, 1935, and he subsequently appeared on four other occasions, at four other sessions of the committee. He was also represented by Mr. Hudson. And the testimony of Dr. Townsend and his associates occupied 97 pages of the hearings, from page 667 to page 760, inclusive. Subsequently, at the request of the organization, the committee reopened the hearings for the purpose of hearing Robert R. Doane, and that appears at pages 1100 to 1126. And there was a final page covering the subject by Dr. Townsend.

Mr. SWEENEY. I wish to thank the committee for the privilege of appearing before it.

T. V. A. and Gilbertsville Dam

EXTENSION OF REMARKS

OF

HON. WILLIAM H. WHEAT

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1939

LETTER FROM ROBERTS-LIGGETT CO., OF METROPOLIS, ILL.

Mr. WHEAT. Mr. Speaker, under consent to extend my remarks, I include herein a letter which I received from a

constituent containing information in connection with the flood-control situation on the Ohio and Tennessee Rivers. I regret that this letter was not received by me in time to have been introduced into the RECORD Wednesday of this week, but believe that the information will be of great value to the Members of this House.

METROPOLIS, ILL., *February 28, 1939.*

Representative WILLIAM H. WHEAT,
House of Representatives, Washington, D. C.

DEAR SIR: We would appreciate it if you would use your influence to oppose the appropriation of Federal funds for the construction of the proposed T. V. A. dam on the Tennessee River at Gilbertsville, Ky.

Our plant was established at Metropolis, Ill., in 1893 and is located on the Ohio River just below the mouth of the Tennessee River and about 30 miles below the proposed Gilbertsville Dam.

Since the establishment of the dams on these rivers we have experienced more widely fluctuating and higher rises in the Ohio River than ever before, with an all-time record of over 60-foot river stage in the 1937 flood and almost 50-foot stage reached last week.

In our opinion, as operator of a large woodworking industry annually handling millions of feet of rafted timber over Tennessee and Ohio Rivers, the addition of these river dams has not helped the flood conditions of these rivers one bit, and in fact has seemed to aggravate them. These dams constrict the channel and cause silt deposits to fill up the river bed, reducing the amount of water that the river can safely handle.

The installing of a dam at Gilbertsville will about ruin most of the woodworking industries located in the Tennessee and lower Ohio Valleys, because the rich timber-bearing Tennessee Valley, from which they have secured their timber supply for generations, will be converted into a lake 184 miles long. There are five woodworking industries in Metropolis alone, and others along Ohio River in Illinois at Karnak, Mound City, and Cairo, and many others in Illinois using lumber from the Tennessee Valley.

In the last few years since the construction of dams on the Tennessee River, the last packet boat from the mouth of the Tennessee River from Paducah has discontinued service, so that we are no longer able to secure packet-boat service up the Tennessee River like we formerly had. The construction of these dams ruins the rich valley timber supplies, which thereby will remove most of the present river traffic in logs, railroad ties, poles, and lumber. Also, if the Tennessee River is converted into a lake 184 miles long like the proposed Gilbertsville Dam will do, it will render most of the present river boats, barges, and all log rafts useless on such a body of water, as they cannot stand the rough waters on a lake. Therefore, the river navigation will not be increased, but will actually be reduced by construction of such a dam.

All the power plants in southern Illinois that might be connected up to hydroelectric power to be developed at proposed Gilbertsville Dam are now using southern Illinois coal, so that building additional power-plant capacity at Gilbertsville for use in southern Illinois would seriously injure the coal industry of our State, with the possibility of reducing the value of many of the municipal power plants.

For the above reasons we think that the proposed Gilbertsville Dam will not only not help flood control, navigation, and power problems, but will actually be detrimental and a waste of money, and therefore we hope you can see your way clear to opposing the construction of such a project.

Yours very truly,

ROBERTS-LIGGETT CO.
W. R. LIGGETT.

The Townsend Plan

EXTENSION OF REMARKS
OF
HON. PAT CANNON
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1939

STATEMENT OF HON. PAT CANNON, OF FLORIDA, BEFORE THE WAYS AND MEANS COMMITTEE

Mr. CANNON of Florida. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include my statement made before the Ways and Means Committee of the House of Representatives, February 20, 1939, with reference to H. R. 2, the Townsend plan, as follows:

Mr. Chairman and gentlemen of the committee, I might say at the outset that my appearance and my mission here today is nonpolitical. The subject matter of which I intend to treat is nonpolitical. Fortunately, I was a member of a Townsend club prior to the time that I ever dreamed I would run for Congress.

Today we are gathered for the purpose of hearing witnesses who will testify on behalf of the greatest plan ever conceived looking toward relief, prosperity, and, above all things, national recovery. I am indeed happy and honored to testify before you gentlemen, as a Townsendite and as a Member of your body.

Most Americans, and surely I, believe that the ingenuity of man and the creative mind of man have stripped us of the utility of our manpower. In other words, the machine age has displaced manpower. We are not to attempt in any wise to retard the machine age, but we are certainly called on to teach ourselves to live with it. It is not the fault of any man that we find ourselves in a precarious position today, and surely it cannot be said that it is the fault of any of the multitude of people who must be cared for today. There is not one among us who has not made his contribution to science—who has not contributed to the progress of this great country which is ours.

The work that the laborer has done and the product that he has produced with his hands has given rise to thought, resulting in a multiplicity of mechanism and mechanical devices to displace the need of him who would work and who must work. Mass production has been the result. It is my belief that the activity of manufacturing should be carried on constantly and not allowed to operate at peak production only to close when the warehouses are full; because then the few men who do work in the factories are not accorded that privilege under full warehouse conditions. We find that our mills are now stagnant and are not operating.

Surely something must be done and since nothing better has been offered to the people of this country, it is my honest belief that the Townsend plan should be enacted into law by this Congress, and immediately. And it is also my belief that if the plan itself had been a brain child of a prominent member of either of the national political parties, it would have long since been a law.

Because the plan was brought forward by a humanitarian existing in political obscurity, it is regarded with great jealousy politically. We see it fought by members of both the major parties because neither party unfortunately has seen fit to blaze a trail in the interest of humanity, and it is most unfortunate that both political parties are so extremely jealous of the staid channels in which they have traveled for lo, these years, and I for one am thoroughly convinced that the politicians particularly in this country should realize now and for all time that the economic picture of this country has changed and that if progress is for us we must change with it, just as laws must be changed to meet emergencies and so it is that courts change from time to time to meet emergencies. The thought of man generally, in every walk of life, changes and progresses as time goes on. The plan itself, as I have said, is nonpolitical and comes to us as a prayer from the masses generally who must have and who deserve assistance. As in the past, we find any number of men ready, willing, and anxious to work, who are not granted that privilege, through no fault of their own. The plan is designed to assist the unemployed primarily, and not the unemployables. In other words, since the beginning of time, there have been those people, unfortunately, who would not work if they were accorded that privilege. In those people we have no particular interest, but we do intend to assist those who, through no fault of their own, are denied the opportunity and pleasure of employment.

The persons whom we intend to assist own this Government of ours and its natural resources in the same measure as those who would deny us the assistance. The masses in this great country have controlled this Government and shall control it in the future, which is the plan of a representative form of government. We are not to deny them that right and we, as Members of this Congress, come from them, the masses and not from the selfish minority of our people.

Surely our positions are not so great that we can deny serious thought to the needs of the people whom we are sworn to represent, and surely we are not so important that we should not so concern ourselves. We as Members of Congress constitute the only body of men who represent the people directly in that we are elected every 2 years, which gives the people a close and possibly a short contact with us. If we do not conduct ourselves in a manner conducive to the progress of our people, then, therefore, we can be retired at the end of 2 years, which is indeed a short time. Our colleagues on the other side of the Capitol, the Senators, are elected for 6 years and represent the State generally, and therefore cannot be intimately in touch with a given people as those of us in the lower House. If a vacancy exists in the United States Senate, the Governor of the State suffering that vacancy may appoint a Senator to fill the unexpired term. Not so in the House of Representatives. If a vacancy occurs, an election must be called in the district where the vacancy has been suffered and the people must act and delegate a person to represent them in the National Congress. A Congressman cannot be appointed, but must come as the result of a mandate of his people. Therefore, we in Congress should be vitally concerned with the needs and the desires of our people and that fact prompts me now.

The remarks that have been made by men of prominence in this country questioning the intelligence and the integrity and the sincerity of those of us who stand by this humanitarian plan have not been discouraging to me. I have a great deal of sympathy for those persons who would so criticize for in so doing it is my honest opinion that they strike at the roots of democracy and a representative form of government. Also it is said that the people of this country, the most of whom, unfortunately, are in poverty, and the most of whom need immediate assistance, can be denied the right to live and exist in a common pursuit of happiness which is their constitutional guaranty. The representatives of this Government do not own it now, nor have they ever and God

forbid that they ever do. A vote for the Townsend plan and its enactment into law is a vote for humanity. And no one need search his heart or his conscience for that tendency. We, therefore, as Members of Congress cannot represent the people properly unless we do all in our power, looking toward human security. Starvation in a land of plenty is inexcusable and deplorable.

Now let us look for a moment at the mechanics of the plan itself. As we all know, the funds paid under the operation of this plan will be raised by the levying of a 2-percent transactions tax. There is nothing peculiar or complicated about that phase of the plan. It has been the practice in commercial fields surely during my entire existence, that a 2-percent reduction or discount would be given on any bill rendered which would be paid within 30 days. That has been a practice in keeping with good business, and the 2-percent discount has never been charged to loss. The transactions tax which I discuss is uniform in that it applies to all sales of goods and services. It is designed also in such a fashion that it is most equitable in that he who has many transactions will pay taxes commensurate therewith and necessarily he who has few will likewise be so taxed. Therefore we may well say that the structure of this tax is no different than the various and sundry taxation schemes under which we now labor. And it is well to reveal at this time that that transaction tax does not add to and heap upon the many taxes that we now know. It displaces and replaces those taxes and frankly mitigates tax burdens. The operation of this transactions tax will not be a shock to the commercial interests of this country and even if it would it is for the public good. I have seen gasoline fluctuate in price from 3 to 4 cents per gallon overnight. I have seen cotton drop in price from 40 cents per pound to 6 and 7 cents per pound in a remarkably short time. I have likewise seen similar instances as represents various commodities. Long-suffering Americans have had no criticism of those things and the answer is that the commodities to which I have referred have been controlled in the past and are controlled now by the powers that be, and by the selfish minority in this country having no interest in the masses which actually support them. It is my belief that we pay 6 or 7 cents on every package of cigarettes which we purchase in America. That I dare say is many times more than 2 percent. I say to you and in all sincerity, my friends, that this matter is much more serious than has been presumed and deserves thought commensurate therewith.

Then, if we as Members of Congress are to be selfish, I ask you now, how many of you have the assurance that you will not be retired to private life by these same people who are calling on us for help and how many of you can tell me now in what financial condition you will be found when you are beyond the age of employment, and I would like to remind you also that in recent years he whose hair has turned gray will never be employed again unless relief is had immediately. There was a time when a man who sought employment could have it for the asking, but that time has gone. For one to find employment now he must be blessed politically, or maybe I should say cursed politically. If it is through organization, he must have political contact or some other sort of guarantee, otherwise employment is not for him, and I say to you that that condition is most un-American.

So far as I am concerned personally, the masses of the people of this country can do with this country and their Government what they may, and with my vote. That on the assumption that they have created and built this country, they have fought for and obtained its security. It is theirs. And I am theirs. They sent me here, not to be a demagogue, not to be a partisan, but to be a representative of them, which I shall try to do with a sincere purpose. I am not ashamed to be identified as a Townsendite Member, nor am I ashamed to speak in its behalf. Rather, I am urged and prompted to speak in its behalf and if I did not feel so, I believe that I would be ashamed to be a Congressman, which I hope shall never be my lot.

If we were authorized to act independently of the most of our people it would be wholly unnecessary for them to elect us. We may well be appointed if we are to carry out a program according to our own dictates. Therefore, I shall vote for any measure which my people want. It is the duty of this Congress to give our people, insofar as we can, that which we know as economic security. Our forefathers fought successfully for that condition. The fact they did prompts me to give the people of this country, insofar as my vote is concerned, a perpetuation of that blessing. We who live today inherited a right to that security as a result of sacrifices made by those who have left us here. That security and everything that goes with it was referred to dramatically and well by those great ones who drafted the writ that we today call the Constitution. Surely the people of this country can reclaim that which is theirs. There is nothing wrong with democracy. There is nothing wrong with this great country, except that our trade channels need replenishing and no individual among us is responsible for the plight in which we find ourselves. We need a complete, new, and effective redistribution of the natural wealth of this country, which, in my opinion, the Townsend plan clearly offers.

Never could I entertain the thought that the people of this country are incapable of handling its affairs, but we, as long-suffering Americans, have waited until the eleventh hour to take stock and look about our doors. Today there is not one community in this whole great country of ours in which we do not find poverty. The Congress has done a lot toward relief. This administration in its wisdom has seen fit to send funds into every community in this country in an effort to relieve the suffering that exists. It was my pleasure recently as a Member of this body to vote for $825,000,000 for relief through the Works Progress Administration agency. Unfortunately the particular bill for which I voted was defeated and the bill was passed in the amount of $725,000,000. But I stand ready now to vote for any amount of money that will relieve suffering and starvation in this country. The funds which have been voted in the past for relief have been a constant drain on the Treasury of the United States and is never to be returned to that Treasury which belongs to the people to whom I refer. It is not objectionable to me, however, because it is better that we deplete the Treasury and mortgage ourselves beyond redemption than for one family to starve to death in this great country.

My walking in marble halls has not caused me to forget thousands of shacks that house many of our unfortunate people, where they merely exist, hungry, ill-clothed, without medical care, which in many cases is absolutely necessary.

The Townsend plan, when it is enacted, will not cost this Government one penny. It is a "pay as you go" plan which has been recognized for many years as the best theory of government and commerce. How long can we exist? There, in my opinion, is our problem. How long can we pay out of a common treasury such great amounts which will never be returned thereto? If our relief problem, by the passage of the Townsend plan, can be decentralized and distributed by each man who receives it, why is it not better. Why is it not better for each man to carry his own load. The recipients under this plan are not objects of charity and they are not recipients of alms. They are employees of this Government. Employed to do what? To spend those funds which they received commensurate with the return of the taxations within 30 days or within 5 days thereafter or they are disqualified to receive further funds. And what is the purpose of this provision? Because it is necessary that the trade channels shall be replenished immediately. We of this country have no buying power and this Government has found that when money is spent indiscriminately or otherwise it trickles down to every man. Many opponents of the plan have objected to it, assigning as the reason therefor that the recipients would be called upon to support any number of persons who would not work, who would retire from gainful occupation because of the security of their elder friends. I would like to remind them that the only important thing in this whole scheme is that the money be spent and spent immediately. That is the theory of the plan without reference to morals. But it has not been my experience that the youth of this country is satisfied to live in an idle fashion without work. The youth with which I have come in contact is much more ambitious. As I have said before, there are a few people who won't work under any conditions and I do not attempt now or in the future to assist those people, nor does this plan so anticipate.

Let us put this plan on another basis and answer to him who has said it is dangerous to give anyone something for nothing. I would say that the recipients under this enactment have earned dividends by long years of work and sacrifice, by reproduction of their kind. This Government, in its wisdom, has seen fit for many years to retire many classifications of its employees, in fact, almost all its classifications, after a given span of service. The leading corporations in this country follow the practice of retiring their employees after a given span of service. Why, then, therefore, is it not just as equitable for us to think along those lines about all people in this country? Surely it cannot be said that a Government employee is inferior to those who pay his salary. And how can it be said with any propriety that all members of our society, including Government employees, do not do their bit in times of stress and every crisis that we have known? Surely the controlling minority of citizens in this country did not contribute as much as the masses during the late World War. I am firmly of the opinion that it was the controlling minority in this country that led us into a foolish war that we now know as the World War. And it was from all of the countrysides in this country that came those stalwart men who fought that war to save the world for democracy. The youth of that day who fought and won a foolish war calls on this Government today for a right to live. The opponents of this act could not exist today in all their glory and pomp were it not for those members in society who gained their security for them. Most of the fortunes in this country were amassed during that crucial moment, and today we ask for a right to participate in living.

The relief program which we know today in this country is most fallacious in that so much money is spent for the administration of it. Particularly the W. P. A. The funds are dispensed usually and in the main by persons not on relief. Therefore full benefit is not enjoyed of the funds so expended. The Social Security Act we have found is most unsatisfactory in that it is insufficient in amount and those who suffer must be further embarrassed by running the gantlet, so to speak, answering hundreds of questions propounded by some political hireling more interested in a job than he is in humanity. These things in all probability, even though most objectionable, are necessary, but the Townsend plan removes all the hardships to which I have referred. And too, when one is relieved under either of the above-mentioned plans he immediately becomes an object of charity and a recipient of alms, and therefore his pride has been scarred and irreparably injured. He no longer can travel in the society which he chooses nor can he hold his head up as he meets his friends on the street. When you have scarred the pride of an individual you therefore have scarred society. We, as Americans, are an aggressive and progressive people and not by instinct charges on public charities. We do things, build things, and produce things. We are active by nature, physically and mentally. Relief, as we know it today, is most un-American. It is true that as always we do things overnight without much thought and are stampeded into compromising positions only too often. That same pride in American people which I attempt now to preserve prompts

the American people not to recede so easily from staid channels and activities of the past. But I for one am willing to admit the fallacy of our present relief programs and am willing and most desirous of departing from those plans and embarking on a more workable schedule, designed after much thought on the part of a great humanitarian, and therefore put the American people back to the status where they rightfully belong.

The Townsend plan is the plan I have chosen as the vehicle to bring that about.

Congress has the same right to repeal a law as it does to pass one. And all that the American people ask is that the Townsend plan be enacted and spread on the statute books and if the plan is actually unworkable as some of the opponents would have us believe today, the people who now seek its enactment would be the first to seek its repeal, because the people in the lowly stations in America have always been the law-abiding citizens.

The $200 maximum amount paid under the operation of this plan is not an arbitrary amount. It has been correctly stated that it costs an ordinary man $1,800 a year to live and enjoy a decent station in life. That being true, $50 per month was added to that amount for the express purpose of putting that much more money back into the trade channels to create new business, and to create a nonexistent buying power.

If the youth of this country was permitted to replace recipients under this plan it has been conservatively presumed that our crime rate would be largely reduced. It is true that there has been crime in the past and unfortunately in all probability there always will be crime. But it is just as true that idle youth is a dangerous instrumentality. If we turn the crime pages that have blackened our history we will be reminded that "Baby Face" Nelson, "Pretty Boy" Floyd, and John Dillinger all embarked on their criminal careers during the tender years of their lives. I am firmly of the belief that criminals are not born, and that criminals are made, largely by the environment in which they find themselves. A child born of normal parents who are equipped to properly rear the child does not become a criminal. The activity and the anxiety and the ambition of unbridled youth cursed with poverty and denied the association of parentage because of economic conditions is the matter with which we must concern ourselves. Thousands of boys and girls are graduated from our high schools and colleges mentally fit and equipped in every way to fill that niche in society. As they walk out into the world, employment is not found. They are none the less ambitious and none the less able, and as a result of the deplorable condition of lack of buying power and lack of available employment, they are called upon to use their good resources toward a criminal end. That is the plight largely of a greater portion of the inmates of our houses of correction, penitentiaries, and reformatories today and likewise our asylums. The youth of America must be employed and put to work and it must be done immediately, lest irreparable injury visit our society.

Then when we think of the amount of money that this country spends each year for the apprehension, conviction, and maintenance of criminals we can readily see how much could be saved if youth were permitted to travel in an orderly way.

Again, this plan is worth its passage because it would do away with the necessity of poorhouses, if for no other reasons. Those institutions to which I have just referred have been eyesores in society for many years. Counties, States, and this Government have spent enormous amounts of money to care for former stalwarts in society who have suffered physical and financial reverses through no fault of their own. This, indeed, would be a great saving, to say nothing of a blessing, if it could only be realized; and as a step in that direction I advocate the passage of the Townsend plan.

It is my sincere opinion that the passage of the Townsend plan will bring about a general readjustment in this country and restore us again to a prosperous thoroughgoing community in keeping with our just deserts.

Mr. BOEHNE. How much is paid under the Social Security Act in the State of Florida? What is the State participation?

Mr. CANNON. I believe it is raised in our State by each county and the payments range from $5 to $30, averaging, in all probability, around $10 or $11. That is as accurate as I can be without further study. But I believe, Mr. BOEHNE, that since you are a member of the Ways and Means Committee actually engaged now in an attempt to assist suffering humanity that you are in a better position to find these facts than I am, and I also believe that they should be your interest.

Mr. MCLEAN. You say the mills are stagnant all over the country?

Mr. CANNON. Yes.

Mr. MCLEAN. Did you ever give any thought as to why that is?

Mr. CANNON. Considerable. There are various reasons advanced for it and frankly I believe that capital has not been invited to expand.

Mr. MCLEAN. The National Recovery Act had a provision in it which was calculated to open factories and create the production of goods and create buying power. The National Recovery Act anticipated increasing wages would increase the cost of production. Therefore there was a provision put in the National Recovery Act to the effect that the President could embargo foreign-made goods to the extent that they competed with American-made goods and made it impossible for American manufacturers to compete with the provisions of the act. Do you believe in that principle?

Mr. CANNON. Most assuredly I do not.

Mr. MCLEAN. That was a Democratic act, you remember?

Mr. CANNON. Definitely.

Mr. MCLEAN. You would not have voted for that piece of legislation had you been in Congress?

Mr. CANNON. I would not have, but I have stated here that my appearance is not political.

Mr. MCLEAN. And my appearance here is not political either. I am an American.

Mr. CANNON. I presumed so, and I, too, am an American.

Mr. MCLEAN. And I am looking for a solution to this problem.

Mr. CANNON. I believe so.

Mr. MCLEAN. I remember in 1923 when things were much the same as they are now that the people cried out to open our mills, not our mint, to give America an honest dollar and a chance to earn it and it was not long after that the Dingley Tariff Act came out.

Mr. CANNON. That is right.

Mr. MCLEAN. And I am taking my position here on that under the leadership of William McKinley.

Mr. CANNON. And I am in accord with you.

Mr. COOPER. Are there any further questions? If not, we thank you for your appearance here and the statement you have made to the committee.

Weekly Report of German Institute for Business Research

EXTENSION OF REMARKS

OF

HON. M. M. LOGAN

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, March 2 (legislative day of Monday, February 27), 1939

Mr. LOGAN. Mr. President, I ask unanimous consent to have printed in the RECORD a letter from former Senator Robert L. Owen dealing with the weekly report of the German Institute for Business Research which was issued January 26; and I also ask that the weekly report be printed in the RECORD following the letter.

There being no objection, the letter and report were ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C., *February 28, 1939.*

Hon. M. M. LOGAN,
United States Senate, Washington, D. C.

MY DEAR SENATOR LOGAN: I received this morning the weekly report of the German Institute for Business Research, which gives some comparative information of special interest with regard to business conditions in Germany which I think might be of interest to our Congress.

Hitler has challenged the democracies on the ground of Germany, under the Socialist-Nazi regime, having demonstrated a greater efficiency, but you will observe that while conditions in Germany have improved greatly in respect to the ending of unemployment and to the increase over 1932 of production, the American democracy shows that the efficiency of the American people is far greater than has been the case in Germany.

For example, in Germany the number of automobiles in 1938 only reached the figure of 222,800, whereas in the United States we have nearly 30,000,000. This report lists the number of radio listeners in Germany as increasing from 56,400 in 1932 to 276,400 in 1938, whereas in the United States we have 40,800,000 radio sets with listeners of many millions more.

Yet, when this has been said, it is to be observed that Germany's index of industrial production has increased from 100 in 1928 to 135 at the end of 1938, while our index of industrial production fell from 111 in 1928 to 102 at present. The value of industrial production in Germany in 1938 was between 85 and 90 billion reichsmarks at 40 cents for the reichsmark, or a total of about $36,000,000,000 maximum; whereas, our national production for 1937 was valued at $67,000,000,000 even in a year where we had a recession. The value of our industrial production in 1929 was $81,000,000,000 before we had the stock-market collapse.

These figures show that production in America does not suffer by comparison with Germany, whereas in the conveniences of life, represented by automobiles and radios, there is no comparison whatever between the condition of the American people and the condition of the German people.

All informed men know that when Congress shall discharge its duty of creating and regulating the volume and value of money in the United States, $80,000,000,000 would be far below our practicable potential production. It is my deliberate judgment that we can increase our production without difficulty to $100,000,000,000 a year and that it is possible to raise our production to $130,000,000,000, as I think has been quite clearly demonstrated by Loeb's Chart of Plenty. In my opinion, the true way to establish an impregnable line of defense against any possible aggression from abroad is to double our production, as we can do, and as I have demonstrated can be done in Senate Document 23, where I have made an exposition of the principles of modern monetary science in relation to our national economy and banking system. Our defense will rather be found in the development of production along constructive lines than in the development of production along destructive lines.

We have the means and the genius and the present knowledge by which we could expand and should be in a position to expand the manufacture of planes on a scale superior to that of any country

in the world in quantity and certainly equal to any other in the matter of efficiency.

It is my belief that the common sense of the people of the world and the moral rearmament throughout the world on an increasing scale will result in bringing the world into a condition of peace and good will through the conquest of poverty. Certainly, we can accomplish the complete overthrow of poverty in the United States.

I call your attention to the testimony of Lammot du Pont, who said that $25,000,000,000 of new capital was required to put to work ten and one-half million people, 3,000,000 in the factories and seven and one-half million as auxiliary in consequence of increased factory production through 3,000,000 additional employees. Mr. du Pont was under the impression that this money could be furnished out of savings, yet the savings accounts and time deposits in 1938 showed a loss of $230,000,000. But we have the unemployed capital now in the hands of our great corporations and private individuals in the form of unemployed demand deposits and of Government bonds which can be converted into liquid capital. We have the Federal Reserve banks, which could, by the purchase of Government bonds and sound bankable assets, convert such bonds and sound bankable assets into liquid money and liquid working capital by which we could easily put to work not only ten and one-half million people now unemployed but we could furnish the capital and create the capital to double this number if the labor were available.

This country has not considered the matured views of Abraham Lincoln (see S. Doc. 23, p. 91) on this question. He points out the enormous power which could be exercised by the Government through its creative opportunity in creating the medium of exchange necessary to the transfer of production and services from the producers to the consumers, remembering that the producers and consumers are, at last, the same people.

We have the greatest and most efficient industrial leaders in the world; and when we cure the difficulties in our credit system they will become the models of the whole world in efficiency and production.

Yours respectfully,

ROBERT L. OWEN.

WEEKLY REPORT OF THE GERMAN INSTITUTE FOR BUSINESS RESEARCH (INSTITUT FÜR KONJUNKTURFORSCHUNG)

(Director: Prof. Ernst Wagemann)

Berlin, Jan. 26, 1939

*Explanation of symbols: S=yearly total; A=12 months' average.

[1] Partly estimated. The figures since 1936 include the Saar District, while in 1935 only part of the figures include this district.

[2] Gross; based on monthly index figures.

[3] Crop years.

[4] Including omnibuses and 3-wheel trucks with over 200 cubic centimeters displacement (since 1937, with over 250 ccm).

[5] Reichsbahn; public traffic.

[6] Goods transported.

[7] Passengers carried.

[8] Reichspost; usual packages.

[9] 260 localities; in each case Oct. 1 to Sept. 30.

[10] In each case, July 1.

[11] Fiscal year.

[12] At end of year; according to yearly balances.

[13] Large private and public life insurance companies.

[14] Excluding Reich loans and industrial obligations.

[15] Important industrial corporations.

[16] Up to 1934, including 3-wheel vehicles weighing up to 350 kilograms; after 1935 including 3-wheel vehicles with displacement of up to 200 cubic centimeters (since 1937, up to 250 ccm).

[17] At end of year.

[18] Since July 1938 including Austria.

[19] Since April 1938 excluding commodity trade of the old Reich with Austria; since October 1938 including commodity trade of the Sudeten-German territory bordering on the German customs frontier with foreign countries and excluding commodity trade of the Reich with total Sudeten territory.

All figures refer, if not otherwise mentioned, to the old Reich territory.

CAPITAL INVESTMENT ACTIVITY IN GERMANY—THE CONTINUATION OF THE 4 YEARS' PLAN AND THE UNDERTAKING OF PROJECTS NECESSARY FOR THE NATIONAL DEFENSE LED IN 1938 TO A FURTHER INCREASE IN CAPITAL INVESTMENT ACTIVITY

PRODUCTION OF CAPITAL INVESTMENT GOODS

According to the index figure of the German Institute for Business Research, the production of capital goods in Germany increased by 10 percent during 1938 in comparison with 1937. Over two-fifths more capital investments goods were produced than in the peak years 1928–29 and over three and one-half times as much as in the worst year of the depression, 1932.

German production of capital goods

[Volume]

Year	Production	
	1928=100	Change compared with previous year in percent
1929	101.1	+1.1
1930	82.4	−18.5
1931	57.1	−30.7
1932	38.5	−32.6
1933	50.3	+30.6
1934	74.4	+47.9
1935	99.8	+34.1
1936	119.3	+19.5
1937	131.1	+9.9
1938 [1]	143.6	+9.5

[1] Preliminary.

In recent years the tempo of the increase in production has become less from year to year along with increasing utilization of capacity. While in 1934 and 1935 the production of capital goods was 48 and 34 percent above the level of the year before, the increase in 1936 and 1937 was only 20 and 10 percent, respectively. In 1938 despite the high degree of capacity utilization attained it was possible to reach the same production figures as in 1937. In this success is expressed both the extraordinary efforts on the part of industry to satisfy all the urgent demands made upon it, as well as direction of capital investments according to the degree of their political and economic urgency.

Just as in the past, so too in 1938, the greater part of total capital investments was accounted for by capital investments in the building and construction field. Moreover, the iron and metal industry, the machine industry, and the automobile industry also participated in the increase in capital-goods production, although not to the same extent as in 1937.

IMPORTS AND EXPORTS OF CAPITAL-INVESTMENT GOODS

The domestic production of capital goods gives only an inexact picture of the capital investments of the German economy. For a part of capital investment goods production is exported and thus does not enter into domestic supply. On the other hand, the domestic supply is increased by imports of capital goods. These two factors are especially important for 1938, because there were considerable shiftings in foreign trade.

The export of capital-investment goods which from 1936 to 1937 showed a volume increase almost double that of domestic production (20 percent as compared with 10 percent), scarcely showed any increase in 1938. Thus, while in 1937 capital-investment activity did not quite keep step with the increase in the production of capital goods, in 1938 a greater part of the (increased) production of capital goods was available for domestic supply.

German exports of capital goods

[1928=100]

Year	Value	Volume	Average export price
1928	100	100	100
1929	120	118	102
1930	113	115	99
1931	91	100	91
1932	56	68	82
1933	45	59	76
1934	39	56	71
1935	43	65	66
1936	52	80	66
1937	71	99	71
1938 [1]	68	100	69

[1] Preliminary.

At the same time the import of capital investment goods increased in 1938 still more in volume than in 1937. The supply of the domestic market with capital goods was thus also more favored from the import side than in 1937. This development was effectively supported from the price side, for import prices declined more severely than export prices.

German imports of capital goods

[1928=100]

Year	Value	Volume	Average import price
1928	100	100	100
1929	103	97	106
1930	74	78	96
1931	45	58	78
1932	27	43	63
1933	32	52	60
1934	39	66	59
1935	34	63	53
1936	35	65	54
1937	50	77	65
1938 [1]	59	98	60

[1] Preliminary.

THE VOLUME OF CAPITAL INVESTMENTS

If imports are added to and exports subtracted from the production of capital investment goods in Germany, the result is a picture of the development of the volume of capital investment activity.

In 1938, the volume of capital investments in Germany was about 50 percent higher than in 1928 and four and one-half times as great as in 1932. In 1932, Germany was living on her capital; now she is working with all her force to increase her capital investments.

Capital investment value in Germany

[Capital investment volume, 1928=100; estimates]

1929	97.0
1930	74.6
1931	47.3
1932	33.2
1933	49.4
1934	77.4
1935	104.4
1936	124.5
1937	134.5
1938 [1]	149.5

[1] Preliminary.

THE VALUE OF CAPITAL INVESTMENTS

For economic considerations and political decisions not only the volume development but also an idea of the value of capital investments is necessary.

In this connection must be considered the price development, changes in capital investment technique, and the composition of the volume of capital investment.

Percentage change of important capital goods prices [1]

[+ = increase; − = decrease]

Grouping	Changes		
	1935–36	1936–37	1937–38
Building costs	±0.0	+2.3	+1.1
Raw materials for production goods	+.9	+2.1	−.5
Finished production goods	−.3	+.2	−.2
Import prices	+1.5	+20.4	−7.7
Export prices	−2.0	+8.4	−2.8

[1] It must be considered that the import and export prices show not only changes of prices for certain goods but over and above displacements in the assortment, in the qualities, etc.

If all these factors are considered, the value of capital investment in 1938 can be estimated at about eighteen to nineteen billion RM., as compared with 16,000,000,000 RM. in 1937.

Of the total capital investments, a part is accounted for by replacement investments; that is, by the renewal of the production and transportation apparatus which in the course of economic activity has been "consumed." Only the remainder; that is, total capital investments less replacement investments, forms new capital investments which mean an actual increase in the amount of capital goods of the national economy (in the widest sense).

Capital investment value in Germany

[Billion reichsmarks; estimates]

1928	13.8
1929	13.6
1930	10.2
1931	5.9
1932	3.5
1933	5.1
1934	8.3
1935	11.2
1936	13.8
1937	16.0
1938	18 to 19

For the year 1933–34 the Reich Statistical Office has estimated that the normal replacement requirements of German industry amounts to about five and eight-tenths billion reichsmarks annually. At present, this amount is surely somewhat higher, for due to the increased utilization, the proportional consumption has risen considerably. Moreover, replacement investments can in part be obtained only at a higher cost than 4 or 5 years ago.

New investments and replacements in Germany

[Billion reichsmarks, estimates]

Year	Total	Replacements	New investments
1933	5.1	5.8	−0.7
1934	8.3	5.8	+2.5
1935	11.2	6.0	+5.2
1936	13.8	6.25	+7.6
1937	16.0	6.50	+9.5
1938	18 to 19	6.50 to 7	+11.00 to 12.50

Finally, it must be considered that the total capital investments of the German economy have increased. This must have led also to an increase in replacement requirements. But even if replacement investments for 1938 are estimated at six and one-half to seven billion reichsmarks, new capital investments amount to about twelve billion reichsmarks—that is a good 15 percent of the German national income. This figure shows clearly what efforts are being made to increase and to improve plant capacity, plant equipment, etc.

THE DEVELOPMENT OF INVENTORIES IN GERMAN INDUSTRY

There are in Germany no comprehensive statistics with regard to the development of total industrial inventories. However, by studying the balance sheets of important corporations, one can arrive at an approximate picture of the changes which have taken place in recent years in this field.

TOTAL INVENTORIES

The German Institute for Business Research calculated the value of total inventories for the year 1935 at about nine to ten billion reichsmarks. Since then inventories must have increased to a considerable degree. The balance sheets of important industrial corporations show the following increases:

Value of stocks on hand in important corporations [1]

[1935=100]

Year	Reich Statistical Office [2] (middle of year)	Institute for Business Research [3] (annual average)
1935	100	100
1936	106	104
1937	136	142

[1] Industrial companies only.
[2] Statement in each case for the third or fourth quarter.
[3] Smaller group of industrial companies.

Naturally, these figures offer only a small base for estimates. Nevertheless, the trend of development has probably been correctly reflected. If the changes in the balance sheet statistics were to be transferred to the above-mentioned figure of nine to ten billion reichsmarks (for 1935), one would arrive at a figure of nine and one-half to ten and one-half billion reichsmarks for the total value of inventories in 1936 and at a figure of about twelve and one-half to thirteen and three-fourths billion reichsmarks for the value of inventories in 1937. This is just about the value of the inventories in 1928–29 (13,000,000,000 reichsmarks). Therefore, the predepression figure for inventories has just about been reattained.

However, the changes which have taken place since 1928–29 in the industrial structure should not be overlooked:

1. In the first place production has shifted more strongly to capital goods, while the production of consumption goods has disappeared more into the background. However, it is well known that in important capital-goods industries (for example, building and construction industry, machine industry, shipbuilding industry) inventories are much smaller than in consumption-goods industries, due to the nature of the process of production. Even if total industrial inventories should not have attained the predepression relation to turn-over, this does not mean that there are shortages.

2. On the whole it can be assumed that an inventory value of about 13,000,000,000 reichsmarks means today a greater volume of goods than in 1928–29. For first of all the price regulations no longer require that every fluctuation, for example, on the raw-material markets, be reflected in the valuation of inventory. Secondly, the prices of raw material and semifinished goods especially are below the level of 1928–29. The index figure of prices of industrial raw material and semifinished goods was on the average for 1937 still 28 percent beneath the level of 1928. In the case of industrial finished goods the difference is still 21 percent. The present volume of industrial inventories cannot be exactly determined, especially since the composition of the inventories changes from year to year.

THE DEVELOPMENT IN 1938

In 1938, the increase in industrial inventories continued. This is especially true for inventories of semifinished goods. It is clear that with increasing production more goods (both in value and volume) were in the process of manufacture than in 1937. Moreover, the delays in production which arose from time to time strengthened the tendency to increase the inventory of semifinished goods.

But in the case of raw materials, too, there must have been an increase in the inventories. Three factors hint at this development:

1. Already in the first half of 1938 domestic raw material production increased more rapidly than the manufacture. According to calculations of the German Institute for Business Research, the increases have been as follows:

	Percent
Domestic raw material production	+11
Industrial manufacturing	+8

2. The decline in prices on the world market made it easier to purchase foreign raw materials; in the first 10 months of 1938 the volume of raw material and semifinished goods imports was about 12 percent higher than in the same period of 1937. But industrial manufacturing only increased by 8 percent.

3. Finally, the reduced demand of foreign countries led to the fact that in 1938 a greater amount of domestically produced raw materials and semifinished goods remained on the home market than in 1937. The export volume was, from January to October 1938, about 21 percent less than in the corresponding period of the previous year.

If one adds the increase in domestic raw material production to the rise in the import surplus, there must have been in the period from 1937 to 1938 an increase of 15 to 20 percent in the volume of raw materials available. Thus the increase here has been twice as great as the increase in the manufacturing of raw materials.

The development of finished-goods inventories is hard to determine. A selection of important industrial balance sheets shows a considerable increase from 1937 to 1938. But whether this tendency was generally true cannot be determined. For the great capacity utilization tends toward a contrary movement of inventories, as does the fact that retail trade continually covers future requirements. But even if finished-goods inventories should have remained at a low level, the great increase in raw material and semifinished goods inventories was sufficient to cause an increase in total industrial inventories. We need not emphasize that there were great differences in the individual industries and in the individual commodities.

[Supplement to the Weekly Report of the German Institute for Business Research, Berlin, January 26, 1939]

ECONOMIC MOBILIZATION AND RAW-MATERIAL PROBLEMS

(First section of an address delivered in Berlin on October 4, 1937, to a group of high-ranking German officers. The complete address was published in State Secretary Brinkmann's book, Wirtschaftspolitik aus nationalsozialistischem Kraftquell; Jena, Gustav Fischer, 1939. This book will soon appear in English)

(By Rudolf Brinkmann, vice president of the Reichsbank and state secretary in the Ministry of Economics)

"If a nation desires to assure its peaceful development, it must be and must remain completely armed for war." This sentence was written around the turn of the century by the political economist, Albrecht Schäffle and was apparently derived from the famed saying of old Vegetius, "Si vis pacem, para bellum."

There is no doubt that the catastrophe of the World War would have broken over our heads much sooner if we had not gone to such pains to assure the military security of our country. For in the judgment of the pre-war period a nation was considered strong only if it possessed a strong military force. It is not to be wondered at that economic preparation for a possible war was not given the serious consideration which it should have received. There was no great necessity for us in the pre-war period to devote a greater amount of attention to questions of economic preparation, for in the pre-war period we were never burdened with economic cares. What we needed to complement our domestic and colonial production of foodstuffs and industrial raw materials we could import without difficulty from abroad, since we were in a very favorable position as far as our international balance of payments was concerned. And since many groups were of the opinion that in case of war the maintenance of this capacity to pay would assure at all times a sufficient commodity import from neutral countries, efforts were directed mainly toward an increase in the national gold holdings. In line with this there was passed the well-known law of February 20, 1906, which permitted the issue of notes in smaller denominations in order to withdraw as far as possible gold coins from circulation. Furthermore, it was thought that in case of war, raw-material imports from the German colonies could be maintained, at least to a certain degree, and that in case of emergency our import requirements, at least as far as the nutrition sector was concerned, could be satisfied through deliveries from our allies. Finally, it was the general opinion that in view of the great technical development in military armament, a future war would last only a short time and would be decided in a few

great battles; for this additional reason it was assumed that there was no great possibility of serious difficulties arising in the supply of foodstuffs and raw materials.

The course and the length of the World War showed us clearly that in the prewar period the importance of economic questions was greatly underestimated, and that the method of handling these questions was by no means in line with actual requirements. Indeed, the World War showed us that in the end it was economic reasons which prevented us from following up our famed deeds of arms with the deserved final victory. We had to experience not only a complete severance of our country from her colonies and their raw materials, but also a planned blockade which cut us off from all overseas imports; these two facts led in the course of time to regular economic warfare. Under these circumstances military operations necessarily had to serve not only a military purpose, but, in many cases, also an economic purpose. I call your attention to the occupation of the Ukraine as granary, the advance directed against Rumania's oil and grain fields, and the expedition into the Crimea. It is understandable that the soldier is loath to include such considerations in his operative plans, since they can often lead to weakness at an important military point. There, where the commander seeks the military decision of the campaign, he must be as strong as possible, and his operative freedom of movement must not be burdened any more than necessary by such special considerations. The longer the World War lasted, the more apparent became the economic weaknesses, even though the efforts to bring about a speedy adjustment of the national economy to war requirements were not unsuccessful in many spheres. For example, success was achieved in replacing the nickel so important in the manufacture of cannon, by nickel-free steel without injury to the quality; furthermore, success was achieved in replacing the saltpeter necessary for powder production by products of the Leunawerke, and a substitute was also found in the textile industry for wool and cotton. Under all circumstances, a way should have been found to prevent the serious munition shortage under which our troops suffered even in the first months of the war—winter 1914–15; this shortage led to the fact that possibilities remained unutilized which might have had an effect on the final outcome of the war.

Thus, the war taught us the great lesson that not only the strength of the weapons, but also the strength of the economy, are of decisive importance in times of war.

Nevertheless, the knowledge thus gained was not utilized during the first period of the reconstruction of the German economy in post-war years. This was due mainly to the Versailles Treaty. We all remember what great changes the German economy experienced through the provisions of this treaty, and to what binding control our former enemies subjected our economic life. In addition, the German governments of that time, in their "role" as pacifists, suppressed brutally all efforts to arouse the national conscience of our country. But even if there had been no Versailles Treaty, and even if the governments had not rejected the idea of military preparedness, it seems doubtful whether the experiences of the World War were sufficiently considered when the reconstruction of the German economy was undertaken. For the economy of that time was directed along liberalistic lines. And that meant in the long run that the economy ruled the state, and not the state the economy. Under such circumstances economic decisions were made only seldom from the viewpoint of necessity, but very often from the viewpoint of profitability. However, it must remain unclear why, even in that time, it was not realized that the soldier does not exist only "for war", but also to prevent war, or at least to prevent it as long as possible. Thus, the economy would have served its interests best, if it had forgotten to a certain degree its selfish striving for profit, and had accepted the sacrifices connected with every program of economic mobilization. The frequently expressed view that wars are seldom and that, therefore, preparatory measures in times of peace should not go beyond the point where they affect general economic interests, cannot justify the shortcomings of the past. For even though the nations of the world do not desire war, because they know that they are richer and happier without it, history shows us that the desire for peace has always been disappointed, and that there is but little hope that this will ever be different.

Thus it remained for national socialism to carry through in the economic sphere those measures which were definitely necessary in the light of the economic lessons taught us by the World War. National socialism created the prerequisites for a successful solution of this problem by combatting selfishness, on the one hand, and, on the other hand, by reawakening appreciation of the fact that the freedom of a nation, and, thus, of its economy can be realized and maintained only through a complete military and economic preparedness.

For 4 years now the German economy has been in the process of adjusting itself to the economic requirements of a future war. And we are approaching today that condition for the description of which the term "economic mobilization" was coined. But it would be incorrect to suspect here the introduction of a new economic system. The sole purpose of economic mobilization is to arouse and to maintain a definite attitude in the national economy and to endeavor to bring this attitude into agreement with all types of economic activity. Therefore, economic mobilization is not opposed to normal economic activity; it is the new form of this normal activity. It has the task of surveying the whole field of economic phenomena and facts, and, as was once expressed, its work in content and form is similar to that of a preparedness organization.

The aim of these efforts toward change and adjustment is clearly set: a highly efficient economy which is in a position in times of war to satisfy the needs of the armed forces as well as the necessary requirements of the rest of the country.

This leads to two special problems for this "preparedness organization": the satisfaction of the economic requirements of the armed forces of the country and the preparation and execution of the economic mobilization. The magnitude of these problems corresponds to the totalitarian character of the war of the future. For, due to this totalitarian feature, the war of the future will not be carried on by soldiers alone; it will include within its orb the worker in the factory, the farmer in the field, and the women and children in the home. Indeed, it will be like the wars of our forefathers, when the entire nation with all its men, women, and children was engaged in a war. The totalitarian war of the future will be again a war of nation against nation in the widest sense of the word.

The difficulties which have to be overcome today by the German economy in order to solve these problems are made all the greater by the fact that the unfortunate outcome of the war deprived us of valuable sections of our territory and caused a serious limitation of our raw material reserves—13 percent of German territory; that is, about 70,000 square kilometers were lost. Included therein were fertile regions in east and west Prussia, Posen, and Schleswig-Holstein; deposits of iron, lead, coal, zinc, and copper in Silesia and Lorraine; and the colonial possessions with their valuable products.

The magnitude of the problems which have to be mastered today demands quite naturally, in addition to increased efforts of all concerned, the exploitation of all sections and possibilities of the national economy. Therefore, if economic mobilization wishes to attain the aim set for it, it must not limit itself, for example, to the mere solution of problems of raw-material supply and nutrition in the sense of its requirements, but it must necessarily include within its sphere of activity a number of other fields. Among such fields to be included are finance, trade, and transportation; insurance and propaganda; questions of labor utilization; of changes in plant operation; of industrial air-raid precautions and counter sabotage.

In judging how much progress has been made by the German economy in the process of adjustment and change necessitated by economic mobilization, it must be remembered that the idea of economic mobilization did not start until a few years ago to play its rightful part in German economy. Therefore, it can, indeed, be considered a great success that the German economy is completely filled today with the spirit of economic mobilization, and is now endeavoring to give practical application to that idea. For just as in all other fields of human activity, so, too, in economic life the spirit which prevails is decisive for the success or failure of an undertaking. If once the proper attitude is created, then much has been gained in the struggle for practical application.

But it is not only the mental attitude which characterizes the German economy and which enables it to compete to a great extent with nations in a more advantageous position. It can be said without boasting that Germany is excelled by no other country in the systematic realization of the requirements of economic mobilization. We undoubtedly owe this systematization to the existence in Germany of a uniform political will. There are probably only a few countries whose economy, thanks to political unification, presents as united a front as the German economy. The inclusion of all industrial firms in the great German organization, Estate of Industry and Trade, not only makes it possible for German economic leadership to get a clear picture of the conditions, efficiency, and requirements prevailing in the various economic groups and in individual firms, but it also guarantees the quickest possible adjustment of the entire economy to any necessary changes. In addition, this organization, which is tending more and more toward self-administration, is especially suited, particularly in the technical field and in the field of industrial operation, to help its members achieve the top performance which the general welfare demands. Thus the Estate of Industry and Trade represents an especially serviceable instrument in the execution of projects of economic mobilization.

Although we can view with satisfaction the increasing orientation of the German economy along the lines of economic mobilization, we must not overlook the fact that economic mobilization is subject to certain limits which are either naturally given or which are necessitated by the general interests of our country.

Thus there is no doubt that the German economy would be placed in a very dangerous position if, in the assumption that a future war would in any case disturb considerably our economic relations with foreign countries, we were led to make the mistake, for example, of abandoning the foreign trade which we have developed over so many years. It is apparent that such a decision would be economic suicide and thus, economic insanity; therefore, it is but natural that in this point the efforts toward economic mobilization should renounce consciously the utilization of forces which are of decisive importance for the direct assurance of the basic requirements of the German nation. We are not even freed of the old necessity of alloting exports first place before all other demands, and it would be a good thing if this requirement, forced on us by present need, were given more consideration by the public authorities.

Though at first glance promotion of foreign trade does not seem to be compatible with an economic mobilization directed along the

lines of strict self-sufficiency, it must not be overlooked that foreign trade may under certain circumstances also be in the interest of economic mobilization. For in times of war the demand to be covered increases greatly, and this demand can be satisfied only if the required additional labor supply is available; the workers now employed in production for foreign trade will in such a case prove a welcome and capable labor reserve. Moreover, foreign trade is also important for economic mobilization for another reason: It permits in some cases not only the sparing of domestic raw material resources, but also the formation of a more or less considerable reserve of raw materials and foodstuffs.

We have seen that in setting the aim of economic mobilization the requirements of foreign trade must be considered; economic mobilization is also subject to certain limits in the question of changes in industrial methods, products, etc. For example, if machines for a special military purpose are to be made available, it must be considered that technical progress in our times is very great, and that what is new today is often tomorrow obsolete. We must consider further that industrial activity is in many cases tied up with the location of raw-material deposits, with means of transportation, with the working population, and with many other factors, and that for this reason, too, there are limits to the realization of complete economic mobilization.

The same thing holds true for the building up of raw-material and foodstuffs reserves in peacetime; for the maintenance of considerable reserves presupposes a large amount of capital, and the poorer a nation is the less it can invest for a purpose which does not give promise of proving profitable within a reasonable time. Moreover, such stocks usually represent dead capital, which in times of good business means a burden and in times of depression a danger. In addition, it is hard to judge the amount which should be stored up; stocks require regular supervision; and in most cases there is a certain wastage. It is well known, for example, that iron ore and coal which are stored too long suffer a decrease in value, while oil "breathes" under the influence of temperature fluctuations, and much of it is lost in the form of gas.

Finding the correct limits for economic mobilization is in itself difficult enough, but there are in many respects other difficult problems in economic mobilization which are always to be found when calculating with unknown quantities.

It is well known that at present the German economy is endeavoring to secure the widest possible range of self-sufficiency. But it is impossible to say what degree of self-sufficiency is actually necessary to cover the requirements of a future war. For although it is known with certainty that in times of war the economy is faced with greater demands in the field of self-sufficiency than in times of peace, it is very difficult to estimate the extent, since this depends on the unpredictable course and length of the war itself. Moreover, in wartime it is often impossible to maintain the previous production level since production is exposed to changed conditions through reduced labor supply, diminished raw materials, semifinished goods, and means of transportation.

The shifting of industry from one section of the country to another presents a similar problem. For although it is just to demand that important industries be shifted from endangered border zones to less dangerous sections further inland, the realization of this is often very difficult. Often the industrial location was selected because the nature of the land offered unusually favorable production conditions. In such cases shifting of the location would be very injurious, and might even lead to a great reduction in efficiency. Furthermore, it must be considered that in the course of years and decades many enterprises have invested a considerable amount of capital in their plants. A shifting of the location would mean that a part of this capital investment would be lost. This would lead necessarily to the question of raising capital to replace these losses.

Although it is very difficult to shift the location of existing industries, in the establishment of new industries the requirements of economic mobilization, including location, are naturally taken into consideration.

The question of the supply and utilization of labor is also a problem which confronts economic mobilization. For the importance of the skilled worker increases as technical methods are developed and perfected. The problem lies in the fact that in time of war it will not only be necessary to fill the gaps which military drafts make in the ranks of the skilled workers, but it will also be necessary to increase considerably the number of such workers in correspondence with the increased demands placed on the economy. It will be necessary to investigate the possibility of making use, after suitable training, of women and of men unfit for Army service.

The questions raised above show that economic mobilization is today still confronted with many problems, some of which are extremely important. There is no doubt that everything is being done to master these problems, and that in the end it will be possible to find in the various fields solutions which make allowance both for the possible requirements of the future as well as for the necessities of the present.

THE ECONOMIC SITUATION IN GERMANY—STATISTICAL SUPPLEMENT TO THE WEEKLY REPORT OF THE GERMAN INSTITUTE FOR BUSINESS RESEARCH, BERLIN, JAN. 26, 1939

Statistics of finance, commodity prices, and cost of living, foreign trade

[For statistics on production, employment conditions and wages, domestic trade and consumption, transportation and communication, see Weekly Report, Jan. 11, 1939]

Progress and Unemployment in Puerto Rico

EXTENSION OF REMARKS
OF
HON. SANTIAGO IGLESIAS
RESIDENT COMMISSIONER FROM PUERTO RICO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1939

Mr. IGLESIAS. Mr. Speaker, since 1898 Puerto Rico has been under the flag of the United States, and since 1917 its residents have been citizens of the United States. Puerto Rico was taken under the flag of the United States to put an end to political persecution. The United States Government then assumed the obligation of helping the Puerto Ricans to develop the institutions and habits of democracy. During the years of this responsibility there has been great progress in the island, and, with that progress, new needs have become urgent and new demands have been urged.

Economically, Puerto Rico has been commercially progressive with the United States. It is one of the United States largest customers, ranking sixth among all the nations of the world.

It was only under the flag of the United States that the workers of Puerto Rico were free to organize a labor movement for the purpose of bettering their conditions of life and work. The A. F. of L. gave them support and counsel in formulating their union policies and methods. The labor movement in Puerto Rico includes agricultural as well as industrial workers. The effective functioning of the labor movement at the present time, when the reconstruction program was in progress in Puerto Rico, it was indispensable and desirable to get lasting results from that program. It has been the masses of the people who suffer from the existing economic conditions.

It was inevitable that the economic structure of Puerto Rico was organized at the beginning of 1900 on the basis of absentee ownership. As everywhere, the finances in sugar, fruit, tobacco, all were controlled in a great part by absentees; and naturally the result was that a very important percentage of the profits emigrated from the island to the mainland and European countries. But this condition was similar to that which exists in some sections of the mainland from which corporations suck the profits from agriculture and industry. There are purely social and economic problems of America as well as Puerto Rico, and should be solved by American principles of justice and humanity, without mention of emotional ideas and sentiments of any anti-American nature.

Puerto Rico has made real progress under the leadership of the United States and is anxious to continue without change in political relationships. Puerto Rico is aware of its duties and responsibilities and does not want to commit political suicide. The United States cannot lightly relinquish a promise assumed with the inhabitants of the island. The majority of the citizens, including the entire labor movement of Puerto Rico, is willing to keep faith with our American institutions and wants to continue its permanent union with the United States.

The United States Supreme Court in various decisions has declared that Puerto Rico is a part of the United States as an organized Territory. We should be incorporated by Congress. A proper Territorial form of government for the island should be initiated by Congress without further delay, to the end that the people of the island be enabled to rapidly develop full and complete economic and political self-government.

It must be borne in mind that there are approximately 550 people per square mile in Puerto Rico, as compared with only about 42 per square mile in the States. Thus, while Puerto Rico does a big trade and buys an almost incredibly large volume of goods from the United States each year, they could use more. Living standards for the most part still are relatively low. The diet of the bulk of the people is poorly balanced. Yet the trend is definitely upward.

Overpopulation is the greatest problem confronting Puerto Rico and is the consequence of unemployment in the island. Every Governor and the legislature, as well as every intelligent leader and responsible man and woman in Puerto Rico, is giving thought to find a cure for these dreaded social and human diseases which threaten to drive our poorer people to suffer continually. The tremendous problem of overpopulation is steadily increasing and will inevitably become very serious unless a part of our inhabitants may be transferred to the nearest American States where there might be lack of laborers. The immediate transfer of part of our population should be a solution, provided the Federal and insular governments have a previous understanding and clear agreement with the States' governments in which our citizens could find work to do, land, and housing facilities.

The dictators in Europe and Asia are solving their problems of overpopulation by taking by force other territories for their own expansion to which they transfer their citizens by the thousands.

We think that another proper form of minimizing the deplorable effects of overpopulation and unemployment would be by inaugurating and pushing the creation of more diversified industries of fair competition in Puerto Rico under the basic wage and hour law by private and governmental initiative.

Against the transfer of half a million of our workers from the island were those interests who are keeping wages down and in order to have duplicate idle hands for each job. Besides, they have helped in the creation of local emotions and sentimentalities to discourage any move that could facilitate the workers to find work out of the island and the necessary employment.

Yes, in the light of the great progress made these are serious problems to the island, to be solved as Americans within the Nation with the help of the President and Congress of the United States, with a disposition on the part of the people and the insular legislature to meet their obligations and duties toward the Nation. Steady reduction in absenteeism, the needs for bettering conditions of the masses, the need of augmenting the resources and production of food to meet the impoverished conditions of our agricultural working people, and all problems to be solved by American ideals and loyal assistance; but never can any good be done by spreading hatred and sinister propaganda of separation.

Other remedies of a radical character are being advocated as the proper cure for the economic and social ills of Puerto Rico; that is, to convert the island into a Commonwealth with a special social and economic organization regulating production and consumption by upholding the right to work, and employ every hand in agriculture and industry, producing every necessity under agreements without deriving any excessive profit at all. The governments of the world are using thousands of millions of dollars in armaments and have put millions of workers in war-industry jobs.

Puerto Rico has been helped greatly economically by President Roosevelt. This help is being diminished and may eventually fade, and for this moment, which may come, we must be prepared.

Wherever democracy has been crushed the workers, as many writers point out, "the workers' vital economy has been reduced to a mere subsistence basis, more or less * * * without liberty."

Secretary of Agriculture Wallace himself has given us a demonstration of how we should use the surpluses in production to feed the poor and destitute workers. He is willing to distribute the surpluses to help the needy and let the Government pay the subsidies.

Puerto Rico has felt that the protection of the United States Government affords the best opportunity for development and progress. We have our human problems, which are purely social and economic in character, and fundamentals and the solution by the way of proper remedies have to come from the Puerto Rican Legislature and Congress in the same way as they applied to the people of our Nation.

The Maine Fishing Industry

EXTENSION OF REMARKS

OF

HON. RALPH O. BREWSTER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1939

RESOLUTION OF THE LEGISLATURE OF THE STATE OF MAINE

Mr. BREWSTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial recently adopted by the Legislature of the State of Maine to the Congress of the United States asking proper protection for American fishermen or compensatory subsidies:

Memorial to the honorable Senate and House of Representatives of the United States of America in Congress assembled, requesting subsidies for Maine fishermen

We, your memorialists, the Senate and House of Representatives of the State of Maine in the eighty-ninth legislative session assembled, most respectfully present and petition your honorable body as follows:

Whereas for over 100 years Maine fishermen have earned a precarious and bare living; and

Whereas the competition from foreign countries, aided by Federal treaties, is such that the Maine fishermen can no longer make their bare living; and

Whereas the Maine fishermen have been a group that has always been self-reliant and expressive of the real spirit of American democracy: Now, therefore, be it

Resolved, That we, your memorialists, do hereby respectfully petition and urge that the various types of fishing in the State of Maine be protected by proper subsidies to equalize the effects of the present and future tariff rates, or that such changes and modifications of the present tariff rates shall be made that our Maine fishermen may compete upon a just and equal basis with fishermen in foreign countries; and be it further

Resolved, That a copy of this memorial, duly authenticated by the secretary of state, be immediately transmitted by the secretary of state to the proper officers and committees of the United States Senate and House of Representatives, the President of the United States, and to each of the Representatives and Senators representing the State of Maine in the United States Congress.

The Public Works Administration a Permanent Agency

EXTENSION OF REMARKS

OF

HON. JAMES P. McGRANERY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1939

Mr. McGRANERY. Mr. Speaker, in the treatment of our national economic troubles no one remedy has been so outstanding and so generally and positively conceded as such as has the Federal Public Works Administration.

The results accomplished by this agency have been so direct and so obvious, the extent of benefits has been diversified and so far flung, that it behooves us to note well its unusual accomplishments and to study its possibilities as a standard remedy.

It is hoped that the general system built up to relieve us from the suffering of the past depression need never be called upon to function again. But it is admitted by all economists that some device must be retained to act as a preventive. From the experience of the immediate past we have found in the Public Works Administration such a preventive to counteract the extreme subnormal fluctuations wherever and whenever they may develop in our industrial and economic life.

When the Public Works Administration was established by the Congress, it was to encourage recovery and provide for the construction of useful public works. In the panic which had seized upon our citizens, construction of necessary public improvements had stopped. The new agency undertook the task of restoring confidence to the people and their officials by encouraging them to proceed as their needs required. This was accomplished by providing money in the form of loans to these communities when private investors refused such help. To encourage our citizens further to carry out the construction of their needed public works, the Government, through the Public Works Administration, also agreed to become a partner with the community and to invest national money in company with the local money in the erection of the people's selected public improvements. Such aid carried the name of a P. W. A. grant.

Thus was launched the first program of the Public Works Administration and its benefits grew like a rolling snowball. Local labor gained employment and all forms of local business gained accordingly. Employment of labor throughout the Nation revived in manufacturing and shipping of the materials needed at the site of each project. Confidence was thus restored and recovery started on its way.

The lessons learned in administering the P. W. A. programs were valuable indeed and should be treasured for future use. There is no doubt that they can be applied with benefit from time to time when necessary to assist the entire Nation or any part of it.

Prior to the depression, communities throughout our Nation invested in their public improvements, in accordance with their understanding of what constituted necessity, plus that surplus beyond necessity that they fixed as proper for advancement. On an average, the investments in public works were wise, but there were many cases where municipalities were extravagant and in many other instances niggardliness was practiced.

Damage to the community in each of these latter conditions resulted from such errors. Had there existed an agency capable of advising and ready to assist when financial aid was needed and when economic conditions warranted, there would have been the happy combination of building a needed improvement at a time when local unemployment could have been relieved thereby. Haphazard methods of many communities were discovered quite accidentally by the Public Works Administration in examining applications from these communities for aid. During the functioning of this agency, many reforms and corrections were suggested to these communities and they were gratefully accepted and followed.

The people of the Nation, now coming to a fuller realization of the purpose and intent of the Public Works Administration and, having experienced the economic benefits produced by it, look upon it with high favor. The man in the street, as well as the editors of newspapers and public speakers have, with few exceptions, expressed praise for its accomplishments.

But the convincing proof of approval of this agency lies in the evidence piled up in applications filed with the P. W. A. by communities throughout the Nation. These communities of their own volition are willing to assess themselves the major part of the costs of the public projects they propose. They realize that while benefiting themselves locally by the improvements and by employment of their own citizens, they are participating in the national plan of recovery and are coworkers with their Government in a worthy cause.

In the present P. W. A. program, for which all funds have now been allotted, a multitude of applications remain on file and their sponsors hopefully await the appropriation of additional funds to permit the offers of grants. Personnel of the P. W. A. report continuously on the numerous and repeated inquiries concerning the possibility of more funds being made available for grants. In filing applications, these communities feel that they have taken time and effort and gone to some expense that should be given consideration. They feel their economic conditions would be improved by the undertaking of public-works projects with its labor and business stimulus. In short, these communities feel that the Government is under a moral obligation to execute the idea initiated by their citizens in expectancy of P. W. A. aid through a Federal grant.

To guide us in deciding on the future of the Public Works Administration, it would be well for us to look back on the past of this agency and review its accomplishments and the benefits therefrom. Without a precedent to guide it, P. W. A. launched the largest program of useful and permanent public construction in the history of the world.

Most significant, however, is the fact that this gigantic program was timed to offset the lack of construction by private builders and to bolster the courage and purpose of building normally carried on by public bodies throughout the Nation. It proved unquestionably that the P. W. A. can be used as an effective remedy against depression.

During the past 5½ years the P. W. A. skillfully has kept a happy balance as the current construction conditions required it. In this time it has made possible the preponderance of all public construction in the United States. Thus have been created billions of hours of work at prevailing fair wages on the site and two and a half times such labor "behind the lines" throughout the Nation, in the "service of supply." Reaching back to the mines and forest, through the mills and manufacturing plants, shipped by truck, train, and boat to the site, workers all along the line have gratefully received their pay envelopes for labor performed. And thus was put in motion a never-ending cycle of purchasing power and the revival of industry.

Aside from the benefits to labor, business, and industry, the good offices of P. W. A. have been widespread. The health of our citizens has been guarded by the continuance of construction of sewers, sewage plants, waterworks, and hospitals; the education of our young continued through the erection and furnishing of needed educational institutions. The housing of the poor was initiated. Industry's need of highways, bridges, and canals was remembered. A market was created for high-grade municipal bonds when banks and private investors either were unable or unwilling to buy. Systematic and sound financial methods and planning were set up by the P. W. A. in many communities lacking in this respect. New standards and patterns were established for public works and good practices were set up and impressed upon the construction industry on P. W. A. projects. By friendly Federal partnerships with the local authorities, P. W. A. has demonstrated that public works can be constructed as efficiently, as honestly, and as graftlessly as any private undertaking.

It would be a sad loss if all the lessons that have been learned, all the paths that have been pioneered, all the gains that have been made should be abandoned at this or any other time. The P. W. A. must continue to function at least in a preventive way. It has proved itself by the true test of actual accomplishment, and the country is convinced of this now. Continuance of the Federal Emergency Administration of Public Works is the wish of the Nation's citizens.

The Traffic Safety Problem

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, March 3 (legislative day of Monday, February 27), 1939

STATEMENT BY PAUL G. HOFFMAN

Mr. REYNOLDS. Mr. President, during the past 15 months there has been a consistent month-to-month decrease in the number of fatalities attributable to motor vehicle accidents. In fact, despite the tremendous volume of vehicular mileage during 1938, the number of traffic fatalities dropped about 20 percent as compared with the number in 1937. This improvement, in the form of more efficient and safer highway use, is due to many factors. The interest of the Congress in this great national problem has, of course, been helpful.

One of the basic factors, however, is the mobilization of national organizations concerned with safe highway use. These groups have been banded together in a well coordinated traffic safety program. The American Automobile Association, of which I am a vice president, is one of the cooperating groups. This constructive program has been sponsored by the automotive industry through the Automotive Safety Foundation, of which Paul G. Hoffman, president of the Studebaker Corporation, is president.

At a time when there is an effort on the part of the Government to enlist new cooperation on the part of business and industry and at a time when the business and industrial leaders of the country deserve credit for the real good they do, I ask unanimous consent to have inserted in the CONGRESSIONAL RECORD a statement by Mr. Hoffman reviewing the traffic safety problem and the achievements during 1938.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ORDERLY TRAFFIC—THE AUTOMOTIVE SAFETY OBJECTIVE

(By Paul G. Hoffman, president, Automotive Safety Foundation)

The year 1938, from the standpoint of further adjustment of motorized America to safer and more efficient use of existing traffic facilities and improvement of these facilities, was one of the most notable on record. It demonstrated, more than ever before, that a greater degree of traffic safety can be achieved; that the public is more alert to the need for such achievement; that public support is solidly behind sound programs to assure safer and more convenient highway use; and that individuals, both drivers and pedestrians, are willing to accept reasonable regulations advanced for their benefit.

Here is ample evidence that the automotive industry is attaining the objectives sought when, 3 years ago, it launched a broad, expanded traffic safety program. Out of it came the Automotive Safety Foundation for the purpose of integrating and coordinating the attack upon the traffic problem. As a result, the industry has aided in meeting a great public responsibility and contributed to greater public enjoyment of and greater public benefits from the automobile.

The basis of foundation activities is furthering the standard highway safety program for States, which has been formally endorsed by 30 national organizations, whose members represent a cross-section of American life. Direct activities are handled by 15 national organizations which are given foundation grants to augment their already comprehensive work, and through cooperation with all other agencies in accord with the spirit, purpose, and objectives of this program.

From the outset the experience and knowledge of public officials and nationally known authorities has been drawn upon to formulate the methods and techniques for advancing the traffic safety movement.

Evidence that these are sound and in the right direction is found in a reduction in the traffic death rate from 17.4 per 100,000,000 vehicle-miles in 1935 to less than 12 in 1938. This reduction of approximately one-third in the accident rate means, as against the 1935 rate, some 15,000 fewer lives lost annually and a drop in the number on the injury list of some 425,000. When this new rate is measured against the tremendous and constantly increasing vehicular mileage in the United States, it takes on real significance. Even greater encouragement is found in an appraisal of results in the traffic safety field during 1938.

THE 1938 RECORD

The direct result of the new national spirit in support of safety programs over the past year was more orderly and efficient movement of traffic over streets and highways and, more important, a reduction of 21 percent in traffic fatalities, or a decrease of more than 8,000 deaths. This improvement was accomplished in the face of a greater number of vehicle-miles traveled during the first 10 months of 1938 than ever before. Thirty-nine States and 307 cities had safety records surpassing or equaling those of previous years.

Seven States showed a reduction in traffic deaths of 30 percent or more, while 12 others had a reduction of at least 20 percent.

The record of cities during 1938 was equally as impressive. All cities reporting to the National Safety Council had, on the basis of latest available reports, an average reduction in traffic deaths of 23 percent.

In cities with accident-prevention bureaus, well-organized safety councils, active motor clubs, and other civic groups alert to traffic safety needs, the record was even better. For example, in 17 cities where accident-prevention bureaus have been installed by the International Association of Chiefs of Police there was an average reduction in traffic deaths of 33 percent. Cities in which the National Safety Council has organized active local safety councils with a full-time manager had a reduction of 33 percent. Those cities with both accident-prevention bureaus and such organized safety councils achieved an average reduction of 40 percent.

Behind these direct results were many factors which deserve mention in any summary for 1938.

Public officials exerted a more effective leadership than ever before in meeting their obligations in the many interrelated fields of official responsibility. Both in their official capacities and through their associations, the police, teachers, traffic-court judges, traffic and highway engineers, motor-vehicle administrators, and other administrative as well as legislative authorities have contributed intelligent and resultful effort.

Effective legislation important to enforcement, engineering, and other phases of accident prevention, was developed and put into effect in a number of States. As a result, 36 States now have accident-reporting laws, and all but 4 States have driver-licensing laws.

Highway planning surveys, financed jointly by the United States Bureau of Public Roads and State highway departments, are now being carried on in all but two States, Thomas H. MacDonald, Chief of the United States Bureau of Public Roads, who characterizes the new pattern for traffic safety now being advanced on a united front as a comprehensive model, says the road inventories now under way in the form of planning surveys "will furnish a secure factual basis for new policies."

The surveys cover the entire rural highway system and will give the country for the first time related data on every fact associated with the origin and destination of traffic. Such a body of fact will undoubtedly give new stimulus to the traffic-safety movement.

Particularly significant during 1938 was the attention given to the training of specialists to apply techniques proven in experience and being further improved through constant research. Permanent training centers have been established in traffic engineering at Yale; in police traffic control at Northwestern, and in teacher training at New York University. Numerous regional and State schools for short-course training in these respective fields, adhering to national standards, gave hundreds of individuals an opportunity for specialized training.

The Alfred P. Sloan gift of $25,000 was utilized entirely for training personnel. Nineteen scholarships at Yale and Northwestern were awarded to winning cities and States in the national traffic safety contest.

The first National Institute for Traffic Safety Training was held at the University of Michigan, offering six specialized short courses, sponsored cooperatively by all interested national organizations. This institute not only focused greater attention on specialized training, but also set a precedent for future activity in this field.

Another phase of specialized training, separate and apart from that offered in the traffic engineering and police fields, was in summer courses for teachers. With thousands of high schools now offering traffic-safety education which emphasizes driver training with some including at-the-wheel instruction, the demand for qualified teachers is being largely met through these summer courses. During 1938 some 38 universities and colleges sponsored teacher-training courses.

While the establishment at New York University of the center for safety education and the sponsorship of two seminars for the press were not activities of the foundation, they made specific contributions to safety which deserve to be included in any report for the year.

In addition to the industry's contribution to safety through the program of the automotive safety foundation, individual companies made many outstanding contributions through individual efforts, that will be dealt with elsewhere and in greater detail.

Any review of 1938 would be incomplete without stress being placed on public acceptance of foundation objectives. In the final analysis, it was the users of streets and highways whose support made possible the achievements above enumerated and whose better driving and walking records cut the traffic toll. To quote the American Automobile Association, which performed an outstanding service in securing public acceptance of sound traffic safety programs:

"While the drop of 20 percent or more in traffic fatalities in 1938, compared with the number a year ago, is attributable to many advances, it is apparent that motorists themselves did much to bring about improvement. Individual care and responsibility has always been and always will be the basis of traffic safety. Thus the country's motoring millions, if they are to be blamed when traffic deaths increase, justly deserve credit, when the number is reduced."

Commercial vehicle operators, both through their associations and individually, contributed measurably to the improvement of an already favorable record.

Throughout the year press, radio, and outstanding periodicals gave wholehearted support to the cause of traffic safety. Few movements in America today enjoy greater active cooperation from the forums of public expression. It evidences the high purpose of those who guide the channels of communication and their interest in the public good.

Through technical staff service on driver-license administration and accident reporting, intensified State and local organization for safety, through widely extended public educational efforts, and especially through sponsorship of the national traffic safety contest with record enrollment, the National Safety Council furnished effective national leadership in energizing and enlarging public support for the traffic safety movement.

Other civic and official organizations with which the foundation has collaborated have made effective contributions, either in the development of techniques, their application, and the training of personnel or in enlisting the informed support first of their members, and, secondly, of the general public.

APPRAISING THE 1938 RECORD

An impartial review of the year just closed leads to two very definite conclusions. First, the application and carrying through of a sound and balanced safety program by any State or community will produce almost immediate results in reducing traffic deaths and injuries, and, second, that we are on the threshold of the greatest opportunity to assure more efficient and, in turn, more economical movement of traffic by meeting the physical, regulatory, and educational requirements essential to full attainment of this objective.

Therefore, as the industry enters its fourth consecutive year of supporting a coordinated traffic safety movement, several things stand out as proven in the light of experience:

1. Since traffic is essentially a local problem, any State or community may have the degree of traffic safety its citizens and public officials determine to achieve.

2. The traffic problem will yield most readily to the application of known and proven methods and techniques by trained, career personnel in both official and nonofficial fields.

3. Public support for effective and balanced programs will be forthcoming in proportion to the degree of emphasis placed on methods for assuring public acceptance.

4. Traffic safety is as much a public responsibility as public health, fire protection, and other safeguards for the public welfare, and as such, must be publicly financed with due regard to budgetary limitations.

In this latter connection some observations seem in order. Protection of life, limb, and property has always been the primary basis of government—National, State, and local. Nevertheless, despite the benefits of our new mobility and what it has done to improve the status of our citizens, expenditures for traffic facilities, and to assure their safe use are on the whole disproportionately low as compared with other expenditures necessary to public health and public safety.

Fortunately public officials generally are showing a keener appreciation of current traffic conditions. Almost without exception States and communities are more and more realizing that orderly traffic—the safe and efficient movement of both motorists and pedestrians—is an essential economy. They are showing an almost unprecedented desire to cooperate with sincerely purposed agencies seeking to bring nearer the day when orderly traffic will be an actuality. It seems nearer today than at any time in the motor age and furnishes new hope for a motor-minded nation.

LOOKING AHEAD

While we can find much comfort in the substantially lower national total of highway fatalities during 1938, the disparity in traffic death rates as between States and cities is a cause for real concern; for example, 5.2 traffic deaths per 100,000,000 vehicle-miles in Rhode Island as compared with 20.8 in Alabama.

It is entirely realistic to say that by centering attention on the areas which have high traffic death rates, and maintaining the gains we have made in areas where the rate has been lowered, the present national rate of 12 deaths per 100,000,000 vehicle-miles can be reduced to 6 in a reasonable period of years.

Another cause of serious concern is the pedestrian accident problem, particularly when combined with the whole problem of night accidents. Four out of ten traffic fatalities are pedestrians. In urban areas the ratio is from 60 percent upward. As a general rule, these pedestrian fatalities involve youngsters and persons of advanced years. The real need in connection with the phase of the traffic problem is the perfecting of new techniques for meeting it.

Progress toward solution of the night accident and pedestrian problems may reasonably be expected to stem from revisions made last year in the Uniform Motor Vehicle Code and as the result of exhaustive studies now being made by eminently qualified national authorities on the various aspects of those subjects.

An indication of the manner in which such problems respond to effective treatment is found in a New Jersey report where last year State-owned and operated vehicle inspection stations were installed. Emphasis was placed on headlight maintenance and in the first 10 months of this activity, night pedestrian fatalities dropped 44 percent. Headlight inspection is credited with having figured prominently in this reduction.

Many long-range items of public policy bearing on the broad problem of highway traffic merit early attention and action. Among these is the need for a modernized land-acquisition policy, high lighted at the 1938 convention of the American Association of State Highway Officials as essential if needed rights-of-way, amortized over a long period of years, are to be secured in the development of special motor roads to provide for the safe, uninterrupted, and rapid flow of traffic to relieve seriously congested traffic centers.

On other important major problems the foundation is providing financial or other assistance on special researches. Among these are the relation of alcohol to accidents, night accidents, pedestrians, the bicycle, modernization, and standardization of traffic court procedures, improved standards of traffic control administration, and enforcement.

Obviously, the Automotive Safety Foundation can render its greatest public service by continuing to stimulate and coordinate existing and future traffic safety programs through aid to groups which, in turn, will help to secure for the American people the efficiency and safety they have a right to expect in highway use.

It is concerned with the translation of national interest into effective local action. Particularly is this true as regards the

application of proven traffic safety techniques to areas where they are most needed. It is inevitable that an industry which has become an integral and vital part of our economic system should take steps to insure that the purchasers of its products should have the most efficient use of the motor vehicle.

This emphasizes the need for adequate facilities—not only physical improvement of the roads, elevated highways, separate lanes of travel, grade separations at rail crossings, and urban parking facilities, but also modernized enforcement methods, improved court procedures, uniformity in traffic regulation and traffic-safety education, improved administrative procedures, and increased employment of trained career personnel.

The immediate outlook for continued reductions in traffic accidents and injuries is tempered by the prospects of a peak year of travel in 1939. The very size of the 1938 reductions makes unlikely another such sizable decrease. We can, however, anticipate a continually improving rate, provided there is no let-up in our activities. It is simply a question of how generally we apply the techniques which have already proven successful.

Finally it should again be noted that progress is being made. Not only is this so when measured by the most significant single factor—the rate of fatalities per 100,000,000 vehicle-miles, which has declined steadily for 4 years—but also in the actual reduction in total fatalities, dropping in 1938 from 39,500 to approximately 31,500.

When it is considered that the motor age really covers a span of less than 30 years; that the greater majority of our streets and roads were primarily designed for horse-drawn traffic; and that nearly 30,000,000 motor vehicles of varying types and in the hands of individuals of varying temperament and qualification move daily over all traffic arteries, highway transportation is a marvel of efficiency and safety.

With cars continuously made safer, with an intensive program of education for the youth of today who will be tomorrow's drivers, and with the realization of a vastly improved highway system into which the maximum of safety has been built, it is reasonable to expect that the next 30 years will show even greater progress than has taken place in the last 30 toward the facile, efficient, and pleasant use of man's greatest servant, the motor vehicle.

Political Survey by Fortune Magazine

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Friday, March 3 (legislative day of Monday, February 27), 1939

ARTICLE BY ERNEST K. LINDLEY IN THE WASHINGTON POST OF MARCH 3, 1939

Mr. BILBO. Mr. President, I present an article from this morning's Washington Post, written by Mr. Ernest K. Lindley, and ask that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of March 3, 1939]

FORTUNE SURVEY—NEW DEAL APPROVED

(By Ernest K. Lindley)

If you believe what you hear around Washington, President Roosevelt and his policies have lost the confidence of the country and the New Deal is all "washed up." The Republicans and conservative Democrats have built up such a bear market on Roosevelt that even some of the New Dealers are selling him short.

Now, however, Fortune magazine appears with a survey showing that the President and his policies are approved by 63.5 percent of the voters who have an opinion on the subject. As less than 6 percent of all those polled lacked a definite opinion one way or the other, this is an impressive verdict for Mr. Roosevelt. The answer shows also that during the last 2 months the popularity of Mr. Roosevelt and the New Deal has increased.

Obviously, somebody is out of touch with the real sentiments of the American people. This column offers no opinion as to the accuracy of the Fortune survey, except to recall that in 1936 it forecast Mr. Roosevelt's majority within 1 percent. If the Fortune survey is right, the anti-New Deal Democrats from right-wingers such as Senator BYRD down through such "moderates" as JOHN N. GARNER either don't know what a majority of the voters really think or are ignoring it. As Mr. GARNER, so far as I know, has never pretended to be more than a good practical politician, I assume that he would not knowingly defy the settled opinions of the electorate.

INCORRECT READINGS OF PUBLIC MIND

If the Fortune survey is even approximately correct, a great many Democrats in Congress have let themselves be stampeded into the anti-Roosevelt camp by trepidations based on incorrect readings of the public mind. The questions asked in this survey were general in character, of course. Most people who approve on the whole of Mr. Roosevelt and his policies disagree with him in various particulars. An overwhelming vote for him is not a demand that Congress act as his "rubber stamp." Neither is it a demand that Congress lend itself to the uses of a "rubber-stamp" opposition. It is a warning to the Members of Congress, and especially to the Democrats, that they should think twice—or three or four times—before they flout him.

The Fortune survey also shows that among the voters who now approve of Roosevelt, approximately 58 percent would vote for him again in 1940, while about 21 percent say they would not, and about 21 percent are doubtful.

The first figure is roughly 37 percent of the whole electorate and the others are about 13 percent each. These returns can be used to show, negatively, that Franklin D. Roosevelt could not win as a third-term candidate unless he received the votes of all those who say now that they do not know whether or not they would vote for him in 1940. But the returns indicate, also, that the "no-third-term" tradition represents no deep conviction on the part of a great majority of the American people.

ONLY 13 PERCENT DISFAVOR THE THIRD TERM

There is no way of knowing, from this survey, how the people who are already against Roosevelt feel about the third-term tradition in the abstract. What it has shown is that only 13 percent of the voters feel strongly enough about the tradition to indicate that they would not vote against Mr. Roosevelt because of it in 1940, and only 13 percent—for various reasons—are doubtful.

Many hearty Roosevelt supporters of my acquaintance are strongly against a third term—some of them on general principles, some because they want to take the progressive Democratic movement out from under the shadow of a single personality, some because they believe that a leader of different talents and personality would be better fitted for the task of carrying forward the work Mr. Roosevelt has begun.

RETAINS CONFIDENCE OF GREAT MAJORITY

Yet I have heard many of those same individuals say, when pinned down, that if they had to choose between a third term and the election of a conservative Democrat or the loss of the election to a conservative Republican, they would vote for Mr. Roosevelt again. Probably many of the Roosevelt supporters who say now that they woud not vote for him in 1940 would change their minds if the alternatives were less acceptable than those they supposed when they gave their answers to Fortune.

Mr. Roosevelt does not want a third term; of that all of his close associates whom I know are convinced. But he retains the confidence of a great majority of the electorate. Even with the handicap of the third-term tradition he remains the strongest candidate now in sight on the Democratic side. By the spring of 1940 the movement to draft him may be too powerful to be resisted.

Racial Persecution and Discrimination

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1939

ARTICLE AND EDITORIAL FROM THE ST. LOUIS POST-DISPATCH

Mr. ANDERSON of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein two short editorials from the St. Louis Post-Dispatch.

Mr. Speaker, here in America we are quick to criticize other nations for the encouragement of class and racial hatred. We are quick to express sympathy for an oppressed class and bitter in our condemnation of all forms of racial persecution and discrimination. But let us not close our eyes to the fact that there is a growing tendency here in America to build up a strong dislike if not a hatred for the German people because of certain activities of the present rulers of the German nation.

Of all the peoples who make up America none has contributed more to this Nation than the German. Let us, therefore, be American enough to disassociate the German people, especially here in America, from the conduct and activities of the present rulers of the German nation.

In my district out in Missouri—in St. Louis—the German-American has long been recognized as among the very best

of our citizens. Some of the great leaders of our country have come from this stock.

The St. Louis Post-Dispatch on March 1, 1939, ran an article by Mr. Edwin Muller, noted journalist, who has just returned from an extended visit in Germany. Mr. Muller's article is well worth our study and consideration. It is certainly worthy of a place here in the CONGRESSIONAL RECORD. It is as follows:

[From the St. Louis Post-Dispatch of March 1, 1939]

NEWS FROM INSIDE GERMANY—RESENTMENT OF ANTI-SEMITIC OUTRAGES IS WIDESPREAD AND GROWING IN REICH, SAYS OBSERVER; FREQUENT PROTESTS WERE HEARD AGAINST EXTREME PERSECUTION LAST NOVEMBER, AND MANY BRAVED WRATH OF THE GESTAPO TO GIVE AID TO VICTIMS; CONTRAST BETWEEN OSTENTATION OF THE PARTY LEADERS AND PRIVATION OF THE MASSES SERVES TO AGGRAVATE DISCONTENT

(By Edwin Muller, American journalist recently returned from Germany, in the Commentator; reprinted from Reader's Digest)

There's one story that the newspaper correspondents don't send from Germany. It's surprising how much they are allowed to send. Stories of violence against the Jews, of priests and pastors sent to prison without trial, are passed without question—because the Nazi sincerely believe that those things are right.

But one topic is absolutely forbidden. Anything that suggests the disapproval of a part of the German people for their Nazi rulers, the increasing openness with which these discontented Germans say what they think—you can't write about that.

Even as to the persecution of the Jews after last November 10, a hundred corroborated stories were never sent. Where the newspaper accounts lacked most was in reporting the reaction of the German people. It may turn out that the most important thing that occurred on and after November 10 was not what happened to the Jews but what happened to the Germans.

I was in Germany during the Jewish persecutions and their aftermath. I lived in big cities and in villages, in north and south. I talked with many Germans of all classes, with well-informed and trustworthy foreign observers, with members of the diplomatic corps, with representatives of American firms in Germany. I came away with the conviction that the unorganized but outspoken opposition to the Nazis is a story that needs to be told.

To begin with, there is economic discontent. It is true that there is no complete destitution in Germany. But almost nobody is allowed to get much above the bare level of subsistence. The man who had a job before Hitler—and he outnumbers the others 3 to 1—knows that his job isn't worth as much as it was before. Prices have gone up, pay has been cut, and it is subject to all kinds of new levies for the party and for the Government.

Now, people will endure privation if they know that their rulers are enduring it with them. The Nazi leaders have always posed as Spartans, despising luxury. Maybe they were at first, but not any more. The party leaders are building themselves big estates, buying custom-made cars, enjoying luxury. The people don't like it.

Dr. Goebbels bought a large island in a lake near Berlin. He made a fine estate of it, with hothouses and riding horses. Then he decided that it would help his popularity to show a motion picture of his home life.

That was a mistake. A dark movie house, even in Berlin, is a fairly safe place to express disapproval. One low hiss inspires another, quickly others join in and the volume grows. Presently that movie house sounded like steam escaping from a hundred pipes. The film was never shown again.

The typical storm trooper of the older vintage has been bewildered and disappointed. Lately there have been some efforts to benefit him. One reason for the terror of November 10 was to turn over Jewish shops and other small businesses to deserving storm troopers.

I asked an official whether the German people would have gone to war if there had been no "peace" of Munich. Yes, he thought, they would have marched—but puzzled and desperately reluctant. Even in the Army there was dissatisfaction. Army officers have protested publicly against actions of the Nazis.

After the occupation of the Sudetenland, the Nazis made a superb propaganda film. It showed the meetings at Berchtesgaden and Godesberg—Hitler well in the center of the stage, always photographed standing a step or two above Chamberlain. I saw that film once in Munich and twice in Berlin. The reactions of the three audiences were precisely the same. There was no reaction. Correspondents say that is typical of German audiences nowadays.

Early last fall one sensed anti-Nazi feeling, in all classes and in all parts of the country. Yet it was almost never expressed in open talk—until after November 10, when the anti-Jewish raids began.

Jews were arrested by the scores of thousands and crowded into concentration camps. Their treatment was such that many walked out into the forbidden zone and were shot down by the guards, or threw themselves into the charged barbed wire and were electrocuted.

Meanwhile their homes were invaded. All over Germany the women and children were turned out to spend the November night on park benches or in the fields. In Neu Isenberg the patients in the Home for Nursing and Pregnant Mothers were turned out without warm clothing. Many Jewish men were called to their doors by storm troopers and shot down.

And what did the German people think of it? It was the first time that most of the crowds in the streets had seen such things with their own eyes. Almost none of them took any part in the smashing. Some of them watched with approval. They were the sort you'd find in any country, the potential Ku-Kluxers. But most of the men and women in those crowds were shocked and stunned. Nearly every correspondent says that someone in the crowd would come up and say, "It is not the German people who are doing this."

The Nazi leaders were amazed. They took action. By noon of November 11 one heard specific accounts of Germans who had been sent to concentration camps for saying they were ashamed of what had happened. But it would have been impossible to arrest a tenth of those who spoke out against the Government. There were too many of them.

So the great propaganda machine was turned on. For weeks after November 10 German newspapers devoted more than half their space to justifying the raids, to attacks on Jews and their supporters. Some of their material would be unprintable in most countries. Radio and movies were employed. Anti-Jewish mass meetings were held in the cities—20 of them in 1 day in Munich alone. At the Munich meeting, which I attended, the people sat through all the speeches but only a minority applauded.

The propaganda hasn't won—not yet. Freedom of speech hasn't been crushed. There's more of it since November 10, and it may be cumulative. When one man boldly speaks his mind, he may inspire his neighbor to do likewise. Men of good will begin to recognize one another.

There is a battle being fought in Germany today. On one side is the greatest machine that was ever built for controlling men's minds. On the other side are the Germans who are unconvinced and protesting. Every day the Fuehrer proclaims that his nation is solidly behind him; but his actions show that he doesn't believe it. He hurries his people from one crisis to another, giving them no time to think, as if he were afraid of waiting for public opinion to catch up with him.

What can these other Germans do about it? Some pessimists say the opposition can do nothing. Others are not so sure. One of the most astute and experienced observers in Germany told me that he stays there for one purpose—to see the collapse of the Hitler regime. How it will come he doesn't predict—whether by war or economic disaster or by the revolt of the army—but that it will come sooner or later, he is sure.

In this battle, Nazi propaganda has won two preliminary engagements. It has convinced the German people that the democracies hate them, threaten to crush them. And it has convinced the democracies that the Germans are all united behind their Government or afraid to speak a word against it. Neither is true.

The protesting Germans need encouragement. If there were some way in which their friends in the rest of the world could get through to them * * *

On the same day of Mr. Muller's article the Post-Dispatch ran a very intelligent and very American editorial accompanying it. This editorial is equally worthy of our consideration. I offer it here in the RECORD as a true appraisal of our debt to the German people who have contributed so much to the building of our Nation.

[From the St. Louis Post-Dispatch of March 1, 1939]

THE GERMAN PEOPLE

Are the German people solidly behind Hitler and the excesses of his regime? This question, often asked, is answered in part by Edwin Muller's remarkable article, reprinted today under the cartoon, which calls attention to spontaneous demonstrations of dissent and dissatisfaction within Germany. Although dread of the concentration camp must haunt the heart of every German, it did not prevent an audience from hissing a motion picture of Dr. Goebbels' lavish estate near Berlin, nor did it restrain Germans, shocked at the latest pogroms, from saying to foreign correspondents: "It is not the German people who are doing this."

Mr. Muller's observations are borne out by other reports seeping through the iron censorship. Americans in Germany, who have been led to believe that Hitler is idolized by his people, are astonished to discover the almost complete absence of applause when he rides through the streets of Berlin. An Englishman, writing in the New Statesman and Nation of London, says: "The plea of so many German friends has been to 'make England understand, please, that this is not the work of the German people—we are horrified at what the Nazis have done to our Jewish friends—we are not such barbarians.'"

These and other reports destroy the myth, carefully fostered by Berlin propagandists, that the Germans are united behind their leader. But there remains the companion myth, likewise carefully fostered, that the democracies are intent upon crushing the German people. It is no wonder that many Germans, fed upon this falsehood, cling to Hitlerism as a protection against such a fate. If they knew the truth, the Germans who protest against Nazi excesses might have numerous additions to their ranks.

What under other circumstances would be a truism becomes, therefore, especially worth saying. It is that America bears no grudge against the Germans as a people. We have no desire to crush them. On the contrary, we fervently hope the day will soon come when they will be freed of their bondage and when they will once again enjoy the blessings of liberty and the warm comradeship of other peoples.

St. Louis knows the German people because it is made up in large part of men and women of German descent. Some of the most glorious entries in its annals were written by Germans. We revere the name of the great Carl Schurz, whose 110th birthday anniversary falls tomorrow. Schurz was editor of the Westliche Post, and joint owner with Emil Preetorius. For 6 years he brilliantly represented Missouri in the United States Senate.

Along with Schurz and Preetorius, the galaxy of German names in this city includes their companion, Carl Daenzer, the publisher; Louis Lange, the editor, member of the same circle; the erudite Dr. Eduard Preuss; Carl Wimar, the celebrated painter; Frederick Lehmann, former Solicitor General of the United States; Richard Barthold, able public servant; Adolphus Busch, founder of a great industry; Charles Nagel, distinguished lawyer and a member of President Taft's Cabinet; and many others.

Even more pertinent, perhaps, is the fact that St. Louis knows the German as a kindly, thoughtful neighbor; a man of character and industry, with a flair for friendliness and gaiety and wholesome good living. Incidentally, the percentage of St. Louis Germans actively interested in the Nazi movement is very small. And the experience of St. Louis is the experience with Germans elsewhere in this country. They are good businessmen, good workers, good farmers, good citizens—and the country has infinitely benefited from the fact that they formed a large part of the immigration tide of the nineteenth century. Many came after the failure of the revolution of 1848, to seek in this country the liberty denied them in the fatherland.

The Germans of the United States cannot be essentially different from the Germans in Germany. Hence it is not hard to believe that there is a revulsion in Germany against the excesses of Hitlerism. It is in the highest degree unfortunate if the Germans over there continue to be deluded with the false and malicious assertion that America, which does not like Hitler's leadership, extends this dislike to the whole German people.

The Relief Problem

EXTENSION OF REMARKS

OF

HON. JOE STARNES

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1939

Mr. STARNES of Alabama. Mr. Speaker, a bill, now pending in the Senate and apparently receiving serious consideration, has for its purpose the establishment of a permanent Bureau of Public Works which would include therein various existing agencies of the Government. While I have not had an opportunity to thoroughly study the provisions of the bill, I do not believe the proposed consolidation would be either economical or efficient.

Apparently the measure has for its purpose a certain "reform" in relief administration which we can all admit is badly needed. However, to tie up the relief problem with various other important activities of the Government is unwise.

In the first place, I do not agree with the author of the bill, the distinguished Senator from South Carolina [Mr. BYRNES], that relief needs to be self-perpetuating. I have never subscribed to the theory that Government handling of relief is a permanent matter. I distinctly do not like the idea of a permanent W. P. A.

The proposal would include in the new Cabinet department relief, public works, employment service, social-security aids, and so forth. The set-up would not result in lowering the cost of relief nor in reducing unemployment. The relief problem would not be solved by this legislation, and I see no reason, therefore, for considering it.

Federal contributions to relief will undoubtedly be necessary as long as we have large numbers of unemployed Americans, but the extent of such contributions can never be gaged correctly by any such formula set up in the Byrnes bill. The formula proposed in the bill authorizes the Government to apportion relief amounts among the States one-half in the ratio which the number of unemployed persons in any one State bears to the total number of unemployed and one-half in the ratio which the population of each State bears to the total population of all the States. The New York Times editorially comments on the formula as follows:

The flat population basis is unsound not only because it bears no direct relation to the relief needs of the individual States, but because it proposes to pay as much per person to the States where the standard of living is very low as it does to States where the standard of living is very high. Unless actual prevailing differences among the standards of living of the different States receive adequate recognition in the distribution of relief funds, then the States with higher standards of living must either receive grossly inadequate amounts or the States with the lower standards must get wastefully high amounts that would act to perpetuate relief and swell the rolls in those States. The unemployment basis would be better than the flat population basis on grounds of equity, but in practice "unemployment" is difficult to define, and we have not yet succeeded in devising any system to collect reliable figures that would be sufficiently up to date for this purpose.

From an economical viewpoint there is no reason to believe that the cost of relief will be reduced by this bill, which provides for Federal contributions of two-thirds of the cost of any project undertaken. Under the present public-works program functioning through the Public Works Administration, communities are required to share the cost on a 55–45 percent basis. That is, the sponsor must pay most of the cost. To change this ratio on public works and require the Government to pay two-thirds of the cost would be extremely extravagant and unnecessary. I venture to state that every conscientious taxpaying citizen of the country would oppose this provision of the bill.

Another objectionable feature of this unified set-up, as it relates to public works, concerns the matter of tempting communities to undertake needless projects. If a community is required to pay only one-third of the cost, unnecessary projects will undoubtedly be sponsored. Under the present P. W. A. system communities must bear the larger cost and only those facilities which are actually needed are erected.

The provisions of this legislation are so drastic and unwise that it should have the united opposition of the House and Senate. The fact that so many varying proposals regarding the relief problem have been presented in this body is definite evidence that the subject must be fully aired and that some revision of present relief methods is vitally necessary. However, a consolidation of wholly unrelated departments of Government is not the proper way to bring this about.

It seems to me from conversations I have had with numerous Members of the House on both sides of the aisle that what is desired is economy in Government relief expenditures. Consolidating home-relief and social-security problems would bring about some measure of economy, and because the subjects are related there would be little objection to such a move. However, I cannot see the wisdom of including the public-works-construction program with these purely social matters. The Public Works Administration is not in any sense a work-relief agency and should not be included in any merger of such agencies.

RESOLUTION OF THOMAS JEFFERSON MEMORIAL COMMISSION AND STATEMENT BY JOSEPH P. TUMULTY

Mr. SMITH of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution passed yesterday by the Thomas Jefferson Memorial Commission in reference to the death of the late John J. Boylan, of New York, and also a brief statement by Joseph P. Tumulty:

The Thomas Jefferson Memorial Commission desires to record its deep sense of loss at the passing of its chairman, the late John J. Boylan, of New York. The fine concept which brought

this Commission into being came from Mr. Boylan, a true lover of Thomas Jefferson and of the principles he espoused in life.

John J. Boylan brought to the deliberations of this Commission not only the knowledge and ripe experience acquired in many years of public service, but also those qualities of integrity and sound judgment so necessary to the faithful discharge of his duties as a member of the Commission.

While a member of this Commission he did what was characteristic of the man. He gave to its noble work the rare gift of life, love, and affection, and though ill and suffering, he carried on in splendid fashion the important work committed to his care, with fine poise and patience and with never a boast upon his lips.

The Commission orders that a copy of this resolution be transmitted to the widow and family of the late John J. Boylan with the expression of the very sincere sympathy of the members of the Commission.

Mr. TUMULTY. In presenting this resolution may I say a few words.

This plain man, born in an unpretentious part of the city of New York, wearing upon his good face the smudge of honest poverty, dreamed a beautiful dream of a memorial in Washington to Thomas Jefferson. Quietly, unostentatiously, he went about his work, scorning vulgar display, happy in the thought that after he had departed, there would be left behind those who would not mock the thing that his vision built to an unmeasured monument.

Somehow, there was about John Boylan a sort of loneliness, that kind of sadness that always makes its indelible imprint upon the face of a man, who, making a tryst with the future, dreams great dreams.

It was a pleasure to work with him, to sit by his side as I was accustomed to do, while quietly, humbly he expressed his views regarding every phase of our Commission's activities. Always he gained his fine objective by openness and honorable action, his fine nature making it impossible for him ever to use unworthy arguments to accomplish his humane objectives.

When the Jefferson Memorial is completed, there will be one name, like that of Abou ben Adhem, which will lead the list and that name will be our altogether lovely friend, John Boylan. As we behold that name, the words of John Drinkwater will flash into our minds:

"Shall a man understand,
He shall know bitterness because his kind,
Being perplexed of mind,
Hold issues even that are nothing mated.
And he shall give
Counsel out of his wisdom that none shall hear,
And steadfast in vain persuasion must he live,
And unabated
Shall his temptation be."

As a personality, he had about him the grandeur of the old-fashioned man, with a noble vision directed into the far reaches of the future.

John Galsworthy must have had this type of man in mind when he drew a portrait of an old friend in the story A Portrait, an excerpt from which is as follows:

"I know how big and sane and sweet he was. His breed is dying now; it has nearly gone. But as I remember him with that great, quiet forehead, with his tenderness and his glance which traveled to the heart of what it rested on, I despair of seeing his like again. For, with him there seems to me to have passed away a principle, a golden rule of life, nay, more—a spirit, the soul of balance. It has stolen away, as in the early morning the stars steal out of the sky. He knew its tranquil secret, and where he is there must it still be hovering."

To him, God was more than a nodding star atop a windy hill. Dear John Boylan, the tired heart, beloved friend in all seasons, turned home and thus the end of his brooding came.

Veterans in the Seventy-sixth Congress

EXTENSION OF REMARKS
OF

LIST OF FORMER SERVICE MEN OF THE SPANISH-AMERICAN WAR, MEXICAN PUNITIVE EXPEDITION, AND THE WORLD WAR IN THE SEVENTY-SIXTH CONGRESS

Mr. BULWINKLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following list of former service men of the Spanish-American War, Mexican Punitive Expedition, and the World War in the Seventy-sixth Congress:

Senators: Alva B. Adams, Charles O. Andrews, W. Warren Barbour, Edward R. Burke, Bennett Champ Clark, Tom Connally, John A. Danaher, Allen J. Ellender, Ernest W. Gibson, Guy M. Gillette, Theodore F. Green, Chan Gurney, Carl Hayden, Lister Hill, Josh Lee, J. Hamilton Lewis, Scott W. Lucas, Ernest Lundeen, Francis T. Maloney, Sherman Minton, Matthew M. Neely, Claude Pepper, Richard B. Russell, Jr., Lewis B. Schwellenbach, Harry S. Truman, Millard E. Tydings. Total, 26.

Representatives: John G. Alexander, Leo E. Allen, C. Arthur Anderson, Walter G. Andrews, Leslie C. Arends, Albert E. Austin, Thomas R. Ball, Graham A. Barden, James M. Barnes, Harry P. Beam, John W. Boehne, Jr., Chester C. Bolton, Michael J. Bradley, Ralph O. Brewster, Overton Brooks, Joseph R. Bryson, Alfred L. Bulwinkle, William D. Byron, Millard F. Caldwell, Frank Carlson, Wilburn Cartwright, Francis H. Case, Joseph E. Casey, Walter Chandler, Robert B. Chiperfield, Ralph E. Church, Charles R. Clason, Harry B. Coffee, William P. Cole, Jr., William M. Colmer, Lawrence J. Connery, Harold D. Cooley, Jere Cooper, Francis D. Culkin, Colgate W. Darden, Jr., Everett M. Dirksen, Carl T. Durham, Henry C. Dworshak, Thomas M. Eaton, Herman P. Eberharter, Andrew Edmiston, Charles H. Elston, Albert J. Engel, Charles I. Faddis, James H. Fay, Ivor D. Fenton, Hamilton Fish, Thomas A. Flaherty, J. Harold Flannery, Frank W. Fries, Fred C. Gartner, Joseph A. Gavagan, Bertrand W. Gearhart, Lee E. Geyer, George M. Grant, John K. Griffith, John W. Gwynne, Charles A. Halleck, Clarence E. Hancock, Forest A. Harness, J. Francis Harter, Charles Hawks, Jr., Arthur D. Healey, William E. Hess, Carl Hinshaw, Frank E. Hook, Clifford R. Hope, Frank O. Horton, John M. Houston, John F. Hunter, Ed. V. Izac, Pete Jarman, Ben F. Jensen, Jed Johnson, Marvin Jones, Robert W. Kean, Edward A. Kelly, Michael J. Kirwan, Wade H. Kitchens, John C. Kunkel, William P. Lambertson, Gerald W. Landis, Karl M. LeCompte, Lawrence Lewis, John W. McCormack, James P. McGranery, Charles F. McLaughlin, Clarence J. McLeod, John L. McMillan, Melvin J. Maas, John A. Martin, Thomas E. Martin, Sam C. Massingale, Matthew J. Merritt, Earl C. Michener, William J. Miller, B. J. Monkiewicz, James W. Mott, Robert L. Mouton, Jack Nichols, W. F. Norrell, Joseph J. O'Brien, James C. Oliver, Emmet O'Neal, Claude V. Parsons, Wright Patman, Luther Patrick, Hugh Peterson, J. Hardin Peterson, W. R. Poage, James G. Polk, D. Lane Powers, John E. Rankin, B. Carroll Reece, Chauncey W. Reed, Edward H. Rees, James P. Richards, Charles F. Risk, A. Willis Robertson, Robert L. Rodgers, Lansdale G. Sasscer, Dave E. Satterfield, Jr., John C. Schafer, Pius L. Schwert, James G. Scrugham, James Seccombe, James A. Shanley, Dewey Short, Richard M. Simpson, Martin F. Smith, T. V. Smith, Andrew L. Somers, John J. Sparkman, Raymond S. Springer, Joe Starnes, Foster Stearns, William H. Sutphin, H. O. Talle, Rudolph G. Tenerowicz, David D. Terry, Albert Thomas, J. Parnell Thomas, James E. Van Zandt, Beverly M. Vincent, John M. Vorys, James W. Wadsworth, Mon C. Wallgren, Francis E. Walter, Dudley A. White, Richard B. Wigglesworth, Thomas D. Winter, Jesse P. Wolcott, Roy O. Woodruff, Oscar Youngdahl, Orville Zimmerman, Samuel W. King (Delegate, Hawaii). Total, 155.

National Defense

EXTENSION OF REMARKS
OF
HON. RENÉ L. DEROUEN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1939

RADIO ADDRESS BY HON. ROBERT L. MOUTON, OF LOUISIANA, MARCH 2, 1939

Mr. DEROUEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of my colleague from Louisiana, Hon. ROBERT L. MOUTON:

As I observe the trend of world events and reflect upon the tremendous drama that is being enacted, a drama in which the forces of evil and oppression have built themselves into a most formidable and horrible threat against all of the institutions we have been taught to revere; as I watch this drama unfold, and consider my own country, I cannot help but feel thankful that we have the world's greatest democracy and that I am fortunate enough to live here. The world issue today revolves about two conflicting idealogies of government—democratic and totalitarian. One is committed to the responsibility of equalizing and preserving human rights, of guaranteeing to man the privilege accorded him by the Creator; the other would turn the clock back to the Dark Ages and regiment men to masses of hopeless, helpless, futureless, mechanical automatons. It countenances and advocates the hateful doctrine of might over right, of oppression over humanitarianism, of ruthlessness and barbarity over decency and civilization. It throttles individualism, freedom of worship, of speech, of assembly, and all other divine rights and privileges that our forefathers fought and died for. In short, one stands for freedom, the other for slavery.

Let's be realists about this great problem that besets the world we live in today. Let's look at facts as they are and recognize the situation for what it is—a most serious menace to all of the things we hold most dear. And let's not bring ourselves to the silly conclusion that the shameful "peace of Munich" ended the designs of the totalitarian states. There was a time, you may remember, when reports of totalitarian designs were regarded as "fantastic" were dubbed "scare-mongers," and when reasonable people simply could not bring themselves to believe that great nations, in an age of enlightenment, could take the dark road to conquest, ruthlessness, and oppression. But the answer to all of that is Manchuria, Ethiopia, Austria, and Czechoslovakia. And the important question now is, "Where will the blow next fall?" "What people are being measured for the yoke of oppression?"

Let's not labor under any false illusions about the issue; it's democracy and totalitarianism. The totalitarian states are on the march. Their aim is world domination, and only three powerful nations bar the way—Great Britain, France, and our own United States. France and England are the last formidable barriers in Europe. Theirs is the task of keeping alight the flame of freedom in the Old World. And in their ultimate fate lies the answer to our future.

Westward of Europe lies South America, a vast continent, rich in fruitful lands, admirable for colonization, ideal for export outlets, a treasure house of natural wealth and an overpowering temptation for the "have not" nations. And need I make mention of the fact that resourceful representatives of these nations are already there, preparing the way, building for the future? All of you good people read the papers, the magazines, and listen to radio addresses. You know of the desperate and ruthless effort afoot to wrest profitable South American markets from our American exports; of the flood of propaganda aimed to discredit democratic institutions and to undermine the influence of the United States; and of the legion of agents disseminating the hideous gospel of totalitarianism throughout all of Latin America. And doubtless you know of the revolts in Brazil and in Chile, subsidized by totalitarian money, supported by totalitarian munitions, and fanned to flame by totalitarian emissaries.

Under these circumstances is it "fantastic" to speculate upon what will happen with France and England out of the way? Is it "scare-mongering" to envision or predict more aggressive operations against Latin America? Operations involving open and active participation in the political affairs of our neighbors to the south? And in such event, would not the Monroe Doctrine be definitely involved? Would it not bring us all, here in the United States, squarely into the picture?

Off the coast of French Indochina lies the island of Hainan. This strategic spot is about 200 miles from Hong Kong and about 150 miles from Singapore. Early in the past month the Japanese walked in and occupied it. Thus with this outpost and the naval bases in the mandated islands to the east the Philippines are surrounded and are comparatively easy prey to Japanese conquest. Now, whichever way you choose to look at it, the resultant situation is far too serious to be a matter of indifference to the United States. Let's forget all about the Philippines and about anything that even savors of sending troops or ships to Asiatic battlefields. That is not the crux of the situation. But if the totalitarian powers in Europe establish themselves in Spain and Africa they will be masters of the Atlantic; and the Japs, with a figurative pistol at the head of the British base at Singapore, will come very close to being masters of the Pacific. And in such event the United States, with only one navy to defend two oceans, will find itself isolated in a way that will not be pleasing even to the isolationists. The United States cannot be indifferent to a situation which promises perhaps within the next few months to establish in both oceans at once and at strategic points controlling both oceans an alliance of war mad, conquest bent, highly armed powers. The situation is not concerned with our intervening in Europe or Asia. It is a question of preserving our security in the two oceans amidst which the American continents are placed.

The President and his military advisers undoubtedly recognize the seriousness and proportions of the world situation and of our position in that situation. And the President has been attempting to make provisions for the future in the form of a national-defense program adequate to protect our shores from invasion, ample to bring respect for the Monroe Doctrine, and sufficient to enable our Government to speak with those who do the "demanding" for the totalitarians with conviction. And, my friends, there must be no tampering with this program. It is vital to the future welfare of all of us. It is designed to prevent the necessity for an "American Munich," designed to keep "government of the people, for the people, and by the people" forever secure in the Western Hemisphere. There must be no subjecting of it to the uncertain mold of political design or expediency. It means too much to the Nation and to the world. Most of my colleagues in the House, I am happy to say, recognize its vital need and are supporting it wholeheartedly; many have cast aside party lines to give it support. But the situation is one that warrants unanimous support. When an issue arises that places our institutions, our sacred ideology of government in the balance, and a policy or program of defense is formulated there should be no dissenters. The present situation demands action, immediate and speedy action.

All of us who participated in the World War know the horrors of armed conflict and, I am sure, are anxious to do everything we can to make war impossible. But at the same time we are concerned with proper preparedness against war, preparedness against even the possibility of invasion, or, as is now the strategy of totalitarian powers, of intimidation. A thug will not attack a person known to be armed, known to be able to take care of himself, and neither will an international bandit attack the nation that is its equal in armament. That is the basis of the present need for preparedness. As an ex-service man, as a member of the Marine Corps Reserve, and as a Congressman I am back of it 100 percent. And it is my hope that all Americans will back it to the limit. It's better to spend now, than pay tribute later; better to have a gun in your hand, than one at your head; and better to be able to tell those committed to the policy of living by the sword that we too have a sword, the sword of righteousness, dedicated to eternal peace, but sharpened, nevertheless, for war, if such unhappy contingency befall us. Totalitarian powers should be made to understand in terms that leave no room for doubt that the Monroe Doctrine has the same force, the same significance today as at the time of its conception; and if it takes battleships, planes, guns, and munitions to drive that meaning home; if by that means alone our integrity will be respected; if that's what it takes to keep the loathsome idealogy of totalitarianism from the Western Hemisphere let's all see to it that such weapons are available. Let's see to it that our Nation and ourselves are placed in the position where we can say with conviction to demands for territory in the Western Hemisphere—"Come and get it!"

Remember, my good friends, our ideology of government represents seven centuries of struggle, seven centuries of blood, of sacrifice and martyrdom, to establish the right to own our own property, to speak our own mind, to assemble together peaceably, to worship as our conscience dictates, to elect our own officers of Government, and to exercise the other rights sanctified by the Bill of Rights of our Constitution. And the right to enjoy these privileges is threatened by beggars on horseback, who ride about the world maddened by the lust for conquest, little men with gaudy uniforms and rattling sabers, but dangerous men, because the game they play is death, and because they stop at nothing to attain their goal. Humanitarianism, decency, fair play, and all of the accepted rules of the game mean nothing to them. Our form of government is anathema to them, because they know it is a formidable obstacle to the realization of their ambitions. And they are determined to destroy it. The responsibility is squarely with us. Our action with respect to national defense within the next few months will either deter them or spur them on to further conquest. And the character and size of our defenses will be the deciding factor. They must, therefore, be second to none. Our naval forces must be powerful; our planes formidable in number and effectiveness; our antiaircraft equipment, now woefully deficient, brought to defensive requirements; our coast defenses strengthened materially; and our manpower augmented to what is necessary. Let's all see to it that all of this is done, and done expeditiously. Let's look at the world situation realistically and have due regard for our own position in that situation. And let's not, above all, be indifferent to or regard lightly a menace that is Europe's and Asia's now and may be ours tomorrow. It is our desire that the people of the world live in peace, and that particularly the people of the Western Hemisphere be free from strife and discord; but if it takes arms and munitions to insure peace and happiness in this hemisphere, and if the totalitarian powers want it that way, let's be sure that we are adequately prepared to accommodate them. The American people want peace, but never peace at any price, never peace with dishonor, or peace that destroys the freedom that is the sacred heritage of our ancestors.

The Social Security Problem

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1939

EDITORIAL BY THOMAS D. WATSON

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial written by Mr. Thomas D. Watson, editor of the Glendale Star, of Glendale, Calif.:

[From the Glendale (Calif.) Star]

OUR CITY—COMMENT AND DISCUSSION

(By Thomas D. Watson)

VICIOUS CIRCLE EXISTS UNDER PRESENT PLAN

Some few issues ago, we commented in this column on the fact that something would have to be done before long to stop the ever-increasing tax load. In response to this article one of our readers called to tell us of his experience with the Federal social-security tax. It seems that on account of poor collections, which are fairly general with most of us at present, this party was unable

to pay the employers' share of the tax. He remitted the money he had deducted from his employees and wrote the Government on January 1 that he would have to withhold his share of the tax until he had been able to make some collections. Early this week, he received a notice to the effect that if he did not pay the bill within the next few days the Government would attach his stock in trade and sell what was necessary to pay the bill.

In other words, the Government would extend no credit to a businessman and would close him up unless he paid immediately. Is it any wonder that we have an unemployment situation in this country when the Governments, both State and Federal, tax a business house out of existence? We were discussing this situation the other day with one of the leading printers of Los Angeles. He mentioned that his share of the social-security tax amounted to $600 per month. That the tax was breaking his back, for, because of the highly competitive nature of his business he was unable to increase his prices and retain his customers. These two instances are just examples of what the business concerns are going through with these days, and unless something is done to change present procedure the unemployment situation will become worse.

If our people would give careful thought to this matter, they would soon reach the conclusion that the American businessmen were the only ones able to take care of the critical unemployment condition. As the matter now stands, our Government is doing everything possible to cripple the very agency that can cure the evil. Governmental employment should be only a makeshift proposition; it is undesirable from both the workers' and the private employers' angle. We are carrying on a most vicious circle at present; we are making business conditions so that expansion is impossible, although expansion is necessary if business or industry is to take on additional employees. By keeping a business unprofitable it cannot pay a heavy tax assessment.

When business gets in such a condition that it cannot pay the tax levy, it can only mean that the Government cannot support a pay roll, and that is the end of the circle. The future welfare of this country demands that something must be done if we are to continue under the same policies which have brought this country to its present standing among the nations of the world. We must recognize the fact that we either have to get Government out of business or private business will be a thing of the past, and conditions here will parallel those now existing in some of the foreign totalitarian countries. We are now playing with fire, and we are more than liable to become badly burned unless we discontinue the present mode of procedure.

War Department Appropriation Bill—H. R. 4630

EXTENSION OF REMARKS

OF

HON. WADE H. KITCHENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1939

Mr. KITCHENS. Mr. Speaker, this bill carries large appropriations to enlarge, improve, and sustain the American Army. It carries an appropriation for munitions, rifles, machine guns, aircraft, salaries, subsistence allowances, as well as to carry on activities of research to design and improve implements of warfare.

The United Press February 26 carried a dispatch from Tokyo, Japan, giving us information that the Japanese Government today is employing the skilled and engineering experience of Americans to develop on a large scale the aviation industry of Japan. We are no longer shipping planes to Japan, and have not shipped any for several months. In the meantime a large corps of American aircraft designers and engineers have been employed and are now in Japan. These American engineers are working under the Japanese Army, and their efforts and ability are to be utilized to maintain, assemble, and construct American engines and aircraft to be used as transports, bombers, and fighters in the prosecution of war.

We are informed that the manager of industrial engineering for the Lockheed Air Corporation, of Burbank, Calif., also an engine expert from the Wright Aviation Corporation, and an engineer from the Douglas Aircraft Co. represent the type of American technicians now working for Japan. It appears that the Lockheed engineer is engaged in the building of a factory for the manufacture and mass production of his company's best model, said to be one of the fastest transport planes in the world, and capable of flying more than 275 miles per hour. It further appears that Japan has not only bought the design rights of this model, which was used by Howard Hughes in making his record-breaking flight around the world, but has purchased 25 completed ships from this factory. It appears again that Japan has bought the design for the Douglas DC model, another air transport easily converted into a bombing plane.

Mr. Speaker, these American experts, designers, and engineers are not permitted close contact with any airplane factory of Japan. Any Japanese improvement in design or construction is kept secret, and our experts are used as auxiliaries to develop and improve Japan's aircraft. These Americans are paid princely salaries, live in luxury at the finest hotels, and are treated almost as royal princes. There seems to me to be something inconsistent and vitally wrong in this. There is something fundamentally wrong with our way of doing business in America. We are depriving our own people of employment and at the same time offsetting our defense preparation in favor of foreigners.

We raise a tariff wall so high that our industries move their plants and experts to England, Scotland, Ireland, France, Japan, Russia, Sweden, and the Far East. We drive them from our shores because of high tariffs, and then wonder why we have so many laborers without employment. Who is responsible for this condition?

We prize ourselves upon our initiative, ingenuousness and inventiveness; yet, we permit and force those valuable assets to go to foreign lands and be used for the benefit of other peoples and other nations to our great loss. Many oppose the sale of airplanes to foreign nations; yet, sit supinely by while our best designers and engineers, for one reason or another, are drawn from our shores to other nations to engage in antagonistic work to our defense. At the same time we concern ourselves in a great effort to prepare for defense against the acts of our own people. In my feeble way of thinking I can find no justification for permitting this to be done if at all avoidable.

Now, we are greatly concerned in preparing ourselves for possible war, while at the same time we are sending our finest munition and aircraft experts to foreign shores to build factories, design and engineer the building of the very implements of war with which we are now trying to provide ourselves. I am very much concerned as I think of these inconsistencies. I feel that some provision should be found or made to keep these expert designers, technicians, engineers, and factory builders in the United States. I had rather the American people would employ their services at almost any price for the benefit of Americans than to see them utilized by other nations, admittedly aggressor and warlike nations, engaged in the business of war. I would prefer we furnish the craft than the brains.

I am wondering whether or not it is sufficient for Americans to go along in the same old rut in the same old way in preparation for defense. I sometimes wonder whether or not we have yet learned that a string of battleships reaching around America, and our coast lined with armaments of every description, really are sufficient to protect a nation. It is my considered opinion that war-minded nations with immense ships and implements of war are doomed to failure because they become top-heavy and inevitably must collapse of their own weight. A day or two ago there were those, in my opinion, who gave no thought to the considered comfort, happiness, and opportunities of millions of good American patriotic citizens. I refer to the great development in the Tennessee Valley. Yet, it is my opinion that unless we develop from within, build within, we will be unable to sustain permanently any great war establishment and the great necessary expense of billions of dollars. Other nations today, surrounding themselves with mighty implements of destruction, without care or considered thought as to internal improvements, betterment of welfare, and culture of their people, are bound to collapse. History teaches us they will collapse.

Mr. Speaker, I believe in national defense, but I do not believe that such defense consists solely in the building up of

a great Army, Navy, or Marine Corps, or surrounding our country with great battleships and other implements of destruction. In this day and time if we do not prepare our people, educate them, cure the defects, deformities, and diseases existing amongst us, we will not be able to design, manufacture, or use the Frankenstein implements of destruction necessary today. It takes a strong, able-bodied, and educated man to maneuver a submarine under the water and loosen torpedoes at opposing machines of war. It takes a strong, steady, cool-headed, and educated man to control our great ships and manipulate the guns thereon discharging from 2,000- to 3,000-pound projectiles at an enemy, and the same may be said for those men who rise in the air and use aircraft for defense.

While we are authorizing and appropriating billions of dollars for such agencies and implements of war, I trust we will not neglect the greatest essential for success in war. I refer to the necessary preparation for internal employment of the people, their culture, comfort, and better welfare. My people desire nothing be left undone, and no risk be taken in our preparation for the defense of America. I have had some experience in war, but I must defer necessarily in great part to the experience, wisdom, and recommendations of those specially selected by the American people to devise and plan the agencies and implements of war necessary for defense. Still we must not neglect the war now on our hands against poverty, disease, and the deplorable condition of many of those who furnish the bones, flesh, and sinews of war.

Congressman, State of California, Sixteenth District,
Washington, D. C.

DEAR FRIEND: I am taking the liberty of writing to submit to you a serious problem which confronts the lime growers of southern California; and while we may be only a small group representing a small part of the whole citrus acreage, nevertheless our problem is equally as important to us as the orange and lemon situation is to the producers of these products (incidentally it is my misfortune to also own two orange groves and a lemon grove as well as my lime grove).

Those of us who have been producing limes on southern California acreage, and to some extent successfully competing with imported limes from Mexico—the country where a United States citizen owning property is treated about the same as a Hebrew is treated in Germany insofar as property rights are concerned—have awakened to the sad realization that, in company with Florida lime growers, we are facing a serious overproduction problem which is greatly aggravated by the fact there is lack of proper protective tariff to protect us against Mexico and West Indies imports; especially in view of the fact that limes practically grow wild in these two foreign countries, are grown on land having an acreage value of about one-fiftieth the value of the land on which we attempt to produce limes, and at operating costs, primarily because of the great difference in salaries, far below our production costs.

A survey of the lime situation is submitted for your consideration as follows:

NUMBER OF ACRES PLANTED TO LIMES IN FLORIDA

So far as we know there are no acreage figures available for Florida. However, statistics furnished by the University of Florida show that from 1929 (the year data was first available) through 1937, a total of, roughly, 342,000 lime trees had been planted in Florida. Of these about 216,000 are Persian or seedless type, 6,500 Mexican type, and the balance are made up of several little-known varieties of limes. Using the generally accepted figure of 100 trees per acre would indicate a total acreage planted to limes in Florida of 3,420. Possibly some planting took place in 1938, which would boost this figure accordingly; but we have no record of such planting.

NUMBER OF ACRES PLANTED TO LIMES IN CALIFORNIA

According to the California Cooperative Crop Reporting Service there were 524 acres planted to limes in California as of 1937, practically all planted to the Bearss or seedless-type lime. In this case also the 1938 planting, if any, is not known.

NUMBER OF ACRES, IF ANY, PLANTED TO LIMES IN OTHER STATES

We have no record of lime plantings of any consequence in any other State in the Union. It is reported that the State of Texas has recently gone into the production of limes on a commercial basis, but no data is available at this time for that State. There may also be a few scattered plantings in the State of Arizona.

APPROXIMATE TOTAL POUNDAGE LIMES RAISED IN UNITED STATES IN 1938

The California production of limes for 1938 was approximately 835,000 pounds, according to records which can be taken as representing nearly all of the California lime production.

There is no way of knowing definitely what the Florida lime production was for 1938. According to the United States Department of Agriculture, the indicated production of limes for Florida for 1938 was 95,000 boxes. There seems to be some confusion as to the weight of these boxes, one source claiming that the standard lime box will weigh slightly over 90 pounds, while another source states that 80 pounds is the correct weight. The Florida limes handled by our organization—the Calavo—are generally shipped in bushel boxes weighing 50 pounds net, standard crates weighing 80 pounds, and quarter boxes weighing 20 pounds. Assuming the 80-pound box is meant in this case, the 95,000 boxes would extend to 7,600,000 pounds as the total Florida lime production for 1938, which, coupled with the California production of around 835,000 pounds, gives a total domestic lime production for the past year of some 8,435,000 pounds. Since many of the lime trees, both in Florida and California, have not yet come into full bearing, the outlook for the future is a substantial increase in this figure, at least for several years to come.

APPROXIMATE TOTAL POUNDAGE OF LIMES IMPORTED FROM MEXICO, 1938

Mexican lime imports into the United States for the year 1938 (through November only, the December figure not being available at this time) totaled 3,709,000 pounds, according to the United States Department of Agriculture, Bureau of Foreign and Domestic Commerce. This was a sharp decrease from past years and was attributable almost entirely to the tremendous increase in domestic production.

This situation will probably change entirely in the coming season, due to the fact that in the past practically all importation of Mexican limes has been handled by Calavo Sub-Tropical Fruit Co. in California, who also handle all of the limes produced by California growers, and it has always been the policy of this company, naturally, to favor domestic production. However, at this time we find that numerous new importers of Mexican limes are springing up, particularly at Nogales, Ariz., which, of course, means that the domestic lime growers will probably be in a worse plight than ever with the start of the 1939 lime season.

BENEFIT TO CALIFORNIA LIME GROWERS IF MEXICAN LIMES WERE TOTALLY EXCLUDED FROM UNITED STATES MARKETS

An unreasonable tariff on lime imports from Mexico, which would totally exclude Mexican limes from the United States markets the year round, would probably not be satisfactory or beneficial to the California lime growers or the Florida lime growers, because limes are produced here primarily during the winter months. However, if a check-up indicates that Florida could take care of the demand in this country from March 1 to September 1, then, of course, the Mexican limes could be totally excluded.

Mexican limes are imported in greatest volume during the early spring and summer, when practically no California limes are available. However, the greatest difficulty insofar as we in California are concerned, is the overlapping mentioned during the latter part of August, September, and the early part of October, during which time a very stiff tariff on Mexican limes is our only salvation.

The year-round continuity of limes is important to the California and Florida growers, as well as other market outlets, and it is perhaps true that if the Mexican limes were completely excluded certain markets would be devoid of limes for a portion of the year, as stated above, unless the Florida production could take care of the market. I frankly admit that if the market could not be supplied with limes from any source for certain periods of the year, it would work to the disadvantage of those of us who are producing limes in California. On the other hand, it is my opinion that even during the gap periods the tariff should be sufficiently stiff to force the price of Mexican limes, during the time they are on the market, up to a basis of direct competition with the California and Florida limes when they are available.

I seriously object to the general practice of lowering tariffs without due regard to the persons in interest, and in my opinion our efforts should be bent toward eliminating this practice by returning the power to raise or lower tariffs to Congress rather than have it vested in the Chief Executive as at present, with the result that protective tariffs bounce around like a rubber ball, meaning that

the poor devil who has to pay toward the cost and upkeep of the Government and secure the portion that he pays by operating an agricultural enterprise is forced to see his investment and his income follow the bounces.

You can be of great service to the lime growers of both California and Florida if, in cooperation with the gentlemen from Florida who occupy seats in the House, you can secure for us a protective tariff which will permit us to remain in business; for if conditions continue as they have existed during the last two lime seasons, I can tell you definitely that the California lime grower is practically through, and his investment of approximately $2,000 per acre is a total loss.

Assuring you of my sincere appreciation of the careful consideration I know you will give this matter, I remain,

Very truly yours,

FRANK C. BALFOUR.

The Townsend Plan—One Disastrous Result

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1939

Mr. TABER. Mr. Speaker, for the information of the people, I desire to call attention to a portion of Dr. Townsend's testimony before the Ways and Means Committee, indicating clearly that a part of his scheme is to put the local retail merchant out of business. This testimony appears on page 623 of the hearings held by the Ways and Means Committee, on the social-security question, and is as follows:

Mr. MCCORMACK. All right. I am trying to get your state of mind. When you drive out the middleman and bring the producer and consumer closer together, the middleman is closed out, isn't he?

Dr. TOWNSEND. Sometimes; yes.

Mr. MCCORMACK. And the middleman, on the average, is the small and independent businessman. That is true, isn't it?

Dr. TOWNSEND. That is right.

Mr. MCCORMACK. And you can't do that without creating another social problem, because that affects millions of people now employed by the middleman.

Dr. TOWNSEND. Let us create all the jobs we possibly can.

Mr. MCCORMACK. In other words, as a result of this bill the middleman will be closed out.

Dr. TOWNSEND. I shouldn't think so.

Mr. MCCORMACK. Either that or he will be compelled to go into a cooperative in order to protect himself against the advantage which the corporations will have.

Dr. TOWNSEND. That is going to happen to him anyway under the present competition.

Mr. MCCORMACK. In other words, he faces extinction?

Dr. TOWNSEND. Yes.

Mr. MCCORMACK. Don't you think we should try and do something to preserve this man?

Dr. TOWNSEND. No; I don't. I think he is a useless appendage in the profit scheme. I mean he is not showing competency. That is what makes the cost of living high.

Mr. MCCORMACK. That is all.

It is clear from the above that the small retail merchant in Dr. Townsend's opinion should not and could not survive under his transactions tax.

Constitutional Money and Government Monetary Control

EXTENSION OF REMARKS
OF
HON. KNUTE HILL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1939

RADIO DISCUSSION BY REPRESENTATIVE VOORHIS OF CALIFORNIA AND FORMER MEMBER OF CONGRESS CHARLES G. BINDERUP

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include what I understand is the first one of a series known as Congressional Breakfast Talks, under the personal direction and supervision of former Congressman Charles G. Binderup. The announcer stated it well when he said:

This morning we introduce a new feature which we believe will soon become one of the most popular early morning features on the air.

Under the personal direction and supervision of Mr. Charles G. Binderup, former United States Congressman from Nebraska, we present the initial broadcast in a series of Tuesday morning programs to be known as Congressional Breakfast Talks.

Mr. BINDERUP. We bid you good morning, everybody, bringing to you greetings from the Constitutional Money League of America, with special greetings to the President of the United States and to all the Members of Senate and House of Representatives. Greetings to everyone on this our first morning breakfast discussions.

Definitely realizing the great potential possibilities of our national organization, the Constitutional Money League of America, and the privilege of these broadcasts, it is with a feeling of profound gratitude to this station when we thank them for their kindness in extending to us their facilities for broadcasting. We have taken the liberty of sending letters and telegrams to the White House, the Cabinet members, and every Senator and Congressman informing them as to the time and station on which these broadcasts are being made. In the future we plan to follow this procedure as a gentle reminder as to the time of broadcast of each program on this series.

We have all, I am sure, long since grown tired and weary of hearing criticism of our present economic system without such criticism being associated with a constructive plan or remedy to overcome this deplorable economic condition that is threatening the very existence of our great democratic institutions. Therefore in these morning breakfast discussions that will be carried on by the Nation's greatest statesmen, regardless of political parties, we will avoid, as far as possible, criticism and will strive to show the way to economic recovery in a constructive manner.

And now I should like to introduce to you at this time Congressman JERRY VOORHIS, who is recognized throughout the land as a great apostle in the righteous fight for the people and the fight for honest money. Mr. VOORHIS, tell us about your plan for solving the unemployment situation and bringing speedy recovery by Government monetary control.

Mr. VOORHIS. First, Mr. Binderup, I should like to make it plain that what we are trying to do is to work toward that greater ideal of a truly free America in command of our own economic destiny, which was expressed in the utterances of Thomas Jefferson, in the fight of Andrew Jackson against Nicholas Biddle and the so-called United States Bank, in the issuance of lawful money by Abraham Lincoln, in the movement lead by William Jennings Bryan, and in the high ideals held by such men as Woodrow Wilson, Robert L. Owen, and many others for the Federal Reserve Banking System, but which, unfortunately, have never yet been realized. I believe I have followed that tradition in my bill which I plan to introduce in the near future, and I am trying to carry on the splendid work which you started in the Seventy-fifth Congress with your bill, H. R. 9800, upon which my bill is based in its essential features.

Mr. BINDERUP. That's a wonderful compliment, Jerry. Thank you. But, Congressman, when you paid tribute to great money students and statesmen that have left their footprints on the battlefield in the great unequal fight for constitutional money, I am sure you just forgot to mention two great Republicans in the ranks—President Garfield and James G. Blaine. These were indeed worthy warriors in our ranks. But tell me, Congressman VOORHIS, what do you think is the most important principle in your bill you propose to introduce?

Mr. VOORHIS. Mr. Binderup, that would be difficult for me to say as I believe there are five cardinal principles contained in our bill, and if you took any one of these five out, the bill would be hardly worth while. The first one I shall mention, however, is the restoration to the Congress of its constitutional right to coin the Nation's money and regulate the value thereof.

Mr. BINDERUP. Yes, Congressman VOORHIS; that is fundamentally true in any sound monetary bill. That's why we call our national organization the Constitutional Money League of America.

Mr. VOORHIS. Probably the most direct and logical way to establish this first principle is by making the Federal Reserve Board definitely and positively the monetary agent of Congress, and giving the Board a mandate consisting of instructions from Congress as to when and how they shall issue the Nation's money and control the volume of demand bank deposits, which are approximately 97 percent of our money today. This is done in the bill.

The second principle is the establishment of a 100-percent reserve back of all demand deposits. This is definitely necessary, because until it is done we will continue to have an uncontrollable banking and monetary system, wherein our money, in the form of demand bank deposits, appears and disappears in billion-dollar chunks, depending on whether or not the people are willing to borrow and the banks are willing to lend.

Mr. BINDERUP. Right you are. Yes, truly, truth is stranger than fiction. We are basing our money on the people's debts. If we pay our debts, our money disappears, and we will all go broke. And if we don't pay our debts, the sheriff takes all we have and we will also go broke; so, in principle, it merely means that we are damned if we do and damned if we don't. Isn't that so?

Mr. VOORHIS. Yes, Mr. Binderup; you are absolutely right. If Uncle Sam and all the rest of us paid our debts, there would then

not be one dollar in circulation except our old reliable Abraham Lincoln money and our silver. The bulk of our money consists of bank deposits created by the banks for the explicit purpose of making loans. By the same token the payment of those loans wipes out the deposits and, in effect, destroys that much of our money. Under our present monetary system, the people are definitely between two fires, a money famine on the one hand and increasing debt on the other.

Mr. BINDERUP. I agree with you entirely, Mr. VOORHIS, but I realize we will have to cover this point in detail later in following discussions. Our present monetary system reminds me of driving an automobile with a loose steering wheel. First, it runs us into the inflation ditch and then into the deflation ditch. Our monetary system, like an automobile, should always be under perfect control.

Mr. VOORHIS. Yes; absolutely.

The third great principle is to bring the 12 Federal Reserve banks directly under governmental control and make of them Government institutions as they were originally supposed to be. This can be accomplished simply by the Government purchasing the capital stock from the member banks. If this were done, $11,000,000,000 of gold would become, for the first time, clearly the property of the United States, and many things which are inherently confusing in our present system of private creation of money would be avoided.

Mr. BINDERUP. But, Congressman VOORHIS, suppose we did get all the gold. What would we do with it? We certainly do not need it for money, when a piece of paper with Uncle Sam's stamp on it is better than gold, more convenient and always at par. We use Uncle Sam's paper—that is, bonds—to buy gold and then pay interest on the bonds, put the gold in a hole, and then kid ourselves into believing that the gold in the hole is necessary to back up Uncle Sam's paper, that was good enough in the first place to buy the gold.

Mr. VOORHIS. That's right. The only real value in the gold is a purely psychological one. To some people it represents a base for issuing money or extending credit. I agree with you that it is unnecessary but I should rather have the Government's title to it a clear one in any case.

Mr. BINDERUP. Of course you are right in that. What is the fourth principle, Mr. VOORHIS?

Mr. VOORHIS. The fourth principle is that of restoring the buying power of the dollar to its 1926 level, and giving the Nation a dollar whose purchasing power and debt-paying power will remain dependable and constant through the years.

Mr. BINDERUP. Well, then, Congressman, it looks to me like that's the first step toward recovery and toward achieving a dollar with permanent debt-paying and purchasing power. And, Jerry, that means taking the rubber out of the dollar. Suppose we had some power changing the length of our yard, making it 3 feet one day and 9 feet the next. We would hesitate to invest in drygoods, not knowing the length of the yard when we would be ready to sell. And yet, I wonder whether we all realize that our dollars are manipulated secretly in just this fashion. In order to make our money dependable and constant through the years, isn't it definitely necessary to measure our money into circulation, scientifically, as accurately and as carefully as a doctor would measure or weigh his medicine to his patients?

Mr. VOORHIS. Exactly so, and that in fact is the fifth principle, for any monetary system must be just and fair if it is to continue to live. We must protect the creditors as well as the debtors. It is a necessary function of a national government to constantly feed into the veins and arteries of trade and commerce enough money to keep pace with the increase in our population and expanded industry. All these require more money in circulation if we are to maintain a stable price level, and that money must be put in circulation in such fashion as to raise the standard of living for the lower-income groups.

Mr. BINDERUP. Isn't it a fact, Jerry, that our monetary vehicle, which must carry the load of trade and industry, might be likened to a railroad engine—the bigger the load the more steam it takes and then the engineer just opens the throttle a little more to provide more power to carry the additional load and maintain the speed? Likewise with our monetary vehicle—the bigger the load (meaning increased population and expanding business) the more monetary steam will be required, and so our engineers (the monetary authority), under the direction of Congress, open the throttle and let in a little more steam (meaning Uncle Sam's own money). Mr. VOORHIS, if our bill was passed, how long thereafter do you think we could start prosperity and solve the unemployment situation?

Mr. VOORHIS. I think improvement would begin at once. With the 100-percent reserve system in effect everyone in the Nation would know that every depositor in every bank could go all at the same time to their banks and all of them get their money. This bill would make banking a 100-percent safe business. But over a period of years the people have had their fingers burned no less than 27 times under our present banking and monetary system, and they are naturally timid, and why shouldn't they be.

Mr. BINDERUP. Of course, they are timid; but they are not afraid of the prices of commodities going up and down if based definitely on supply and demand of commodities. The thing the people are afraid of is that the dollar, by a privately manipulated control, will go up and down by increasing or decreasing its abundance.

Mr. VOORHIS. Yes; I know you are absolutely right in that point, but this bill will put a stop to such catastrophes. Mr. Binderup, I believe our audience would like to know just who will speak over these congressional breakfast talks, as far as you know in advance.

Mr. BINDERUP. A good suggestion, Congressman. That will be a pleasure, as we have met with such great cooperation in this work. Next Tuesday we have Senator GEORGE W. NORRIS, of Nebraska, and Prof. Irving Fisher, of Yale University. The following week we will have the Honorable Robert L. Owen, former Senator from Oklahoma and for a number of years chairman of the Senate Committee on Banking and Currency, with Senator M. M. LOGAN, of Kentucky, author of Senate bill 31, a bill for monetary reform introduced in this session of Congress. Later to follow we expect to have Senator BORAH, of Idaho, and Congressmen HILL, HUNTER, and other outstanding statesmen.

We are inviting all Senators, Members of the House, and others to write us asking further information on this subject. Every fourth Tuesday we will have round-table discussions with several Senators and Members of the House reading, commenting on, and explaining these questions.

Mr. VOORHIS. Mr. Binderup, just what is the purpose of your organization?

Mr. BINDERUP. The purpose of this organization is to spread monetary knowledge and to coordinate and unite in a national organization all the various detached local monetary study clubs and organizations of the United States, together with unattached students and citizens who are in sympathy with constitutional money, Government monetary control, as the first step to economic stability.

Mr. VOORHIS. I want to thank you very much for inviting me to speak with you here this morning on that all-important subject of Government monetary control.

Mr. BINDERUP. I want to thank you, Congressman VOORHIS. You have always been a good fighting trojan in the ranks, fighting for this most important cause.

ANNOUNCER. Next Tuesday morning at this same time we will present the second in the series of congressional breakfast talks. Mr. Binderup, can you tell us now who will be our guests?

Mr. BINDERUP. Yes; it is a pleasure to announce that Senator GEORGE W. NORRIS, of Nebraska, and Prof. Irving Fisher, of Yale, will discuss the subject of 100-percent reserves back of demand deposits as a means of preventing booms and depressions.

And so on the morning of February 28, 1939, the Nation heard the first gun fired from Washington, the Nation's Capital, for freedom from economic servitude in this radio broadcast by Congressman VOORHIS of California and former Congressman Charles G. Binderup, of Nebraska. I might add that the people of the United States have never had two stancher champions and I trust the people of the Nation will lend their assistance to the Constitutional Money League of America by inserting an article in their local papers calling attention to this great campaign in the great cause of constitutional money and Government monetary control. Personally I think this is a remarkable undertaking, and I do not believe there has ever been a greater program for spreading monetary knowledge than is this one by men devoting and consecrating their lives to this educational work. In this I want to pay a tribute to the personal director and supervisor, Charles G. Binderup, of Minden, Nebr. I know him well, ever since the first day he came to Congress, and a strong friendship has developed between us.

He came to Congress not for a salary, for he spent it as freely as it came in for the benefit of his people. He hired extra office help, both in his Washington office and in his home office, sending out information to promote the principles of constitutional money, not alone in Congress but hundreds and thousands of letters to private citizens scattered over the Nation. His efforts were not confined to his own district or State alone, for his political views were of a national scope. He believed that prosperity must come by creating a consuming and purchasing power among the lower-income group over the entire Nation.

He came to Congress modest, yet firm; willing to listen, yet resolute and determined. He fought at first almost alone, but later many came to his way of thinking and saw the soundness of his proposals. I do not think that labor and the farmer ever had a truer friend.

When someone would praise the bill he had introduced in Congress for Government monetary control, as many of us did in the last session of Congress, he would modestly reply, "It is really not my bill. I just borrowed it from Thomas Jefferson and Andrew Jackson and Abraham Lincoln and W. J. Bryan, and from such great Republicans as President Garfield and James G. Blaine."

Mr. Binderup is a Democrat, and yet, in matters of importance, definitely nonpartisan, weighing every great principle only from the angle, Is it for the protection of the great masses? Devoted to the cause of constitutional money when

he was defeated in the last election, he refused to quit. He came to Washington at his own expense and there organized a great group under the name of the Constitutional Money League of America in support of his principles for Government monetary control; old-age pensions without taxation in the amount of $50 per month for old needy people, widows, orphans, the blind and cripples, to be paid by necessary new money issued direct by the Government; rehabilitation of the farmers back on their farms with 1½-percent amortized payments on their loans; and repayment of the national debt with a fountain pen, using exactly the same plan in retiring the bonds that the banking system used in the first place in buying the bonds.

Where does the money come from for carrying on this stupendous campaign? When I asked him, he replied: "Destiny has always been kind. It never fails. Devotion and sincerity to a righteous cause always wins. I have faith in the people. If everyone that has suffered under our miserable and criminal money and banking system would give a penny a day for their country, we would have more money than we need for our great educational campaign."

Mr. Binderup has written his third book on the subject, called Uncle Sam's Hospital Chart. He has donated the profits from the sale of this book to the cause. Senator Owen compliments this book by saying: "It is the kindergarten plan for teaching fundamental monetary truths."

The idea of a forum on the money question interested me, and because I wondered what organization was sponsoring the radio series, I wrote Binderup asking him what the Constitutional Money League was and how it was operated. Since other Members of Congress may have also asked themselves this question, I think this answer from Binderup is appropriate:

Hon. KNUTE HILL,
Member of Congress, House of Representatives,
Washington, D. C.

MY DEAR KNUTE: I am pleased to receive your letter of inquiry asking what the Constitutional Money League is, who are its sponsors, and what it stands for.

The Constitutional Money League is a patriotic association supported by volunteer workers and contributions. It is nonpartisan, nonsectarian, nonracial, and nonprofit. No obligation is imposed on its members. Debts in the name of the league are forbidden. The object of the league is to have Congress discharge the duty imposed by the Constitution: To exclusively create money and regulate the value thereof, and thereby end depression and prevent the recurrence thereof through a dollar just to debtor and creditor alike, a dollar of uniform, permanent, debt-paying, purchasing power. The league proposes through money study clubs and organizations in every congressional district to establish an informed public opinion on managed money for the benefit of all the people to end poverty through maximum production and employment. It solicits the aid of patriotic citizens, especially of the unemployed.

The organization is composed of three departments. The first consists of the Honorary Tribunal of Economists, with a membership of more than 100 professors of the Nation's outstanding universities, monetary authorities in political economy. This tribunal endorses the principles of Government monetary control and 100-percent reserves back of demand deposits. The tribunal, however, is not in any way committed to any bill or legislation, nor do they suggest a plan; they have merely declared a policy or principle and recognize that the plan, in the shape of a bill, must originate in Congress and be carried out by the representatives of the people.

The second department consists of the Honorary Advisory Business Council, who, while they do not take any active part in the transaction of business, supervise and direct the national organization. This council consists of nine outstanding businessmen of ability. The league endorses the principle of Government monetary control as advocated by the four largest farm organizations in this country, the National Grange, the National Cooperative Council, the American Farm Bureau Federation, and the Farmers' Union, and educational associations of America. We expect to include the heads of these groups as members of our Honorary Advisory Business Council.

The Executive Business Council that transacts all business for the league consists of a president, vice president, executive secretary, assistant secretary, executive treasurer, and various committees.

The Honorable Robert L. Owen, former United States Senator from Oklahoma, has been elected as the honorary councilor at the head of the Advisory Business Council.

I believe it is generally recognized that Senator Owen is one of the Nation's greatest statesmen, a leading monetary authority and philanthropist, untiring and devoted to his country, knowing that this Nation cannot live and civilization cannot endure unless the reasonable wants of humanity are recognized and satisfied.

Mr. Robert Hemphill, financial writer and formerly credit manager of the Federal Reserve Bank of Atlanta, Ga., is the executive secretary.

I have the honor to be the president of the Executive Business Council that must transact all business for the organization. My office address is in care of the Constitutional Money League of America, 3200 Sixteenth Street NW., Washington, D. C., and I will appreciate your addressing me there if you wish more information concerning our league.

With many thanks for the interest you have shown, and with personal best regards, I am,

Sincerely, CHARLES G. BINDERUP,
Former United States Representative from Nebraska.

Proposed Amendment to Social Security Act

EXTENSION OF REMARKS
OF
HON. JOSIAH W. BAILEY
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Saturday, March 4 (legislative day of Monday, February 27), 1939

STATEMENT BY JOHN R. SAMPEY, OF LOUISVILLE, KY.

Mr. BAILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very important statement concerning a proposed amendment to the Social Security Act, made by John R. Sampey, president of the Southern Baptist Theological Seminary, Louisville, Ky.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

A new threat to religious liberty in America may develop from a bill recently introduced in Congress to amend the Social Security Act. Baptists in particular and Christians of all faiths who are of like mind should inform themselves of the dangerous potentialities of this bill. In 1935 Congress passed "An act to provide for the general welfare by establishing a system of old-age benefits, and by enabling its several States to make more adequate provision for aged persons, blind persons, dependent and crippled children, maternal and child welfare, public health, and the administration of their unemployment compensation laws; to establish a Social Security Board; to raise revenue; and for other purposes."

This act significantly contained an exclusion clause which omitted from the application of the act and from taxation thereunder "service performed in the employ of a corporation, community chest, fund, foundation organized and operated exclusively for religious, charitable, scientific, literary, or educational purposes, or for the prevention of cruelty to children or animals, no part of the net earnings of which inures to the benefit of any private shareholder or individual." The bill which has been introduced into the present Congress (H. R. 101, by Mrs. O'DAY) would amend the original act by striking out this exclusion clause. And it is to this amendment as it concerns the churches and other institutions of religion that we would direct the earnest attention of Baptists and of all other Christians.

What does the amendment mean? Practically it means (1) that in the future the function of providing for the economic security of employees of churches, denominational organizations, and other institutions of religion would be taken away from these groups and be made the function of the state; it means (2) that the churches and their institutions would be taxed by the state for the support of its social security program; (3) it opens the door for the punitive coercion of the churches by the state in the enforcement of its regulations; and (4) it involves the individual workers of the churches in a direct economic dependence upon the state that will tend to dull religious conviction and stifle independent conscientious action.

The further meaning of the amendment for Baptists becomes clear when we recall their historic views. Early American history rings with their insistence upon full religious liberty for all men. In order to guarantee such liberty for the individual they further insisted on the state's recognition of the distinctive nature and distinctive function of the church in the world, warranting the demand for a free church in a free state. They believed, and Baptists still believe, that the church is not in the same category as the economic corporation, that it is the voice of God in the world, and that its spiritual function becomes impossible when its organization and methods are controlled by the state, or when it becomes economically dependent upon any other group whatsoever. The church must be free from entangling alliances if it is to remain the voice of God in human society. Although the different functions of the church and the state are complementary rather than antagonistic, they are so different that neither the church nor the state is fitted to govern the other, and that attempted domination

of either by the other makes only for injustice, bitterness, strife, and disruption.

The proposed amendment, furthermore, reverses the historic judgment of the Nation. The above Baptist principles were recognized in the Bill of Rights and in the legislative policy of our Government, a policy based, we must be reminded, not upon the expediency of gratuitous exemption, but upon the essential right and requirement of the church in the exercise of its spiritual function. But the twentieth century pressure of economic and political expediency begins to ignore the essential difference between churches and other associations, and to regard the freedom of religion as freedom of thought and worship only, without the implementation of action and method. In our sight this amendment is just another step, undiscerningly proposed perhaps, in the direction of incorporating religious organizations under the leadership and control of the state, a movement that promises as great a disaster for democratic government as for the church.

We speak, therefore, not merely in defense of the freedom of the church, but as patriotic citizens we would enter our protest against a step that would further secularize the national thought, endanger the freedom and variety of democratic association, yield to the totalitarian principle another gain in its conquest of western civilization, and become the portent of national confusion.

Because we feel so deeply that this proposal is an incipient thrust at something basic in our national life we voice this warning and protest. We appeal particularly to our southern Baptist brethren to give to our historic conscience supremacy over an easy conformity. Our fathers won recognition for the high principles of religious liberty and separation of church and state at the price of hardship and blood; we must not easily surrender them or retreat from their full meaning. We must make our protest. And we suggest that Baptists urge upon their Senators and Representatives the meaning of what is about to be done and register a strong dissent. We must, furthermore, be willing to pay the price of separate action, which in this matter means adequate provision for the workers in our churches and institutions through our own agencies. The work of our relief and annuity board for the security of our preachers, teachers, and other denominational workers is already well established and making remarkable progress toward a complete service. And now a critical challenge confronts us. Shall we go on to perfect the service of our own agencies of security? Or shall we abandon them and yield our task to the state? Our answer should not be in doubt. We shall cooperate most loyally with the state in the area of its own functioning, but within the life of our churches and our denomination we shall claim the right and accept the task of caring for our own.

JOHN R. SAMPEY, *President.*
(For the faculty.)

Labor Organizations and Labor Legislation

EXTENSION OF REMARKS
OF
HON. EDWARD R. BURKE
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Saturday, March 4 (legislative day of Monday, February 27), 1939

ARTICLE BY RAYMOND MOLEY

Mr. BURKE. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Reforming Reform," written by Raymond Moley, and published in Newsweek of the issue of March 6, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Newsweek of March 6, 1939]

REFORMING REFORM

As the American people begin to grow dimly conscious of the fact that neither Franklin Roosevelt nor anyone else of his general philosophy has a permanent lease on the White House, several curious shifts are taking place in public sentiment. The most spectacular of these, to my mind, is occurring among the country's labor leaders.

Remembering, no doubt, the President's references to those "new instruments of public power" that might some day in the hands of a reactionary government "provide shackles for the liberties of the people," the A. F. L. is moving toward a firm stand against further Federal regulation of working conditions in the immediate future. More, it has already indicated grave dissatisfaction with the Wagner Labor Relations Act. The dawning realization that the Wagner Act is an instrument that might, under an ultra-conservative administration, become a pretty ruthless check upon labor has reinforced the knowledge that 1940 and 1944 are not so far off. Together they spell awareness that the theory of a biased board might well prove to be organized labor's undoing.

Hence labor's desire to make the act fair to all parties before it is too late.

Senator BURKE has introduced a series of amendments to the present act—amendments which, while they go somewhat beyond the A. F. L. amendments, are not inconsistent with them. The Burke amendments provide, among other things, for a recreated Board consisting of one representative of employers, one of employees, and one of the public. They would limit the Board's discretion by requiring certain procedural changes. They provide changes in election procedure calculated to remove the present possibility of bias in favor of one or another labor organization. They would protect employees against intimidation "from any source" and against closed-shop discrimination or a check-off of dues. They would rewrite the first section of the present law to provide that all industrial strife, "however caused," is against public policy. It's going to be difficult for Congress to avoid the clear implication of these amendments, particularly at a moment when real friends of organized labor recognize clearly the danger—to labor itself—of Government partisanship in the labor field.

But equally important is the fact that the far-sighted friends of organized labor are beginning to show signs of nervousness about the expansion of wage regulation.

Wages are being regulated in two ways now—by the Wages-Hours Act and the Walsh-Healey Act. Under the latter, by steadily expanding the "locality," it is possible to make uniform the wages in plants which sell to the Government the country over. For example, 29 small independents in the steel and fabricating industries through the Eastern States complain they have been bracketed with the big steel industries between Pittsburgh and Chicago—a territory where wages have been higher than in the East for a generation or more. The "locality" was expanded by the Walsh-Healey Board. The next expansion could well be to take in Kentucky. After that, Alabama. Always a majority of the plants in a given region would be paying the higher rates.

The question that must inevitably arise, then, on the part of workers is "Why belong to a labor union at all?" If union wages can be effected in Alabama, say, without a union, why pay dues? If the Government is taking over the show, why bother? So are years of education and organization by labor leaders being undermined.

In May 1935 I wrote: "So much sincerity and sacrifice has gone into the upbuilding of the American labor movement that failure would be one of the tragedies of our national history. Yet * * * labor today is maneuvering itself into a position where it is open to devastating consequences from a change in the American political climate. * * * The present liberal Democratic Party, which recognizes the need of a strong labor movement, ought itself to take care lest it permit labor to assume a yoke from which it might never free itself."

Unfortunately the Democratic Party didn't "take care." What we are witnessing now is labor's moment of awakening, labor's scramble to get out from under, labor's effort to escape from its dreadful position of dependence upon whatever national administration happens to be in power.

The Historical Romance of the Foreign and American Merchant Marine

EXTENSION OF REMARKS
OF
HON. WILLIAM I. SIROVICH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1939

SPEECH OF HON. WILLIAM I. SIROVICH, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES, JUNE 25, 1935

Mr. SIROVICH. Mr. Speaker, under leave granted me to extend my remarks in the CONGRESSIONAL RECORD, I include the following speech which I delivered in the House of Representatives on June 25, 1935:

Mr. Chairman, when ancient man found that certain things would float on water, some genius, possibly cousin to the inventor of the wheel, gathered together floatable objects and used them to help him cross streams, ponds, and lakes that blocked his progress to some desired goal.

The earliest navigation was on rivers and the oldest records we have are concerned with Egypt and the Nile on which, nearly 5,000 years before Christ, boats were made of papyrus reeds woven in the style of an elongated basket and smeared with pitch within and without in order to make them waterproof. The Egyptians had no forests from which to obtain wood, but later on from the time of the first navigational experiments the Egyptians imported wood, probably from the coasts of Phoenicia, and made their ships of wood, using papyrus, stiffened by slats, for sails to augment the sweeps, or oars, previously used.

Coeval with the Egyptians the inhabitants of the lands fronting on the Euphrates and Tigris Rivers turned to these watercourses for transport of persons and goods. Herodotus relates that the general custom of those along the upper reaches of these rivers was to build a framework of osier withes—that is willow branches—and cover them with skins, which in turn were coated with pitch, of which there was a plenitude in that region. Carried down the river by the current these early traders brought their produce to Nineveh and Babylon, sold or bartered it there, and then knocked down their coracle, the bowl-shaped boats they used were called, loaded the whole on the back of a donkey which had been brought down in the coracle for this purpose, and made their way back overland to their homes.

The earliest occidental nagivators of the open sea were the Phoenicians, especially those of Sidon and Tyre. They struck boldly out on the waste of waters in wooden vessels probably fabricated from the cedars of Lebanon. These early navigators of Philistia used first one bank of oars and sails and then added another, and possibly two more banks of oars, manned by captives, although the final perfection of the bireme, the double-banked vessels propelled by oars and sails, is given by credit to the Greeks long before the time of Pericles. It is tradition that Cadmus, a Phoenician, landed on the peninsula of Greece before the Dorians and Ionians came down from the north and took over the land, and not only gave the earliest inhabitants of the Hellenic Peninsula the alphabet but also inducted them into the arts of navigation.

The Greeks took their lessons well and soon were building ships that were used centuries before the Christian era to found colonies in Magna Graecia, the present Sicily, and on the south of the Italian Peninsula. So we find that the navigation of river courses and small lakes was the first attempt of man at water transportation, and that this gradually expanded through the centuries into marine transport on the Mediterranean, the Adriatic, the Tyrrhenian, the Aegean, and the Black Seas. Of navigation on the Red Sea, the Gulf of Persia, the waters of the great bays and seas of the Orient, we have little record, but it is certain that such was accomplished by the natives of those regions.

Ancient vessels connected with ancient caravan routes and river mouths at strategical points along the coasts, such as the present Smyrna; olden Issus, far older than the famed Damascus; Gaza, various ports on the delta of the Nile, of which Alexandria became the most famous; Arsinoe, at the head of the Gulf of Suez. The rivers and the caravan routes performed the functions of modern railroads and brought the produce and products of the hinterland to the coast. The interior prospered because it had outlet to the sea through its coastal harbors; the coast prospered because the deep waters of the earth opened up highways over which the goods of one country could be rowed or sailed to another country and there bartered for that country's goods or sold, and these products brought home again for another sale.

Brigands raided the caravans on land, pirates looted the vessels at sea, but despite these levies by lawless force, trade prospered. Corinth sent the bronze to Athens and the Ionian settlements along the coast of Asia Minor, to Media, Persia, and Rome for armor and statuary. Tyre brought Corinth the tin that made possible the bronze alloy from copper and took factored bronze in exchange—the famous "aes Corinthia" or bronze of Corinth and brought the fine ladies of Corinth the fashionable Tyrian purple, that beautiful dye of the ancients that smelled so terribly in the making and looked so beautiful in the wearing.

Mr. Chairman, I could unfold a most fascinating tale of the merchant marine of ancient nations and the intriguing story of the development, step by step, of vessels capable of taking and holding the seas and of trade between all the civilized and barbarian nations of the days before Christ, but time does not permit.

At the head of the Adriatic Sea, which lies between the long boot of Italy, thrust deep into the Mediterranean, and the present Yugoslavia, Albania, and Greece, for centuries 11 streams swept down to the shores of this sea great quantities of alluvial soil from the mountains and piedmont that crown the head of Adriatic. Due to an easterly flowing current, this silt was formed into long banks of alluvial mud, called "lidi," lido in the singular. On these banks fishermen settled and the first commerce of the embryonic Venice was with fresh and salted fish to the mainland nearby.

The Goths, Huns, and Lombards overran the Alps, and to escape them the inhabitants of the cities of the mainland at the head of the Adriatic fled to the mud banks and lagoons offshore. This was in the fourth century of our era. There were 12 low mud-bank islands, and the settlers from the mainland formed themselves into lagoon townships and, in time, chose tribunes to represent them in the growing form of republican government.

The aboriginal inhabitants were absorbed by the mainland folk. Trade turned from the local barter with the mainland to the open Adriatic and, league by league, spread over the Mediterranean, up the Dardanelles, and through the Black Sea and across the southeastern Mediterranean to Egypt and the Red Sea, and thence to the Orient.

Venice prospered through her eastern trade until she became the great maritime nation of her times, but her supremacy was to be challenged by another Italian city, Genoa the Superb, built not on mud banks but on the footing of high hills at the head of the gulf of the same name which tops the Tyrrhenian Sea, on which the "boot" of Italy fronts. Genoa itself is from genu—the knee—and well describes its location at the top of the "boot."

Genoa and Pisa first fought for trade and Genoa defeated Pisa. Then the Venetians and Genoese clashed over the riches of marine commerce and were each alternately victors and vanquished until the Battle of Chioggia, in which the Venetians finally were victors. Genoa's trade had penetrated as far as the Euphrates, and there the Italian city had erected strong fortresses for the protection of her commerce.

Out of the city of Lisbon, in the then weak nation of Portugal, in 1497 sailed Vasco da Gama with four vessels, instructed by Emmanuel the First to find a sea route to the eastward to India and China. Da Gama rounded the Cape of Good Hope, and continuing his northeastward course reached Calicut in India. Later, with 10 ships, Da Gama sailed again to Calicut, and in revenge for the treatment of the Portuguese he had left to establish a factory on his first visit bombarded Calicut and then swept onward to Cochin-China, destroying everything he could that he found at sea. Calicut, from the cloths of which we get our name of calico, must not be confounded with Calcutta, which was not in existence then, being founded in 1690 by Job Charnock, of the English East India Co.

The discovery of an easterly all-sea route to the Orient by the Portuguese crippled the caravan-vessel routes, part overland, part seaway, of the Genoese and Venetians. An all-water route was cheaper than a mixed land and sea route. Furthermore, the crusades had endangered the western caravans that fell into the hands of the Saracens. Vessels were laden at the prime port and unladen at the home port, or vice versa, and a single shipment was made of goods instead of many transfers en route. To the Portuguese, rather than any other of the nations of the Middle Ages, is due the discovery of the great value of all-water, long-distance transport of passengers and goods. Lisbon prospered as Genoa and Venice declined.

Much else of historical interest, for which we have not time, occurred between this period and the time of Elizabeth of England and Philip II of Spain, in the next century. With this "woman of England" and this "man of Spain" came the conflict for the control of the western ocean—the North Atlantic—and the sea routes to the New World and around the Horn to the Pacific, the Indian, and the China waters and their rich coasts. Elizabeth and Phillip would have little more than academic interest for us were it not for the fact that the victories of Drake, Howard, Hawkins, and other English captains over the Duke of Medina Sidonia, in command of the armada of Spain, closed the Continent of North America to further expansion by Spain and opened up English colonization of the eastern coast of North America above Florida, from which grew the British Colonies in North America, out of which developed the United States of America, based on English law and customs, and speaking the English language.

Had the Lord High Admiral of Spain, in any one of four engagements, been able to inflict a decisive defeat of the Lord High Admiral of England, and then to join with the Duke of Parma in the low countries—the Netherlands and Flanders—and together land victorious troops on English soil—Spain had the best infantry in Europe at that time—the very name "infantry" coming from Infante—the royal title of princes of Spain—the whole course of American history might have been changed and England herself become an appendage of Spain as had Naples and Sicily, Peru and Mexico.

Man proposes—God disposes. The storms of the skies, rather than the artillery of the English, scattered the armada. Elizabeth Tudor herself was gracious enough to give Providence credit though she had two medals struck to commemorate the victory, one of which showed the armada in flight and bore the inscription, "Venit, vidit, fugit"—"They came, they saw, they fled."

English Elizabeth fostered merchant-marine commerce by instigating navigation acts for the protection of English mariners, by giving new charters to merchant adventurers, and organizing and financing new companies. She secretly upheld the piracies of Drake and Hawkins while she apologized for their buccaneering in public. From 1558, when the red-haired daughter of Henry VIII and Anne Bullen, or Boleyn, as we know her today, came to be Queen of England, until her death in 1603 she forwarded the dreams of her father, Henry VIII, and grandfather, Henry VII. The first of the Tudor dynasty obtained concessions for English cloth merchants in the Netherlands and increased trade with Scandinavia. Allying himself with John of Denmark, Henry VII broke the monopoly of the Hansa cities and gained free trade with Denmark. Venetian caracks had brought the goods of the Mediterranean to Southampton or Sandwich, but Henry Tudor concluded a treaty with Florence by which that republic opened its ports to English vessels, and the Venetian monopoly of trade with England ceased. English ships began to carry English goods north, south, and east.

John Cabot, a Genoese, settled in Bristol, fired by the exploit of his fellow Genoese, Columbus, got authority in 1497 from Henry VIII to sail the western sea and set up the English banner on all lands he might discover. Cabot ranged the North American coast from Labrador to the mouth of the Delaware—a great heritage for England, but one that was to lie latent until more than a century later under the Stuarts. Cabot received £7 sterling for his discovery.

Portugal had found Brazil and the route around the Cape of Good Hope to the Indian and west and south Pacific Oceans. Francis Drake for England had entered the Pacific around the Horn. The Hollanders had found the route to the Orient. Spain was busy with the looting of Mexico, Central and South America, and under Philip had taken the Philippines. Trade was the base of all these exploits. The Spice Islands were in the thoughts of every mariner skipper. The famous Spice Islands were sought because there was to be obtained the condiments that would preserve and make palatable the stale and often putrid meat of the times, and that had marvelous medicinal powers, according to the beliefs of that day.

In all of this the three first Tudors, the two Henrys, and Elizabeth had much hand. Thwarting Spain here, checkmating Portugal there, blocking the Dutch elsewhere, overcoming the advantages of the German Hansa cities in the trade with the Continent of Europe and the circumnavigation of the globe by Francis Drake in the *Golden Hind*.

Under Elizabeth the English East India Co. came into being in 1600. Its original object was to compete with the Dutch East India Co., which had obtained a monopoly of the trade with the Spice Islands and had raised the price of pepper from 75 cents to $2 a pound, though the shilling of Elizabeth's time was worth much more than the quarter dollar of our time in purchasing value. For 258 years the English East India Co. monopolized English trade with all lands and islands lying between the Cape of Good Hope in Africa and Cape Horn in South America—that is, according to the charter granted by Elizabeth to "the governor and company of merchants trading into the East Indies"—and in the early days interlopers were liable to forfeiture of their ships and cargoes. James I granted subsidiary licenses to private traders induced thereto by the great profits of the trade, but in 1609 he renewed the East India Co.'s charter "forever."

France, Denmark, Scotland, Spain, Austria, and Sweden also established East India companies and traded their home products for or bought for cash the spices, silks, gems, and other valuables of the Orient. East India merchantmen became the finest ships that plied the seas, down to the advent of the American clipper ships in the early part of the last century. Cromwell renewed the East India Co.'s charter, and Charles II made it his especial concern granting five charters to the company. I have dealt at length with certain aspects of English marine history because it was the root from which sprung American merchant marine. From the first, England subsidized her shipping. Not by outright gifts of money but by granting monopolies of trading rights to her mariners with the prospects of huge profits for private capital and joint-stock capital in the beginning. This was an indirect subsidy, and it was the foundation of England's greatness at sea. Over a long period of years, one by one she crushed or weakened her rivals in trade.

The wars with the Dutch, the Danes, the Spaniards, the piracy of Elizabeth's time, and the privateering, a polite term for piracy, of the Stuarts, and the alleged free trade of later monarchs had only one object—the expansion, with profit, of England's trade over the seas, north, west, south, and east.

American shipping had its origin in the seaports of the peninsula of Penzance. The names of the cities and towns in New England, the middle colonies, and Virginia show the love in which the early immigrants held their English homes. Plymouth, Bristol, Falmouth, Biddeford, Barnstable, Bridgewater, Weymouth, Dorchester, Portland, Southampton, Exeter, Truro, towns east of the Hudson and well known, indicate the early immigration to the American shores and the establishment of colonies by the men and women of Cornwall, Devon, Somerset, and Dorset, and it was the descendants of these men and women who built the early vessels of the merchant marine of the American colonies of Great Britain; and their descendants, in turn, aided by others, who built and manned the fishing, whaling, and trading fleets of New England.

Ships and the seas were in their blood and the same Atlantic Ocean that washed the shores of New England also bathed the strands of Old England, and called to them to venture forth on its broad highways as it had called to their forebears in the times of the Tudors and Stuarts.

Privateers and pirates are often confused in the modern mind. Privateers were privately owned vessels armed with cannon which sailed under the commission and flag of some recognized government. They might be called the militia of the sea. Another class of privateers consisted of vessels either owned or chartered by a colonial government. Their mission was to capture the ships and cargoes of any enemy, either factual or assumed. Pirates carried no commissions from any recognized government, but preyed on the vessels of all nations indiscriminately without regard to war or peace. Privateers sometimes turned pirates deliberately. Sometimes they became such technically by overlooking or misinterpreting the laws and usages of the seas. Both privateers and pirates became the equivalents of the land-robber barons on the sea.

Privateering was really a sort of commercial venture. Skippers and crew worked on a sharing-in-prizes basis and were not paid regular wages. Privateers were an important adjunct to the naval operations of the American Revolution and of the War of 1812. They raided British commerce carried in British merchant ships. Privateering fell into disrepute finally. Pirates claimed to be privateers and privateers denied that they were pirates. So Europe abandoned privateering under the Declaration of Paris of 1856.

American vessels built on the coasts of Maine, Massachusetts, Narragansett Bay, Long Island Sound, the Hudson, Delaware, and Chesapeake Bays, and even further south, ventured on voyages across the Atlantic and back as well as along the coast. They traded agricultural and forest products of the Colonies for industrial products of England and Europe.

Fishing increased along the banks that lie off the shores of New England as far as the Grand Banks of Newfoundland. A hardy race of mariners developed there, and there are authenticated cases of fishing vessels driven by northwesterly gales in record time to the coasts of Ireland, England, and the Spanish Peninsula. Then came whaling.

Nantucket, Marthas Vineyard, New Bedford, Fairhaven, and Salem became the home ports of a series of fleets of whalers that ranged far and wide, from the Arctic to the Antarctic in the Atlantic Ocean, and up the Pacific to Bering Sea and the Arctic Ocean. Whaling trained seamen of fine quality for the merchant marine in the first half of the last century, and whaling brought at least $500,000,000 to the strong boxes of New England, much of which later was invested in clipper ships and sea-borne trade.

At the end of the eighteenth century France evolved a fast vessel of war along new lines. Intended for a convoy for merchant ships, this new, swift type of vessel was also built for ocean commerce by France. England copied the French design, but it remained for American designers of naval and merchant vessels to evolve an entirely new type of sailing-vessel hull, sail rig, and mast stepping which became known as the frigate type, of which the *Constitution, Constellation, United States, Ranger, Lexington,* and *Saratoga* were the prototypes. These vessels of war were slim hulled with clean runs aft, heavily sparred and canvassed, carried a cloud of sails forrad—forward—were quick in stays, ardent on the helm, and highly maneuverable at sea or in tight waters. The frigates of the 1790's were the parents of the clipper ships in the merchant-marine service of the United States in the first half of the nineteenth century. Commerce learned from war and improved on its teacher.

The North Atlantic, the South Atlantic, and the Indian Ocean were common routes to the new steamships a little over a hundred years ago. From the *Savannah* to the Civil War, the new steamers were challenged by the full and medium clipper ships. England had plenty of coal and iron and little forest; America had few developed coal and iron mines but did have great forests. England pinned her faith on coal and iron, and the United States cleaved to hardwood hulls, great pine masts, and spars and canvas. It was the conflict between beauty and utility, and utility won.

England built the *Britannia*, a paddle-wheel steamer, in 1840. The Great Western Railway of England built the first single-screw, iron-hull steamer in 1843, and the screw-propelled ship gained 3 knots an hour in speed over the paddlers. The seagoing world was astonished when the American Collins Line built the *Arctic*, in New York, in 1850, and she made the startling speed of 12½ knots an hour.

The Collins Line operating from New York and Boston to England from 1840 to 1856 was subsidized by the Government of the United States. When the Government, in 1856, ceased subsidizing this line, the entire merchant marine of our Government collapsed.

The discovery of gold in California did more than enrich the pioneer miners and their backers. The names of Flood, Fair, Mackey, are known to many, but the names of the men and women who crossed the Plains, the Rockies, and the Sierras to reach the gold coast are buried in history. The Great Plains between the Alleghenies and the Rockies were the haunt of the Indian and the range of 20,000,000 bison, or buffalo, as they are improperly called.

Railroads were extended into the new territories. The eyes of the East were turned toward the fertile plains. The seacoast, Original Thirteen States, sent their sons and daughters westward and the empire of the sea was abandoned for the land empire of the West. Money that had financed clipper ships was poured into the coffers of the new railroads. The Federal Government heavily subsidized in money and great strips of marginal land the iron rail transport.

Seven railway systems received 81 percent of these land grants; and five systems, the Northern Pacific, Southern Pacific, Union Pacific, Santa Fe, and Chicago & North Western Railroads, received 79 percent of the Federal land grants, which amounted to a total of 129,947,000 acres, and from various States additional grants of 48,424,000 acres, making a total of Federal and State land grants to railroads of 178,371,000 acres. The value placed upon this immense acreage was the extremely reasonable one of $1 an acre computed on the average price received in the sale of Government lands in the 20-year period from 1851 to 1871. In addition to these grants the railroads also received about 600,000 acres of right-of-way grants generally in the proximity of or within the limits of cities and towns and additionally various other forms of financial aid. The price of $1 an acre does not in any way indicate the price per acre received by the railroads on a resale to settlers at later periods. Some of the land given away in order to forward rail transportation now sells for as much as $2,000 an acre. It must be remembered, however, that the railroad in some instances carried Government troops and property free of charge and in other instances at half the normal charge for such transportation.

In addition to the land grants, the railroads sold securities in the shape of bonds and their variants and stocks to municipalities, States, and private investors, and of this money represented today by the refunding, but not the payment, of these security debts runs into a standing funded debt of $12,000,000,000, to which must be added ten billions of money received from the sale of stocks estimated at par value. A total of $22,000,000,000 present-day valuation.

The railroads have certainly been well cared for financially by the Government and by private investing.

As the railroads gained in power and scope of operation the merchant marine declined. Confederate gunfire destroyed most of the beautiful full clipper and medium clipper ships, the ownership of which was mainly held in the Northeastern States, mostly in New England and New York.

In order to place the merchant marine on an equality with railroads, it would be necessary for Congress and the investing public to put in $200,000,000 a year, not counting interest, to provide the equivalents of the twenty-odd billion of the railroads.

Since the export and import ocean transportation of the United States represents about 10 percent at its best of the land transportation, the merchant marine should have received in this period

$2,000,000,000, which figure could have been reached by an annual appropriation and investment of twenty millions a year.

Before the outbreak of the Civil War the United States had a merchant-marine tonnage of 5,600,000 tons; England had a merchant-marine tonange of 5,900,000; the rest of the nations had 5,600,000 tons of shipping. Before the Civil War 75 percent of the export and import cargo of the United States was carried in American ships; this dropped to 8 percent in 1914 at the outbreak of the World War. With the start of this last disastrous conflict the European Allies withdrew all their shipping to their own purposes. American cotton was left in the fields unpicked, or stored in warehouses because there were no American ships to transport it abroad. The same thing was true of wheat and other commodities, except, in such cases where these commodities were required by the Allies for their own use.

When the United States entered the war, we had no vessels to transport troops and material and our Government had to rely upon foreign shipping, for which it paid a high price to England and France and later to Italy to transport troops and personnel.

In a belated effort to provide ships for its own war needs the United States spent $3,500,000,000, most of which went into wooden ships, which later were found to be absolutely unsuited for the purpose, involving a total loss of the money spent for these archaic structures.

For the transport of men, munitions, and material overseas and their return, the United States Government paid out to foreign governments or their nationals the astounding sum of $110,000,000.

Had this amount been paid to American shipping interests instead of to the foreign countries, who later repudiated their debts to the United States, American shipping would have been ably financed and our flag today would be flying over an efficient and competent American merchant marine. [Applause.]

From 1789 to 1860 American-built, manned, and owned ships carried the products of this Nation to all the ports of the world. There was a steady growth in our sailing merchant marine, mostly vessels of wood, of which we had ample supplies in our abundant forests. Oak, hickory, pine—and nothing devised by man in metal could equal the suitability of Maine pine for masts and spars. England had few forests but ample coal and iron. Iron for ships and coal for fuel. So naturally the Britons turned to the steamship as their means of carrying ocean-borne commerce. Americans also built steamships, and their efforts climaxed in 1840 in the Collins Line, which for 7 years gave keen competition to European steamships. The Collins Line was helped by the Federal Government through a mail subsidy. When this was withdrawn, about 1856, and the Collins Line lost two vessels, the line went into bankruptcy, and that was the end of that competition.

The destruction by the *Alabama* and other Confederate privateers of Federal shipping almost cleared the oceans of the American flag. Shipping had been highly profitable to the seaboard States, notably New England, and these profits were turned to the development of the great West. Coastwise trade still held its own, but the deep sea was practically abandoned by Americans.

The Europeans were not idle. The heavily settled nations on the northwest of Europe clung to the sea. It was their route to world commerce. They had no great interiors to develop, and the only export market for their surplus goods was by way of the sea, and to the sea they held tenaciously.

Each new vessel that was launched in Europe was larger and better than those that preceded her. European consuls in other nations sought out new fields for their nationals' goods—they were, and still are, commerce scouts. It is only recently that through the Bureau of Foreign and Domestic Commerce of the Department of Commerce that an organized attempt has been made to learn, on the ground, what American goods foreign nations would buy and that has been heavily curtailed in its activities.

From 1800 to 1860 American ship captains were not only skippers of their ships but were also first-class salesmen of American goods in foreign ports. The real work fell on the supercargo, an officer aboard ship who was in charge of the cargo. It was his job to find out what demand there was or could be created for American manufactured goods and to report the results to the captain and the owners. On the return home such cargoes were shipped as could find ready sale in foreign ports. The historic shipload of warming pans, discarded in New England, taken down to the Tropics and sold to cook over open fires; the sale of ice to the southern countries; the introduction of Yankee clocks, shoes, rubber boots, horse plows, and other farming implements used by hand are examples of old-time Yankee enterprise. For many generations the young women of Buenos Aires would wear no other footgear but American kid boots.

South American countries are accustomed to long credit. Six months used to be considered cash in the last century. The American manufacturers would only sell for cash—spot cash. The English, German, French, and Scandinavian countries were willing to give long credit and to adopt the leisurely method of dealing customary in South America and the Orient. The Yankees were always in a hurry, anxious to do business out of hand. Their European competitors, adopting the methods of the countries they dealt with, gradually cut into the sales of American manufacturers. Americans offered better goods at better prices, and, when the motorcar came in, with improved agricultural machinery, smarter shoes, better hats, and clothing.

These American goods had to be shipped in foreign vessels, and the foreigners saw to it that deliveries were slow and freight charges high—for Americans—while their own national goods were expedited and at lower freight rates. The edge was always against the Americans so far as ocean-borne commerce is concerned, which would not have been the case had there been enough American hulls to transport exported American products.

When the World War broke out the United States had only four vessels plying to South America regularly. Had we then been possessed of ample shipping, the tremendous market in South America, which the nations at war were compelled to abandon, would have produced billions in profits to American manufacturers—exporters and manufacturers. We need never have sold a dollar's worth of goods to the warring nations but could have dealt with, and legitimately so, South America, the Far East, South Africa, and Australasia to the upbuilding of our export trade and the profit of all concerned. We would have gotten paid for our goods, which is more than can be said for the goods we shipped to the Allies.

When we finally established the United States Shipping Board and began to build ships, overseas export trade which had dropped from a percentage of goods carried in 1860 in American ships amounting to 77.3 of the total to 8 percent in 1914. Our lowest point in tonnage and percentage of goods carried in American ships was in 1910, when the shameful figures of 782,517 tonnage and 8.7 percentage of goods carried in American ships were reached.

Due to legislation favoring the American merchant marine from 1917 on, the number of American vessels engaged in trade with Europe has risen from 6 to 193 vessels; with South America from 4 ships to 169; with the Pacific coast and Far East from 6 ships to 87 vessels; with Africa from no ships to 20 ships; and with the Pacific coast-Australasia from 3 ships to 19 vessels. To the Caribbean, West Indies, and Canada in 1914 only 66 American ships were trading; in 1932 this had risen to 164 vessels. The total of all overseas ships in 1914 was 85, and this had increased to 652 vessels. The gross tonnage of these vessels has risen from 510,271 tons in 1914 to 3,282,022 tons in 1932.

The only thing that has enabled this increase in American shipping is the granting of mail subsidies, of which 44 are now in effect. To those who shudder at the word "subsidy," as if it were something malefic, let me cite the figures of increase in tonnage to Europe, South America, the Orient, Africa, and Australasia, which are from 187,333 tons in 1914 to 2,534,595 in 1932. All this is due to subsidies in the form of mail contracts which enabled our shipowners to compete with foreign ships in these trade routes, since a subsidy meant the difference between a continuous deficit and a slight but encouraging profit.

In 1924, due to world conditions, ships to the number of thousands were withdrawn from our trade. The farmers had a surplus of wheat of 250,000,000 bushels and no means of moving it to Europe. At a cost of less than $1,000,000 the Shipping Board moved this wheat abroad and thus prevented a price collapse that would have meant the loss of $600,000,000 to farmers.

When the British coal strike in 1926 caused the withdrawal of British ships and the United States Shipping Board took out its laid-up ships, and came to the rescue of our farmers and industrialists, saving them a loss estimated to reach $300,000,000.

Two billions have been saved American shippers, to be added to their profits, by the reduction in ocean freight rates caused by the competition of American vessels in the period between the World War. Not alone is this saving, but discrimination against American ships has been prevented, because we could compete for our own export trade with our own ships, and do not have to rely on foreign vessels for export carriage.

Nine billions is the amount of America's ocean freight bill for the decade of 1921–30. American ships received three billions of this amount. We should have got every dollar of that nine billions instead of handing six billions over to foreign vessels. We shall get our legitimate share of freight, which is all that is paid for export of American goods, when we have the ships and they are properly supported by the American people through Congress. [Applause.]

Confining the citation to ocean-going vessels competing in the international-carrying trade, we find the total of the world's merchant marine tonnage to be today about 36,000,000 tons. Of this tonnage, Great Britain has about 13,500,000; Japan, slightly over 3,000,000; the United States, slightly less than 3,000,000; Germany, 2,700,000; France, about 2,250,000; and Italy, about 2,100,000. Compared with the situation in 1914, the American merchant marine engaged in ocean foreign trade has much improved, but we are still near the foot of the list from the viewpoint of competitive tonnage, although as a result of the act of 1928 in a period of 4 years subsequently 450,000 gross tons of vessels were launched, including 9 tankers and 2 ships of special type, leaving us high types of combination passenger and freight vessels valued at $142,000,000, or about $4,600,000 each vessel.

In the President's message he contended that we had given thirty millions in subsidies to ships of United States registry which is less than one-third of the one hundred and ten millions the United States paid to Great Britain and France for transport during the war.

In marine commerce between the elements of the British commonwealth of nations 90 percent of that trade a few years ago was carried in British ships although this transport, theoretically, is open to all nations. However, as we all know, there is a vast difference between theory and practice. England has always cared most scrupulously for her commercial navy. Build as she would, Germany before the war was never able to set afloat more than one-quarter of the amount of British tonnage with all of Germany's naval technical advance. Remember, in this connection, that in 1858 the United States had as much ocean-going tonnage as all the other nations of the world put together, except Great Britain, and the United States was only 300,000 tons behind Great Britain at that time. From this splendid condition in less than 40 years the

United States dropped to 8 percent of the carrying capacity of its own exports and imports, in 1914 the year that witnessed the outbreak of the World War.

When President Theodore Roosevelt sent the United States Navy on its voyage around the world, he had to go to foreign nations to get colliers, auxiliary ships, and tenders to accompany that fleet on its way around the world.

During the last decade foreign countries have carried about 75 percent of the ocean trade of the United States. Since this was profitable to them, it seems to me, that an opportunity was presented our former associates in the World War to devote part of this profit to the payment of the war debts to the United States, particularly also in view of the fact that between August 1914 and April 1917, when the United States entered the war, American shippers paid increased ocean freight charges boosted tenfold or more, which cost industry and agriculture of the United States nearly a billion dollars, and it might also be recalled during the British coal strike, after the World War, which withdrew many of their ships from service, that the United States Shipping Board was able to put ships to service to carry wheat and cotton out of Gulf ports, which saved American shippers $650,000,000, which went into the pockets of American industrialists and farmers.

Were we able to build ships such as the American merchant marine needs, 85 percent of the cost would go for labor and 15 percent for material, to the advantage of the reemployment of labor and the development of the merchant marine. That is the purpose of the present bill. [Applause.] To put American shipping under the American flag back on the ocean trade routes of the world, where it belongs by the right of a great people to have their own means of water-borne transport to all the nations of the world, three things are necessary:

First. A construction differential subsidy, to be granted to shipbuilders and their shipyards to equalize the difference in cost between vessels built in the United States and vessels built in other countries due to the higher cost of materials and skilled labor in the United States over that obtaining in other countries.

Second. An operation differential subsidy, which would be a subsidy to equalize the difference in the cost of operating American shipping in competition with the shipping of other nations operated under lower labor costs for personnel, supplies, and repairs.

Third. A trade penetration subsidy, a grant to United States ships to enable their owners to open up trade with other countries not now open to or traded with by American ships.

No further mail subsidies should be granted. Their operation was permeated with fraud and corruption. I confidently believe that these methods will put the shipping of the United States of America on a parity with the shipping of the world and that through them the American flag again will be seen flying in all the ports of the world as it was in the days of the clipper ships. [Applause.]

The United States is now giving subsidies—there is no other name for it—to industry through the tariff; to agriculture through bounties; to bankers through the operations of the Federal Reserve Banking System; to labor and the American Federation of Labor through restricted immigration, thereby keeping out the competition of foreign labor; to Boulder Dam, Muscle Shoals, through flood control—all local in their operation and only indirectly, if at all, affecting the Nation at large.

In the building of ships 70 to 75 percent goes to labor and 30 to 25 percent to material; in the operating of built ships plying in trade 80 to 90 for labor and 20 to 10 percent for supplies; that is, for material. Testimony was adduced before the Committee on Merchant Marine and Fisheries during the hearings that the cost of labor in the building of ships was 80 to 90 percent of the total cost, and of material 20 to 10 percent; but the figures I first cited are based on construction costs of vessels built by or for the Navy, and I feel that these figures are the most certain. Whichever be true, labor gets at least three-quarters of the amount spent for ships and may get as high as 90 percent. Labor is the great beneficiary in the end.

Washington, Jefferson, and Madison in the early days clearly saw the value of shipping to the young United States when all they had to ship were agricultural, lumber, and fishing products. How much more is American shipping needed today, when the industrial products of the Nation have reached a development far beyond that of any other single nation and surpassing in variety and magnitude the entire products of many nations?

Are these products to be carried to foreign buyers of American goods in American export trade in foreign vessels so that our exporters are at the mercy of any freight charges that these foreigners may choose to extort, to their great profit, or are we going to arrange it so that the freight charges for American cargoes will go to the profit of Americans, as they should, and as they will when again we have an American merchant marine worthy of the name?

When the Cunard Line had obtained the cream of passenger and freight traffic on the North Atlantic from 1840 to 1847 the United States granted a subsidy to the American Collins Line, and in a short time the faster and abler Collins steamers had captured 50 percent more passengers and 30 percent more freight from the Cunarders and forced the Cunard to reduce its freight rates from $35 to $20 a ton, to the saving of American shippers. The withdrawal of this subsidy and the loss of two ships, about which there was much mystery, caused the Collins Line to suspend and left the North Atlantic to the Cunard Line. When Congress in 1857 abolished ship subsidies, it sounded the death knell of the American merchant marine.

In the 50 years from 1860 to 1910 American shipping fell from 77.3 to 8.7 percent of American foreign trade. Where once the Stars and Stripes had been seen in every important seaport of the world, it now became so seldom seen as to excite wonder.

American manufacturers and farmers were paying to foreigners every year hundreds of millions of dollars for freight that should have gone to American owners of American vessels—had there been any such.

Grover Cleveland, William McKinley, and Theodore Roosevelt in turn earnestly warned the American people of the dangers inherent in a policy of allowing American shipping to decline. Woodrow Wilson said: "How are we to get the ships if we wait for the ocean trade to develop them? The Government must open these gates of sea trade, and open them wide."

When the World War broke out there were only 19 American ships in ocean trade, of which only 6—only 6, think of it—were in the North Atlantic trade. When the European belligerents withdrew their ships from trade we had none to replace them. If we had ships then the whole of South American trade could have been ours for the taking. But we could not ship our products south of the Caribbean, since we had no vessels to ship them in, and a vast and profitable trade was entirely lost. Because it could not be shipped abroad, cotton fell to 5 cents a pound.

It cost the United States three billions to try to put ships on the ocean when we entered the war. If we add what we paid England, France, and Italy to this and then surcharge it with the lost profits we might have had from sea trade between 1914 and 1917 the amount is so staggering that I hesitate to give it. It would have provided the United States with a merchant marine surpassing any in the world, surpassing all in the world.

In shipbuilding 16 principal items are used. Each of the 48 States of the Union produces several of these materials. The benefit would not be confined to the seaboard States if we built proper ships for a new merchant marine. Every producer of cotton, corn, wheat, lumber, coal, oil would benefit; every State in the Nation would benefit; and at least 75 percent of the money spent would go to labor—in some special cases as high as 90 percent.

Therefore, it would not only be the shipyards of the seaboard States that would benefit from the upbuilding of a competent merchant marine by the United States but every section of the country, every State in that section, every county in that State, and I might almost say every village and hamlet in that county. This was true in New England in the days of the Boston, Salem, Portland, New Bedford, and Nantucket shipping; and what was true on a small scale in the days of the sailing ships would be as true in these days on a far greater scale.

We must have ships. We must have American ships, built by Americans and manned by Americans, and flying the American flag. [Applause.] Our great prosperity lies in the export of our surplus products. When the United States is sending its industrial and agricultural products abroad that means that there is opportunity for the use of the full potentials of our producing capacities and abilities, not only in industry but in agriculture. There are great markets yet to be developed. The little town of Salem built ships and traded to the Orient and grew wealthy. The ships of Nantucket scoured the Antarctic, rounded the Horn, and sailed to Bering Sea and the Arctic. Were they hardier and better men than we? They had no trade. They had to make trade or find whales and they did both. Let the Government provide the three requisites that I have named: Construction differentials, operation differentials, and trade penetration subsidies, and American men and firms will do the rest. But the ships we are to build must be real ships.

They must be able to compete in speed and comfort and cargo-carrying capacity with the best that the rest of the world has to offer in competition. I would rather we had five first-class 20,000-ton ships than one super 100,000-tonner. It is the combined cargo and passenger ship that Great Britain relies on. The *Queen Marys* are advertisements—splendid ones to be sure—but advertisements nevertheless. We must build our great superliners to match them later on. At present we need what is known as "combination ships," carrying passengers and cargo, tankers, and cargo ships. Let the thousand-footers wait about 2 years until we have the solid fleets of handleable and profitable vessels plying into all the ports of the world from all the ports of the United States.

The ships must be made, as they can be made, as safe as human ingenuity can make them. They must be wholly manned by American officers and crew and wholly built of American material in American shipyards by American workmen. Then we shall know what we have got and how they will stand up in the times of stress that are bound to come at sea.

The sea is a rough master once it gets the upper hand. It takes skill, competent skill, to operate safely any ship at sea. Our American seamen have the intelligence so to operate their vessels when they get them and they can be trained. This cannot be done in a year nor in a few years. It takes years to make and mold an ocean line. Half a dozen ships under a house flag will not make a line. But American lines can be established and the time to begin is now. [Applause.]

The loss of lives of crews and passengers due to destruction of vessels at sea is estimated to have been 100,000 persons in the past century; the loss of cargo mounts to countless millions. Man has not conquered the sea and man never will! An icefield, solid and just awash, tore out the forefoot of the great *Titanic* and hundreds met their death. Spasmodic and unpredictable variation of the compass off the California coast made a fleet of torpedo boats pile

up on the rocks. Ice in the Arctic has crushed whaling and exploring vessels as if they were made of thin glass instead of sturdy oak. Wind and wave have driven vessels ashore on lonely coasts with the loss of the ship and all hands.

But man must use the seas for his surface transport, and man will continue to use it if he cannot conquer it, defying its terrors and dangers with stout hearts. Every new vessel that is launched is built better to combat that "Ol' Dabble Sea." Science in marine architecture reduces the dangers incident to shipping every year, but owners of vessels do not always take advantage of the advances made in design, construction, and operation. Vessels can be made practically fireproof, but not all are. Double hulls reduce the danger of sinking, as do athwartship and fore-and-aft compartments. But all vessels, passenger as well as freight, are not so equipped.

Trained and competent crews are obtainable, but it saves money for owners and ship's stockholders to discharge crews at the end of a voyage and rehire at the start of the next one. It takes more than one voyage for the bridge, engine room, and forecastle staff to know their ship and what she will do and will not do under stress.

Two ships, built from the same plans and materials, by the same construction crews, and in the same shipyard, will differ even more than human sisters will. One will have an ardent helm and steer quickly; the other will have a slow helm and steer lazily. One will work to leeward despite all the helmsman can do, and thereby lose way, and the other will hold her course through the eye of a needle, as seamen say.

No vessel or any other human structure can be made wholly fireproof, but ships, as well as structures ashore, can be made strongly fire-resisting and fire-retarding, and ships can be equipped with proper fire-fighting apparatus and their crews trained in its instant and continuous use. Patent davits and practically unsinkable lifeboats and life rafts are obtainable in the market, but many shipowners carrying passengers will not go to the extra expense their purchase and use aboard ship involve.

The *Vestris, Morro Castle, Havana,* and *Mohawk* are the recent additions to disasters at sea in which many lives have been lost. There is no doubt in my mind that inefficient officers and crews and ineffective disaster-preventing and life-saving equipment were responsible in each case for the extent of these disasters.

Mr. Chairman, the greatest, most outstanding, and humane feature of this bill is the section that deals with the provision of my limitation of liability bill which I had inserted as a part of the ship subsidy bill which we are now considering. It is designed to protect the life of every human being that travels on an American ship. Let me briefly narrate to you the first statutory enactment of limited-liability law which took place in Great Britain in the year 1734. The first statutory enactment of limited liability was only for acts of embezzlement on the part of the master and crew and other acts caused by them. It limited liability for nothing else, just acts of the master and crew. In those days the enemies of the shipowners were the captain and the crew who took out the vessel and embezzled the cargo. They operated against the interests of their owners. Therefore the owner of the ship had to be protected against the master and his crew.

In 1786 the limitation of liability was extended to robbery and to losses in which the master and crew had no part. In 1813 the limited liability of shipowners in England was still further extended to include other causes of losses, including cases of collision. The only funds against which those who had lost their life or cargo could sue was against the money that was raised from the salvage of the ship, and if the ship was sunk there was no money, plus the money that was received for the transportation of passengers and its cargo. This was known as the "limited liability act of Great Britain."

In 1851 Hannibal Hamlin, the distinguished Senator from the State of Maine, chairman of the Senate Commerce Committee, introduced the limited liability law that was upon the statute books of Great Britain as part of the laws of the United States. His fundamental purpose was to put the American merchant marine on a parity with that of Great Britain.

In 1862 Great Britain, because of the protests of her citizens, who felt this limited liability law was written for the interests of the merchant marine and not for the traveling public, abolished the entire law. In its place it substituted a bill which makes it mandatory upon all British shipping organizations to pay £15, which is $75, per ton for each of its registered tonnage, for the protection of human life and cargo.

This law was approved in Great Britain in 1862. We never changed our law of 1851. Therefore we are in the tragic position of being the worst Nation of the world in taking care of its traveling public, our American citizens. Take the *Morro Castle* as an example. When that ship was sunk 147 lives were lost and 100 people were permanently injured. The total amount of money for which these 247 people who lost their lives and were injured can sue is the sum of $20,000, while the Ward Line Co., the owners of the *Morro Castle,* have received the sum of $4,500,000 for its insurance. Behold the *Mohawk,* which was sunk! Forty-seven lives were lost and 50 to 70 permanently crippled and injured. All these people can sue for since the ship has sunk is the money that the company received for the transportation of passengers and cargo, which amounts to $9,000, while the company received $2,500,000 for loss of its ship.

Is it fair? Is it just? Is it humane? Is it American? The limitation of liability which our distinguished committee helped me to put in this bill, and for which I want to express my personal thanks to all of them, particularly, Mr. Welch, of California; Mr. O'Leary, of New York; Mr. Wearin, of Iowa; Mr. Bland, of Virginia; Mr. Lehlbach, of New Jersey; Mr. Crow, of Indiana; Mr. Hamlin, of Maine; Mr. Wallgren, of Washington; provides for paying a minimum of $60 per registered ton for the loss of human life alone.

In the case of the *Morro Castle,* instead of only having $20,000 for the victims to sue for, they would at least have had between $600,000 and $700,000 if my provision for limitation of liability had been in operation. This section of the bill alone, Mr. Chairman, entitles every Member of the Congress to vote for this bill because for the first time in the American history of our merchant marine it takes care of the life, the limb, the health of every American citizen traveling upon our sea-going ships. [Applause.]

Mr. Chairman, in the past property rights, the property of shipowners, were guarded and protected, but human life took its chance not only with the dangers originating with wind and wave but also with the dangers from incompetent crews and officers and ineffective equipment and inefficient operation of vessels in times of emergency and danger. The present section of limited liability in this subsidy bill makes our laws the most humane and progressive in all the world.

I have traveled on foreign vessels to Europe and I have used American ships on coastal voyages and ocean journeys.

I hate to admit it, but the foreign vessels engaged in trans-Atlantic transport have the advantage of American shipping in the long and continuous operation of lines. A flotilla of vessels does not make an ocean line. It takes decades of continuous operation to form an ocean line—or rather it takes Europeans that length of time.

If American lines were subsidized directly, as are European ocean lines, the story would be different. Give us ships competent to compete with the ships of Great Britain, France, Germany, and Italy, and the means of training officers and crews to man them, and it will not take long for American passenger and cargo vessels to get their full share of ocean passenger and cargo traffic.

The golden age of American clipper ships lasted only 25 years, from 1833 to 1858, yet in that time the American flag, carried by these wonderful American designed, built, and manned ships was flown in every important seaport of the world. When the discovery of gold in California and Australia provided demand for fast vessels, full rigged and entirely seaworthy ships were built in 90 days.

Given sustaining subsidies, as were the railroads in their early days and since, American built and manned shipping would again compete for its own foreign trade and the trade of the world. Given the protection of a satisfactory limited liability law for the protection of passenger and cargo at sea, as this present bill provides, and our vessels would be used to capacity.

There are many other provisions looking toward the safety of passengers, cargo, insurance, security for insurance, and other features, all designed for the fair treatment of passengers, shippers, and vessel owners, and for the advancement of American shipping on the trade routes of the world in order that the Stars and Stripes shall again be a familiar sight in the seaports of the world, and as a beginning in the formulation of legislation that shall operate to put American shipping where it belongs—at the head and forefront of the shipping of all the nations of the earth. [Applause.]

War Referendum

EXTENSION OF REMARKS

OF

HON. J. HAMILTON LEWIS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, March 6, 1939

RADIO ADDRESS BY HON. ELBERT D. THOMAS, OF UTAH, MARCH 5, 1939

Mr. LEWIS. Mr. President, I ask leave to have included in the Appendix of the RECORD an address delivered by the junior Senator from Utah [Mr. THOMAS] last evening over the Mutual Broadcasting System touching the matter of a referendum on war.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The amendment suggests a modification of our present constitutional method of declaring war. It provides that except in a case of attack, actual or immediately threatened, by armed forces upon America or her possessions, and in the case of an attack by a non-American nation against any country in the Western Hemisphere, the people shall have the sole power through the medium of referendum to declare offensive war or to put America into a defensive war that might cause our Army and our Navy to be sent overseas. The referendum by the people would be held only after an act of Congress declaring a national crisis to exist and further declaring it necessary for the people to decide whether or not our country

should go to war. Under the amendment there is no way for the people to initiate a declaration of war. The amendment suggests that its adoption be brought about in accordance with the constitutional method of asking for the action by conventions in the several States.

Constitutionally, the amendment takes the right of declaring war from Congress and places it in the people. This, in governmental technique, is a recognition of the fundamental principle of direct democracy rather than indirect democracy through the people's representatives. I am sure that the sponsors of this amendment believe that the people will invariably vote for peace and that they have discovered the advantage of referendum technique in that it does slow up governmental action.

Few will be in disagreement with the objectives which the sponsors of this amendment attempt to achieve.

The sponsors are men who are definitely against war. They are men who would like to see war cease to be used as a medium of national action. They are men who have adopted the thesis that the American world is a large enough world for America's activity. They are men, too, who accept the theory that we were drawn into the last war by propaganda, by our own actions, by breaking our neutral position, and by not remaining aloof. They are men who know that the objectives of the last war were not attained, and that a resort to arms again would not bring benefits even to the victors. They are men who commonly urge the point that America should mind its own business. By their opponents they are called isolationists. They are men who generally have carried their isolation ideas to the point wherein they have opposed American cooperation in peace-promoting institutions, holding that aloofness rather than cooperation is the real road to American peace and welfare.

Now, the question arises, does this proposed amendment fit in with these theories? We could argue that point until doomsday and, of course, never get a satisfactory answer. If the factors of men's behavior are contrary to the deductions made by those who sponsor this amendment, then, of course, the amendment will not and cannot accomplish the objectives that its sponsors wish to attain.

Let us look to history: Ordinarily the mass of the people has always been conservative. Movements forward and backward, movements for good or for ill, have been movements of the few in an attempt to lead the many. Revolutions are seldom initiated by the mass. If, therefore, the resolution is to be completely consistent with the deductions which have been assumed, this amendment should be passed in accord with the theory of initiation rather than upon the theory of reference. If it is slow action that is wanted, action sponsored by those who have to bear the great burden of war—or, to put it popularly, "let those who have to fight start the wars"—then this amendment should provide that war be declared only when the people initiate it. But the resolution leaves the leadership in the hands of Congress, while it takes from Congress the right to act.

Another theory which is behind this resolution is that Presidents lead us into war. The strongest power that Presidents have always had against Congress is a direct appeal to the people. A President who wants to take us into war will have less trouble convincing the mass of the people that we should go to war than in convincing a Congress which is opposed to it. We know from experience the pressure of the people upon those who lead the Government. In 1912 Utah and Vermont were the only two States that voted the Republican Presidential ticket. Utah until 1932 had given her electoral votes to Democratic candidates but twice: Once when the issue was silver, to Bryan in 1896; and once in 1916, when she voted for President Wilson, who used as a campaign slogan "He kept us out of war." In November 1916, Utah elected a Democratic Governor, Democratic Congressmen, and a Democratic Senator. President Wilson was the outstanding contribution to this success. Before the following March 4, when the Senator and the Congressmen took their seats, a great preparedness meeting initiated by the people was held in Utah's biggest hall. One of the congressional group, who had not yet taken his seat, spoke at this meeting and under the influence and pressure of the people he declared that he was going to Washington to vote for and work for war. President Wilson did not present his message to Congress declaring that a state of war existed until 2 months after this time. To think that President Wilson led the people into war in the face of experiences like this from one end of the country to another is one of the most absurd perversions of historical fact.

It must be remembered that war is psychological quite as well as actual, that the beginning of war is always psychological. In the Spanish-American War, both the President and the Congress were slower in acting than were the people in demanding action. In the late World War, Congress' declaration on the recommendation of the President was a declaration that war already existed. Assume that war did exist again, would any President, who is the Commander in Chief of the Army, and would any Congress, which controls the purse strings, hold back if a war was in existence?

The only way to overcome a resort to war for the accomplishment of national objectives is to find the substitutes for war to accomplish those objectives. This amendment in no sense does that. It removes no cause for war; it removes no action or method which has been used to accomplish war's objectives. War rests upon principles of direct action and force, and comes into existence when a nation or leaders in a nation assume that only by direct action and force can they accomplish their purposes. This holds quite as well for the most righteous of causes as for wars of conquest and aggression. There of course can be no admitted unrighteous causes after once fighting begins.

Substitutes for the accomplishment of national objectives are those related to the peaceful processes, such as a resort to law, a resort to conference, a resort to negotiation, a resort to an exchange of opinion and discussion of conflicting objectives. These processes are essential after a war in making peace. Why not use them in avoiding war and in keeping peace? These are the processes which must be furthered in the world if direct action and resort to force are to be overcome. The amendment does not, we see, face the problems as they are. It is instead a reaction to the slimmest of assumptions, namely that war when undertaken by the United States has been undertaken at the behest of Congress and the President, while the people have been against it. That, I declare to be, historically, untrue. If it is historically untrue, there is no reason for assuming that it will be true in the future.

War with its ghastly circumstances in this day and age—war which today means not a contest between men or armies but a contest between machines and whole peoples, where the utter destruction of women and children is assumed to be necessary to accomplish a military objective—war today which places chivalry in the realms of utter sentimentality, which has no respect for life at all, which must be carried on by men with the type of nerves which would be necessary for an engineer to have if he were asked to run his train deliberately into a mass of women and children at play—war under such circumstances and carried on in the way which we have seen it carried on in the last 8 or 9 years is a morbidly emotional disease. It is not in any sense a reversion to the primitive, because primitive man with all his cruelties and crudities did honor personal bravery and did fight against great odds. The blowing of a community to bits by pushing an electric button or the ordering of the bombing of women and children gathered in a church for prayer is the act of madness or disease. That type of war must be solved by bringing about a cure. Running away from a disease may be a means of saving oneself, but running away does not cure the disease nor destroy the madness.

Finally, it must be remembered that war is not a unilateral proposition. It is at least two-sided or many-sided. It can never be stopped by the actions or the will of one unless that one expresses itself in might with force. The suggested amendment is merely a curb on America. It takes away from Congress and from the Executive their discretion. It, therefore, would hamper government at the time government should be freest to act if it is to serve its people best. Discretion is of necessity inherent in government. Without trust in our President and in our Congress, American representative democracy will not persist. War, being many-sided in its nature, and at the present time a disease in its character, must be cured by the discovery of substitutes for it by the development of the will to use peaceful processes.

Admission of German Refugee Children

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, March 3 (legislative day of Monday, February 27), 1939

ANNOUNCEMENT AND EDITORIALS RELATING TO REFUGEE CHILDREN

Mr. WAGNER. Mr. President, I ask leave to have printed in the RECORD an announcement of the formation of a Nation-wide organization to be known as the nonsectarian committee for German refugee children, and also sundry editorials on the subject of the problem of the refugee children.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

LEADING REPRESENTATIVES OF ALL FAITHS HEAD ORGANIZATION TO GIVE SANCTUARY TO GERMAN REFUGEE CHILDREN

Formation of a Nation-wide organization to be known as the Non-Sectarian Committee for German Refugee Children was announced today by Clarence E. Pickett, executive secretary of the American Friends Service Committee. Heading the committee are representative churchmen and laymen who will serve as co-chairmen, including His Eminence George Cardinal Mundelein, represented by the Most Rev. Bernard James Sheil, auxiliary bishop of Chicago; Rev. Anson Phelps Stokes, dean of Washington Cathedral; Gov. Herbert H. Lehman; William Allen White; Dean Helen Taft Manning, of Bryn Mawr College; and Frank Porter Graham, president of the University of North Carolina.

Organization of the nonsectarian committee marks the crystallization of a comprehensive plan developed by public-spirited citizens of all faiths, leading child-welfare experts, and the American Friends Service Committee who have been working in collaboration for the past 2 months.

"The proposal to give sanctuary to the youngest, most pitiful victims of persecution," Mr. Pickett said, "has touched the hearts of thousands of Americans. Their sympathy has found concrete expression in the Wagner-Rogers bill, which will admit to the United States up to 10,000 German children under the age of 14 in 1939 and the same number in 1940, depending upon the number which can be adequately cared for."

The Wagner-Rogers bill, Mr. Pickett pointed out, is endorsed by both the American Federation of Labor and the Congress of Industrial Organizations. Fifty eminent churchmen in an eloquent petition have urged that the United States give sanctuary to German children. Ex-President Herbert Hoover and other leading citizens of all faiths and all shades of political opinion have expressed their approval of the plan, which has received wide editorial support from the press of the Nation.

"The Nonsectarian Committee," Mr. Pickett said, "has undertaken the task of implementing this humane measure with a practical workable plan which can be put into effect as soon as the bill is enacted. The committee will assume responsibility for the placement of children in foster homes of their own faith throughout the country. We have guarantees of adequate financial backing from responsible organizations and substantial private sources to assure that the children will not become public charges."

A major objective of the committee, he said, is to prevent any concentration of refugee children in large cities or on the eastern seaboard. Of the children seeking refuge at the present time, approximately 50 percent are Jewish and the remainder Catholic and Protestant.

Since the introduction of the Wagner-Rogers bill, Mr. Pickett said, inquiries have been received as to whether 20,000 children could be separated from their parents within the next 2 years. Holland alone has received applications for the admission of 10,000 such children. Mr. Pickett quoted from a dispatch just received from a representative in Holland which said that, "Thousands of parents are willing to part from their children who are suffering the most ghastly moral degredation and actual physical danger. How terrible conditions are for children may be gathered from the fact that many are found at the Dutch frontier without any protection. In many cases children are simply put on a train and sent to Holland in the hope that they would be looked after."

Holland, although a small and crowded country, Mr. Pickett said, has already taken in 1,700 refugee children. England, as an immediate step, opened her doors to 5,000 and is admitting many more, as are Sweden, Belgium, and France. He cited a recent report published in the Manchester Guardian, describing "children arriving mute with grief and fear; children who can scarcely believe that their new life is not a dream after the misery and bitter humiliations they have endured; children for whom such simple privileges as going to school, to the movies, playing in a park bring ecstatic joy. We have every indication that there are thousands of Americans who are ready and eager to give these children a chance for a free life in the United States by taking them into their homes."

Offers to receive German children in American homes have already been received, he said, from persons in 41 States. Among the many individuals and agencies who have made such offers is Mrs. Calvin Coolidge, who recently announced herself as one of the women of Northampton, Mass., who want to take care of 25 children. One agency alone has on file 2,500 such requests which had to be turned down because of the failure of the United States to admit more than a handful of such children up to the present time.

Mr. Pickett, who is one of the cochairmen, will serve as executive director pro tempore of the nonsectarian committee pending completion of arrangements to secure the services of an eminent educator, who will direct the project on a permanent basis. The committee is making its headquarters in New York at the School of Social Work, 122 East Twenty-second Street, and in Philadelphia at the offices of the American Friends Service Committee, 20 South Twelfth Street.

[From the Montgomery (Ala.) Advertiser of February 17, 1939]

"SUFFER LITTLE CHILDREN * * *"

At her press conference Monday Mrs. Roosevelt was asked if she approved the congressional move to admit into this country within the next 2 years 20,000 German refugee children under the age of 14. "It seems to me," she replied, "the humanitarian thing to do."

It is estimated that in Germany today are about 50,000 children under 14 who have no choice but to find homes outside their native land. Their parents, in many cases, are either dead or totally lost to them. Many of them are in concentration camps or somewhere in exile. Hundreds of these children do not know where their parents are. They are not even certain they are alive.

The only hope these young Germans have of establishing themselves as responsible citizens of the world is that there are governments less vicious than their own.

England and Holland already have found homes for several thousand of these most tragic of all the victims of the Hitler fanaticism. Many of them are too young to remember their own names, and they are now but numbers in a vast herd of infant refugees.

Of the 50,000 German children for whom homes must be found about half are Jews. The others are Protestant or Catholic.

Senator WAGNER has introduced a joint resolution which would admit into the United States "a limited number of German refugee children." Not more than 10,000 a year would be admitted, and these only for the years 1939 and 1940. It is provided further that satisfactory assurance must be given that those children admitted "will be supported and properly cared for through the voluntary action of responsible citizens or responsible private organizations of the United States and consequently will not become public charges."

William Green and John L. Lewis, the labor leaders, have made known their support of the resolution, and leading Catholic and Protestant clergymen have added their support. As the New York Herald Tribune says, "the whole group would be but a drop in the vast American population bucket—amounting to one refugee child for every 2,000 children under 14 now in the country—and their rescue (if accepting them for permanent, even though kindly, separation from their parents and homes can be called rescue) would take but a few drops out of the buckets of misery filled by the new politics. Small as it is, it seems well worth the doing—both for the portion of misery that it would end and as a gesture to the world of where American sympathies unmistakably lie."

The American people were among the first to cry out against the horrors of the Nazi barbarism; surely they will not be the last to offer some token of their conviction regarding the inhumanity of which the swastika is the symbol. Legally speaking, responsibility for these children does not, of course, rest with us. We could turn our backs upon them, if we liked, and seal our frontiers. But we should be guilty of a moral crime against the very things of which we most often boast.

The United States has expressed a willingness to contribute its due share to a solution of the refugee problem. Through President Roosevelt this country suggested the organization of the Evian Conference, and George Rublee, an American, has this week reported the results of his negotiations with the Berlin authorities. It is all a ghastly business. But from it Americans must not shirk. The very least we can do is to support the humanitarian movement in behalf of the dispossessed children.

[From the Sioux City Journal of February 18, 1939]

GERMAN REFUGEE CHILDREN

Senator WAGNER, of New York, has presented to the Senate a resolution authorizing the admission to this country of 20,000 German refugee children this year and next. The proposal specifies that children "of every race and creed" be permitted entry. The refugees who thus would be given sanctuary in the United States would be those of tender years, under 14. There are many thousands of them in Germany whose adult relatives are in concentration camps or who have been slain or driven out of the country by Nazi cruelty. In commenting on his resolution Senator WAGNER, a native German, said:

"Millions of innocent and defenseless men, women, and children in Germany today, of every race and creed, are suffering from conditions which compel them to seek refuge in other lands. Our hearts go out especially to the children of tender years, who are the most pitiful and helpless sufferers. The admission of a limited number of these children into the United States would release them from the prospect of life without hope and without recourse and enable them to grow up in an environment where the human spirit may survive and prosper. This resolution does not suspend existing quota restrictions on the immigration of adults. It merely authorizes the admission during a limited period of a limited number of refugee children 14 years of age or under. This readily could be accomplished without their becoming public charges and without any danger of dislocating American industry or displacing American labor."

Senator WAGNER said further that responsible American families and private organizations had volunteered to make adequate provision for such refugees as may be permitted to enter. Thousands of private citizens are willing to provide homes for refugee children. In permitting entry of child refugees the United States would be doing what Great Britain, Holland, and other countries already have done. Thousands of children have been received in those countries from Germany.

The Wagner resolution has been endorsed by Protestant and Catholic churchmen, by the two labor organizations, the American Federation of Labor and the C. I. O., and by large groups of prominent Americans. It is a humane thing to do, and the resolution ought to be acceptable to both Houses of Congress. Since American public opinion has been so strong in condemnation of the mistreatment of minorities in Germany, not all of whom are composed of Jews, it is believed that favorable action on the Wagner resolution would meet with majority approval on the part of the people.

The absorption of 20,000 children in American homes and charitable organizations in the ensuing 2 years should not be difficult. Twenty thousand children could come into the country without hurt to any group or section. It would mean one refugee from Germany to every 2,000 children already here in the same age group. Surely this country can undertake that, and it is believed that it will.

Restrictions on Wheat Production

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

RESOLUTION OF LEGISLATURE OF THE STATE OF MINNESOTA

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Legislature of the State of Minnesota:

Concurrent resolution memorializing Congress of the United States and the Secretary of Agriculture to take action modifying the restrictions on the production of spring or hard wheat grown in the Northern States

Whereas widespread dissatisfaction exists among the producers of hard spring wheat in Minnesota and adjoining States relative to the unwarranted restriction imposed upon the growing of such wheat during the year 1939; and

Whereas no surplus exists in reference to such wheat; and

Whereas the same amount of such wheat will be required in the manufacture of flour as has been required in the past; and

Whereas the land taken out of production of hard spring wheat cannot be profitably utilized in the raising of other commodities without creating a surplus in such other commodities; and

Whereas the farmers raising hard spring wheat will be subjected to extreme hardship by reason of being deprived of this means of making money to pay living expenses, taxes, interest, and loans: Now, therefore, be it

Resolved by the Senate of the State of Minnesota (the house of representatives concurring therein), That the Congress of the United States and the Secretary of Agriculture adopt immediate measures to meet the current crisis in the farming industry in Minnesota and the adjoining States growing hard spring wheat, and to establish such stabilization of prices on such wheat as will guarantee the producer at least the cost of production and assure consumers an ample supply of American-grown farm commodities; be it further

Resolved, That a duly authenticated copy of this resolution be transmitted to the President of the United States, to the presiding officers of the Senate and House of Representatives of the Congress of the United States, to Henry A. Wallace, Secretary of Agriculture, and to each of the Senators and Representatives from the State of Minnesota in the Congress of the United States.

The Church and the State

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, March 6, 1939

ADDRESS BY RT. REV. LEWIS B. WHITTEMORE, FEBRUARY 12, 1939

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address entitled "The Church and the State," delivered by the Right Reverend Lewis B. Whittemore, D. D., bishop of western Michigan, of the Protestant Episcopal Church. This address was occasioned by the proposal of the Social Security Board to include clergymen and church workers under the provisions of the Social Security Act. Coming as I do of Welsh descent and knowing of the long struggle this people have made on the issue of separation of church and state, I am heartily in sympathy with the protests thousands of clergymen of all denominations have addressed to me directed against this proposal. Attention is called to the fact that this protest is in no way directed against social-security legislation as a whole. It has been generally approved by the many clergymen who have written me.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In the reconsideration of social-security legislation by the Congress of the United States, the proposal is now being made that the church be brought within the scope of the act, along with charitable, scientific, literary, and educational institutions.

In considering the advisability of this proposed change the distinct character and function of the church should be kept in mind. There may or may not be good reasons why the workers in these other agencies should be brought within the operation of the act. There is every reason why the church should be kept without it.

Unlike these other agencies, the church conceives of itself as divine in origin, having as its Sovereign the eternal Christ and owing allegiance only to God. It claims to be His instrument in bringing the gospel to every man, woman, and child on the face of the globe. It claims that the nations are themselves under the sovereignty of God and that Christ is King of Kings and Lord of Lords. It seeks to bring about that rebirth which makes men realize that they are children of God, with a life to live which is not bounded by death itself. It believes that the Spirit of God dwells in the church and constantly molds the members of it into a life of unselfishness, joy, peace, and faith. Its methods are those of gentleness and peace, although it is called upon, when necessary, to denounce oppression and to fight against evil. It believes in every human soul and its divine possibilities as a child of God. It calls upon its members to live a life of discipleship to the Christ, who is conceived as an ever-living personality.

Such a conception of itself marks the church off from other institutions. It exists in the state, but it is not of the state. It has a higher allegiance. Its center of gravity is not in this world. This is what has given it members throughout the course of history the courage to give up all, even life itself, rather than to betray their Master. It has made them bold as lions, untouched by ordinary human motives, and yet all in the cause of goodness and peace.

The moment the state lays its hands on the church and endeavors to make it a part of its own system the church loses both its distinctive character and its power to make its most valuable contribution. The domination by the state withers the eternal values, makes the part supreme over the whole, restricts the vision of man to his lower interests, emphasizes methods which are not of God, dries up the moral powers and the sense of the supreme value of the individual as a child of God. The state can touch only to destroy.

When the church and state live along together, each supreme in its own sphere, each paying deference to the other, the utmost human good results. In this country the church has always been the bulwark of our democracy. It has upheld it in countless ways. It has been the source of sturdy individual initiative and self-respect which need to have a religious basis if they are to endure. It has raised up citizens who have not been afraid to take upon themselves the responsibilities and duties of citizenship. It has made men fearless to denounce the wrong, even on the part of government itself, without which no democratic form of government can endure. It has produced that strength of character which must abound in a democratic state. Democracy rests squarely upon the church and could not long endure without it. The Bill of Rights is Christian teaching put into political form.

This separation of church and state has been from the beginning a cardinal principle of our democracy. This principle does not rest upon expediency nor upon the difficulties of having a state church. It rests rather upon a recognition that each has its own functions and should be supreme in its own domain.

The proposal which is now being made would be a long step toward breaking down this essential distinction between church and state. Doubtless such is not the intent of the authors, but such would be the effect. Like most revolutionary proposals, the avowed purpose is beneficent. It is to tax the church in order to assure old-age benefits to its clergy and other workers, precisely as is being done in the areas of secular life. Harmless as this sounds, this means that the ministers of the church and other church workers would become a part of the political system and, in a very real sense, agents of the state. Such a change in the act would give to Government agents the power to examine all church records and pay rolls. It could send its agents into the offices of every church treasurer.

If the Government is to have the power over the old-age period of the clergy, it would have power over the whole life of the man of God. The policies of the party in power would have a great influence upon his point of view and his actions. The temptation to support the party which would promise the larger benefits would be enormous no matter how unsound the general policies of that party might be. The Government would find it less difficult to influence church policies and to bring pressure to bear upon church pronouncements. It could tone down criticism, silence voices of protest, get support for Government propaganda, and in general degrade the church of the Most High God to the services of the party which might happen to be in power. The confusion and bad feeling which would result from such a course would be incalculable.

What has happened in other countries should be a lesson to us here. In Russia the church allowed itself to become a tool of the Government. In many cases the priests were even agents of the secret police. In very few cases did the church, bound as it was to the state, have the courage to speak out against the oppressions of the people. Had there been a free church in Russia, independent of the Government, devoted to the true interests of all the people, the revolution might never have happened.

We have been appalled by the conditions in Germany where the state has attempted to make the church of the sovereign Christ a tool for its own purposes. It has been easy for all to see what the effect of this has been, and we honor the brave souls like Niemöller who have had the courage to proclaim that Christ is above Hitler.

We do not want this sort of thing to happen here; and when a government, from whatever motive, attempts to make the church of the living God just another department of the vast machine, the time has come to protest, because something very vital is at stake.

Our country needs one domain of its life which is not subject to the temporal power. It may be necessary to regiment business and farming and labor into one great collective whole but our temples should remain inviolate. We do not want Government agents, no matter how good their intentions, ransacking our possessions and telling us that they will manage our affairs better than we can. It is more than that. A free church is the greatest and, perhaps, the last bulwark of democracy itself. It guards and produces those very values which are necessary if the democratic process is to endure. When that bulwark is down we have come to the end of an era. What will be left when every voice is silent, when in no area can a free voice be raised, will not be the democracy for which our fathers died.

Nor does the church need this paternalistic and suffocating care from the Government. The branch of the church to which I belong has made great sacrifices to give social security to its aged clergy and those benefits are now being extended to lay workers as well. Other great church groups are doing the same thing. We take pride in what we have done.

But even if this were not so, the price of Government help would be too high. Even though the Government were the wisest conceivable, the principle involved would be the same. The church would be surrendering its soul for a mess of Government pottage.

If, on the other hand, the principle of Government control of the pension system of the clergy were essentially right, then the church should have no hesitation in modifying or abolishing its pension system for the greater good of the greater number. It is my own conviction that the proposed change is wrong both in practice and principle. First, it would damage if not ruin the carefully planned pension systems now in existence and, at the same time, it would make a violent assault on the principle of the separation of church and state which has served our country well throughout its long history.

I hope that all the Christian people of this country will consider well what is pending before our National Legislature. Do they want the church of the Eternal God to become a mere vassal of the state? Do they want agents of the Government rummaging in the temples to see what they can discover? Do they think that all of our clergy can become dependent upon a governmentally administered system without the church being pulled into politics? Do they want the witness of the church to the eternal truth of God dulled and, perhaps, stopped? Do they want to see the last great bulwark of democracy laid low under the guise of assistance to the needy and infirm?

The church takes no stand against the great ideals of security for old age. But in view of its peculiar character and mission it claims the privilege of working out these problems in its own way.

National Old-Age Pensions—The General Welfare Act, H. R. 11

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

STATEMENT OF HON. CHARLES H. LEAVY, OF WASHINGTON, BEFORE THE COMMITTEE ON WAYS AND MEANS, FEBRUARY 7, 1939

Mr. LEAVY. Mr. Speaker, a few days ago I appeared before the Ways and Means Committee for the purpose of presenting a plea to them for the enactment of a national old-age pension that would pave the way for the youth of our land to again find an opportunity to work and live useful and happy lives and know they were helping build this great country of ours. I urged enactment of national old-age-pension legislation further because simple justice, common fairness, and every humane instinct entitle our civil veterans, who have builded this great Nation, to be permitted to live out their lives in security, peace, comfort, and happiness.

This is not possible under existing social-security laws.

I then stated that I am not concerned so much with a particular pension program as I am in getting the best possible bill enacted into law; and it seems to me the best bill is the general-welfare bill, H. R. 11. I am convinced that the gross-income tax as proposed by the General Welfare Act, H. R. 11, is by far the best tax formula yet proposed.

In order that my views may be fully understood, I am incorporating and making my statements before the Ways and Means Committee a part of these remarks, and they are as follows:

Mr. Chairman and members of the committee, at the outset I want to say that I appreciate the opportunity you afford me to come before you and briefly express my views upon this important matter that you have under consideration.

I think in the short time that I have been in Congress I have learned to sympathize with the Members of Congress in the problems that are presented to them. As a citizen, before becoming a Member, I often became quite impatient with the slowness with which things moved; and it seemed to me that much more could be done than was done. Since coming down here and finding 435 Members, all with different views and yet all dead in earnest, and finding that when anything of great moment is done it must be the result of more or less give and take, I am inclined to be more patient and more sympathetic.

This committee has before it for consideration, I think, a problem of possibly the greatest magnitude of any domestic problem we have, that of social security. It is one in which everybody is interested; and it is one that can be so easily misunderstood; and it is one that nobody fully understands; it is one that touches the life of every person in this great Nation. And with all due respect to the fine membership of this committee, nobody can say that they have an absolute solution for this great and trying problem.

Social security, as it was reported out by this committee and as enacted into law, was an idealistic piece of legislation, and it had splendid objectives. Certainly I can find no reason to quarrel with its objectives nor with its ideals. But in actual practice it has not been a success.

One of the difficult things before you gentlemen is to frame legislation that will make social security and the social-security law a more nearly workable and successful piece of legislation. In my brief experience here, and in an informal way—because I have no prepared remarks—I want to be of some help, if I can. There have been many proposals. You have before you not only the suggestions of Mr. Altmeyer, head of the Social Security Board, as to needed reforms and changes, but you have before you H. R. 2 and H. R. 11, and dozens of other proposals. It is my own humble opinion that the general principles found in H. R. 2, and found in a more practical way in H. R. 11, can be molded into the existing social-security laws and can be made workable. It is with that thought in mind that I want to briefly address the committee.

I stated that we have almost all agreed to the fact that the existing law must be amended. It must be amended because it virtually sets up 48 separate and distinct systems. And there is not a State in the Union—and I make this assertion deliberately and thoughtfully—where social security is now functioning to the satisfaction of the people in that State. In my own State it has been the source of a tremendous amount of controversy, a tremendous amount of misunderstanding. It has been the football of politics, of those who would use it to further their own purposes solely and without any thought of the effect that their proposal might have upon the State as a whole.

Two years ago the legislature of my State enacted a law providing that every citizen of the State of Washington over 65 years of age whose annual income, from all sources, was less than $360 a year, should receive a sufficient amount to bring the income up to $360 and at the same time the legislature repealed all of the pauper laws of the State.

The administration both here in Washington—that is, the Social Security Board—and the administration in my own State held by ruling that if some friend, relative, or other person made donations of any kind to an elderly person, that was a resource and an income, and consequently such recipients would be barred. A case was taken into our courts and the court held otherwise. Now, the legislature has gone back again, apparently by what has been done in the State legislature, to the old system of requiring absolute destitution or pauperism, or practically that condition, before one can become a beneficiary. One to receive a pension would scarcely be one step removed from the old poorhouse.

It is my own belief that the present social-security laws would have been more nearly workable if we had had a minimum of $30 in every State in the Union, the Federal Government standing ready to match $15 with every State, and every State should have been required to pay that much. But that is not the fact, and we cannot make it so, except to cover the problem by national legislation and remove it entirely from State participation.

The social aspects of this problem are appalling, and you can play upon the emotions of men, I care not how hard-hearted they may be, and you can often produce results which are possibly inconsistent with the practical situation. The injustices should make us all ashamed of ourselves.

However, the economic feature of this problem to me is the great one. It is admitted that we are going to have a large army of unemployed, whether 6,000,000, 8,000,000, or 10,000,000. It is likewise

admitted by all of us, whether we be Democrats or Republicans, that the W. P. A. and work relief as a permanent program is not a solution to our problem, nor is it at all desirable.

If by reason of technological advance and scientific discoveries, mass production, and all of those things that ought to be blessings to us we have created a permanent army of unemployed, then as a matter of justice that ought to be the older group and not the younger group, as it is now in large measure.

As a matter of sound economy, and as a matter of national welfare and as a matter of simple justice, we ought to give the leisure to the older folk and not, as we are doing now in too large a measure, to our youth. Our young people who come from our fine institutions of learning go out into life, and then we have nothing to give them except possibly some little Government job or some job with some great corporation. Those are problems that we, as Congressmen, have to meet. And they fall unusually heavy upon the shoulders of this committee, because the solution of them, at least in a large part, lies in the framing of wise tax legislation. That is why it comes home to this committee in a greater measure than any other group in Congress.

H. R. 11, it seems to me, tends in large measure to cure some of the defects that have shown themselves in our present laws and that I have briefly referred to in my remarks. It tends to aid greatly in a solution of our economic problems.

Of course, going along with it is the money question and the monopoly question and a number of other important questions. But this fact is important. This proposal does not increase the public debt. Certainly no critic can say that it does that, because it is founded on a pay-as-you-go basis. The dollars collected are the dollars disbursed. It places every citizen in America, irrespective of the State in which he lives, upon exactly the same footing so far as benefits go. It takes out that which to me is the detestable and un-American feature of old-age pensions, the one that requires a "needs" test. In H. R. 11 there is no "needs" test. You are not required to qualify for admission to the poorhouse. If the American citizen has been thrifty and has acquired a home or a farm, possesses a bank account, and has a regular income, or is a person of little or much wealth, he has the option of stepping out of the field of gainful employment and making way for a young person and taking his $30 to $60 a month. If he wants to step back into production, he may do that by foregoing his pension.

Of course, I know you may say that the theory of the thing sounds beautiful. But it seems to me it is practical. It varies from the original Townsend plan largely in this, the most fundamental feature of all, the tax formula. It is based upon a gross-income tax; a gross-income tax levied upon persons, partnerships, corporations, associations, trusteeships, and every other creature, either natural or artificial that has an income from profit. It is based upon a 2-percent tax. Perhaps that is not the proper rate. Perhaps the committee, in its wisdom, might think it wiser to graduate the tax. The tax itself can be made an instrumentality of correcting a lot of our existing monopolistic abuses. It will not, as I say, add to the public debt, because it disburses only what is collected. It is based upon the same tax principle that the social-security laws are based upon, to wit, a gross-income tax.

Now, we have a gross-income tax levied upon every man who works in industry. The lowest bracket income people are being required to pay monthly a gross-income tax, while those in the high brackets pay only on net incomes.

I expressed my views a year ago last June by my remarks in the CONGRESSIONAL RECORD concerning gross-income tax and the possibility of using that as a basis for a universal pension, and I refer the committee to page 1487, volume 81, Seventy-fifth Congress.

There are many other worth-while features in H. R. 11. I do not want to monopolize the time nor tire the committee. I know you have this difficult task to perform. I know that you will do it to the best of your own judgment. You have to report to this Congress some substantial changes in the existing social-security law. And since Congress is going to act upon them, why not report H. R. 11 with such amendments as you think ought to be made—give us a real recovery pension.

I think it would be splendid to go into this field, not a wild and revolutionary field, but to go into this field as it is proposed by H. R. 11. I have examined the legislation carefully. I am not here to say that it is a perfect piece of legislation; because no Congress on earth ever put out anything of that kind, particularly when you have a bill as far-reaching as this is. But it seems to me it is a piece of legislation which points the way and tends to help us in what is one of our great problems.

And I say advisedly we have shameful, inequitable distribution of our national annual income. Any program of social security that seeks to solve the economic problem in part must recognize the fact that we must have a better distribution, not necessarily of existing wealth but of annually produced wealth, and we must distribute it on a wider base.

I have here the figures, and I give you my source of authority to prove the statement I just made to you. In 1935–36 there were 87 consumer family units in the United States who had an aggregate income of $157,000,000. Each family unit had an average income that year of $1,800,000.

Now, let us look at the other side of the picture. At the bottom of the structure there were 2,123,534 family units whose aggregate income was $294,138,000. In other words, 87 families had $157,000,000 and 2,123,534 families had $294,000,000. The average family income in the low bracket, 1935–36, was less than $140 per family, a little over $10 per month, or about $11.50 a month. In the upper bracket we find that 1 percent of the families of America had an income equal to 40 percent of the families in the lower brackets. This bill—H. R. 11—can be made an instrumentality going a long way toward correcting that situation. The figures I have given you come from the Consumers Income for the United States, National Resources Committee, a Government publication put out in August of this year.

Now, gentlemen, I have somewhat roughly and generally discussed this subject. And again I say that I appreciate the opportunity you have given me. If there are any questions you wish to ask me, I shall try to answer them, if I can.

The CHAIRMAN. Are you through with your main statement?

Mr. LEAVY. Yes, sir; I am.

Mr. DUNCAN. As I understand you, you spoke of the tests for one who is to receive the benefits. Suppose this committee, in its wisdom or lack of wisdom, should decide to pass a bill which would hold need as a test. What effect would that have on this bill or on the other phases of the bill? Would it have any effect at all?

Mr. LEAVY. I think it would have a very decided effect, because it would restrict very greatly the group of beneficiaries and destroy the objectives sought to be attained. The unfortunate thing is that when the "needs test" is applied that citizen who has had a useful, productive life throughout 40 years and who has been the high type of citizen in his community, is the last one to come in and submit himself to this "needs test," because it is humiliating.

Mr. DUNCAN. If you make it general it might not be. Suppose we make this a general pension bill to everybody, regardless of needs; it might involve the expenditure of too much money; it may be that under the financial picture of the Nation we cannot take care of it. A point in my mind is this: Suppose we take 1 percent; suppose we take the bill and reduce it to 1 percent and restore the "need" test; would that wreck this bill, or does it have to run on a 2-percent basis in order to make it workable?

Mr. LEAVY. I would say that it would be in almost direct conflict with the principal idea back of this bill.

Mr. DUNCAN. In other words, as you look at it, you think the principal thing to this bill is that it does not carry the "needs" test; it carries a pension to everybody, and the method of collecting the money is only an incident to carrying out this great principle?

Mr. LEAVY. I appreciate the fact that the tax formula itself is of tremendous importance. If the formula is one that tends to reduce annual production it is a failure. If it tends to restrict every enterprise in America, then it is a failure. But if it has a tendency to distribute on a wider basis the annual production, then it is accomplishing what we seek.

Mr. DUNCAN. Every tax is a burden on industry, upon anyone in the organization upon which it is placed. You can hardly expect this tax to be received with any great demonstration of good will from anyone. It is naturally going to be considered a burden, and will be opposed directly in the same ratio as the burden is great or small. Two percent is greater than 1 percent. If you make this a 1-percent proposition and restore the "need" test, then I still ask you, Do you think that would wreck the whole program?

Mr. LEAVY. I think it would, answering generally; yes, sir.

Mr. BOEHNE. In the opening part of your statement you seemed to use these words, "The Social Security Act has not been a success." Disregarding your views on either H. R. 2 or H. R. 11, and realizing the usual impetuosity of the American people, do you think the Social Security Act has been given the fair and impartial trial because it is based upon the actuarial or the insurance basis?

Mr. LEAVY. In answer to your question I would say it has certainly been given a sufficient trial. Even its most ardent friends point out glaring weaknesses that it has disclosed.

Mr. BOEHNE. We may agree there. But would that necessarily infer, as previous speakers have inferred, that by the passage of H. R. 11 we would automatically repeal the Social Security Act?

Mr. LEAVY. H. R. 11, by express language, repeals titles I, II, and VIII, I think they are.

Mr. BOEHNE. I say it would repeal the heart of the Social Security Act.

Mr. LEAVY. Three titles of the Social Security Act are expressly repealed, and of course the taxes upon which they rest.

Mr. BOEHNE. I have only one other question, which is a very general question. Do you believe that there is a point at which a more equitable distribution of income may become a capital levy—which I do not believe you believe in, and which I know I do not?

Mr. LEAVY. I would not want to say that I think we have reached that point. But I do believe, Mr. BOEHNE, that if we permit this aggravated condition to continue without the control of money and credit and without a better distribution, we are in danger of reaching something of that kind.

The CHAIRMAN. You spoke of the law in Oregon—was it not?

Mr. LEAVY. It is in Washington.

The CHAIRMAN. Where they give them $360 per annum if their income is not that amount; but whatever their income is, they give them a sufficient pension to bring it up to $360. But you said that was based upon need. If it is a good thing to have a pension, regardless of need, in the United States, in the Federal Government, why wouldn't it be a good thing in Washington, and why don't you try it out out there and show us how it works. Why don't they make it $360 out there? And if it worked well there it would be a fine argument to broaden the scope in the entire country.

Mr. LEAVY. I don't know that I have made myself clear.

The CHAIRMAN. You used the word "need."

Mr. LEAVY. The taxpayers in the State of Washington are just like the taxpayers in the State of North Carolina, in the State of

Kansas, in the State of Texas, or anywhere else. They want to get their $15 per person from the Federal fund. Now, in order to get that, of course, they have to have State legislation that fits into the Federal legislation. The Federal legislation provides that they will only match with a State where payments are made to persons in need. And the legislature sought to define the term "need" in our State 2 year ago by saying that any person whose income or resources produced less than $360 a year is in need and is entitled to receive a pension that will supplement his income or resources in a sufficient sum to bring it up to $360.

The CHAIRMAN. If they cared to have independent set-ups in the States, it is surprising that someone did not think of this before we embarked upon the present social-security program and that it was not tried out in some States.

Mr. LEAVY. It was not proposed in our State but it has been proposed in many States.

The CHAIRMAN. I know that. But it has never been adopted, has it?

Mr. LEAVY. No; it has not.

The CHAIRMAN. I wonder why they did not adopt it and try it out.

Mr. LEAVY. I think probably Colorado and California have gone further than most States have gone along that line.

The CHAIRMAN. Have they gone that far and adopted as the basis of raising money the gross-income tax?

Mr. LEAVY. I am not sufficiently informed on that. I am prepared to answer your question, Mr. Chairman, as to why. It is because no State in the Union can adopt an independent pension plan, general in its scope and liberal in its provisions, without virtually destroying itself. It has to take into consideration its 47 sister States. If the State of Washington were to say, "We will pay $60 a month, based upon a gross-income tax in this State," the immediate tendency would be to drive industry from that State to a State where they do not have such a tax. The immediate effect would be to attract people to the State so that they could live there the number of years required to become recipients.

The CHAIRMAN. You could make the number of years great enough so that they would not be attracted thereby.

Mr. LEAVY. But you would drive industry away?

The CHAIRMAN. That is how it is under the Federal law. If they move from one State to another, they have to be there a certain length of time before they can become beneficiaries.

Mr. LEAVY. Under this H. R. 11, they do not have to be residents any particular time in any particular State, as I recall the provisions. They merely have to be citizens of the United States, and they can go from place to place.

The CHAIRMAN. Let us take a concrete case. I want to find out for my information just how your plan works. A man has borrowed $10,000 on his business or on his farm, but he is unable to make the payment, and he has a mortgage or a deed of trust on it, and it is sold for the obligation and it brings only $8,000, and the $8,000 goes to his creditor who has lent him the $10,000, which is possible in any depression. Would you take the $160 out of the $8,000 and pay the creditor $7,840, or would you pay him $8,000 and have no tax?

Mr. LEAVY. My understanding is this. There is a statutory definition of the term "gross income" written into this bill.

The CHAIRMAN. How is that?

Mr. LEAVY. There is a definition of the term "gross income" written into the bill. My understanding is that that transaction would not be subject to a tax at all. It would be the repayment of a debt.

The CHAIRMAN. There would be no tax in that case.

Mr. LEAVY. No, sir; because of the definition that is written into this bill. All income of $100 or less a month is exempt under this bill.

The CHAIRMAN. Yes; I understand that. That is all.

Mr. DISNEY. Congressman LEAVY, I did not get the benefit of the earlier statement which you made because of my coming in late, but when I did come in you were speaking about this not adding to the public debt. The bill proposes to raise substantially about $8,000,000,000 a year, as I understand the previous testimony. I want to get your reasons why this would not add to the public debt.

Mr. LEAVY. The provisions of the bill, Mr. DISNEY, are that it will not distribute anything other than that which is raised in the fiscal year. Consequently there could not be an increase in debt, since there is no statutory obligation to expend beyond the money that is collected.

Mr. DISNEY. It appears that any collection would be an addition to the public debt, even though it were distributed.

Mr. LEAVY. No. The debt at the end of any given period would not be any greater than it was at the beginning of the period. I think it would reduce the public debt as a whole, because it would undoubtedly reduce these enormous work-relief appropriations that we are constantly called upon to make. I understand that this type of tax has been in operation in Indiana and in Hawaii, and quite successfully. In Indiana I think it is a graduated gross tax. Probably a graduated tax would fit better into this. That is a problem for this committee in the first instance.

Mr. MCCORMACK. Do you recognize the difference in the effect of a gross-income tax where it is the only tax and where it is a surtax?

Mr. LEAVY. I don't know whether I quite get your question.

Mr. MCCORMACK. Of course, all taxes affect us all of our lives in one way or another.

Mr. LEAVY. Yes; surely.

Mr. MCCORMACK. That is one thing we can and must expect—taxes and death. But you do recognize the difference in effect upon business and upon our economic life, which affects every one of us, whether we are in business or not, when a gross-income tax is a surtax instead of being an original tax in itself? By that I mean with no other miscellaneous taxes or any of the other taxes existing that are on our statute books today.

Mr. LEAVY. Do you mean giving it consideration as a surtax?

Mr. MCCORMACK. Of course, this makes it a surtax. In other words, you are laying it on top of all the others.

Mr. LEAVY. It makes it an additional tax; yes.

Mr. MCCORMACK. You will not disagree with me when I call it a surtax, will you?

Mr. LEAVY. No; I will not.

Mr. MCCORMACK. Do you see any difference in the effect upon the economic life of the Nation when it is a surtax or if we wipe out all other taxes being imposed?

Mr. LEAVY. I can see how this additional 2-percent tax burden is going to work a hardship in some places. But no tax can be conceived but that it works a hardship occasionally. But the consideration that has to be paramount is the general good of the whole group involved.

Mr. MCCORMACK. Of course, that is involved in all taxes, isn't it?

Mr. LEAVY. It is in theory.

Mr. MCCORMACK. You say "in theory." Certainly there would be no more force to your argument than there is to the statement you just made, that in theory all taxes are for the general welfare in some way or another.

Mr. LEAVY. I think we have to grant, Mr. MCCORMACK, at least in theory and also in fact, that we know that there are present taxes that are disastrous, both State and National; and we modify them and change them. There is no doubt in my mind but that if we remain static in our annual production a 2-percent gross-income tax would not be a good thing; but if the effect of it were to increase production because of a wider distribution and a greater consumer power and that increase were substantially in excess of the levy, then it would be a good thing. And I think the latter situation would prevail.

Mr. MCCORMACK. Then the primary objective you have in mind is the wider distribution?

Mr. LEAVY. Yes, sir; and a great increase in production.

Mr. MCCORMACK. A wider distribution of what?

Mr. LEAVY. Of our national annual income. I gave some figures here this morning, Mr. MCCORMACK, but I don't know whether you were here then or not.

Mr. MCCORMACK. We have a national income this year of $62,000,000,000.

Mr. LEAVY. In 1935–36 we had about forty-eight billion. But we had 1 percent of the population getting as much as 40 percent.

Mr. MCCORMACK. Did you break down those figures? Of course all figures have a break-down. Have you broken them down?

Mr. LEAVY. I gave as the source of my figures the Consumers' Income, and a United States Government publication put out in August of this year by the National Resources Committee. They are broken down in there considerably. As I pointed out, 87 family units had an average income of $1,800,000 per unit on one end of the structure, and on the other end of the structure you had two and one-quarter million families with an average income of less than $140.

Mr. MCCORMACK. Going back to the question of taxes, this bill would raise roughly how much, in your opinion?

Mr. LEAVY. I am not sufficient of an authority to say. Proponents place it variously, of course. I think it is from four or five billion dollars to ten or twelve billion dollars. It all depends upon national income.

Mr. MCCORMACK. Of course we already raise through taxes about $15,000,000,000. Would you put that on top of that?

Mr. LEAVY. I look upon this in this way; and I have thoughtfully considered it. First, it would eliminate a lot of taxes. It would eliminate almost a billion or more of the present social-security taxes. It would eliminate, conservatively——

Mr. MCCORMACK. That is a little high, isn't it—that is, that billion dollars?

Mr. LEAVY. Under titles I, II, and VIII that are involved.

Mr. MCCORMACK. Would you throw off the unemployment insurance? Certainly you would not want to have unemployment insurance wiped out. That is title III.

Mr. LEAVY. No; it does not wipe it out.

Mr. MCCORMACK. There are a lot of people in this world, 35, 40, and 50 years of age. What do you think we ought to do for those people? I know that you have given it consideration, and I would like to get the benefit of your views. What about the fellow who is approaching middle age?

Mr. LEAVY. The fellow who is approaching middle age?

Mr. MCCORMACK. He has the dead line of business staring him right in the face.

Mr. LEAVY. That fellow is not only deserving of the very greatest sympathy and consideration but of every protection. But if he is an individual businessman, a small-business man, he has little chance for a continued existence in the next 15 or 20 years unless his particular environment is unusually good. Monopolies can crowd him out in almost any activity in which he engages.

Mr. MCCORMACK. Coming back to taxes, it is estimated that this tax, according to its proponent, Mr. SHEPPARD—and I think it is not more than two or three billion dollars out of the way one way or the other—would raise about $8,000,000,000. Now, is it your idea

that we should impose that upon the tax bill that already exists of about $15,000,000,000 throughout the country?

Mr. LEAVY. It is my idea, Mr. MCCORMACK, that if we can take where it can be gotten, through the instrumentality of government, any particular sum, and as a result of that raise the general standard of living in America and likewise raise our annual production, that is a desirable thing to do.

Mr. MCCORMACK. Of course, you have no more desire for that objective, I think, than everybody else in the United States who has a hope to see the present depression overcome.

Mr. LEAVY. I feel this legislation will do it.

Mr. MCCORMACK. And if all people, no matter what position they might be in, would be in harmony with that objective, which is purely an academic one, and will employ measures to try to obtain it in a practical manner; but you have to have regard for all other factors. That is true, is it not?

Mr. LEAVY. Yes, sir. But you have to recognize that we have been drifting away from the ideal of that objective.

Mr. MCCORMACK. Of course. From the fact we believe in the profit system—which I do.

Mr. LEAVY. I do, too.

Mr. MCCORMACK. To everybody who has a dollar invested, you have to give him encouragement and give confidence to the mind of the fellow investing, and the employers. Is that right?

Mr. LEAVY. Yes. That is, the little fellow.

Mr. MCCORMACK. Well, all employers.

Mr. LEAVY. But when you give undue encouragement to the fellow who already has an undue advantage, like those in the steel industry, or in the automobile industry, or the oil industry, or the aluminum industry, and many others, then, in my judgment, you are beginning to work an injury.

Mr. MCCORMACK. Our system is dependent upon the operation of private business, whether it is big or little. That is true, isn't it?

Mr. LEAVY. Yes. But it can become so big that competition will pass out of the picture, as it has largely done in many industries.

Mr. MCCORMACK. You are going into the monopoly feature. I am not talking about that. I am talking about business in a general way.

Mr. LEAVY. Except that I am trying to look upon this thing concretely and objectively as it presents itself at the moment in this country.

Mr. MCCORMACK. And I am just asking you a few questions to get the benefit of your profound knowledge.

Mr. LEAVY. No; I don't claim any profound knowledge. I am very humble in my opinion concerning my knowledge of so complex a question.

Mr. MCCORMACK. But you will permit me to have my respect for your opinions, will you not?

Mr. LEAVY. I certainly will. And I appreciate it. I likewise have a very high regard for your views.

Mr. MCCORMACK. What effect will the imposition of an $8,000,000,000 additional tax have upon our national income? Can you give us some opinion on that?

Mr. LEAVY. Answering abstractly the first part of your question, without considering the accomplishments, that would be a bad thing. But answering concretely as to what would be the results obtained, if they were the kind that we sought, it would be a good thing.

Mr. MCCORMACK. Suppose they did not come out the way you thought they would, then what?

Mr. LEAVY. It is my view we have just reached a point that to me, at times, is rather alarming. I am in sympathy with the efforts we are making; but we have reached a point in this country where we not only have to take stock but take a rather bold stand, because we are living in a changed economy and we must recognize it. If it is bold to the extent of being destructive of democratic institutions and of those things that we prize, then we would better stay away from it.

Mr. TREADWAY. I would like to ask a question. You realize we have quite a problem on our hands in this committee to shape up something here?

Mr. LEAVY. I think before you came in I said you had my heartfelt sympathy. I think you have one of the most difficult problems of any committee in Congress. And I know that you are struggling with it.

Mr. TREADWAY. Do you see any middle ground? Were you here when Dr. Altmeyer testified as to various amendments to the Social Security Act?

Mr. LEAVY. No; I was not.

Mr. TREADWAY. Of course, he offered certain suggestions and changes. You are appearing for H. R. 11, are you not?

Mr. LEAVY. Yes, sir; I am.

Mr. TREADWAY. As nearly as I can find out, the advocates of H. R. 11 have not consulted very much with the officials of the Government on this subject, as represented by Dr. Altmeyer and his Board. Have you consulted with Dr. Altmeyer at all?

Mr. LEAVY. Not this year. I did last year. I spent considerable time with him and with some of the Treasury experts. And it was pointed out to me very clearly then as to the weakness of a transactions tax and the greater possibilities of a gross-income tax. That is when I expressed myself in my remarks in the record in June 1937 concerning that matter.

Mr. TREADWAY. Did you gather from conversations with the Treasury officials that they favored the gross-income tax or preferred it to a transactions tax as the lesser of two evils? Is that it? It is the lesser of two evils, is it?

Mr. LEAVY. I cannot say that I gathered from them that they favored either tax; but the gross-income tax, as you expressed it, would probably be, from their viewpoint, the lesser of two evils, the more easily collectible and the one that would probably be less injurious to the payer.

Mr. TREADWAY. Do you see any middle ground as between the advocates of H. R. 11 and H. R. 2?

Mr. LEAVY. Their general objectives are almost the same.

Mr. TREADWAY. Then why are they so far apart?

Mr. LEAVY. Their tax formulae, I think, are as far apart as night and day; that is, the transactions tax and the gross-income tax.

Mr. TREADWAY. Some seem to think that if you analyze the gross-income tax you pretty nearly get down to the basis of a transactions tax. I have heard that statement made by a number of persons.

Mr. LEAVY. It does not occur that way to me.

Mr. TREADWAY. You do not so consider it?

Mr. LEAVY. No; I do not. The dispenser or processor of goods, if he were big enough, could eliminate all transactions except the final transactions and thus gain an advantage over the independent who would be subject to three or four or five transactions. That is just for that phase alone.

Mr. TREADWAY. I had hoped there might be some way in which this committee could meet the wishes of the advocates of these various systems or methods. But I do not get much help from the advocates of either bill.

Mr. LEAVY. I would like to see them harmonize all their differences. They would if they could eliminate personal feelings.

Mr. TREADWAY. Would that be along the lines of H. R. 11 or H. R. 2, or a middle ground?

Mr. LEAVY. You are asking for my opinion, of course?

Mr. TREADWAY. Yes; I am asking for your opinion.

Mr. LEAVY. My opinion is that H. R. 11 is a much better considered piece of legislation than is H. R. 2. And the crux of any such legislation rests upon the tax formula. If the tax formula is unsound or is bad, then no matter how idealistic the program, it is going to fail.

Mr. TREADWAY. That is all.

The CHAIRMAN. You are dealing with matters of Federal legislation. It is not our responsibility to deal with State or municipal taxes. You mentioned some taxes as being disastrous. What taxes do you have in mind? What Federal taxes do you have in mind as being disastrous?

Mr. LEAVY. I was probably speaking generally. I said some taxes are disastrous.

The CHAIRMAN. What taxes did you have in mind?

Mr. LEAVY. To an individual engaged in some particular calling; if the tax strikes that particular individual with a much greater degree of force, Mr. Chairman, than it does another in another calling, or a competitor with an entirely different volume of business, it is disastrous to the one, and it might ultimately work to the benefit of the other, because it is driving the one out of business.

The CHAIRMAN. Let's pursue that thought. It is difficult for me to see how a tax on profits or net income can be disastrous; but I can very readily see how a tax on gross income, where very frequently losses are sustained, can be disastrous. When it comes to imposing a gross tax on the man who is making money and a gross tax on a man who is making little or no money, and it is the same tax burden, can't you readily see the distinction there, and how it would be against the man making little money or no money, who pays exactly the same tax as the man pays who is making good profits? Can't you see the ultimate destruction or disaster there? It seems to me that it is very obvious; but I don't see where it is obvious if they are all making money.

Mr. LEAVY. There is no question at all, if you look at this in the concrete and pick a single individual here and there.

The CHAIRMAN. You have to pick folks who pay the tax.

Mr. LEAVY. But you have all of these other factors which enter into it.

The CHAIRMAN. You can't argue from that that it is not a greater hardship for an individual or corporation engaged in business to pay a tax when they have no income than it is to pay a tax when they have an income. And you know what is going to occur under this system. You can't get away from that.

Mr. LEAVY. I grant that.

The CHAIRMAN. With all the sophistry, you can't get away from that.

Mr. LEAVY. I want to go one step farther than that. I am not using any sophistry.

The CHAIRMAN. Will you admit that that means discrimination and disaster?

Mr. LEAVY. I will admit that there would be instances when a gross-income tax, just as in the case of a net-income tax, will prove to be a disaster.

The CHAIRMAN. I don't believe you can prove that a net-income tax will prove a disaster.

Mr. LEAVY. The difficulty arises here in your net income. Personally, I think this Nation, as a tax program, since you have suggested this to me, would be better off if its entire income tax were gross instead of net.

The CHAIRMAN. Will you give us an instance? You said there are instances where a net-income tax is disastrous. Will you give us a concrete instance of that? I would like to have it.

Mr. LEAVY. In the first place, to give you an instance requires that you go largely into this extremely complicated definition of what constitutes net income.

The CHAIRMAN. You may know of some special circumstance.

Mr. LEAVY. All of the lawyers and accountants in America have been wrestling over that.

The CHAIRMAN. The law defines net income. You know that. That is simple.

Mr. LEAVY. But it is difficult of solution. The law says that this shall be a net income, and deductions shall be thus and so.

The CHAIRMAN. And the taxpayer makes out his own tax return.

Mr. LEAVY. I am unable to make mine. I have to be helped.

The CHAIRMAN. Then, under the law you get an expert to do it. And you do not pay anything unless you have a net income above certain deductions.

Mr. LEAVY. I am allowed certain deductions.

The CHAIRMAN. You do not pay on your losses. You do not pay any income tax if you have a loss. You pay only when you have profit over and above certain deductions. How is that going to be disastrous to you?

Mr. LEAVY. I can see what you have in mind, Mr. Chairman; and I can see the reason back of it.

The CHAIRMAN. Now, let me ask you this question: If the net-income tax is disastrous, how much more disastrous will be the gross-income tax under the law? You say the net-income tax is sometimes disastrous. How much more disastrous will the gross-income tax be and how much more disaster may be looked for in collecting a tax where there is a loss, under the gross-income tax?

Mr. LEAVY. My own opinion is that you would have less of it. But that is my opinion. I am entitled to it, just as you are to yours.

The CHAIRMAN. Are there any other questions?

Mr. CARLSON. Mr. LEAVY, I believe you represent an agricultural district. You have been talking this morning about the distribution of the national income. And I am going to agree with you so far as distribution is concerned. We have in this country six and one-half million farm families and a thirty-million farm population. In your discussion of this legislation you mentioned the fact that we would better distribute the national income. Would this help the agricultural population?

Mr. LEAVY. My own judgment is that it would help out substantially because it exempts $1,200 a year, or $100 a month. And that would catch about 90 percent of the farmers.

Mr. CARLSON. You appreciate—as I read the bill—that the exemptions are $100 a month.

Mr. LEAVY. Yes; that is right.

Mr. CARLSON. It is very natural in farming communities to have an income in one or two seasonal periods. Therefore, they would be entitled to the exemption of $100 a month, except it would not apply during the harvesting seasons.

Mr. LEAVY. I don't believe that interpretation would be placed on this act. But if that is the correct interpretation that can be remedied. It could be provided for in the language of the bill, there be exempted $100 a month or $1,200 for a year.

Mr. CARLSON. Of course, you realize that agriculture at this time is operating at a loss?

Mr. LEAVY. Very much so; yes, sir.

Mr. CARLSON. Then do you feel that they could carry this gross-income tax at 2 percent?

Mr. LEAVY. I think a very small amount of it would fall on them.

Mr. CARLSON. Why is that?

Mr. LEAVY. Because of the exemptions provided in the bill. I think a very small amount of the farmer's income would be subject to tax at all. I am satisfied a farmer who is 45 to 50 years of age who is called upon to pay this tax would gladly do so to the extent of his earnings above exemptions, because of the assurances it would bring to him and the financial burdens it would take from his shoulders.

Mr. CARLSON. You have to admit that every time a farmer sold a cow for $80 he would have to pay a tax of $1.60.

Mr. LEAVY. Depending upon whether or not he sold enough cows; yes.

Mr. CARLSON. He would have that tax.

Mr. LEAVY. If that were the only one he sold during the year and if that were his only income, no.

Mr. CARLSON. That would be in a month.

Mr. LEAVY. My interpretation would be that this is how it would work.

Mr. CARLSON. I am sure you want to correct the situation; and so do I. We want to know that it will not seriously injure one great group of our people. But I was interested in getting your opinion.

Mr. BOLAND. What would be your opinion of the present Federal social-security tax on pay rolls?

Mr. LEAVY. I do not like to use the word "disastrous"; but I think it is detrimental. I think it is detrimental for the reason that it is taking from the fellow who has too little now. And every penny that is taken from him is taken out of the channels of trade. And if it were given to him he would spend it for the things that he needs and thus increase the market for consumers' goods.

Mr. BOLAND. In your opinion, the present Federal tax may be injurious?

Mr. LEAVY. I think it is.

The CHAIRMAN. As President Hoover said about prohibition, we will have to work out this subject. I suppose it has to be worked out. But suppose a farmer exchanged a hundred bushels of wheat for a grain drill, is there then any tax? If there is, who pays it? The farmer has sold a hundred bushels of wheat, and the merchant has sold a grain drill. Will both pay the tax or will just one of them pay it?

Mr. LEAVY. I don't know. I would have to examine carefully this definition that is given on gross income.

The CHAIRMAN. But you admit that is a practical question?

Mr. LEAVY. Yes; that is a practical question. There is no doubt about it, Mr. Chairman. This legislation on gross income as drawn up takes money as the medium of exchange, or checks as representative of money, and it must also mean barter and trade.

The CHAIRMAN. You would soon knock the tax to pieces, would you not?

Mr. LEAVY. Yes, Mr. Chairman. It would be inequitable to disregard barter, where it became a factor in gross income.

The CHAIRMAN. We thank you for the testimony which you have given to the committee, Mr. LEAVY.

Grasshopper Control

EXTENSION OF REMARKS
OF
HON. JOHN G. ALEXANDER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1939

JOINT RESOLUTION OF LEGISLATURE OF THE STATE OF MINNESOTA

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following joint resolution of the Legislature of the State of Minnesota:

Whereas in 1938 the farmers of the Northwest witnessed the largest migration of grasshoppers in recent history and these flights infested new territory, including the Red River Valley of Minnesota and other areas throughout the northern Great Plains area; and

Whereas the general situation is acute, particularly because of the danger of migratory attack and because of the interstate movement of these insects and because certain States are unable to cope with the situation and it is therefore of paramount importance that the Federal Government take speedy action to assist in controlling these insects in 1939; and

Whereas definite surveys by entomologists of more than 24 States in cooperation with the Federal Bureau of Entomology and Plant Quarantine indicate that grasshoppers, Mormon crickets, chinch bugs, and the new insect, the fringe beetle, must be given special consideration to avoid calamities in 1939; and

Whereas organization and educational work is already under way in the infested areas, but the most effective preparation cannot be made until funds are available; and

Whereas past control programs have given excellent results and many millions of dollars' worth of crops have been saved for the farmers of the infested States; and

Whereas if poison bait materials and other equipment for the control of these insects are on hand in time, the farmers can save their crops, but if appropriations are not made in time to provide an effective control campaign before crops are damaged, the farmers lose heart and give up: Now, therefore, be it

Resolved by the Legislature of the State of Minnesota (in regular session assembled), That we memorialize the Congress of the United States to take speedy action to assist in controlling these insects in 1939 by making an appropriation of at least $6,000,000 for that purpose; be it further

Resolved, That the secretary of state of the State of Minnesota be, and he is hereby, instructed to transmit a copy of this resolution to the presiding officers of the Senate and House of the Congress of the United States and to each Member of Congress from the State of Minnesota.

Government Reorganization

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1939

STATEMENT BY BROOKINGS INSTITUTION

Mr. ANGELL. Mr. Speaker, the study and survey recently completed by the Brookings Institution on Government reor-

ganization is worthy of serious consideration in connection with the problems now facing the Government. The fact that expenditures made by the Government since 1929 far exceed its income and the further fact that there is now a combined indebtedness of approximately $40,000,000,000, and that the limit of 45 billions, heretofore fixed, will soon be reached, makes necessary a thorough examination of our whole Government structure and processes in order to bring expenditures within income and with the goal in view of balancing the Budget.

One of the elements in this process is the cost of meeting the pay roll for Government employees. Much is said about overlapping bureaus and departments, duplication of activities, and unnecessary employees. Unquestionably this is a field where savings can be made. The Brookings survey, however, discloses that the complete Budget for the operation of administrative agencies, including emergency activities, amounted in the last fiscal year to only 17.65 percent of the total expenditures. It is obvious that whereas substantial savings may be made in drastic curtailment of pay rolls, the major savings necessary to balance the Budget must be sought elsewhere.

This report also discloses that a misrepresentation exists as to the status of many independent agencies; that as to these, reorganization legislation is not essential; that of the 132 agencies listed by the President's Committee on Administrative Management in its report in 1937, only 54 require legislative authority for reorganization; that the President already has control of 22 agencies. Since 1921 the Bureau of the Budget has had authorization from the President to investigate the structure of the administrative branch and to make recommendations to the President with respect to its reorganizations.

Following is the Brookings Institution statement:

Possibilities of economy through mere structural reorganization of Federal administrative agencies are relatively minor in comparison with those which might be realized by the elimination and curtailment of activities, according to a study made public today by the Brookings Institution. Savings large enough to play a really important part in bringing Government outgo down to the level of income can come only from elimination and curtailment of certain types of activities, a step which involves large issues of public policy.

The entire budget for operation of administrative agencies, including the administration of all emergency activities, amounted to $1,827,318,000 in the last fiscal year, which was approximately 17.65 percent of the total amount available for expenditures. The remaining $8,522,590,000 was appropriated for various functions and activities which administrative reorganization would not touch.

The study, which was made by Dr. Lewis Meriam, chairman of the Institute for Government Research, and Dr. L. F. Schmeckebier, points out that two procedures may be utilized in seeking these larger savings.

PRUNING ONE WAY OUT

One involves subjecting all present functions and activities to a rigorous, detailed pruning process, which involves examining the multitudinous activities of the executive agencies, abandoning those which are not regarded as essential, and reducing others to the necessary minimum. Such a program means that beneficiaries of the National Government who are now receiving from it subsidies, grants, donations, loans, pensions, and special services, and even direct or indirect employment would find these aids curtailed or abandoned.

The second procedure involves the development of a more consistent social and economic program through the reexamination of broad policies that are now in conflict. Such major problems are involved as the elimination of conflicting Government price policies; encouragement of private enterprise so that economic, self-sustaining employment may be substituted for Government-made work and the relief of employable persons, and the development of a healthy, coordinated, and self-supporting transportation system. Improvement in such major matters would reduce governmental expenditures and add materially to revenues.

Reorganization merely to eliminate overlapping, duplication, and conflict in the administration of existing activities unquestionably presents some possibilities for the reduction of expenditures. The overwhelming bulk of the administrative expenditures is made, however, by a relatively small number of large agencies which do not seriously duplicate or overlap other agencies, and would not be affected to any appreciable extent by structural reorganization. The 30 largest agencies contain more than 99 percent of all the civilian employees of the executive branch.

AGENCIES EXAMINED

Misconception apparently exists as to the actual status of many independent agencies which have been cited as illustrating the need of reorganization legislation. Of the 132 agencies listed by the President's committee on administrative management in its report to the congressional joint committee in 1937, the study found that only 54 require legislative authority in a plan of reorganization.

Of the remaining 78, the President already has complete control over 22 agencies with staffs and of seven administrative and technical advisory and coordinating committees and boards having no staffs. Twenty-one of the agencies are already under other units; seven are related to specific agencies; four are not Government agencies; three are international commissions integrated with the State Department; two do not exist; eight are temporary agencies created by law for special purposes, and four are ex officio boards and commissions having no staffs.

Since 1921 the Budget Bureau has had authorization, on direction of the President, to investigate the structure of the administrative branch and to make recommendations to the President with respect to its reorganization. No legislation is necessary unless the objective of the Congress is to give the President authority to make laws by Executive order.

The major defect in the executive branch, says the study, is the absence of a fully developed, effective, permanent coordinating agency under the President. It suggests that this situation could be met effectively by strengthening and expanding the Budget Bureau into such an agency through the selection of permanent officials and employees under the classified civil service. Most of them should be obtained by transfer from existing establishments, in order to bring experience gathered over a period of years. The expanded Bureau, under the President's direction, could obtain an orderly and efficient reorganization of the Government over a reasonably brief period of time without any new legislation.

Such an agency could serve in some measure to relieve the President of his burden of activity. The study points out, however, that this heavy administrative burden does not arise primarily from the number of persons who report to the Chief Executive but from the number and diversity of matters under existing law that require his personal attention. Prior to 1932 the substantive law and appropriations acts ordinarily vested initial authority and responsibility in the head of a department, bureau, or independent office. The President had only indirect responsibility for details of management. Under the emergency laws huge appropriations were made directly to the President; he became a major spending officer and had to assume great direct managerial operating responsibilities. Thus, no small part of the volume of business which today crosses the President's desk arises from this recent change in American practice.

While recognizing the fact that the Congress frequently does not have the detailed information which permits of precise control of executive departments, the study raises questions regarding the results which might be obtained from attempting to meet this situation by delegation of more powers to the Executive. More effective, it suggests, would be the further development of congressional investigational agencies.

WOULD EXPAND STAFFS

The present staffs of the Appropriations Committees, though able and fairly permanent, are so small that they must depend chiefly on the information they can obtain from the administrative officers. These staffs could well be expanded so that the committees could obtain complete and impartial information through investigations by their own qualified representatives on such matters as organization, management, personnel, procedures, and activities of the executive branch.

Another relatively simple way to provide the Congress with the necessary information would be by expansion of the investigational research staff of the General Accounting Office, so that, in addition to reporting to the Congress solely on financial data, it could make independent reports on the economy and efficiency of the executive branch.

Excess personnel does not arise merely or even principally from duplication and overlapping, the study says. More important factors are creation of unnecessary jobs for political appointees, appointment of unqualified persons, failure to reduce staff when operations permanently diminish, and failure to adopt efficient business procedure.

TO PREVENT POLITICS

The best-known device for preventing unnecessary political appointments and insuring proper qualifications is a competitive merit system, administered by a Civil Service Commission and an adequate examining staff as completely independent of political control as it is possible to make them.

In recent years, the percentage of employees in the classified civil service has declined, falling from more than 80 percent at the end of 1932 to 62.2 percent before the new Executive orders covering politically selected employees into the classified civil service. This decrease resulted mainly from the exemption of certain new and presumably temporary agencies from the operations of the Civil Service Act. Appointments to these new exempted agencies were made, in many instances, on a political basis. Many of these politically appointed employees are now being covered into the civil service by noncompetitive examination.

Creation of these new agencies was largely responsible for the 53 percent increase in number of Government civilian employees between February 28, 1933, and September 30, 1939. Between July 3, 1921, and February 28, 1933, the number on the pay roll increased little more than 1 percent. Between July 31, 1920, when the rolls were still swollen by wartime activities, and February 1, 1933, there was a reduction in number of employees of nearly 18 percent.

Aid to Needy Crippled Persons

EXTENSION OF REMARKS
OF
HON. JOHN G. ALEXANDER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1939

CONCURRENT RESOLUTION OF LEGISLATURE OF THE STATE OF MINNESOTA

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution of the Legislature of the State of Minnesota:

A concurrent resolution petitioning the Congress of the United States and President Franklin D. Roosevelt, respectively, to pass and approve an amendment to the Federal Social Security Act to provide Federal financial assistance to States for aid to needy crippled persons

Whereas there are thousands of crippled persons in the State of Minnesota who, because of their physical handicap, are unable to secure employment or adequately to provide for themselves, and hence are in destitute circumstances and in need of adequate assistance and aid; and

Whereas it is imperative and a necessity for the State of Minnesota and its political subdivisions to provide adequate assistance and aid to such needy crippled persons to safeguard their health and welfare; and

Whereas the State of Minnesota and its political subdivisions, which in the past have carried the entire burden of furnishing assistance and aid to such needy crippled persons are no longer able to adequately do so; and

Whereas the State of Minnesota and its political subdivisions are urgently in need of Federal financial assistance for the purpose of enabling the State and its political subdivisions to provide adequately for such needy crippled persons: Therefore, be it

Resolved, by the Senate of the State of Minnesota (the house of representatives concurring), That we respectfully petition the Congress of the United States and President Franklin D. Roosevelt, respectively, to pass and approve an amendment to the Federal Social Security Act, now in force, to provide Federal financial assistance to States for aid to needy crippled persons. Be it further

Resolved, That the secretary of state be instructed to send copies of this resolution to the Honorable Franklin D. Roosevelt, President of the United States; the Honorable JOHN N. GARNER, Vice President of the United States; the Honorable WILLIAM B. BANKHEAD, Speaker of the House of Representatives of the United States, and to each of the Senators and Representatives of the State of Minnesota in the Congress of the United States.

Gen. Edmund Pendleton Gaines—A Great American, for Whom Was Named the City of Fort Gaines, Ga.

EXTENSION OF REMARKS
OF
HON. STEPHEN PACE
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1939

Mr. PACE. Mr. Speaker, several days ago I introduced a resolution, House Joint Resolution 158, which has for its purpose an appropriation to be used in the erection of a monument to Edmund Pendleton Gaines in the city which today bears his name—Fo[illegible] Gaines, Ga.

The progress and aavancement of our Nation in the nineteenth century was slow and tortuous because of the nature of the new land that had just gained its independence and was seeking to get a foothold. There was much strife in the struggle for expansion, and the credit for achievements which made smooth the roads for advancement of the Nation has been largely given to a few brilliant and outstanding men, whose names are forever engraved in our memory. However, the task was too herculean for such a few men to have accomplished alone, and the groundwork upon which their brilliant careers were founded had to be laid by others who worked untiringly and steadily. Such a one was Edmund Pendleton Gaines. He had a passionate belief in the ability of the new America to become a great Nation, and he pressed himself to the task of realizing his ambitions for his country with a characteristic fiery determination and unbounded enthusiasm. One result of his visions and constant efforts is our present national network of railroads, which in 1840 seemed but the fantastic dream of a mentally unbalanced man.

Edmund Pendleton Gaines was not a Georgian, but Georgia was proud to honor him in naming one of her cities for him, and now seeks to pay him further tribute in a more material manner. He was by birth and heritage a southerner, having been born in Virginia, the son of a Revolutionary War hero who later became a legislator, and the grandnephew of one of the most able jurists the country has ever known—Edmund Pendleton, for whom he was named. He spent his early youth in North Carolina and Tennessee, and was still but a boy of 17 when his career, that was to make of him one of America's greater generals, began. Though by birth a southerner, his career took him into all parts of the United States, and his deeply imbedded love of country had no place for any feeling of sectionalism. It is not, therefore, the service which he rendered to Georgia or to the South alone that this monument seeks to pay tribute, but also his invaluable services to the entire country.

I quote from James W. Silver, who has made a protracted study of the life and career of Edmund Pendleton Gaines and has incorporated his findings in a publication entitled "Edmund Pendleton Gaines and Frontier Problems, 1801–49." He states:

When the completed story of the westward moving frontier has been written, the achievements of the Regular Army as a peacetime institution and the contributions of many individuals who are now buried in comparative obscurity will undoubtedly assume more important proportions. This is well illustrated in the work of Edmund Pendleton Gaines, a product of frontier environment, in whose career as an Army officer from 1801 to 1849, most of its problems appeared. A study of his life indicates that the attempt to solve these difficulties led to the evolution of a definite frontier philosophy devoted to the protection and internal development of his section as a way to a greater nation.

The career of Edmund Pendleton Gaines had its beginning in a lieutenancy in a volunteer rifle company, formed to combat hostile Cherokee and Creek Indians. He was barely 17, but his ability was such that he was soon rewarded with an appointment as ensign in the Sixth Infantry of the United States Army. From then on his rise was rapid. He was singled out because of his technical qualifications to make a topographical survey from Nashville to Natchez for the location of a military road and his successful completion of this task gave rise to a promotion to a first lieutenancy. Shortly thereafter he was given the commission of captain and was sent to the Mississippi territory, where he was—

Called upon to adjust differences between invading whites and retreating Indians, between ambitious squatters and Spanish officials, and later still he was engaged in a real war against a first-class foreign power.

Also, before the West actually became his permanent residence, he had eliminated a grave menace on the Apalachicola and had started the United States toward the conquest of the Seminoles. Before he crossed the Mississippi as commander, then, Gaines had risen steadily from an obscure lieutenant * * * to one of the few generals whose conduct in the War of 1812 might be approved and cherished. (Silver, Edmund P. Gaines and Frontier Problems, p. 20.)

Among the outstanding military achievements of General Gaines is his brilliant victory at Fort Erie in the War of 1812, where he successfully defended the fort in an attack by the English with a force which far outnumbered his own. He is also outstanding by virtue of his success in handling the situations which arose in east Florida in connection with the expansion into the territory of the Indians there. His Indian policy was one which caused him many clashes with his superiors. He believed in fair treatment at all times and even

risked his career on several occasions to carry out this policy. Again quoting from Mr. Silver:

Gaines saw from the first that in the inevitable clash between Indian and white, the less civilized and therefore the less powerful necessarily had to give way. But the very presence of a weaker civilization meant, to him, that the red man should not be exploited, but should be given a fair chance. Above all, a contract in the form of a treaty made with these unfortunate people should be religiously observed by the stronger party, even more than in case of an agreement with an equal foreign power. It distressed him greatly to see squatters and land speculators illegally take from the Indians property which belonged to them, and, seeing that it was inevitable, he labored long to cushion the blow for the expatriated savages. This does not mean that he was unduly lenient with the tribes; certainly his retaliatory and punitive forays together with his austerity and strictness, invalidate that charge. But he did understand the problem from both points of view. His negotiations with the Cherokees, the Creeks, with Black Hawk, his appreciation of the methods of Leavenworth in 1823, his sympathy for the Seminoles and the Pottawatomies, all indicate efforts at reconciliation rather than annihilation.

However brilliant his military achievements may have been, the records disclose that General Gaines' work in bringing about various internal improvements such as the construction of roads, bridges, and canals, the improvement of river channels and his—

Never-ending crusade to convince the people of the significance of steamships and railroads—greatly overshadows any military victories he may have won. His was a civilizing, law-abiding influence, whether on the Tombigbee, the Chattahoochie, the Mississippi, or the Sabine. * * * If his imagination carried him to the point of being visionary, it was because he looked a little further into the future than his contemporaries, for many of his prophecies, visions, and speculations have been fulfilled (Silver).

General Gaines was untiring, relentless, persistent, and sincere in his efforts to better his country. He was not easily discouraged, and had that same quality which seems to have been so predominant in that great American, Abraham Lincoln, which was once being assured in his own mind that a thing was right, nothing deterred him from his purpose in carrying that idea out.

In this day of modern sophistication it is the inclination of the majority to scoff at hero worship as being sentimental. Various famous and beloved legends which have been a part of every child's belief and education until recent years have been attacked and attempts have been made to expose them as myths; attempts to drag these great heroes of ours down to common level and expose them as having feet of clay. What then can we expect of a rising generation that has no hero to worship, no tangible pattern to try to conform to, no incentive to greatness that comes from hearing of the things that made men great?

It is not healthy, to my mind, for an individual or a people or a nation to consider himself or itself completely self-sufficient. It is a condition which is conducive to smugness, which can well become an instrument of destruction of the character of that individual or people. Our Nation was not built up to its present greatness by ordinary mortals. It was built by men who were made of sterner stuff, who bent their minds and their ceaseless energies to the task of creating order from chaos; who saw visions and dreamed dreams and made them reality; who gave of their very lives in order that a nation might advance into the realms of the mighty. Who can expect to emulate the accomplishments of those immortals or even to carry on the work that they so painstakingly started, who does not possess a just regard for the talents which made possible these accomplishments?

It is, therefore, not only to honor Gen. Edmund Pendleton Gaines, a superior general and a great American, that I have proposed this monument, but also to preserve the principle of hero worship, which is necessary to the preservation of a certain humility without which no man and no nation can become great.

It is my sincere hope that this Congress will aid me in this effort and will give favorable consideration to an appropriation for the erection of a monument to the memory of Maj. Gen. Edmund Pendleton Gaines in Fort Gaines, Ga.

Interest on Farm Loans

EXTENSION OF REMARKS
OF
HON. JOHN G. ALEXANDER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1939

RESOLUTION OF THE LEGISLATURE OF THE STATE OF MINNESOTA

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Legislature of the State of Minnesota:

Resolution memorializing Congress and the President of the United States to continue a low minimum rate of interest on farm loans through the Federal Land Bank System

Whereas the stability of agriculture and the prosperity of the farmers engaged therein is essential to the national and public welfare; and

Whereas agriculture is one of the basic industries and there can be no sound business prosperity unless and until the business of agriculture is placed on a comparable and equal basis with other industries; and

Whereas American agriculture is still below an adequate income level; and

Whereas farmers are large users of credit and such a large percentage of their income is used in paying interest on farm mortgages, production credit loans, and other necessary loans; and

Whereas before we can have general prosperity the purchasing power of the farmer must be retained and increased: Therefore be it

Resolved, That we urge upon the President and the Congress to support and pass legislation extending the interest rates of 3½ percent or less on Federal farm loans and 4 percent or less on Commissioner loans; be it further

Resolved, That the secretary of the State of Minnesota is hereby instructed to forward a copy of this resolution to the President of the Senate of the United States, Speaker of the House of Representatives, and Representatives in Congress from Minnesota, and to the President of the United States.

The Farm Chemurgic Movement, the Real Permanent Solution of the Farm Problem

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1939

Mr. MASON. Mr. Speaker, the following disconnected but pertinent observations bearing upon our farm-surplus problems are worthy of serious consideration. We claim that the main reason 10,000,000 of our people are unemployed today is that our 30,000,000 people in agriculture are on half pay. We also claim that if we give the 30,000,000 full pay that our 10,000,000 unemployed will be put back to work. The hypodermic treatment provided for agriculture in the present A. A. A. program is no permanent solution. In fact, our present low prices for farm products prove that the beneficial effect, if it ever had any, has already worn off. The farm chemurgic movement is the sound, permanent, long-time solution of the vexing, persisting farm problem.

A SOLUTION FOR FARM SURPLUSES

There are 30,000,000 people on the farms of America directly dependent upon the farm dollar, and 20,000,000 more people indirectly affected by the farm dollar. Agriculture has been considered as the industry that produced our food and clothes. However, a man's stomach can stretch only so much. It is elastic, but it has its limits. A man can wear only one suit of clothes at a time. His financial condition determines whether he may have more than one suit.

Therefore, if farm acres are to be kept in production, we must find other uses for farm products besides food and clothes. Our shelter and power-fuel needs can be supplied from farm products. This is where the farm chemurgic movement, chemistry applied to the solution of farm surpluses, comes into the picture. We are 20 years behind other nations in this field. The farm chemurgic movement is the solution for farm surpluses.

ALCOHOL FOR FUEL

England mixes 15-percent fuel alcohol in the gasoline used for her internal combustion engines; Germany mixes 10-percent fuel alcohol in her gasoline; and Italy mixes 11 percent. If the United States would mix only 5-percent fuel alcohol in the gasoline she burns each year every idle acre in the Corn Belt would be needed, and then we would be short of the corn required. We use 30,000,000,000 gallons of gas each year in our internal combustion engines. If 10-percent corn alcohol were used in this gas, it would mean 3,000,000,000 gallons of corn alcohol, and require 30,000,000 acres of corn land to produce the corn needed. We can make 18-cent alcohol from 50-cent corn, and a nice profit accrues to the distillery. Why have idle corn acres? Farm chemurgic is the answer.

WHY HAVE IDLE ACRES?

American farmers represent 25 percent of our population, but they receive only 12 percent of the national income. Something should be done about it. We import 466,000,000 pounds of tropical starch materials each year. Sweetpotatoes, from which a better grade of starch can be produced economically, can be grown on our acres at a profit. Why import starch materials when we have idle acres that should be in cultivation? We import 164,000,000 pounds of tung oil each year. Tung oil can be made from the castor bean at a profit, and castor beans grow readily in the South and Southwest. Why import when we have idle acres that should be cultivated? Why pay out one and one-half billion dollars each year to foreign farmers for competitive farm products that our farmers can and should grow? This is the other side of our crop-curtailment question. Farm chemurgic is the answer.

FARM PROSPERITY

Our prosperity does not lie across the water. Foreign trade will never solve our agricultural surpluses, nor will it bring back prosperity to the American farmer, nor will it solve our unemployment problem. Our prosperity lies in making full use of our farm acres and the finding of other uses for our farm crops. This can be done if we apply the lessons we have learned in our chemical laboratories. Farm chemurgic is the solution of our farm problem. It can bring back farm prosperity.

BUTTER AND BUTTER SUBSTITUTES

The American people need 3,000,000,000 pounds of butter each year—about 30 pounds per person. Many substitutes for butter are in use. If those substitutes are made from farm products grown on American farms, well and good. If, however, those substitutes are made from coconut oil or Brazilian nut oil shipped into this country to compete with our home-produced butter, then that is a different story. If the butter substitute is made from whale oil captured by Danish seamen, that is also another story. Do you know that a year ago Danish whale hunters gathered 3,000,000,000 pounds of whale oil? Now, whale oil stinks of the whale. It also tastes strong of the whale. But our chemists take whale oil, deodorize it, detaste it, decolor it, put other color in it, and then it can be and is used as a substitute for butter. No wonder our dairy farmers grumble.

COTTON EXPORT AT 20-YEAR LOW

The Agriculture Department reports our cotton exports so far this season are at a 20-year low. Unless there is a substantial and unexpected increase during the next few months, our cotton exports for the year ending August 1, 1939, may not exceed 4 million bales as against a normal export of 6¾ million bales. The reason given is competition from other cotton-growing nations. Is crop restriction the solution? No; farm chemurgic is the solution.

Sam Houston

EXTENSION OF REMARKS
OF
HON. R. EWING THOMASON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1939

ADDRESS BY HON. T. V. SMITH, OF ILLINOIS, MARCH 2, 1939

Mr. THOMASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks by Hon. T. V. SMITH, Congressman at Large from Illinois, and a native of Texas, regarding the life of Sam Houston, made at the Texas Independence Day dinner on the evening of March 2, at the National Press Club in Washington:

Sam Houston was in truth the Sampson of the Southwest. Born in Virginia, reared in Tennessee, escaping in adolescence from civilization to the semisavagery of Ol-loo-te-ka, a chieftain of the Cherokees, this pioneering Paul Bunyan combined in a single frame the virtues of many States, a strange and potent mixture of earth and air, of fire and water. Adopted by the Indian chief and christened "The Raven," Houston brooded over troubled waters and troubled the still waters of three continents for half a century.

Twice a Member of Congress from Tennessee, and then its popular Governor, in the hour of his eminence he renounced all that he had been, and all that he might be, to return to the Cherokees in the silence of southern chivalry for the sake of a woman's name. In the somber stillness of his retreat rolled distantly the thunders of mighty events coming on. Taking up with honor dreams lost by Aaron Burr in dishonor, Houston wrested the empire of Texas from alien cruelty and native greed and blazoned, for all ages, the moral meaning of human intrepidity: "Not greatly to care and dare is never greatly to achieve."

Commander in chief of the almost mythical forces, by land and sea, of the swaddling Republic of Texas, he developed out of thin air the morale of war and later the healing balm of peace. First President of that singular star in the galaxy of nations, he worked incessantly to trade imperial sovereignty for the humbler partnership in a nation of States. Thrice Governor of the Lone Star State, later its United States Senator for 13 years, Houston with surpassing clairvoyance withstood the pressure of forces toward disunion and accepted personal disgrace rather than be a party to national dismemberment. Barely avoiding the Presidential nomination against Lincoln as a Union Democrat, Houston sympathized in private retirement with Lincoln's endeavor to save the Union.

Uniting the best of the subtle sagacity of the aborigines and the worldly wisdom of the Anglo-Saxons, Sam Houston became the father of the Commonwealth of Texas and is for all time one of the greatest American leaders in the finest enterprise of all, the craft of human statesmanship. His spirit goes marching on.

Is America Drifting Blindfolded Into War?

EXTENSION OF REMARKS
OF
HON. HAMILTON FISH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1939

RADIO ADDRESS OF HON. HAMILTON FISH, OF NEW YORK, MARCH 5, 1939

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following radio speech delivered by me over the Columbia Broadcasting System on Sunday evening, March 5:

The American people have a right to know, and to know immediately, the foreign policy of President Roosevelt and the New Deal administration. What does all the secrecy and mystery that surround it mean? Is President Roosevelt trying to scrap our traditional American policy of neutrality, nonintervention, peace, and no entangling alliances for collective security, secret understandings, quasimilitary alliances, and war commitments without the consent of the Congress or the American people?

The time has come for a definite show-down on our foreign policy. It is the duty of President Roosevelt to take the American people into his confidence by explaining the mysterious course he

has been pursuing and help allay the war hysteria that has resulted from his speeches and those of his Ambassadors, Cabinet officers, and other high New Deal spokesmen.

Why doesn't President Roosevelt use his great influence as Chief Executive to dispel the war talk, the hymns of hate, and the appeals to fear and emotionalism that are making our people jittery and a prey to war hysteria? Why is President Roosevelt so strangely silent when by a few reassuring words and acts he might make clear to the American people that there is no danger of our being involved in any foreign wars?

Instead, as we take up the morning papers we find one new crisis after the other, generally conceived in the imagination of the President, to further inflame our jittery nerves. The President had hardly gotten out of sight of land on his recent fishing trip—or was it to direct a great naval battle; it makes no difference to the taxpayers which—than he discovered in his own mind another alarming crisis and imminence of war that might require his immediate return. I am inclined to believe that the farther the President is away from Washington on fishing trips the safer the country will be.

I challenge President Roosevelt or anyone of his spokesmen to specify what nation, or nations, has the faintest idea of attacking or invading the United States, or what nation, or nations, has the capacity to attack or invade us even if they wanted to.

There will be no answer, for the only possible answer is there is none. All the totalitarian states are busily engaged in their own back yards. I have no fear whatever of any nation attacking us, but I am fearful that we may be goaded by false propaganda and by adventures in aggression and provocation, such as establishing Guam as an air base, to become involved in foreign conflicts.

The American people will not be satisfied to drift blindfolded into war in either Europe or Asia. They will not agree to being led to wars through secret diplomacy, nor will they be satisfied, if the President is taking us into war, to merely know about it.

Instead, they demand that President Roosevelt pursue a definite course and policy to keep us out of all foreign wars. The American people, irrespective of party affiliations, have no use for international poker games, because they know in advance that we are always the losers and pay all the bills. They are naturally opposed to interfering and meddling in other people's business. It is none of our business what form of government exists in Soviet Russia, Nazi Germany, Fascist Italy, or Imperial Japan, and by the same token it is none of their concern what form of government exists in the United States of America.

For the first time in the history of our country our foreign policy is based upon provocation, hatred, and attacks on the forms of government and the rulers of foreign nations. It is the most amazing departure from American traditions and statesmanship and puts the United States on the road to war.

The President, members of his Cabinet, and his ambassadors have vied with each other in swashbuckling statements and tirades against certain nations. It is not necessary to go further to find the origin of the spread of war hysteria and the beating of war drums, which become faster and louder each week. Ambassador Bullitt, who only recently with the aid of Ambassador Kennedy did his bit to promote the war scare by telling a congressional committee that war was inevitable this spring, produced a brand new red, white, and blue rabbit before the American Club at Paris on Washington's Birthday. In the presence of the French Prime Minister and members of his cabinet, he announced that the United States had abandoned its geographical isolation; an insult to the memory of George Washington and a denial of the foreign policies he proclaimed. What right had Ambassador Bullitt to misrepresent and repudiate the traditional American foreign policy accepted by all our Presidents since the time of Washington? Certainly he was not speaking for the American people. Was he speaking for President Roosevelt or for other internationalists and interventionists in the administration? If not, why has he not been rebuked or recalled, for this is the third time he has made similar statements?

I am beginning to wonder whether our Ambassadors are doing more to get us into, than keeping us out of, wars.

The United States will defend itself against any and all nations, but it does not propose to go to war again to make the world safe for democracy, as Ambassador Bullitt infers, and our frontier is not on the Rhine or with the French Army or the British Navy but on our own shores, protected by our own Navy, the largest and most powerful we have ever had and by our own Army and Air Corps.

For the benefit of Ambassador Bullitt let me again quote George Washington's words of wisdom and advice in his Farewell Address: "Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground?" Were truer words ever uttered? Washington had more vision of the future than any of our other Presidents.

It is high time that the spokesmen of the administration and other war mongers cease their public attacks on certain nations and making direct or implied commitments involving us in disputes, quarrels, and wars in foreign lands. They are doing a disservice to France and Great Britain by egging them on by false insinuations and by verbal or implied war commitments. The people of France and Great Britain want peace, but our war mongers are constantly inciting them to disregard the Munich Pact and resort to the arbitrament of arms. If only we would stop meddling in foreign lands the old nations of Europe would compose their own quarrels by arbitration and the processes of peace, but apparently we won't let them.

Can it be that the war propaganda and hysteria in this country is purposely instigated to cover up the failure and collapse of the New Deal policies with 12,000,000 unemployed and business confidence destroyed? Can it be that the dogs of war, who are barking and straining at the leash, will be let loose to join in the European madness? God forbid that such a folly and crime could be entertained by any American no matter how humble or how exalted.

The answer to the dictatorships is not force and compulsion, threats, abuse, and hatred, but to make democracy work in our own country.

The dictators, Stalin, Hitler, and Mussolini, are laughing at our economic failures and huge unemployment problem in the greatest and richest nation in the world. They claim that democracy has broken down in America and has no program to restore prosperity. We should keep out of all entangling alliances and the eternal wars of Europe and Asia and put our own house in order, restore confidence, provide employment for our wage earners, and make democracy work in free America.

That is the best and most effective answer to the dictators in Europe and to our enemies from within, such as the Communists, Nazis, and Fascists. I believe we have far more to fear from our enemies from within than we have from our enemies from without. All the Communists are united in urging us to go to war against Germany and Japan for the benefit of Soviet Russia, and the Nazis and Fascists would stab us in the back if we did. A plague on all three of their houses.

If I had my way, I would deport all the Communist, Nazi, and Fascist agitators back to their native lands and give their jobs to loyal American citizens now walking the streets looking for employment.

I favor adequate national defense, but if we are arming merely for defense we are spending far too much and wasting money, as no nation thinks of attacking us. If we are planning to send our armed forces to Europe or Asia, then the American people have a right to know it. In either case we are on the road to bankruptcy, but in the latter we are on the road to both war and bankruptcy and to much quicker and surer bankruptcy.

All America needs is to provide for extensive research and prepare in advance to mobilize, coordinate, and standardize our resources in order to produce airplanes and equipment in vast quantities in case of emergency. If we follow such a course, we could turn out a couple of thousand airplanes a month, and I doubt if we need to spend hundreds of millions on airplanes now that will be obsolete in a few years. No airplane has ever been invented that can bomb any American city and get back to its base in Germany, Italy, or Japan.

A number of Senators on the Military Affairs Committee who attended the now famous secret conference at the White House with the President have publicly stated that the people would be shocked if they knew what the President said. I doubt if he said anything more than he has repeatedly said: That we are on the verge of war and can scarcely keep out; that war is imminent and is apt to break out any time; that he wanted the power to determine the aggressor nation and to establish economic sanctions, which means that he wants Congress to surrender its constitutional power to declare war; that our traditional policies of nonintervention and neutrality are outmoded; that we must scrap the Neutrality Act; that we must furnish supplies and enter into concerted action with Great Britain and France; that we had a rendezvous with destiny; that our first line of defense is in foreign nations; and profusely punctuated by attacks on Hitler and Mussolini, on Germany, Italy, and Japan, but not on Stalin or Soviet Russia. It does not take a mind reader to know what the President said, because for the past year or more he and his Cabinet have been making so many violent, provocative, and inflammatory statements.

It is not true that we are a weak, defenseless nation like China or Abyssinia. The United States and Latin America were never safer from attack than at the present time, as we have the strongest national defense in our history and the most powerful Navy.

The American people have been burned once, and will in the future follow the example of the sane nations of Europe, such as Norway, Sweden, Holland, and Switzerland, who managed to keep out of the World War. We must, however, beware of foreign propaganda. The American people are the greatest push-overs for British propaganda. We just love to be told that it is our moral duty to preserve the British colonies and Empire—Hong Kong, India, and Egypt. I admire the English statesmen because they know exactly what they want and how to get us to do it for them, but they never give up anything in return. Great Britain still expects every American to do her duty. I hope the recent reports in which leading British statesmen came out in favor of a third term for President Roosevelt is no indication of an entangling political alliance whereby the British will participate in the next American election.

In conclusion, I urge the radio audience to write their Representatives in Congress to support H. R. 2645, introduced by me, to prohibit the arming, drilling, and wearing of uniforms by Nazis, Communists, Fascists, and other un-American groups. Hearing on this bill will be held before the Committee on Military Affairs, House of Representatives, on Tuesday morning March 28. Unless this type of legislation is passed, these seditious groups will bring their Old World quarrels to America and cause class, religious, and civil warfare. The way to stop it is for Congress to pass legislation immediately and scotch these insidious and un-American activities at the beginning.

Resolution Encouraging a More Extensive Use of Copper

EXTENSION OF REMARKS
OF
HON. JAMES F. O'CONNOR
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1939

RESOLUTION BY THE LEGISLATURE OF MONTANA

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Legislature of the State of Montana:

Resolution encouraging a more extensive use of copper

Be it resolved by the House of Representatives of the State of Montana (the senate concurring):

Whereas all copper consumed in this country is mined, refined, and fabricated into wire and cable in the United States at a cost of $222.74 per ton, $96.50 paid directly in wages, $79.57 in supplies purchased from other industries, $8.29 in Federal taxes, $10.39 in State and local taxes, $27.99 in freight to railroads (estimated 44 percent of railroad income goes to labor); and

Whereas the consumption of copper declined in the first quarter of 1938 against the first quarter of 1937, 56,008 tons, a loss to labor of 1,663,438 man-days; and

Whereas aluminum has entered the field as a competitor of copper as a conductor of electricity on projects being executed by the T. V. A., R. E. A., etc., aluminum being manufactured from bauxite ores, of which 54.8 percent in the year 1937 was imported from British Guiana and Surinam, countries in which coolie labor is employed at a few cents a day in their m nes, thus causing an exploitation of cheap labor and a displacing of American workmen in the bauxite fields of Arkansas and Tennessee, to say nothing of the unfair competition with the American copper miner; and

Whereas low bids on T. V. A. and R. E. A. projects have invariably included the use of aluminum because of its lower price due to the fact that it can be imported and fabricated into a finished conductor more cheaply than copper as a raw material can be produced in this country based on our higher standard of living; and

Whereas from a true American standpoint and from what we believe is the real intent of the R. E. A. to use American material and labor: Now, therefore, be it

Resolved by the House of Representatives of the State of Montana (the senate concurring), That domestic labor and industry should be receiving from the projects carried on by the T. V. A., R. E. A., etc., a larger proportion of the benefits to be derived from these projects, and that said benefits will be derived by a more extensive use of copper as a conductor, and that in all calls for bids wherein in executing the proposed contract either copper or aluminum might be used, the use of copper exclusively be one of the specifications thereof.

Tax on Gasoline

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1939

Mr. ANGELL. Mr. Speaker, on February 25, 1919, the Oregon Legislature passed a bill imposing a tax on gasoline. I am advised that this was the first gasoline tax in the United States. The State of Oregon was in great need at the time of raising revenues for the building and maintaining of highways. The first tax imposed was 1 cent a gallon and was devoted to highway purposes. Oregon's tax now is 5 cents a gallon. This tax has raised in Oregon in the 20 years of its existence some $94,000,000. Last year the gasoline tax amounted to $11,298,218. Since that time, practically all, if not all, of the States in the Union have imposed similar taxes on gasoline, and this tax has yielded throughout the Nation more than $7,000,000,000. The Oregon State Motor Association states that in the past 2 years this tax has amounted to more than 25 percent of the total State tax yields.

The gasoline tax is an ideal tax in many particulars, especially in those States which require that the revenue raised thereby shall be devoted to highway construction and maintenance. It is a pay-as-you-go tax; is inexpensive in operation; is paid by the taxpayer in small amounts, and is devoted to a specific purpose for which the tax is levied and collected. The motoring public is willing to pay the tax in order to enjoy good roads. It more nearly than any other tax complies with the old adage of "plucking the goose by getting the most feathers with the least squawk."

In 1932 the Federal Government adopted this source of tax revenue and now gets about $200,000,000 a year from this source. It is regrettable that the Federal Government saw fit to enter this field of taxation. The Government has avenues for raising tax revenues which are not available to the States, and the Federal Government should, so far as is possible, leave certain tax fields free to the States. The gasoline tax was originated by the States, and is, in the main, devoted exclusively to the problem of raising funds for construction and maintenance of highways. The Federal Government should leave this field free to the States to carry on this most necessary State activity—that of highway construction and maintenance.

The Federal Government should and must revamp the whole tax structure. When this is done, it should eliminate any tax on gasoline, and leave this important revenue-raising field to the States which originated it for meeting obligations already incurred in the construction of highway systems, and for the extension, improvement, and maintenance of them.

In the Oregonian, of Portland, Oreg., in its issue of February 25, 1939, the following statement with reference to this tax appears:

[From the Portland (Oreg.) Oregonian of February 25, 1939]

TAX ON GASOLINE TWO DECADES OLD—OREGON FIRST STATE TO VOTE LEVY, 20 YEARS AGO

Twenty years ago today the Oregon Legislature, hard pressed for highway funds, devised a means of raising revenue that since has yielded more than $7,000,000,000 throughout the Nation.

The gasoline tax law, first adopted by Oregon in February 1919, has been the principal source of revenue for highway construction and maintenance in every State, and in the past few years has amounted to more than 25 percent of total State tax yields, according to the Oregon State Motor Association.

The first Oregon statute, levying 1 cent on every gallon, was drafted by W. B. Dennis, of Carlton, and Loyal M. Graham, of Forest Grove. Among other sponsors were C. C. Chapman, of Portland, and James S. Stewart, of Fossil.

Within 10 years every State had drafted a similar law. The Federal Government tapped the gas pumps in 1932 and now it gets about $200,000,000 each year, the motor association pointed out.

Oregon's tax, now 5 cents, has provided about $94,087,000 in its 20 years of existence. Last year its income from gasoline sales amounted to $11,298,218.

Aid of Dependent Children

EXTENSION OF REMARKS
OF
HON. JAMES F. O'CONNOR
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1939

JOINT RESOLUTION BY THE LEGISLATURE OF MONTANA

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following joint resolution of the Legislature of the State of Montana:

Joint memorial to the Congress of the United States requesting the amendment by that body of the Social Security Act of Congress so as to provide for the payment by the Federal Government of one-half the money used in aid of dependent children

To the honorable Senate and House of Representatives of the United States of America:

Whereas the Social Security Act of Congress, known as Public, No. 271, Seventy-fourth Congress, H. R. 7260, approved August 14,

1935, provides in section 403 (a) for the payment by the Secretary of the United States Treasury to each State which has an approved plan for aid to dependent children, for each quarter beginning with the quarter commencing with July 1, 1935, an amount which shall be used exclusively for carrying out the State plan, equal to one-third of the total of the sums expended during such quarter under such plan; and

Whereas by section 3 (a) of said act the Secretary of the Treasury is directed to pay to each State a sum equal to one-half of the total of the sums expended as old-age assistance under the State plan; and

Whereas the volume of necessary work and expenditure in connection with aid to dependent children is equal to or greater than that in the case of old-age dependents; and

Whereas the work of caring for dependent children, giving them an opportunity in life of which they have necessarily been deprived by the circumstances which bring them within the purview of the act, and making them useful and independent citizens to take the place of those who have passed their age of activity, is greater than that involved in providing for aged dependents: Now, therefore, be it

Resolved by the Senate and the House of Representatives of the Twenty-sixth Legislative Assembly of the State of Montana (both houses concurring), That the Congress of the United States of America be, and it is hereby, respectfully urged to amend subdivisions (a) and (b) of said section 403 of said Social Security Act by changing the words "one-third" wherever the same appears therein to the words "one-half"; and be it further

Resolved, That copies of this memorial be mailed to the President of the United States, to the President of the Senate of the United States, to the Speaker of the House of Representatives of the United States, and to each of the Senators and Representatives in Congress from the State of Montana.

Resolution Against Participation by the United States in Any Foreign War

EXTENSION OF REMARKS

OF

HON. HENRY B. STEAGALL

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

RESOLUTION BY THE ALABAMA SENATE

Mr. STEAGALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution recently adopted by the Senate of the State of Alabama:

Whereas war clouds hover over the world today; and

Whereas wars are raging today in both Asia and Europe; and

Whereas there is seemingly imminent danger of a general conflagration breaking out among the major countries of Europe; and

Whereas in such event there would be much pressure brought upon the President and the Congress of the United States to induce participation by the United States in such a conflict; and

Whereas in the Spanish-American War, which this country fought ostensibly to right the wrongs which had been done this country by the Spanish Nation and to relieve dire human suffering in certain Spanish possessions; and

Whereas in that war the United States, after having won the same at a cost of many millions of dollars and many hundreds of human lives, then paid to the Spanish Government $20,000,000 to be allowed to relieve that Government of the burden of the Philippine Islands; and

Whereas the Philippine Islands have since been a burden and a source of worry and trouble to the United States; and

Whereas in the World War, into which the United States entered to make the world safe for democracy, the United States spent many billions of dollars and saw the lives of thousands upon thousands of its young men sacrificed; and

Whereas whatever else may have been accomplished by the participation of the United States in the World War, it certainly did not result in making the world safe for democracy; and

Whereas the participation of the United States in the World War caused it to lose the friendship of many nations whose friendship she would still have had she not participated therein; and

Whereas the United States financed in large measure the participation of other nations in the World War by loans to those nations which they have refused to repay and still refuse to repay; and

Whereas the cost of the United States' participation in the World War is still being paid for by the citizens of America at the rate of several billions of dollars annually and will continue to be paid for at this rate for many, many years to come; and

Whereas the deleterious effects of the World War have left an ugly scar upon the present generation of American citizens and will continue to leave an ugly scar on many generations yet to come; and

Whereas the best minds of this Nation and the world are convinced that the world has not yet recovered morally or financially from the disastrous effects of the World War, and that another such war will mean the destruction of the civilization of the world; and

Whereas the experiences of the past teach us that no good but much harm can come from further participation by the United States in future foreign wars; and

Whereas the citizens of the United States are overwhelmingly opposed to the United States becoming engaged in another foreign war that will mean a sacrifice of thousands of lives of its citizens in addition to the financial cost of untold billions of dollars: Now, therefore, be it

Resolved, By the Senate of Alabama that it is the sense of the people of the State of Alabama that they are unalterably opposed to participation by the United States in another foreign war; and be it further

Resolved, That the Senate of Alabama and the people of Alabama, through the Senate of Alabama, memorialize the President and the Congress of the United States to do all in their power to keep the United States out of any foreign war in case a general conflagration occurs; and be it further

Resolved, That copies of this resolution be sent by the secretary of the senate to the President of the United States, the Secretary of State of the United States, the President of the Senate of the United States, the Speaker of the House of Representatives of the United States, the United States Senators from the State of Alabama, and the Members of Congress from the State of Alabama.

Pollution of the Ohio River

EXTENSION OF REMARKS

OF

HON. CHARLES H. ELSTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

REPORT OF HUDSON BIERY, CHAIRMAN OF COMMITTEE ON STREAM POLLUTION OF THE CINCINNATI CHAMBER OF COMMERCE

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report of Mr. Hudson Biery, chairman of the stream pollution committee of the Cincinnati Chamber of Commerce and the water resources committee of the National Resources Committee, excerpts from which were submitted to the Rivers and Harbors Committee of the House of Representatives on March 3, in support of pending legislation on the subject of Stream Pollution in the United States:

OHIO BASIN HAS ALL KINDS OF POLLUTION

The Ohio River drainage basin includes 200,000 square miles, comprising parts of 14 States. The population of the basin is 17,000,000. All of the larger cities on the main stem of the Ohio are placing their raw, untreated sewage in the river. River pollution also includes wastes from many industrial plants and mines. It is estimated that the many coal mines in the upper stretches of the river contribute 4,000,000 tons of sulphuric acid every year. In addition, the entire range of industrial development is represented in processing mineral, agricultural, forest, and chemical products resulting in every possible type of industrial waste contribution.

THIS POLLUTION IS INTENSE

As stated by the Ohio Valley Compact Commission, "Some conception of the severe pollution of the Ohio River, and the public-health hazards arising from the use of this stream for public water-supply purposes, may be gained by the fact that the raw, untreated sewage from nearly 5,800,000 persons and the treated sewage from nearly 2,400,000 additional persons are discharged daily into the Ohio River and its tributaries; that over 6,200,000 persons are supplied with water from the Ohio River and its tributaries; and that 1,500,000 persons are supplied with water from the Ohio River itself. The concentration of bacterial pollution in the river water for many weeks at a time is far greater than that considered safe to be used as a source of public water supply, even when the water is treated by the most modern methods of filtration, supplemented by chlorination, under the direction of competent, trained, and experienced operators."

These serious conditions prevail in successive river stretches from Pittsburgh, through Wheeling, Huntington, Portsmouth, Cincinnati, and Louisville, a river length of over 600 miles.

POLLUTION IS RAPIDLY INCREASING

The United States Public Health Service has found that a satisfactory raw water supply from a lake or a river may have as many as 5,000 bacillus coli (germ from the lower bowel of red-blooded animals) per 100 cubic centimeters and be safely treated for use as drinking water. With the exception of the year 1930, the pollution load in the Ohio River has exceeded the safe limit of 5,000 for more than 2 months out of every year for the past 15 years. In August 1935 the bacillus coli count averaged 22,700. In January 1937 the pollution count reached 22,800 for the month while in December of the same year it reached almost 24,000 (safe limit 5,000). This year, July 1938, the count averaged 28,840 for the entire month, with some days even higher. See document 36 attached.

To keep pace with increasing pollution the Cincinnati waterworks has just spent $3,000,000 to enlarge the facilities of the plant and to improve its processes for treatment. Health authorities hesitate to prophesy how much longer the water can be safely refined if the pollution continues to increase as it has increased during the past 10 years. Taking the Ohio River as a whole, the National Resources Committee is authority for the statement that when the river is low 1 quart out of every gallon of water flowing in the river has been through a sewer.

POLLUTION PROBLEMS COMPLICATED BY NAVIGATION DAMS

The Ohio River is completely canalized by over 50 navigation dams. During low flows these dams create a continuous series of pools which retard the flow and result in critical sanitary conditions at metropolitan centers. The seriousness of this pollution was forcibly brought to the attention of the municipalities located on the Ohio River during the severe drought that occurred during the summer of 1930 and again in 1934, when the flow of the Ohio River became so low that some of the pools formed by Government navigation dams became virtually open cesspools. From the upper end of one of these highly polluted navigation pools the cities of Cincinnati, Ohio, and Covington and Newport, Ky., pump their water supplies. During the latter part of the severe drought of 1930 there were in many cities situated along the Ohio River successions of epidemics of gastroenteritis involving thousands of cases. According to reports of investigators of the United States Public Health Service, these were caused by discharge of sewage and wastes into the Ohio River from which these cities obtain their public water supplies. Among the cities affected were Charleston and Huntington, W. Va.; Portsmouth, Cincinnati, and Ironton, Ohio; Louisville and Ashland, Ky.

The dangers to health created by sewage pollution were demonstrated also during floods and extreme high water conditions, especially those of 1935, 1936, and 1937. During the early stages of such high waters the flushing action of accumulated sewage deposits behind the navigation dams exerted an extremely heavy bacterial loading upon downstream waterworks intakes. It has been only by the most careful and efficient operation of the water filtration plants serving these municipalities that reasonably safe water supplies could be provided, according to the compact commission.

POLLUTION AND RECREATION

The streams and rivers of the Ohio Valley will become a vast playground for its people when the streams once more become clean. Recreation has economic phases that should not be disregarded in the conservation of our streams. There are more than 500,000 fishermen in the State of Ohio alone (even with Ohio's streams what they are, 470,082 fishermen bought Ohio licenses last year). Each year these fishermen travel many miles to other States, trying to find places where they may fish and boat and swim. Most of these fishermen spend several week ends or a week or 2 weeks' vacation fishing and boating. If each fisherman only spends $20 a year in the pursuit of this favorite recreation, this means an economic loss to the State of Ohio of more than $10,000,000 a year. The amount may actually be five times this great. If we apply this method of calculation to other States of the Ohio Basin, the resulting figure will be enormous. With increasing congestion on the highways and the attendant hazards of high-speed motor travel, restoration of our own native streams for recreational purposes would be most welcome to the people.

PUBLIC DEMANDS ACTION

Public sentiment, reinforced with ample factual data from the health authorities of the several States bordering the Ohio River is thoroughly crystalized in demanding action on this important problem. Repeated suggestions for exactly the course now proposed have been made throughout this territory time after time.

LARGE FEDERAL INVESTMENTS AT STAKE IN OHIO RIVER

The Federal Government has invested large sums in the construction of navigation and flood-control works in the Ohio River Basin. These improvements and replacements are directly related to the need for correction of pollutional conditions. Acidity of the waters in the Pittsburgh area are costly to Government and industrial properties as well. Formation of sewage banks behind navigation dams, particularly if such dams are of the fixed type, must result in increased costs of channel maintenance. Any abatement of pollutional conditions would be immediately reflected in reduced maintenance costs of Government properties along the Ohio River.

THE WORK HAS ALREADY BEGUN

The pollution situation has become so acute in the Ohio Valley that in 1936 Congress authorized the negotiation of an interstate compact among the principal States forming the Ohio Basin to deal with the problem. These negotiations have been completed and the proposed compact is now being submitted to the Governors and the Legislatures of New York, West Virginia, Pennsylvania, Ohio, Kentucky, Indiana, Illinois, and Tennessee for enactment into law.

In 1912 by a special act of Congress the duties of the United States Public Health Service were broadened to include a study of the pollution of streams. At that time, after a considerable investigation, the Ohio River was chosen as being the best example of a typical inland river on which to establish a station for the purpose of studying stream-pollution and stream-purification work. As a result, after having maintained a school of study at Cincinnati at the stream pollution investigation station we have nearly a quarter of a century of knowledge that has been gained by constant study of the problems of pollution in the Ohio River which is applicable to all streams in the United States in a general way.

Proceeding under authority of an amendment to the rivers and harbors appropriation bill introduced by Representative SPENCE, of Kentucky, a joint survey is now in progress under the direction of the United States Corps of Engineers and the United States Public Health Service. This study may well be followed by a comprehensive program of actual works and development, contemplated in the selection of a typical river basin as a demonstrative unit for pollution abatement.

Also, a comprehensive program for elimination of mine drainage is now being actively prosecuted in every mining State of the Ohio Basin with Federal funds administered by the Public Health Service and State agencies. This work, under way for several years, has already resulted in marked reduction in the acid content of many important tributary streams.

OHIO BASIN OVERNIGHT FROM WASHINGTON

Serving a densely populated area the Ohio Valley is sufficiently small in size to be flexible for adjustment in the studies proposed. It is sufficiently close to Washington for conferences, negotiation, and observation.

FEDERAL GOVERNMENT HAS ACTIVE ESTABLISHED ORGANIZATION ON OHIO RIVER

Since the Federal Government has long conducted detailed studies in this area and maintains a full-time staff of engineers and research experts here in the Ohio Valley, the proposed program could be conducted probably at less cost than in any other section of the country. The Public Health Service has maintained its headquarters station for all stream-pollution studies throughout the United States at Cincinnati on the Ohio River. Greatly enlarged facilities for these activities are now being provided. The United States Army Engineer Corps has a complete organization engaged in flood-control and navigation activities in the Ohio River Basin. These organizations have assembled vast amounts of essential information which are immediately available for prosecution of a demonstration program for the abatement of river pollution.

NATIONAL PHASES OF POLLUTION

Because a vast amount of research and planning is necessary, because many basic industries contribute to river pollution that, as yet, have developed no practical means of disposal for their waste products, because many State boards of health are inadequately financed to study and combat pollution, and because many municipalities and industries will need financial help, it is inevitable that there should be adequate Federal legislation to assist the States in dealing with the pollution problem. Congress has been emphatic in the view that each State should deal with its own offenders. It also has held the view, up to this time, that Congress has no authority over interstate streams unless the pollution interferes with navigation. Proponents of stream purification hope to have a new bill similar to the Barkley-Vinson bill enacted by the Seventy-sixth Congress and signed by the President.

LOCAL COMMUNITIES PREPARED TO COOPERATE

The city of Cincinnati has just approved a bond issue for sewage-disposal works and interceptor sewers in connection with funds sought from the Federal Government that will start the abatement of pollution at the upper end of the Cincinnati pool. Kentucky cities across the river from Cincinnati, including Covington, Newport, Dayton, Bellevue, Fort Thomas, and the smaller municipalities, have established cooperating committees and are preparing formal request for Federal aid to cover a sanitation survey for this area that will permit these cities to proceed with pollution abatement along with cities on the Ohio side of the river. From the broad interest in the problem it is safe to say that the other cities of the Ohio Valley stand ready to cooperate in the broad solution of the problem that is herein proposed. This is evidenced by the speed with which the interstate compact has been negotiated.

Investigation of Homesteads on Indian Lands in Montana

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

RESOLUTION OF THE LEGISLATURE OF THE STATE OF MONTANA

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following resolution adopted by the Legislature of the State of Montana:

House Joint Memorial 16

Memorial to the Congress of the United States requesting an investigation of certain homesteads on Indian lands in Valley, Daniels, Roosevelt, and Sheridan Counties in regard to settlement thereof, money paid therefor to the United States Government, abandonment of such homesteads and thereafter the enactment of legislation for refunding to such settlers or their heirs who were compelled to abandon said land of the amount paid therefor

To the honorable Senate and the House of Representatives of the United States in Congress assembled:

Whereas certain Indian lands in the counties of Valley, Daniels, Roosevelt, and Sheridan were opened for settlement under the homestead laws of the United States prior to the year 1920; and

Whereas many bona fide settlers filed on said lands, completed requirements for and obtained patents to parcels thereof, paying therefor to the Federal Government from $2.50 to $7.50 per acre; and

Whereas said lands being worthless for farming purposes said patent holders, their successors, or heirs, were forced either to abandon said lands, to have said lands sold for delinquent taxes, or to sell said lands to the Federal Government under the resettlement program at 50 cents per acre; and

Whereas said lands were inadvertently and wrongfully opened for settlement under said homestead laws: Now, therefore, be it

Resolved, That the Twenty-sixth Legislative Assembly of the State of Montana (the house of representatives and the senate concurring) hereby does petition and memorialize the Congress of the United States that an investigation be made of the inadvertent and wrongful opening of said Indian lands in the counties of Valley, Daniels, Roosevelt, and Sheridan, State of Montana, the amount of money paid therefor by settlers in procuring patents, and abandonment, sale for taxes, or sale to the Resettlement Administration, and that thereafter legislation be enacted to refund to such settlers or their heirs the amounts paid for such lands; be it further

Resolved, That a copy of this memorial be transmitted by the secretary of state of the State of Montana, to the Senate and House of Representatives of the Congress of the United States, and to the Senators and Representatives in Congress from the State of Montana, and that our Senators and Representatives be urged to use all honorable means within their power to bring about the enactment of such legislation.

John Philip Sousa

EXTENSION OF REMARKS

OF

HON. RUDOLPH G. TENEROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

Mr. TENEROWICZ. Mr. Speaker, last Thursday, March 2, marked the seventh anniversary of the death of the late John Philip Sousa, who held the distinction of serving in all three branches of our military service. He was musical director of the Sixth Army Corps during the Spanish-American War, conductor of the United States Marine Band, and lieutenant in charge of Navy bands during the World War.

Under the auspices of Troop 10 and Troop 2, Boy Scouts of America, of Washington, D. C., and Detroit, respectively, fitting memorial services were held yesterday at Sousa's tomb in Congressional Cemetery. On behalf of the Boy Scouts a wreath was placed on the tomb by Mr. Lawrence J. Bach, a young man employed here on Capitol Hill, and I ask unanimous consent to place in the RECORD the remarks of Mr. Bach, followed by my own, on this occasion:

Mrs. Varela, honored guests, ladies and gentlemen, it is altogether fitting that we pause in our busy lives to visit again at the tomb of John Philip Sousa as evidence that his contribution to our culture has an abiding place in the affections of our people.

We regret that the near relatives of our departed friend are prevented from being with us today because of illness. I received the following telegram from Miss Priscilla Sousa, daughter of the renowned musician:

"Very disappointed that none of us can come to Washington Thursday. Mother has been very ill and regret to miss the service which I know will be a beautiful tribute to my father's memory. Best wishes to you and the Scouts."

As time goes on, the void created by his passing does not fill. His character and ability were of the highest order; he loved his country with zeal; he loved justice; he was faithful and devoted to public service. He was a great American, fully worthy of the high honors he enjoyed.

Supplementing the above words I made the following brief remarks:

I am glad to join with the Boy Scouts of America in this deserving tribute to John Philip Sousa. He was greatly interested in the Boy Scout movement in this country and helped to organize Boy Scout bands.

Sousa was an accomplished composer along with his fame as a band leader, and his most familiarly known composition is the Stars and Stripes Forever. He also wrote 10 comic operas and composed more than a hundred marches, which were all stamped with an individuality truly his own.

He was a native of the southeast section of the Capital, where his remains now rest, and it is most appropriate and fitting that the new bridge which is soon to span the Anacostia River within the very shadow of his tomb is to be named in his honor the John Philip Sousa Bridge.

Stop Worrying About Europe

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

ARTICLE BY ROGER W. BABSON

Mr. RANKIN. Mr. Speaker, the American people are being besieged daily with a bombardment of synthetic war scares by newspaper headlines and radio broadcasters who seem anxious for this country to be plunged into war.

The American people do not want war. The people of Europe do not want war. If war should come it would be because of this continued barrage of war propaganda. The peace-loving people of this Nation can stop this nonsense if they would let it be known, in no uncertain terms, that they would not buy any article advertised by one of these war propagandists, whether it be gasoline, coffe, radio sets, or what not. These broadcasters would either stop their war propaganda or they would be taken off the air at once.

This morning I picked up the local paper and read an article by Roger Babson headed "Stop Worrying About Europe," and under permission granted me to extend my remarks in the RECORD I am inserting extracts from that article in the RECORD.

It seems to me that the time has come for the peace-loving, law-abiding, patriotic citizens of America to speak up and protest against these tirades, and in that way help to maintain the peace of the world.

For that reason I am inserting portions of Mr. Babson's statement and expect to have more to say on the subject at a later date.

The matter referred to follows:

BABSON PARK, FLA., March 5.—The war scare of last September pulled business up short throughout the world. Radio announcers, press dispatches, bulletin boards all screamed war. Retail trade slowed down; businessmen were terrified; investors dumped securities. We had a minor panic. As a result, the sharp business recovery which started in June 1938 and carried on through July and August was almost snuffed out. It was well into mid-October before people stopped shaking and trembling over the straw war built up by hysterical radio commentators and frenzied press dispatches. The American public was fooled into thinking that the poker game going on in Europe would end up in a real war!

If the press services and radio bulletins had played up the very optimistic and encouraging domestic news of the moment, as prominently as they played up this poker game, business would probably have gone on just as usual. In my 35 years' experience of business observing, I cannot recall a situation which was more overplayed and overemphasized than last September's war scare!

Now, it looks like a repetition of the Czech crisis could easily be reenacted. Today's news is filled with war rumors. Every move the dictators make is analyzed and dramatized. The columnists are all broiled up over the United States armament plans and foreign policy. The public is getting jittery. Businessmen are holding up their orders. Uncertainty is gaining the upper hand. "I'm going to see what Hitler does next before I buy anything" is the typical comment of the day.

Yet the foreign situation has not changed. Everyone knows that Hitler intends to push on toward the east and that Germany and Russia some day may struggle in a real war. Mussolini should be paid either by cash or otherwise for his good work in Spain. England and France, however, are in no more danger of a conflict now than they were a year ago or 3 years ago.

Moreover, the domestic business situation is sound. There has been no change in the basic picture since 2 months ago. At that time I outlined the reasons why business should be better in 1939 than in 1938. I see no reason yet to change my forecast, even though business is running slightly lower than in mid-December. However, I expect that we will have a sharp improvement this spring.

Why should we worry about hostilities in Europe?

Naturally, I do not want war. There is no quicker way to get into one, however, than to talk war, eat war, and live war. That is why I hate to see our people giving such a tremendous amount of attention to the European situation. That is why I dislike the constant dramatization of Hitler and Mussolini. There are "goings-on" in this country twice as dangerous to our liberty. These could be emblazoned on the front pages and over the airwaves, if we must scare ourselves to death.

I am not a "Pollyanna" disciple. I am not urging the press and the radio to play down European news. I am asking only that our domestic news be dramatized and given just as much human interest as the "hot" stories from Europe. There is plenty of good news coming out from industry, from laboratories, from churches—yes; even from Washington—to provide an antidote for the unpleasant dispatches from abroad.

I know Europe and I urge readers to forget it for this spring at least. Tend to your business and your job. Now is a chance to make some money while the other fellow is trying to find out where "Ruthenia" is on the map!

What Every American Should Know About Food, Drugs, Cosmetics, and Beverages

EXTENSION OF REMARKS

OF

HON. WILLIAM I. SIROVICH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1939

SPEECH OF HON. WILLIAM I. SIROVICH, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES, MARCH 6, 1934

Mr. SIROVICH. Mr. Speaker, under leave granted me to extend my remarks in the CONGRESSIONAL RECORD, I include the following speech, which I delivered in the House of Representatives on March 6, 1934:

Mr. BLANTON. Mr. Chairman, I reserve the balance of my time and yield 30 minutes to the distinguished gentleman from New York [Mr. SIROVICH].

Mr. POWERS. Mr. Chairman, I yield 30 minutes to the gentleman from New York [Mr. SIROVICH].

Mr. SIROVICH. Mr. Chairman, ladies and gentlemen of the Committee, food, beverages, and drugs have been the foundation, from time immemorial, upon which the superstructure of the health of mankind has been preserved. Food and beverages to maintain bodily health and vigor. Drugs to restore lost health. Cosmetics to improve women's looks, have had the keen attention of the women, of all times and climes, and of all races, from the dawn of civilization throughout all the ages.

"Tell me what you eat, and I'll tell you what you are." This adage can be paraphrased by saying:

"Tell me with what his food was adulterated, and I'll tell you what caused his death."

Nature does not produce all of our food products the same everywhere. Nor is all food of the best quality. All fruits grown are not of superlative standard. All vegetables that Mother Earth brings forth are not of the finest quality. All meat products do not come from the choicest animals.

There is a natural variation in quality, standard, and nutritive value in all plant and animal products. Food and drugs, offered for sale, should be graded officially, by labeling, to show the consuming public these variations in the quality of food and drugs they purchase.

If the food products we produce are not consumed, as time rolls by, nature, through decomposition, takes its toll on these animal and vegetable products. Deterioration and decay set in. The stage of putrefaction and dissolution arrives. The nutritive, caloric, and vitamin value of the food has been destroyed. In this condition food substance is unfit for human consumption.

Here some of the vultures and carrion crows of unscrupulous business come in. Animated by greed and avarice, they actually embalm this animal and vegetable material unfit for human consumption, by the utilization of artificial and chemical preservatives, colorations, astringents, and adulterants, such as sodium sulfite, aniline dyes, sulfur dioxide, sodium benzoate, formaldehyde, alum, boric acid, and countless other poisonous chemicals that react on these decomposing foods, that are unfit for human consumption, to make them appear to be wholesome, palatable, fresh, and nutritious.

Food, decayed and injurious and wholly unfit for human consumption, is thus sold by the carload. Millions on millions of dollars is the price that the innocent purchaser pays for the privilege of being poisoned daily.

When there is a surplus of good food obtainable, humanity should be protected by stringent laws declaring it to be criminal to adulterate, devitaminize, demineralize, and abstract important nutritive elements and ingredients from the food of mankind for the benefit of the personal greed and the enrichment of unscrupulous racketeers dealing in food products.

What is true about food products is equally true about certain drugs, cosmetics, and nonalcoholic and nonintoxicating beverages. In drugs we have adulteration, substitution, and vitiation of strength. In cosmetics we find the use of poisonous elements that may be harmful to the human body. In nonintoxicating and nonalcoholic beverages we have colored and charged water, dyed to make them attractive seeming to the eyes, no matter how harmful they may be to the human system.

High-pressure salesmanship and false propaganda, designed to make the public what is craftily called "health conscious," not out of regard for the public or the health of any citizen but solely to sell alleged remedial products, is put out daily, yes, hourly, in a constant barrage through every form of available communication.

Who ought to be held responsible for this frightful and dreadful state of affairs that has excited an innocent and often gullible public with fears about their health, their stomachs, their nervous systems, their teeth, their throats, their appearance? The answer is: Those who seek profit, and profit only, by the sale of alleged medicaments; remedies that neither remedy, nor cure, and cosmetics that scarify rather than beautify. These are the responsible ones, and they should be held up to public contempt and obloquy and be punished for their reprehensible acts.

Who profits by constantly urging the public to eat, drink, gargle, smear, brush, and spray with products that they promise will postpone the onset of every conceivable disease? Who assures mankind that they will provide recovery from every ailment that flesh is heir to, even to the curing of such diseases as cancer, tuberculosis, and other diseases now incurable by any known remedy? The same type of profiteering buccaneers worshiping on the altar of Mammon—gluttons of greed. [Applause.]

Who is responsible for permitting pears, apples, plums, asparagus, cauliflower, and cabbage to be sold to you still bearing overdoses of insecticides containing arsenic and lead? It is the producers who use the insecticides to kill the bugs that infest their product. They are too indolent to clean away the poison by means, easily available, but send it forth to do its deadly work, not caring who suffers from their criminal indifference or their willful and contributory negligence and callousness.

Who is responsible for the selling to your home of chickens that are infected and diseased with tuberculosis, sarcoma, peritonitis, septicemia, croup, and other infectious diseases? Certainly not the honest poultry raiser. Certainly not the man or firm who takes proper pride in producing a healthful product. There are plenty of such honorable organizations. They should be protected against the avaricious and conniving poultry buccaneers who fatten from the chicken racket by making the public pay tribute to them throughout the length and breadth of our Republic.

Who sells these diseased products to the public without proper Government inspection? Outlaws of the food and drug industry who, under the guise of honest merchants and manufacturers daily mulct their gullible victims. Why do these outlaws take these desperate chances? Because there are not enough inspectors properly to examine food and drug products offered for sale. There

are not enough inspectors because Congress does not provide enough money to pay their wages.

For the current fiscal year ending June 30, 1934, the appropriation actually usable by the Food and Drug Administration is $1,493,000—a little more than 1 cent a year for the population of the United States. For the 48 States of the Union there are provided 76 inspectors, an average of less than 2 inspectors for each State. Imagine 14 inspectors investigating food, drugs, cosmetics, nonalcoholic and nonintoxicating beverages covering the metropolitan area, which consists of the city of New York and adjacent counties, with a population of over 10,000,000. These 14 inspectors are supposed to inspect all the manufacturing and selling plants of New York City and its five boroughs, besides Albany, Schenectady, Syracuse, Herkimer, Utica, Rochester, Buffalo, and the lesser cities of the State of New York. Imagine four inspectors covering the entire State of California. Bad as it is for New York State and California, it is even worse in the rest of the 46 States of the Union. They have fewer inspectors than New York and California. Is this condition of affairs just? Is this adequate protection to 120,000,000 innocent consumers?

Would it surprise you to learn that certain so-called germicidal antiseptic, and disinfectant preparations, profusely advertised by prints, signs, and voice as being able to kill every form of bacteria and germs harmful to humans are so weak in their germ-killing effect that bacteria actually live and thrive in these very solutions and preparations? Alluring and emphatic claims and assertions will not kill germs.

Harmful germs and bacteria subjected to the germicidal effects of much-touted concoctions, for which killing effects have been claimed within 15 seconds, have been proven to be alive and active at the end of long hours of complete immersion in the advertised germicidal fluid, when tests have been made by others than the manufacturer.

In one such series of tests 21 so-called antiseptics were subjected to trial to determine the efficacy of the much-heralded product when used according to the actual directions for application printed by the manufacturers. Instead of the slaughter of germs promised, the results were wholly unsatisfactory, only the weakest of germs succumbing after 15 minutes to 1 hour instead of in the instantaneous slaughter promised.

Infections in industry from accidents due to the use of tools and machinery usually none too clean total about 250,000 a year. Industrial casualty insurance companies pay from 40 to 60 percent of their compensation cases for infected wounds. Time lost by employees in cases of infection of wounds averages 18 weeks longer in serious cases than where the wound is not infected; that is, the wound, of itself, is not as dangerous to the body as the germs that are introduced into the human system at the time of wounding or through later infection. The money loss from industrial wounds each year totals $104,000,000; the time loss, 4,450,000 weeks, or 85,000 years. These figures do not include wounds received in agriculture, the home, at play, or in transportation, and it is on all of these injuries that the germicidal and antiseptic makers fatten.

Do the ladies and gentlemen of this House realize that what are called "radium cures" have sent several persons to horrible deaths after suffering frightful pain and torture ere they passed away? Throughout the length and breadth of our country the newspapers have carried full accounts of such tragedies. Radium has its uses in the treatment of certain malignant diseases by qualified specialists. Even these authorities, with all the knowledge obtainable and available about this mysterious substance, radium, have lost fingers, arms, and parts of their bodies, due to exposure to the effects of radium, and eventually have died from these effects. What chance do you think the innocent drinker of radium water, as it was called, had when this fluid, powerfully fortified by a highly destructive element, came into contact with the sensitive membrane and tissue of the internal organs? None whatsoever. Its sale and distribution was criminal.

I am wholly in sympathy with the efforts of womankind to make themselves as attractive as possible and to aid nature in this process by the careful and judicious help of art. If a touch of rouge on the cheeks relieves a natural pallor, any woman is justified in using it. If a tint of lipstick enhances the color and better defines the form of the lips, what harm does it do? Most men can tell when artificial aids have been used, and accept it as a whim of womankind, and let it go at that, in modern days. The women of Babylon and Nineveh, of Egypt, Greece, and Rome used cosmetics. Articles found in tombs prove that as a fact, absolutely beyond any question of doubt. They even bobbed their hair in the most approved method of 1934, as the monuments and statues of ancient days show. When women will, they will. Let the male of the species beware. [Applause.]

Mr. Chairman, adulteration of food is not a new racket of recent growth. It has been practiced by all peoples from the start of recorded time. "There is death in the pot" (II Kings iv:40) was cried to Elisha to warn him that the herbs of which the pottage was made were poison weeds of which he could not eat.

Amongst the ancient Athenians a row was raised during the building of the Parthenon by the workingmen that their wine was being adulterated. A special wine inspector was appointed by the Government to catch these adulterators. In 1482 a wine falsifier of Germany was forced to drink 6 quarts of his own vintage from the effects of which he died.

Pliny the Elder, prior to the destruction of Pompeii and Herculaneum by the volcanic Vesuvius, complained that "white earth" was added to the bread baked in his day.

During the reign of William the Conqueror brewers were heavily fined for adulterating beer and were drawn around in carts receiving the jibes and execrations of an outraged citizenry.

In 1830 there appeared in England an anonymous book on the adulteration of food by the baker, brewer, grocer, cheesemonger, pastry cook, confectioner, and so forth. Most of the food purveyors were implicated. The author recommended that those found guilty of adulteration of food be exiled from England. He opposed fining those guilty of adulteration because of the large profits which made it easy for them to pay their fines.

Apparently the old racket goes on garbed in new vestments. Solomon was right when he said, "There is nothing new under the sun." But that is no reason for any manufacturer to concoct and sell, at ridiculous prices, depilatory creams for removing surplus hair, such as I show you, that contain a large percentage of thallium acetate, a most virulent poison that has caused terrible and dreadful suffering and permanent scarification to women. These depilatories have been highly advertised and sold to innocent and unsuspecting women to their tragic regret and to their permanent disfigurement.

Here is a bottle of Jamaica ginger, commonly known to those who drank it as "jake," that an irresponsible manufacturer adulterated with triorthocresyl phosphate, a powerful poisonous synthetic preparation, that caused horrible deformities and paralysis among 25,000 victims, many of whom died. Thus far sentences of 20 months in prison and fines of $2,500 were imposed upon two of the individuals responsible for shipment of this poisonous ginger extract, and a prison sentence of 17 months on a third. Two members of a Boston firm responsible for the manufacture of the goods have been prosecuted and upon having pleaded guilty were given jail sentences of 2 years each, in addition to a fine of $1,000 against the company. One member of the firm is serving his sentence. The other is at liberty under suspended sentence.

This is the type of justice meted out to 5 people for killing hundreds of people and poisoning 25,000 people in 24 States of the Union. Thousands of these unfortunate victims of "ginger jake" poisoning are still suffering and remain crippled and paralyzed from the poisonous effects of this powerful drug. Millions of dollars have been paid in accident insurance by various companies in the United States to these tragic victims of unscrupulous and criminal business methods of racketeers and bootleggers operating despite the present pure-food and drug laws of the United States.

Do you know that yeast used in some commercial bread making in the United States contains a chemical improver called "potassium bromate," and that French health officials consider this drug so harmful that its use in baking is prohibited in France? Still it is used in the yeast that goes into some of the bread that we eat in the United States.

Heralded far and wide by screaming advertisements everywhere, through radio, newspapers, magazines, periodicals, billboards, are the alleged great and powerful virtues, germicidal and antiseptic powers, of various well-known tooth pastes and preparations. The chief chemical used in forming one of these tooth pastes is so poisonous that a German officer committed suicide by swallowing the contents of a tube of it. Abrasive ingredients were found in other tooth pastes. These materials were shown to have sharp, heavy angles and edges that not only injured the gums but wore away the hard enamel of the teeth.

Penny prize candies containing copper coins, small toys, and even alcohol are made and sold by manufacturers to innocent little children. Their nefarious profits are obtained from the purchase by innocent children of wares that are heavily injurious, not alone from the prizes they contain but from the poor quality of the candy and the coatings used. It is serious enough when adults are gulled into purchase of foods, drugs, and beverages; but when children are induced by specious and cheap prizes to buy and eat stuff that often is not fit for hogs to eat, the business is being carried on to a point of villainy that is indescribable. How would you like to find that your small boy or girl had stuck in its throat, or bronchial tube, a leaden toy, such as a jack, a rabbit, a chicken, or a copper cent covered with the green slime that only copper can produce? In many of these cases surgical intervention had to be resorted to to remove these foreign bodies from the throat and bronchial tubes of these innocent and unsuspecting children.

It would shock the conscience of the American people if they knew that thousands of lives are annually jeopardized upon the operating tables, and serious complications often ensue in our hospitals because the ether with which the patient had been anesthetized is contaminated and vitiated. Ten years ago 35 percent of all ether examined was found to be below standard; that is, dangerously impure and adulterated. When this fact became known there was some improvement. Recently tested samples of ether entering interstate commerce were found to be adulterated and impure.

How would you like to be one of the innocent victims operated on in a hospital that might die on the operating table because the ether that the surgeon relied on to relieve you of pain, trusting to the manufacturers' promise that it is pure, gave you eternal sleep and relieved you of pain forever?

There is no time in a woman's life when she needs the most tender and sympathetic care, the utmost sanitation in all accessories, than when she is about to give birth to her child. Maternal

mortality at childbirth is still too great. Perhaps the great mortality in modern childbirth that has caused the death of thousands of mothers can be attributed to the terrific hemorrhages that take place after delivery, due to the impotency of the drug called "ergot," which has been found to contain only one-fourth of the strength it should have to stop the hemorrhages, which is the purpose for which it is used.

How many Members of Congress know that there is a little pamphlet usually issued monthly by the United States Department of Agriculture which is called Notices of Judgment Under the Food and Drugs Act, in which are printed the names of organizations, groups, and manufacturers whose foods, drugs, cosmetics, and nonalcoholic and nonintoxicating beverages are being confiscated because these products have been found to be unfit for human consumption through adulteration, decomposition, substitution, and other causes.

Still, in the records I have searched I have found that only one person was sent to jail, and that for a short time, for violation of the Food and Drugs Act. How many corporate owners, groups, and individuals who manufactured these foods and drugs unfit for human consumption have been arrested? Only one. The containers and packages holding these products are arrested, not the persons who are responsible for the placing of unfit, putrid, decomposed, and filthy food or below strength or adulterated drugs or poisonous cosmetics in the containers and packages. The thing is made the criminal—not the person who is responsible for the thing—the person who made and sold the thing, whatever it was, that was unfit for human consumption. Did you ever hear of anything so tragically ridiculous? Like arresting the jimmy and not the burglar. Or arresting the pistol and not the murderer. Or, as is actually the case, arresting the poison and not the poisoner. [Applause.]

Mr. Chairman, under the operation of the present food and drug law, I have found time after time, as disclosed in these "notices of judgment" the governmental seizure of food that has been libeled as being "adulterated in that it consisted in part a decomposed-animal substance." In one particular case the packing company admitted the allegation of the libel. The food, in this case, 925 cases of salmon, was released to the claimant conditioned that this decomposed food be made to conform with the Federal Food and Drug Act and the product was allowed to be reshipped back to Seattle to be reconditioned. I would like to have some Member of this distinguished House tell me how and by what means decomposed fish can be reconditioned to make it fit for human food and human consumption. The case I have referred to is that of the United States against McGovern and McGovern reported on page 213 of Notices of Judgment, issued in January 1934.

Ladies and gentlemen of the committee, do you realize that 120,000,000 people in the United States spend $20,000,000,000 annually for food, drugs, cosmetics, and nonalcoholic and nonintoxicating beverages. Think of it, $20,000,000,000! Yet the Congress of the United States for the current fiscal year appropriated net, only $1,493,000 to run the Food and Drug Administration and to enforce all the pure food and drug laws throughout the entire United States, which means that less than 1 cent a year is spent on each person to prevent him or her from being poisoned by unscrupulous racketeers in foods, drugs, cosmetics, and beverages throughout the United States.

May I repeat that to carry out the provisions of the Pure Food and Drugs Act there are only 76 food and drug inspectors employed. Imagine 14 inspectors being able to cover all the nefarious chicanery in food and drugs in the State of New York! Imagine the great expanse of the State of California being successfully covered by four inspectors! This is a tragic indictment of the negligence of legislation to provide sufficient appropriations to safeguard and preserve the vital interests in pure food and drugs of the consuming people of the United States. [Applause.]

During the last 14 years Congress has appropriated the tremendous sum of $250,000,000 to enforce the prohibition laws that the American people have detested and that were finally repealed. Congress has appropriated between twenty-five and fifty millions of dollars to exterminate the boll weevil, the corn borer, the fruit fly, the grasshopper, hog cholera, cattle diseases and God knows how many other countless parasites that are living in the animal and vegetable kingdom. Yet when it comes to protecting and preserving the human family, the men, women, and children of our Nation against poisoning, adulteration, substitution, abstraction, cheating in quality and quantity, of their food, drugs, cosmetics, and beverages we deny sufficient money to and emasculate the work of the Food and Drug Administration to such a pitiful state that it is impossible for that administration adequately and properly to function and to do justice to its work of preserving the health of 120,000,000 human beings.

Is cotton, or the destruction of the parasites that live and thrive on it, of more value than human life? Was the prohibition of drinking, interfering with the personal liberty of our fellowman, of more importance than the protection of the quality and the purity of their food? Is the health of cattle and swine more important than the happiness, prosperity, and the health of human beings? Are crop profits of more importance than the physical and mental welfare of our fellowman? Is human life of such little value that Congress does not appropriate more than 1 cent a year for each person to assure good, wholesome food to keep the vital spark going in our children, our wives and mothers, our aged and infirm and ourselves? Answer me with your votes, when the time comes to grant adequate appropriations that will safeguard the life, health, and happiness of our American people and they will answer you when they come to vote for you. In this new era of the New Deal—the square deal—the forgotten man must come to the fore. Humanity must take its place in the forefront of civilization. In the future call of the national roll of honor human rights must and will supersede property rights. [Applause.]

Just as the circulation of the blood carries life and nutrition to every tissue of the body, so do newspapers, magazines, periodicals, and other publications carry news, information, and advertising to 120,000,000 people of the United States.

Newspapers, magazines, periodicals, and publications receive only 15 percent of their gross income through circulation. The other 85 percent comes to them through selling advertising space in their publications. Every publication uniformly preaches the gospel of honesty, of integrity, of justice in the business relationship of mankind with his fellowman. Why should not every publication itself do likewise and carry only the truth regarding advertising?

Why should many of our publications exaggerate, falsify, and disseminate advertising news that is palpably and grossly unjust to the consuming public and unfair to the ethics and standards of honest publications?

The slogan of the New York Times, one of the greatest newspapers in all the world, is that it prints "all the news that's fit to print." Why should we not paraphrase that sentiment to every publication and say, "You shall print only the advertising fit and right to print"? The New York Times lives up to this ethical standard and has prospered. Why not all publications?

Only a short time ago the late William E. Humphrey, of the Federal Trade Commission, estimated that there were at least 1,000 advertisers of fraudulent schemes now operating regularly with the aid of certain magazines and newspapers throughout the country. In one publication alone he found no less than 50 different advertisements which he considered safe to designate as illegal. Mr. Humphrey contended that the annual loss to the consumers through false, misleading, and exaggerated advertising runs into hundreds of millions of dollars.

Mr. Chairman, ladies, and gentlemen, it would be a most liberal estimate to say that only 25 percent of the business transacted in our country each day is done as a result of natural demand. The other 75 percent is contributed as a result of salesmanship in one form or another. It is on this 75 percent of advertising that the welfare and prosperity of our country is dependent.

Advertising is founded on the publicity formula and the economic fallacy that "repetition makes reputation." Constant advertising of the virtues and qualities of all food, drugs, cosmetics, nonalcoholic and nonintoxicating beverages brings the product before the consuming public and induces them to purchase food materials whether they need them or not.

More than 16,000,000,000 copies of daily, weekly, and monthly periodicals are printed and circulated every year in the United States. Every copy carries advertising matter intended to induce the readers to buy some article of commerce, and of these at least one-third are food, drugs, beverages, and cosmetics. Approximately $1,000,000,000 is paid publishers annually by advertisers who use the 20,000 daily and monthly newspapers, which have a circulation of about 1,400,000,000 a month.

These publications live on revenue collected from advertisers. The advertisers live on money collected from the purchasing public.

For many years in the past a great many publishers, without consideration for their readers, accepted and published advertisements filled with false and misleading representations and thereby became parties to the deception and fraud perpetrated on their readers.

The vast majority of publishers today are reputable and respect the confidence of and guard the welfare of their readers. The business office of a newspaper or periodical edits advertising copy as carefully as the news section edits reading matter. These reputable publishers will not knowingly publish false or misleading advertisements. They approve all efforts to stop such advertising and loyally cooperate with the Federal Trade Commission, which, under the law, now has charge of this type of advertising, in its efforts to prevent it.

Unfortunately, there are many unscrupulous advertisers and publishers who still print any advertising for which payment is made to them.

Laws are essential to restrain and punish such unscrupulous advertisers and publishers in order to protect reputable advertisers and publishers as well as the general public.

Laws are not necessary for law-abiding citizens, but they are essential to protect the law-observing from the law-breaking element.

Every reputable advertiser and publisher need fear no law designed to prevent false, misleading, or fraudulent advertising, since they do not use nor publish such form of advertising. It is the unscrupulous and disreputable advertisers and publishers who must be restrained and punished for their use and abuse of a noble profession and institution, the daily, weekly, and periodical press, to forward their nefarious projects to make profits from advertising worthless and dangerous medical products and for helping, through advertisement, to dispose of food unfit for human consumption.

The present cooperation of the Federal Trade Commission with the Food and Drug Administration for the prevention of unfair trade practices as they apply to the advertising in a false, misleading, or fraudulent manner of foods, drugs, cosmetics, and non-

alcoholic and nonintoxicating beverages, is made more powerful by my food and drug bill. No powers in the present Federal Trade Commission Act are disturbed by my bill. Indeed, their commendable work is fortified, enhanced, and strengthened.

Newspapers, magazines, periodicals, and publications have constantly been denouncing the paternalistic attitude of our Government through its granting of subsidies. We have subsidized the railroads, the great banking institutions, the great life-insurance organizations, the merchant marine, the different States of the Union for various projects and enterprises, and, last but not least, we have subsidized the newspapers, magazines, periodicals, and publications during the last year by granting them a subsidy of almost $90,000,000 through the carrying of these publications as second-class mail matter.

It should, therefore, be the privilege, no, I should say the duty of newspapers, receiving the beneficence and munificence of the contributions of 120,000,000 of citizens, taxpayers of the United States, that these great publications to carry into fruition and realization the ideal of having their advertising space carry advertising news that is the truth, the whole truth, and nothing but the truth. [Applause.]

Our modren financial and monetary system is founded upon the philosophy of economic scarcity of gold, while our mass technological standards and industries are built upon the philosophy of economic abundance. These two systems, one represented by economic scarcity and the other by economic abundance, are in conflict with each other. They do not articulate. They do not harmonize. They fail to unite. Because of this incompatibility between economic scarcity and economic abundance, advertising becomes an accepted necessity adequately to distribute in the markets of our country and the world the materials of production. The present condition of production and distribution brings into play the disintegrating forces of competition.

In the old days competition was the life of trade. Today competition is the death of profits. The only medium whereby the principle of economic scarcity and the element of economic abundance can be harmonized is through the element of advertising. Constant repetition is the slogan, watchword, and shibboleth of modern business enterprise. Advertising within the last 30 years has been chiefly instrumental and responsible in making the great strides that business, commerce, and industry have enjoyed.

It has always been my intent, and I believe always my action, to be fair and just to everyone. In the food and drugs bill which I introduced in the House on January 29, 1934, H. R. 7426, I have embodied proposed legislation that I think will meet and cure many of the difficulties which now arise under the present food and drugs laws.

My main thought has been the protection of the American people against those who would sell them food, drugs, cosmetics, and nonalcoholic and nonintoxicating beverages unfit for human consumption. My chief desire has been to be fair and just to the 90 percent of the producers of such products, who honestly and sincerely desire to provide wholesome goods to our American citizens. No honest producer, processor, or manufacturer need fear the effect of any section of my bill. It is designed to protect him against the racketeersman in his own line of endeavor, as well as against the charlatan and quack, as well as to protect the public.

The cornerstone and touchstone of worthiness I have used throughout my bill is this: Does the product contain anything that is harmful or injurious to the average human system? If it does not, there is nothing to prevent its sale anywhere and any place under the jurisdiction of the United States Government.

If the article be food and it be found to be pure and wholesome, within the common and accepted meaning of this term, the Food and Drug Administration is directed to issue a permit to the producer, processor, or packer to print on or surcharge his private label with these words:

"This product meets the requirements of the quality standards of the Food and Drug Administration of the United States of America."

No manufacturer or anyone else could ask more than this.

I define a food to be any edible material, or materials, the nutritive elements of which are ingestible, digestible, absorbable, assimilable into, and beneficial to and not harmful nor injurious to the average human body.

Producers and manufacturers of drugs or medicants are required to file the formulas of their preparations with the Food and Drug Administration, but such formulas need only disclose the active therapeutic ingredients; and all formulas must be kept secret. If anyone connected with the Food and Drug Administration shall reveal to any unauthorized person the contents of any formula in whole or in part, either while in the employ of the Administration or subsequent thereto, that person is subjected to imprisonment of from 1 to 3 years, and the person soliciting or inducing such disclosure is made equally culpable of a felony and is subjected to the same penalty and must give an accounting of and pay compensatory damages for the illicit use of such formula to the rightful owner thereof. Mutilation or destruction of any formulas, records, or correspondence carries the same penalty. Therefore every safeguard is thrown around the formulas of the manufacturer and producer to prevent the formulas being made known to anyone who might use them illegally to their own purposes.

The manufacturer of any food, drugs, cosmetics, or nonintoxicating and nonalcoholic beverage may continue to use his private label and his present trade-mark. Neither right is disturbed in any way, provided that the label contains no false or fraudulent statements in conflict with the contents, capacities, or the amount of fill in the packages or containers in which it is sold. In addition to the surcharge on pure-food products that I have referred to, my bill provides for three other labels to be used, which are white, blue, and orange in color, so the buying public at once can see into what class various drugs are placed.

Here are the ways the classes and the colors of the labels are determined: If the material or materials described in the formula or in the prints, labels, or labeling are not harmful to the average human system, if intaken or applied by self-treatment and contain no harmful drug, injurious to the average human system in the proportions represented by the formula or in the prints or labels presented to the public, the applicant shall be granted a license by the Food and Drug Administration to use a white label on the immediate container or package of his product bearing the words: "Formula registered in the Food and Drug Administration of the United States of America at Washington, D. C."

And in type of the same size the words: "Contains no material or materials harmful or injurious to the average human system in the proportions represented by the formula or formulas for this product."

This white label will be a certificate of character. It will indicate that the food, drugs, and beverages are pure and wholesome. It will make the American consumer "white-label conscious."

I digress to call your attention to the words "average human system" and the reason for their use. All persons do not react the same to all drugs. Some persons have what physicians call an idiosyncracy against certain foods and drugs. Shellfish, strawberries, cucumbers, and other edibles produce a rash on some folk. Certain drugs, camphor, quinine, and others affect some persons adversely, but that is no reason why the rest of us should be deprived of edibles, potables, and medicines that act favorably on us and produce beneficial results.

Resuming: There are certain powerful and effective drugs and extracts that are most valuable in the restoration of health, but their potency is such that they can be used safely only under the prescription and continuous observation and care of a physician. For such drugs my bill provides that the container or package shall bear a blue label, permit for the use of which is to be issued after the filing of the formula with an analysis of it by the Food and Drug Administration. This label shall bear the words: "Formula registered with the Food and Drug Administration, Washington, D. C."

And shall also state the dosage and name of the drug and continue: "Caution! Contents to be used only under the care and supervision of a registered physician."

Certain hypnotic and narcotic drugs such as opium, morphine, cocaine, and so forth, are highly useful in the practice of medicine and in the alleviation of pain. But they never should be self-administered and should be available to the general public only on the prescription of a doctor and used medically only under the care and supervision of a physician.

These drugs are placed in a third class, and their containers or packages under the provisions of my bill must bear an orange-colored label, permit to use, which is to be granted by the Food and Drug Administration after filing of the formula, and its analysis of the materials proposed to be sold. This label shall bear the words, "Formula registered in the Food and Drug Administration at Washington, D. C.—Caution, Habit Forming," shall bear the name and dosage of the habit-forming hypnotic or narcotic drugs, and continue "to be sold and used only under the prescription and supervision of a registered physician."

Hair dyes which contain an aniline derivative, or an amine or a metallic salt or compound, under the provisions of my bill, shall bear on their containers or packages a white label which shall state this, followed by the words: "For external use only and must be used with care, and should not be used on eyelashes or eyebrows." The formula must be registered with the Food and Drug Administration, and when a permit is granted by it for such use the label shall state "Formula registered in the Food and Drug Administration at Washington, D. C."

The decision as to the medical, therapeutic, or remedial status of the materials in any container or package offered for sale and submitted for analysis does not rest finally with the officials of the Food and Drug Administration. My bill establishes a board of appeals for food, drugs, nonalcoholic and nonintoxicating beverage cases consisting of four specially qualified members to be appointed by the President. To the board any applicant who has been refused a permit to use a white, blue, or orange label, or whose product has been set in a lower class than he thinks it should be placed may appeal. If the board sustains his contention he gets his label; if the decision of the board is adverse to him he still retains his right to appeal to the Federal courts, and the same right of appeal to the Federal courts is granted the Food and Drug Administration if it desires to use it.

In my bill it is provided that every container or package holding food, drugs, cosmetics, or nonalcoholic and nonintoxicating beverages shall bear a trade-mark registered in the United States Patent Office on the private label of the manufacturer. If the manufacturer now has a trade-mark so registered, he need not obtain a new one. The art quality in the disign of the trade-marks is not considered. A special class for such trade marks is established in the Patent Office and the fee for such trade-marks is reduced from $15 to $1.

The applicant for a permit to use the Food and Drug Administration labels must submit samples of his product for analysis to

the Food and Drug Administration, and for this laboratory work a very reasonable fee of from $1 to $10 is charged him. Counterfeiting or imitating any private or Government label is made a felony and penalized by from 5 to 10 years imprisonment, so the manufacturer gets protection for his trade-mark and private label such as he never had before. No trade-mark is granted until the product has been certified by the Food and Drug Administration not to be harmful or injurious to the health of any average human being.

What I consider the most important feature of my bill is the complete emancipation of the small drug, grocery, and provision storekeeper. He will no longer be subjected to the humiliating disgrace of being indicted and arrested for a crime of which he is innocent. His belief in the manufacturer as to his good faith in producing and selling to him wholesome products relieves him of the responsibility if he acted in good faith. The responsibility is placed where it belongs—at the source—the manufacturer, producer, processor, or packager of food, drugs, beverages, and cosmetics that sold him food and drug products unfit for consumption or use by human beings.

For the benefit of my colleagues I am going to ask unanimous consent to extend my remarks by printing after the conclusion of my address the full text of my bill I have introduced to cure all the evils about which I have complained.

Mr. Chairman, ladies, and gentlemen, the great progress of the United States can be attributed to the tremendous advances that have been wrought in the social, economic, and political fabric of our Republic.

Each Congress of the United States has contributed its political share to the agricultural, industrial, and commercial development of our people. In every form of human endeavor, in science, in art, in literature, in philosophy, in statesmanship, in engineering, invention, and technological perfection and improvement, our Republic stands in the forefront with the highest civilized nations of the world.

In the past, those Congresses have been remembered that have declared war in order to preserve the ideals for which our Republic was founded—the War of 1812, the Mexican War, the Civil War, the Spanish-American War, the World War.

On the field of battle of these great conflicts of our country's past millions bared their breasts to shot and shell and died that our institutions might be preserved. Today we are engaged in another great conflict. It is to determine whether these institutions founded upon the lifeblood of our martyred citizens shall endure or shall perish. We are waging a great war against economic depression. Revolutionary changes are taking place everywhere. The policies upon which the superstructure of our Government has been reared are tottering and collapsing. Millions of deserving Americans ready to die for our Republic in time of war are starving in times of peace, amidst a harvest of plenty.

To preserve our institutions of hallowed memory, to keep faith with those who have given up their today that others may have their tomorrow, it has become necessary for Franklin D. Roosevelt, the beloved Commander in Chief of our Republic, to strengthen, fortify, and reconstruct those pillars that have supported the superstructure of our social, economic, political, and capitalistic form of government.

When the actions and deeds of every Congress that has preceded us in the past will have been forgotten in the ashes of time, the Seventy-third Congress will remain and endure in the memory of historians because it enabled us to escape a bloody revolution through adoption and practicing of the principles and ideals of social and economic justice. This action of the Seventy-third Congress has enabled us to rear a new edifice dedicated to our fellow man and consecrated to the philosophic ideals of social, economic, and political justice that will bring the greatest good to the greatest number.

While we are passing through this great period of economic and social transformation, let us not forget in these trying days and depression times to protect the life, the limb, and health of 120,000,000 American consumers through the adequate enactment of laws that will safeguard to each and to every American citizen food, drugs, and beverages that are and by the rights of humanity should be fit for human consumption. [Applause.]

We have given much consideration to capital and material things; now let this Congress give consideration to men, women, and children and see to it that they are provided with food that is good and clean, with food that is wholesome, with beverages that are pure and palatable, and with medicines that are remedies for sickness, that human life may be made better, fuller, and happier for all. [Applause.]

Mr. Chairman, now that I have concluded my remarks on the subject of pure foods, drugs, cosmetics, nonalcoholic and nonintoxicating beverages, I shall be pleased, as is my usual custom, to answer any questions any Member of the House desires to propound to me.

By the way, I am very pleased to see sitting in the body of the House of Representatives our beloved and distinguished Speaker, the Honorable Henry T. Rainey. Our gracious Speaker told me this morning that he was present in the House when the famous Dr. Henry W. Wiley, the great pioneering expert in foods, and James Mann, the leader of the House on the Republican side, appeared on this floor to explain to the membership of this House the necessity for the enactment of the first Pure Food and Drugs Act in 1906. Speaker Rainey was greatly interested at that time in that measure, an interest which he has maintained ever since in legislation that will insure pure foods, drugs, and beverages, and harmless cosmetics for the men, children, and women of our country.

Our beloved Speaker has been most gracious and exceedingly helpful to me in my efforts to bring the pure food and drugs law up to date, to strengthen them in such a way as will forever prevent fraud and deception in the preparation, manufacture, and sale of articles that play such a great part in the preservation of the health and vigor of our people. For his courtesy to me I most emphatically wish here and now sincerely and gratefully to thank our great Speaker. [Applause.]

Mr. Chairman, ladies and gentlemen of the Committee, before I begin to answer any question that any Member of the House may ask me I am going to show you actual examples of poisoned foods, drugs, and cosmetics, which have been before your eyes here in the Well of the House during my discussion. Look at this sample of noodles in clear cellophane and in gold-colored cellophane. Both samples are the same, but the one in the gold-colored container appears as if it were heavily loaded with eggs. Sheer fraud.

Look at this, which shows how the Lydia Pinkham people meet the requirements of the drug law on their label, but continue to make unwarranted claims in their hand-out advertising. If this concoction has any value, it is only in the 18 percent alcohol contained in the alleged remedy.

Here is an exhibit of the kind of alleged Jamaica ginger that a few years ago was sold throughout 24 States and poisoned over 25,000 persons. It is the infamous "jake." It was made in Boston and four men were imprisoned and fined for this murderous fraud and another was sentenced but the sentence was suspended.

This is an example of how a trustful woman, desiring to add to her attractiveness, used a preparation called "Lure-Lash" on her eyelashes, with the result that one of her eyes was destroyed and she was made blind. President Roosevelt shuddered with horror when his attention was called to this.

Here is a preparation that is made from a rank weed called horsetail. It is of no remedial value but it is advertised to cure a dozen diseases besides diabetes.

Here is a concoction called "Bar-Ban" for which it is claimed that it can be used for rheumatism, neuralgia, bronchitis, colds, kidney trouble, and a long list of diseases. It could be used, but it would be useless for any remedial purpose.

Here is an advertisement of yeast to make a woman grow thin; I have another advertisement of another yeast that claims to make women grow fat. One yeast makes fat women thin; another makes thin women fat. The age of miracles must have come back. [Laughter.]

How many Members of the House know that the Food and Drug Administration issues a monthly pamphlet under the title of "Notices of Judgment" in which are printed the often gruesome details of cases brought against food poisoners? I will have these passed around to the Members of the House. Read them. Take them home with you and study them. You will see from them the necessity of efficient and punitive food and drug laws to stop the racketeers in edible and drinkable products.

Look at these bottles. This one is a genuine 3-ounce bottle. This one seems larger, but is not. It is a 2-ounce bottle. Note the way it is made taller and thinner. Here is another fake bottle. The glass side walls are so close together that this bottle holds only three-quarters of an ounce instead of its pretended 2 ounces.

Here is the infamous Marmola of unsavory memory. The name is craftily attractive, but the material itself is vicious when used for self-medication. It contains thyroid extract, which is very dangerous to use unless given under the supervision of a physician. Marmola has ruined the health of many unfortunate women who have used it to their bitter regret.

This product that I show you is Koremlu. It was put up by Cora M. Lubin and contains thallium acetate and was used as a depilatory. Over two and a half million dollars damages were asked for in suits brought against this woman, and she is now a bankrupt. But the product is still being sold to ruin and scarify thousands of unfortunate women who buy and use this preparation.

Here I show you a set of testimonials for an alleged remedy, called B & M, and beside them are the death certificates of those who wrote the testimonials and died from the diseases it was alleged to cure.

This B & M alleged remedy is the king fraud of them all—B & M. It began as a horse liniment and was used only for horses. Now it is advertised everywhere to cure tuberculosis, pneumonia, bronchitis, blood poisoning, asthma, heart disease, and every disease that mortal flesh is heir to. Here is the evolution of quack medical concoctions beginning with the horse and ending with man.

Mr. BOLAND. Will the gentleman yield?

Mr. SIROVICH. I yield to the gentleman from Pennsylvania.

Mr. BOLAND. May I ask the gentleman if he has read the bill I have introduced (H. R. 8316) along this line?

Mr. SIROVICH. For the benefit of my distinguished friend, and for the edification of the House, I want the membership to know that there have been several bills introduced regarding pure food, drugs, and cosmetics. One gives additional powers to the Secretary of Agriculture which I sponsored in the House and which I have relegated to the background, because it takes away privileges

and prerogatives of the Federal Trade Commission and emasculates the work that this great organization is doing. It also gives additional powers to the Secretary of Agriculture to which I am opposed. Then we have the Black-Stephens bill, which is a bill written by the proprietary interests which is simply the old pure food and drug legislation as it now exists, with a couple of Ethiopians buried in the middle, which would continue the very conditions I have been criticizing here.

My friend PAT BOLAND has introduced a bill which I think, if my bill could not be passed, is one of the finest and most complete and progressive measures ever brought before the House. It is a bill that has been written by the Consumers Research of the United States, representing at least 100,000 consuming people. It is a bill that is designed to bring about the millennium in food, drugs, cosmetics, and beverages. It is a bill that will help every human being to have the quality standard and nutritive value in foods and drugs to which he is entitled, and I want to compliment my friend PAT BOLAND for having the courage to introduce this kind of bill. [Applause.]

Mr. BEAM. Will the gentleman yield?

Mr. SIROVICH. I shall be very pleased to yield to the gentleman.

Mr. BEAM. I was very much interested in the gentleman's explanation of the anesthesia proposition. Does not the gentleman think it would be beneficial to the doctor, to the hospital, and to the patient if some analysis were made of the quality of the anesthesia administered to the patient without any direction from the Government itself?

Mr. SIROVICH. I want to explain, for the benefit of my colleague and friend, that the United States Government has a Bureau of Standards and it never purchases anything until this Bureau investigates it to see that everything that is given to any of Uncle Sam's men is of the best quality. It is about time we established a bureau of standards of the United States that would investigate all the food products for the benefit of the consuming public in just the same way. So I believe if we had this kind of bureau that could investigate ether and other products, the doctors and the public hospitals would be in position to buy the best they can have.

Mr. SHOEMAKER. Will the gentleman yield?

Mr. SIROVICH. I yield to the gentleman from Minnesota.

Mr. SHOEMAKER. It may interest the gentleman to know that our so-called Bureau of Prisons has been buying from the wholesale houses stale goods and drugs that have been on the shelves for a long time and has been killing prisoners with them in our Federal penitentiaries.

Mr. SIROVICH. That is not as bad, I will say to my friend, as when the United States Government, in 1920, sold all the ether it found was worthless after the war was over. It sold this to second-class dealers with the understanding that they would use it for varnish, shellac, and other similar purposes. One cruel man relabeled it and sold it to the hospitals of the United States, and 35 percent of it was so vitiated and contaminated that thousands of people died in our country because of its use. I read of one case where there was stamped on an article by the Government of the United States the word "second," and some unscrupulous dealer who bought this product changed it to "second to none" and sold it in that way.

Mr. FITZPATRICK. Will the gentleman yield?

Mr. SIROVICH. I yield to my colleague from New York.

Mr. FITZPATRICK. What are the qualifications that the Government requires of a food inspector? The gentleman knows that to enforce a law of this kind such a man would have to have special qualifications to be able to make such investigations.

Mr. SIROVICH. Mr. Chairman, there are thousands of doctors in the United States who are in penury and want and would be glad to act as food inspectors if they were given an opportunity to take such an examination; but you have not given the Food and Drug Department the appropriation that they need to effectively carry on their work. You have only 76 food inspectors in the United States. We have 48 States in the Union, and if you gave every State 2 inspectors you would have to have 96. Take my friend Tom Blanton. Blanton's State, from what the former Speaker, JACK GARNER, told us, could be divided into six States of the Union because it is so large. In that entire State they have not more than one or two inspectors to look after the food, drugs, and cosmetics that they are using there.

Mr. FITZPATRICK. Are these inspectors doctors?

Mr. SIROVICH. No; they are not doctors.

Mr. FITZPATRICK. That is just what I am trying to find out. What are the qualifications required by the Government

Mr. SIROVICH. The qualifications are such as necessitate knowledge of chemistry, of the physiological action of drugs, ability properly to analyze materials, and determine where adulteration was made. He would have to know physiological chemistry and physiology, and everything that pertains to food, drugs, and cosmetics.

Mr. BLANTON. Will the gentleman yield?

Mr. SIROVICH. I will yield to my friend.

Mr. BLANTON. What are you going to do when the inspectors disagree and when the doctors disagree as to the efficacy of remedies? Forty years ago some doctors would not let us have ice cream when we had a fever but now some feed us on ice cream. Years ago some doctors would not let us have ice with fever and now they pack us in ice. [Laughter.]

Mr. SIROVICH. Increased knowledge, experience, and scientific observation are constantly making the medical profession improve its methods. Time and the increased longevity of mankind has vindicated changes and consequent improvement in treatment. The gentleman from Texas and I have been very consistent in our common ideals. When I was battling against poison in alcohol little did he and I dream that when I called the attention of the people of the United States single-handed, almost 8 years ago, to poisoned liquor, that we would repeal the iniquitous eighteenth amendment at this time. All the time he was exclaiming, "Hold the line! Hold the line!" Both of us have held the line. [Laughter and applause.] My good friend from Texas does not know when he is licked.

Mr. BLANTON. Will the gentleman yield again?

Mr. SIROVICH. It is a pleasure to yield to my aggressive colleague.

Mr. BLANTON. Does the distinguished physician who does not drink himself feel proud that in most of the large hotels and cafes in Washington you can buy hard liquor that is drunk openly before young people?

Mr. SIROVICH. Let me say to my distinguished friend, whom I personally love, honor, and respect, that I am not conversant with the situation in Washington with which he seems to be so familiar. [Laughter.] Let me say, however, as one who never drinks and never smokes, that I believe in moderation in every form of indulgence. I never condemn the use of anything, but I always condemn the abuse of overindulgence in anything that would make a man or woman lose self-respect. [Applause.]

Rice Exports and the Cuban Market

EXTENSION OF REMARKS

OF

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

Mr. NORRELL. Mr. Speaker, two stated major purposes of the present administration are to improve farm conditions and provide employment for labor. The administration has also recognized that there is a special problem in improving farm and labor conditions in the South. The Agricultural Adjustment Act was passed, and it was hoped that through the operation of this act the problem of surpluses of agricultural products might be solved. It is not within the scope of these remarks to launch into an exhaustive criticism of the act and its administration. I do pause to mention what is so well known that it is a commonplace observation: The problem of surpluses of agricultural products remains unsolved and continues to overshadow our agricultural interests like some giant specter whose evil visage spells want and disaster for countless thousands who labor but continue to look in vain for the just and hard-won fruits of that labor.

In no single field is the problem of agricultural surpluses more sharply felt than in the rice industry which is one of the more highly concentrated farm industries of the United States. The importance of rice in the agricultural interests of the Nation is recognized in its inclusion among the basic agricultural commodities subjected to crop control. It is not very generally known, however, that rice now offers a profitable farm commodity for a large part of the Gulf Coast region, especially in Louisiana and Texas; California, Arkansas and, to a lesser degree, Mississippi, are also rice-producing States. The requirements of the crop as to soil, water, and climate are met in this relatively restricted area. In the Gulf Coast region alone there are approximately 1,000,000 acres given to rice production, representing an investment of more than $100,000,000 in farm lands, irrigation canals and wells, pumping plants, storage warehouses and elevators, mills, and other facilities. Arkansas ranks high among the rice-producing States, having in Arkansas and Lonoke Counties two of the largest rice-producing counties in the entire country, the city of Stuttgart, Ark., being a sort of rice capital where annually a colorful rice festival is held. In these areas rice is the mainstay of towns and cities, businesses, and professions. The economic condition of the rice industry proper quickly

becomes the condition of this entire territory. All of these rice-producing areas are in close proximity to water transportation. It is significant also, I think, that they lie largely in an area which has been called by the President the Nation's No. 1 economic problem, and in a section which for generations has been depleted by a vicious one-crop system.

With rice, as with other agricultural commodities, the problem of surpluses remains unsolved, and it is toward a solution that these remarks are addressed. The operation of crop-control legislation has not resulted in taking the rice industry off an export basis, although through the operation of the Agricultural Adjustment Act the full impact of the effect of declining exports was temporarily mitigated to some extent. Production-control measures and benefit payments have to some degree cushioned the shock that would otherwise have been inevitable; but if the growers of rice are to be afforded permanent relief, timely efforts toward the restoration of our export markets should be undertaken, and it is with this phase of the disposition of our rice surpluses that these remarks are mainly concerned.

Mr. Speaker, the situation of our export markets with regard to rice is capable of amelioration if our own State Department will take immediate steps to include in the proposed revised trade agreement with Cuba a sufficient tariff preferential favoring the rice growers of this country to enable them to compete with the growers of Asiatic countries. There is no indefiniteness in my proposal nor is it in the least bit visionary. While it is not contended that Cuba alone could or would consume the entire export surplus of rice from this country, it could reasonably be expected to consume a sufficient quantity to lift the rice industry from its present trough of depression insofar as that depression is due to a failure of export markets. Our exportable surplus of rice over domestic requirements annually is approximately 5,000,000 pockets. Cuba, which produces no rice, now imports some 4,500,000 pockets of rice annually. That Cuba furnishes a natural export market for our rice is apparent both because of its geographical proximity to our rice-producing areas and because of the close-knit trade relations with this country. Unfortunately for our rice growers, under the present trade agreements between Cuba and this country, only a small portion of imports of this commodity are received from the United States. This does not indicate an unwillingness on the part of Cuba to buy from this country; on the contrary, it has been proven that Cuba prefers to buy from this country but now buys largely from the Orient because the Asiatic countries operate on a much lower cost-of-production basis than is possible in this country with our relatively high-wage scale and standard of living and can, therefore, export their rice at a much lower price. The additional and significant fact is that our own State Department with all the means at its hand has not provided in trade agreements concluded between this country and Cuba a sufficient tariff preferential to equalize cost of production in this country with that of the Asiatic countries.

What I propose, Mr. Speaker—and in this I am ably supported by my colleagues from all the rice-producing belts—is an increased Cuban tariff preferential which will place rice exports from this country on a truly competitive basis in the Cuban market, a preferential which will balance with the low cost of production in Asiatic countries. Rice growers of this country do not seek an advantage; all they seek is an equality or a truly competitive basis in the export market. With such a preferential there is little doubt that American rice would be preferred over exports from the Asiatic countries. The present 50-percent preferential afforded this country by the Cuban Government is entirely inadequate to make up for the difference in cost of production. It is true that the President of Cuba may now by proclamation permit our rice to come into that country on a higher preferential basis. From August 10, 1937, to December 31, 1937, by Presidential decree, American rice growers were permitted to ship rice into Cuba on an import duty that was about 20 percent of that of other countries. Since January 1, 1938, however, through trade agreements negotiated by our own State Department, Cuban import duty on our rice has been raised to 50 percent of the minimum duty from any other country. A 50-percent preferential does not equalize the cost-of-production basis. For that reason it is proposed that the tariff preferential be raised to 75 percent or that American-grown rice be admitted at approximately 25 percent of the minimum duty imposed on exports from any other country. Obviously, the route of Presidential decree offers no stable basis upon which rice farmers can go ahead and plant their crops; therefore, the desired action is sought of the State Department of this country to which our Congress has delegated the authority to negotiate trade agreements.

That the State Department stands in an advantageous position for securing the desired preferential is self-evident since the balance of trade between the United States and Cuba is preponderantly in favor of Cuba. During 1937 we shipped to Cuba only 62 percent of what Cuba shipped to us; the first 9 months of 1938 we sold Cuba only 63 percent of the amount they sold to us. During 1937 81 percent by value of the entire exports from Cuba were in shipments made to the United States. For the first 9 months of 1938 the total value of all exports from Cuba to the United States was $100,200,329, while during the same period the value of all imports into Cuba from the United States was only $63,-465,009. Cuba is now permitted to ship into this country a quota of nearly 29 percent of our total sugar requirements, netting to that country some $38,000,000 more for this portion of their sugar than they could get for it in any other market. Who can doubt in the light of these facts, that our State Department occupies a most advantageous position for protecting our rice industry by negotiating for an adequate preferential? That the 75-percent tariff preferential is necessary is supported by voluminous briefs and statistical data now in possession of the State Department. That the time for action is now is self-evident, both because of the desperate plight of the rice industry in this country and because the State Department is now preparing to negotiate with Cuba a trade agreement supplemental to the trade agreement signed at Washington on August 24, 1934, and now in force.

In preparation for these negotiations the Committee for Reciprocity Information conducted public hearings beginning on January 3 of this year. The rice interests were represented at these hearings and able briefs and arguments were presented. As Representative of the major rice-producing district in Arkansas, I appeared before the committee on January 4 in oral argument and also filed a written brief which followed in main the outline of these remarks. On January 18, it was my pleasure to present to Hon. Cordell Hull in person a petition signed by the entire Arkansas delegation in Congress urging prompt and favorable action on the proposal for an adequate Cuban tariff preferential. Mr. Hull assured me of his intense concern with the plight of the rice industry and promised earnest consideration of the preferential proposal, leaving no doubt in my mind of his personal willingness and earnest desire to contribute to the solution of the problem of the Cuban export market. Under date of February 4, the Secretary of State directed to me and my cosigners of the petition of January 18, a very thoughtful letter which further confirmed his interest in and sincere consideration of the preferential proposal. In this letter he raised no question of the necessity and urgency of the proposal nor did he express any doubt of the factual basis upon which the proposal is grounded. He did, however, express some doubt that the proposal was consistent with the general trade policies of the State Department and at this point I quote a pertinent paragraph from his letter:

> I think I should point out to you that the question (of the proposed preferential) involves serious difficulties in respect of policy insofar as an increase in the guaranteed percentage of Cuban tariff preference in favor of American rice is concerned.

You will appreciate, I am sure, the inconsistency of our seeking guaranties of increased preferential treatment for American goods in a foreign market in connection with a program which includes, as one of its basic essentials, the negotiating for the removal of discriminations against American goods in foreign markets.

In my reply to Mr. Hull's letter, I stated that while recognizing the apparent persuasiveness of his argument, I was totally unable to agree that the proposal for an increased tariff preferential was in any way inconsistent with the trade policies of the State Department, inasmuch as it extended only to trade negotiations between this country and Cuba. I have long been of the opinion, Mr. Speaker, that trade agreements concluded between this country and Cuba stood well outside any general trade policy of the State Department in connection with its program for negotiating for the removal of discriminations against American goods in foreign markets. This opinion was founded in part on a statement issued by our State Department on August 24, 1934, with respect to the existing trade agreement which was entered into between the United States and Cuba on that date and which I quote:

Although this agreement has been concluded under the Trade Agreements Act of 1934, it stands, nevertheless, in a separate category. * * * Reciprocity with Cuba still is a proposition that stands entirely alone. * * * Each country in addition to pledging reduced rates of duty for certain products of interest to the other grants exclusive and preferential reductions in duty.

In the light of this language and of the situation which now exists, a realistic trade policy now, as in 1934, requires that we keep our trade agreements with Cuba in a separate category. The general trade policies of the State Department, however wise and praiseworthy they may be and doubtless are, could hardly embrace a program which would require this country to continue indefinitely favoring Cuba with a 35 to 40 percent advantage in trade relations, especially when their main article of export—sugar—involves both a sacrifice on the part of this country's farmers and a contribution on the part of this Nation's consumers to the extent of around $38,000,000 annually. I repeat: The advantageous position which our State Department now occupies with regard to securing the desired Cuban tariff preferential on rice is self-evident. I am also advised that the Cuban Government is favorably disposed toward the proposal of the increased preferential. These being the facts, I find myself unable quite to appreciate the inconsistency of which the honorable Secretary of State writes, though I have no doubt of his own earnestness and the broad vision upon which the general policies of our present State Department are founded. I make bold to believe, and continue to hope, that when the presently existing facts of the rice situation are realistically approached and considered, that the State Department will be moved by the force of logic and a sense of justice to our own rice farmers, to provide for the insertion in the supplemental trade agreement with Cuba the desired and urgently needed preferential. I am daily in receipt of numerous letters which leave no doubt in my mind of the truly desperate situation with which the rice industry is faced in the loss of the Cuban market. To escape the consequences of the cotton surplus, many small farmers have turned to rice production, only to be faced now with a similar situation as to surpluses in the rice industry. The insertion of the proposed preferential in the revised trade agreement with Cuba, as I have shown, will go far toward ameliorating the situation with regard to rice surpluses and the ensuing benefits would not only strengthen the agricultural and industrial interests of the rice-producing States but of the entire Nation as well.

In addition to the recapture of our export markets in rice, there are other steps which may and should be taken to diminish rice surpluses. The discovery through scientific laboratory experiments of new uses and utilization of rice products would be a definite aid. I have suggested that a project on the industrial utilization of rice and rice byproducts be included in the program of the southern regional research laboratory, which is now being established in accordance with the Agricultural Adjustment Act of 1938. The commodities assigned for initial attention are confined to cotton, sweetpotatoes, and peanuts, and I now propose that rice be added to this list. It is true that work now being done on starch as a component of corn and wheat in the northern and western regional research laboratories will be applicable in some degree to the starch, which is the principal component of the rice grain, but it is only appropriate and in keeping with the importance of the rice industry that rice be one of the main subjects for research in the southern regional research laboratory. As a further aid in relief of rice surpluses, an increased activity in this commodity is urged on the part of the Federal Surplus Commodities Corporation. There is no better food from the standpoint of economy and nutritive value than rice, a fact which, coupled with the present stagnation in the rice industry, should move the Federal Surplus Commodities Corporation to a quickened interest in this product.

Mr. Speaker, I have confined my remarks to a few pertinent and concrete suggestions with regard to the disposition of our surpluses in one important farm industry—rice. I, of course, have by no means exhausted the subject, and could not do so in this brief space. I have sought to underline the importance of rice in a section which is seeking rehabilitation over great odds by drawing away from a one-crop system which has depleted its soil, and which no longer can be depended upon to lift the South out of its position of the Nation's economic problem No. 1. The signal importance of rice in the agrarian program of the South is not as yet fully appreciated, nor does it present an insoluble situation. The fuller utilization of the Cuban export market through an increased tariff preferential, together with the discovery of byproducts and increased uses through scientific exploration and an increased activity in rice on the part of the Federal Surplus Commodities Corporation, are measures by which the specter of rice surpluses may largely be dissipated, and our agricultural workers in this field may once more be rewarded with the just fruits of their labor.

Let Us Exempt R. E. A. From Provisions of Reorganization Bill

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

Mr. RANKIN. Mr. Speaker, when we reach the 5-minute rule, I expect to offer an amendment to exempt the Rural Electrification Administration from the provisions of this reorganization bill.

There is no reason on earth why that should not be done. It cannot possibly be improved by any change that would likely be made as a result of the passage of this measure.

The R. E. A. is rendering a great service in electrifying the farm homes of this country, and in my opinion, it would be a great mistake to disturb it at this time.

For the information of the House, I am inserting a table showing the allotments made by the R. E. A. up to March 4 of this year—totaling $193,109,330—which, you will note, is broken down by States.

Remember that these lines cost on an average of $1,000 a mile, which means that the Rural Electrification Administration has already provided for 193,000 miles of rural power lines, to serve 600,000 farms or more than 2,500,000 people in the rural districts of the various States.

Any Member can take this table and figure for himself what it means to the farmers of his own State. Practically every congressional district in the agricultural States has already been reached and more extensions are being made all the time.

The table referred to is as follows:

Total allotments, by States, as of Mar. 4, 1939

State	Allotments up to 1938-39 funds		Allotments from 1938-39 funds		Total allotments from all funds		
	Number of allotments	Amount	Number of allotments	Amount	Number of allotments	Number of borrowers	Amount
United States, total	783	$89,631,310	687	$103,478,020	1,470	550	$193,109,330
Alabama	11	1,564,350	14	2,098,200	25	11	3,662,550
Arizona	1	145,000			1	1	145,000
Arkansas	12	1,772,000	10	1,542,500	22	13	3,314,500
California	5	1,510,500			5	3	1,510,500
Colorado	9	950,000	7	687,500	16	6	1,637,500
Delaware	2	427,037	2	309,000	4	1	736,037
Florida	8	687,000	5	273,000	13	5	960,000
Georgia	54	3,649,615	55	7,218,000	109	35	10,867,615
Idaho	7	1,270,750	5	526,000	12	5	1,796,750
Illinois	25	3,052,630	25	7,605,000	50	20	10,657,630
Indiana	35	6,057,695	37	5,839,500	72	31	11,897,195
Iowa	61	5,778,328	46	7,244,800	107	43	13,023,128
Kansas	15	1,684,651	14	2,146,000	29	13	3,830,651
Kentucky	26	2,436,300	35	4,021,420	61	22	6,457,720
Louisiana	6	947,000	9	1,042,100	15	7	1,989,100
Maine	3	91,000			3	1	91,000
Maryland	5	225,000	5	244,000	10	2	469,000
Michigan	28	4,655,000	25	5,852,000	53	14	10,507,000
Minnesota	64	6,375,236	43	7,746,500	107	34	14,121,736
Mississippi	21	1,656,700	22	3,643,000	43	20	5,299,700
Missouri	27	2,632,000	28	6,190,200	55	24	8,822,200
Montana	14	909,900	10	754,700	24	10	1,664,600
Nebraska	30	5,093,200	31	4,704,500	61	27	9,797,700
Nevada	2	173,000			2	1	173,000
New Jersey	3	257,500	2	162,800	5	2	420,300
New Mexico	5	360,000	5	321,000	10	3	681,000
New York	1	250,000	2	800,000	3	1	1,050,000
North Carolina	19	1,746,350	20	2,579,000	39	18	4,325,350
North Dakota	8	691,972	5	275,000	13	3	966,972
Ohio	43	7,531,525	50	5,417,500	93	25	12,949,025
Oklahoma	19	2,380,000	14	2,213,500	33	12	4,593,500
Oregon	8	366,000	3	186,000	11	5	552,000
Pennsylvania	16	2,509,500	13	2,181,700	29	7	4,691,200
South Carolina	8	1,157,328	4	666,000	12	4	1,823,328
South Dakota	8	537,000	1	50,000	9	3	587,000
Tennessee	27	1,993,458	10	1,572,600	37	12	3,566,058
Texas	34	4,584,985	63	9,766,700	97	47	14,351,685
Utah	1	5,000	4	259,000	5	3	264,000
Vermont			2	72,000	2	1	72,000
Virginia	25	2,256,800	20	2,419,000	45	12	4,675,800
Washington	17	1,507,700	4	134,000	21	8	1,641,700
West Virginia	5	488,000	1	15,000	6	2	503,000
Wisconsin	48	6,361,800	28	3,844,000	76	25	10,205,800
Wyoming	17	902,500	6	355,300	23	7	1,257,800
Puerto Rico			2	500,000	2	1	500,000
Total		89,631,310		103,478,020			193,109,330

Think what this means to the farmers of this Nation who were never able to get any electricity at all until this program was put into effect. Think what it will mean to the millions of farmers yet to be served.

I hope you will all join in supporting my amendment to exempt the R. E. A. from the provisions of this bill just as other similar governmental agencies are exempted.

Let us not interrupt the great work the R. E. A. is now doing, but continue to give it a free hand, and a liberal support that it may carry on this program until we shall have electrified every farm home in America.

Reduction of Freight Rates

EXTENSION OF REMARKS

OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 3, 1939

LETTER FROM GOVERNOR OF NEW YORK

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me recently from the Governor of New York:

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany, February 27, 1939.

Hon. W. G. ANDREWS,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: My attention has been directed to the following bills which have been introduced in the present Congress: S. 126, S. 137, S. 158, S. J. Res. 27, H. R. 3369, H. R. 188, and H. R. 3749.

It appears from the press that the southern group in the Congress is renewing its effort to secure, through congressional legislation, lower freight rates for products of southern manufacture shipped into northern markets in competition with products of northern industry. It is the claim of this southern group that the fact that railroad freight rates on manufactured products within the South and from the South to the North are generally higher, mile for mile, than the freight rates on the same commodities within the North constitutes an impediment to the industrial development of the South and to the South's ability to attract manufacturing from the North to the South.

You will recall that I addressed you on this same subject a year ago in connection with a bill introduced by Congressman RAMSPECK, which would have made it unlawful to charge freight rates higher, mile for mile, for the shipment of goods from one section of the country into another than the freight rates on the same goods within the territory of destination. Substantially the same bill has again been introduced by Congressman RAMSPECK as H. R. 188 and an identical bill has been introduced by Senator HILL as S. 158. The other bills above referred to seek to accomplish the same result, although their terms are somewhat different. It appears that the southern group is seeking to enlist in support of these bills the cooperation of Members of Congress from the Western States, in view of the fact that the freight rates on manufactured goods in the West, and from the West into the Northeast are also higher than the freight rates within the northeastern section of the country.

I cannot overemphasize the seriousness of these bills from the standpoint of New York State, and I urge that they have your

attention. The results sought to be achieved are, of course, contrary to the interests of the other Northeastern States as well as of New York. I am informed that steps are being taken to organize opposition to them on the part of representatives of all the States north of the Ohio and Potomac Rivers and Illinois and east. I am also informed that the bills will be vigorously opposed by the railroads which will be adversely affected thereby and by commercial organizations throughout the Northeast and even in some sections of the South. I feel that the New York delegation should take the lead in bringing about a united front on the part of the representatives of the Northeastern States to defeat this legislation.

Of course, the fundamental objection to all of these bills is that they would make the measure of railroad freight rates the subject of congressional enactment rather than leaving their regulation to the independent judgment of the Interstate Commerce Commission on the basis of evidence presented to it. There is already pending before the Interstate Commerce Commission a proceeding brought by seven of the Southern States involving the very interterritorial freight rates to which these bills are directed. Extended hearings have been held in this proceeding, at which evidence has been offered both on behalf of the South and on behalf of the North and of the railroads in two sections of the country. New York State was represented in this proceeding by the attorney general's office. I trust you will agree that the subject should be left to the Interstate Commerce Commission to be determined by it upon evidence presented to it independently of any restrictions imposed by Congress of the sort provided by these bills. Senate Joint Resolution 27 is less objectionable than the other bills, since it would call simply for a general investigation by the Interstate Commerce Commission into the subject of interterritorial freight-rate levels. However, insofar as rates between the South and the North are concerned, the pending proceedings brought by the Southern States would appear to constitute such an investigation, and the proposed joint resolution seems superfluous. With respect to the particular freight rates against which the Southern States have reason to believe that they have grounds of complaint, they should be content to bide the Commission's decision in this proceeding.

While the fundamental objection to these bills is the one of principle which I have just mentioned, you will also appreciate the seriousness from the standpoint of New York of a change in freight rates, which would make it even more attractive than it now is for industries to move from New York State to the South. The Hill and Ramspeck bills (S. 158 and H. R. 188) would not only require a reduction in the freight rates from the South into the North but so long as the freight-rate levels within the two territories are different would require the freight rates from northern shipping points into southern markets to be higher than the freight rates paid by southern manufacturers shipping into the North.

It may interest you to know some of the facts which were developed in the proceeding before the Interstate Commerce Commission by witnesses for New York State and New York communities and industries. This evidence was designed to meet the contention of the seven complaining Southern States that their industrial development has been restricted by the freight-rate situation and that under the existing freight rates they have not been able to compete in northern markets in the sale of goods in competition with northern manufacturers. A study was made by the engineering firm of Ford, Bacon & Davis, and I cite a few of the facts disclosed by that study.

In 1935 the number of wage earners in manufacturing plants in this State was only 77.9 percent of the corresponding figure for 1923; while the number of wage earners in manufacturing plants in the seven Southern States in 1935 was 101.4 percent of that for 1923. The total wages paid in manufacturing industry in this State in 1935 fell to 64.4 percent of the figure for 1923; while in the seven Southern States, in spite of the depression, the decrease in wages was only 14 percent.

Turning to specific industries, it was disclosed that the number of employees in the stove and furnace industry, which has been a very important one in this State, decreased 52.2 percent in the 12-year period between 1923 and 1935; while the number of employees in this industry in the South increased 101.4 percent. In the boot and shoe industry New York suffered a decrease of 18.5 percent in the number of wage earners employed, while the seven Southern States had an increase of 403 percent. In three branches of the textile industry, namely, cotton, silk and rayon, and in knit-goods manufacturing, the number of wage earners employed in New York State decreased 42.4 percent, 47.9 percent, and 40.2 percent, respectively. In the seven States of the South, on the other hand, the number of wage earners employed in cotton manufacturing increased 17.9 percent and in knit goods 78.7 percent, the figures for silk and rayon for the South not being available. The number of wage earners employed in steel works and rolling mills in New York State decreased 53.2 percent, while the seven Southern States had an increase of 101.4 percent. Wage earners employed by concerns engaged in manufacturing electrical machinery and supplies in New York State fell off 36.2 percent, while the seven Southern States had an increase of 92.6 percent.

I am informed that the evidence in the proceeding before the Interstate Commerce Commission shows that stoves and furnaces, fire hydrants, electrical goods, wooden furniture, textiles, and many other goods manufactured in the South sell at lower prices in New York State under the present freight-rate adjustment than do the same commodities manufactured in this State.

On such facts it is plain both that there is little ground for contention by the South in support of the proposed bills that the freight-rate structure has interfered with the industrial growth of the South or its ability to compete with the North, and also that to accord to the South a further advantage in the way of relatively lower freight rates would increase the difficulty which we have of retaining industries in our State for the employment of our wage earners.

I bring these facts to your attention and express the hope that you will agree with me that these various bills are both fundamentally unsound and prejudicial to New York.

Very sincerely yours,

HERBERT H. LEHMAN.

Northern Montana College

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

RESOLUTION OF THE LEGISLATURE OF THE STATE OF MONTANA

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution recently adopted by the Legislature of the State of Montana:

Memorial requesting Congress of the United States to pass a bill granting certain public lands to the State of Montana for the use and benefit of the Northern Montana Agricultural and Manual Training School, also designated as the Northern Montana College

To the honorable Senate and the House of Representatives of the United States in Congress assembled:

Whereas the Honorable BURTON K. WHEELER, United States Senator from Montana, introduced in the Senate of the United States on January 4, 1939, a bill granting certain public lands to the State of Montana for the use and benefit of the Northern Montana Agricultural and Manual Training School, designated as S. 30, purporting to grant to the State of Montana 500,000 acres of land for the use and benefit of said Northern Montana Agricultural and Manual Training School, also designated as Northern Montana College;

Whereas the Federal Government previously has granted lands to aid in the establishment, support, and maintenance of all of the units of the Greater University of Montana except said Northern Montana College;

Whereas said land grants have been and are of great assistance to the said institutions benefiting thereby in furthering the progress of higher education in the State of Montana; and

Whereas the Northern Montana College is in need of such aid and will be able to offer greater advantages, particularly to the youth of northern Montana if such grant were made: Now, therefore, be it

Resolved, That the Twenty-sixth Legislative Assembly of the State of Montana (the Senate and House concurring) hereby does request and petition the Congress of the United States to pass said bill introduced by the Honorable BURTON K. WHEELER entitled "A bill granting certain public lands to the State of Montana for the use and benefit of the Northern Montana Agricultural and Manual Training School," designated as S. 30; and be it further

Resolved, That copies of this memorial be transmitted by the secretary of state of the State of Montana to the Senate and House of Representatives of the Congress of the United States and to the Senators and Representatives in Congress from the State of Montana, and that they and each of them be and hereby are requested to use all means within their powers to bring about the passage of said bill.

Progress of the P. W. A. in Region No. 2

EXTENSION OF REMARKS

OF

HON. DOW W. HARTER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

Mr. HARTER of Ohio. Mr. Speaker, more than a thousand applications for Public Works Administration grants in P. W. A. region No. 2 remained unfilled when the appropriation for the 1938 program was exhausted. These applications,

which could not be granted, represent many millions of dollars in potential pay rolls and materials.

From all over region No. 2, which is composed of Illinois, Indiana, Ohio, Michigan, Wisconsin, and West Virginia, come expressions of the need for the continuation of the Public Works Administration as a perpetual instrument for the stimulation of industry in times of economic depressions. There have been constant queries from various communities and organizations as to future prospects for obtaining the financial assistance asked for much-needed public improvements which are in abeyance.

The construction industries, which have found in P. W. A. a business lifesaver, are intensely interested in the future of P. W. A. There has been a growing realization and firm belief that in the Public Works Administration a positive solution of the unemployment problem has been found and a solution based on solid economic principles.

This feeling is well expressed in a statement to the citizens of Wisconsin issued by the Wisconsin Construction Industries Advisory Council, representing 40 employers' trade associations and covering every branch of the construction industry. This statement says:

> It is the contention of the construction industry that the P. W. A. program—a 100-percent construction program—by maintaining normal trade relations and trade volumes prevents unemployment and thereby offers a positive solution of the unemployment problem.

This same statement also contains this characterization of the operation of P. W. A.:

> The P. W. A. program uses the established organizations and the competitive-contract method of the construction industry. It produces projects of lasting value to the community and pays the prevailing wage at the site. The workers are on a full-month work basis, are nonrelief taxpayers, unemployment-benefit and old-age benefit insurance-paying citizens. They work on projects of a more complicated type requiring definite costs.

One of the outstanding accomplishments of P. W. A. is that its record shows it has been able to increase wage levels without increasing the cost of its projects. Actual figures are on record showing this fact. The reason for this is explained by labor authorities in that P. W. A., through its various divisions and sections, in being largely responsible for the increase in wages to higher levels, insures a higher quality of workmen for high-class work and gives employment to skilled labor.

Employers are placed in a position to demand and to obtain higher efficiency both in quality and quantity of work and have been able to construct projects below estimated costs even with the increased wages. High wage rate jobs come under estimates because the contractor knows what his labor can produce.

Past P. W. A. programs since its inception show that up to January 14, 1939, 353 non-Federal projects have been completed in region No. 2. For these projects P. W. A. loans of $18,417,958 were made and grants totaling $33,294,414 were approved by the President. The estimated costs of these projects were $107,158,702. The total actual cost to date is $103,158,465.

The actual cost of completed projects was about $4,000,000 less than estimated costs.

Since the first Public Works Administration program there has been a growing conviction that here is an organization that should be continued as a permanent Government agency, its record being the overwhelmingly convincing argument for its continuance. It has been a cumulative growth of public opinion registered by the applications by communities with each succeeding program.

It was climaxed by the 1938 program which was accomplished on a vast scale, far in excess of previous programs and put into operation in 6 months, an amazing accomplishment never before paralleled. In region No. 2 between the inauguration of the 1938 program through the act of Congress in June until the dead line of September 30, 1938, communities in the six States rushed in applications for grants to the number of 2,643. President Roosevelt approved 1,780 P. W. A. non-Federal grants for the region. Of this number, before the dead line for the start of construction, 343 had been rescinded because of the inability of the applicant to comply with the conditions set down by P. W. A. to qualify for grants, usually a financial problem which could not be solved by the community within the limited time. This leaves 1,437 active dockets in the region, all now under construction.

For these 1,437 active dockets, many of which have multiple units, loans have been granted by P. W. A. totaling $3,664,500; approved grants totaling $172 ,001,025; and the projects under construction have a total estimated cost of $382,548,437.

Up to the middle of January 1939, P. W. A. programs in region No. 2 have been responsible for the employment of approximately 86,000 men. This includes only the starting forces of the 1938 program, which will not reach the peak of employment until summer.

The immediate and tremendous response to the 1938 P. W. A. program by communities willing and anxious to levy taxes upon themselves for 55 percent of the cost of public improvements is illustrated by the distribution by counties of the applications. There are in the six States of region No. 2, 491 counties. Of this number 351 received grants under the P. W. A. program, or about 73 percent. These grants, of course, were in addition to grants under previous programs in which counties not represented in the current list had participated. Four of the six States applied for and obtained multiple grants for State-wide highway programs. There remains a wide field for further work in this line.

An extended study by the Bureau of Labor Statistics shows that for each man-hour of employment on site about 2½ man-hours are created off site in industries providing materials, in transportation, and administrative work. Some engineers and economists believe this figure to be altogether too conservative.

According to the Bureau of Labor Statistics, the 1938 P. W. A. program in region No. 2 will require orders for $227,797,000 worth of construction materials.

It will provide 132,358,000 man-hours of employment at the site of the projects and 277,225,000 man-hours in industries providing materials, in transportation, and other necessary work.

Iron and steel products are the largest factor in construction materials. For the 1938 program there will be required about $60,486,000 worth. Cement is the next highest. Both will be furnished to a large extent by plants in the region.

Fourth-quarter reports of the steel companies reflect the impetus that P. W. A. orders have given that industry in increased earnings and in increase in the capacity of production at which the steel mills are operating.

The same spur to the heavy industries is shown in other lines, as orders for the 1938 P. W. A. projects cover all fields of construction materials.

In region No. 2 the value of P. W. A. as a sound solution to the employment problem during the recent period of business slump has not been questioned. It has proved its case. What of the future?

Region No. 2 now has on file more than a thousand applications which have been tested and examined and found sound from a legal, financial, and engineering standpoint and qualifying as of permanent nature and socially valuable, and which have not been approved because of the fact that the 1938 appropriation for P. W. A. has already been exhausted.

Other communities have notified Regional Director D. R. Kennicott that they will be ready to file as soon as they learn whether or not P. W. A. is to be perpetuated. P. W. A. projects in region No. 2 have aroused a healthy spirit of community emulation and desire for public improvements. There are queries and criticisms from various communities because they did not receive P. W. A. grants while neighboring communities were favored.

There is this reservoir of applications ready should Congress decide to continue P. W. A. It is a larger list than was waiting at the start of the 1938 program.

There has been a general upturn in employment throughout the region as the P. W. A. 1938 program swings into active construction. Chicago's great $40,000,000 subway made possible by P. W. A. grant of $18,000,000, a $7,000,000 school-building program in Chicago, and other projects throughout the six States of the region are offering employment to thousands with the consequent improvement in business conditions brought about by increased purchasing power.

In the applications which await the future decision as to the continuation of P. W. A. schools bulk largely. Scores of communities are anxious to build new schools and improve their present educational facilities. A number of sewage-disposal projects are also pending, many of which found the time too short to complete financial arrangements in order to qualify for grants under the 1938 program. They are now ready to apply. There are also many paving and hospital projects yet to be considered.

Opinion in the region so far as reflected by newspapers, construction organizations, union labor, and various civic organizations favors a continuation of P. W. A. as a stabilizing influence in times of financial and economic distress and as a sound institution to be perpetuated in times of prosperity to concern itself with the construction of public improvements of benefit to the people at large and to be spread over a period of years. There will always be this field both in the way of new improvements and in the replacing of public buildings and projects which have become obsolescent or inadequate to serve their purpose.

Annual reports of the heavy industries, particularly fourth-quarter reports, at which time the 1938 program was swinging into the construction phase, have reflected the benefits of P. W. A. The pick-up in employment through P. W. A. projects has been shown in the retail-trade reports.

As outstanding examples of P. W. A. projects, I would like to cite the Black River bridges now under construction in my district in northeastern Ohio. These bridges rank foremost in civic improvements in Lorain and Lorain County. These two huge structures, made possible by grants from the Public Works Administration have long been desired, and when completed will replace the present unsafe and inadequate structures. The present bridges were constructed at the turn of the century to take care of the then existing traffic. But Lorain kept pace with the rest of Ohio and the Nation in the march of progress, and these vital traffic links became inadequate. The two new bridges will take care of not only present-day traffic but will allow for a normal increase for many years to come.

The Public Works Administration has, as the Federal Government's share, made grants totaling $1,224,832 toward the $2,732,960 cost of the bridges. The bridge over the Black River connecting Broadway and Twenty-first Street with the junction of Kansas Avenue and Colorado will cost $1,364,560 and will supply an estimated 364,542 man-hours of labor. The entire bridge, including the approaches and the underpass, will be 6,000 feet long, connecting State Highways 57 and 611, and will offer great advantages to not only the people of Lorain but to tourists.

The bridge over the Black River at Erie Street, to cost $1,368,400, will be 1,300 feet in length and will supply 258,237 man-hours of employment. This bridge will prove of immense importance because it will handle the through traffic between Cleveland and Toledo, which is constantly passing through Lorain.

Aside from the immense value of these important improvements in communication and convenience, consider a moment what this construction means for my community in employment and pay rolls. These two bridges will furnish a total of 622,799 man-hours of work to residents of Lorain and Lorain County. The Bureau of Labor Statistics of the Department of Labor tells us that for every man-hour of employment at the site of a P. W. A. project, two and a half man-hours of work are created in industry supplying, handling, and transporting the necessary materials. Using this formula, we find that as a result of the employment to be provided at the bridge sites, 1,566,947 man-hours of indirect employment will be furnished at the source of manufacture.

This makes a total of 2,179,726 man-hours of employment, direct and indirect, growing out of the construction of these necessary improvements, thus offering a splendid example of the President's recovery plan putting men, money, and machinery back to work. Transportation will come in for its share in moving the fabricated materials from manufacturing points in at least 15 States to Lorain. Pay rolls not only in Lorain, but at the places of manufacture will be spent for food, clothing, and rent, thus providing necessary and highly important stimulus to the consumers goods industries.

The Public Works Administration has played a vital part in stimulating business in my district and in helping us to make our community a more modern and better place in which to live. We were glad to match the Government's 45-percent grant by supplying 55 percent of the cost ourselves. Not only did the P. W. A. furnish us with financial aid, but it extended valuable guidance and counsel as well. Because of its supervision we know that these projects will be the best that this amount of money possibly could buy. The people of Lorain value the work the P. W. A. has performed for them.

The great accomplishments in region No. 2 made possible through P. W. A. grants and loans have opened the eyes of the people to the fact that they are only making a start on a vast program of betterments for everyday life. There is a strong feeling that it should be continued and that P. W. A. is the one and only instrument that can make its continuation possible.

The National Labor Relations Board—St. Louis Litigation

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

Mr. COFFEE of Washington. Mr. Speaker, we have recently been hearing severe criticism of the manner in which the National Labor Relations Board is conducting some of its cases. There are in this House five bills, and in the Senate five or six more, all of them suggesting amendment to the National Labor Relations Act. Back of these suggested amendments lies an assumption that the act needs clarification or Board practices need correction, or both. In good time a scrutiny of the act itself will take place. Meanwhile I think it important to inform ourselves in regard to that entirely separate question, the proper handling by the Board of its cases.

THE BOARD HAS A RECORD OF SUCCESS IN TRIAL AND APPEAL

On its face the Board seems to be making progress. In spite of recent Supreme Court reverses its litigation record, over all, still stands in the front rank of all administrative agencies of the Government. The Board itself tells us that it has managed to settle 8,000 labor disputes, representing more than 50 percent of all its closed cases, and without resort to costly formal proceedings. The Board states that during less than 4 years it has settled 1,500 strikes and averted 600 others; that it has peacefully conducted 1,800 elections; reinstated many thousands of unfairly discharged workers, and that in general the habit of cementing peaceful working agreements between workers and employers is taking hold throughout industrial America despite the unhappy strife in which labor itself is engaged.

LET US NOT HINDER LABOR'S RAPPROCHEMENT

Tomorrow the President of the United States himself will meet with labor's warring factions, so concerned is he that

this division may not remain a hazard to industrial peace and security. I think it vital at this critical moment that we do what we can to aid the President in his undertaking by trying to pacify, and not to rile still further, these complex cross-currents in which labor and the Labor Board are struggling.

For that reason I have made a personal study of charges brought against the Labor Board last Thursday on the floor of this House, charges, Mr. Speaker, which, if true, must demand our action. I refer to the fourfold indictment brought against the Board by the gentleman from Missouri [Mr. ANDERSON].

AN EPISODE AT ST. LOUIS

His primary charge concerned the testimony at a Board hearing in St. Louis of one Mrs. Ethel Spangler, who swore on the stand that an attorney for the Board, Thurlow Smoot, attempted to persuade this Mrs. Spangler's 17-year-old daughter to give false testimony on the promise that she would be paid enough to open a beauty parlor of her own. If that is what is going on, I agree with the gentleman that the Labor Board requires investigation. The gentleman himself accepts this charge against the Board as accurate, basing his belief on the fact that three St. Louis newspapers carried virtually the same descriptions of Mrs. Spangler's testimony.

For myself I find nothing extraordinary in the fact that three newspapers carried identical versions of her testimony. Good reporters naturally pick up a lively bit of testimony, and the better reporters they are the more nearly will they agree as to what a witness says. St. Louis happens to have three very good newspapers—the Post-Dispatch, the Star-Times, and the Globe-Democrat. This Labor Board case is an important local issue involving charges by a sound and well-established labor union, the International Ladies Garment Workers, that the Forest City Manufacturing Co. discharged for union activities some 17 of its 800 workers.

AN AMAZING WITNESS TESTIFIES AND RECANTS LATER

I am willing to reserve judgment whether or not this employer treated these workers unfairly, exactly as I would wish judgment reserved whether the charges of this Mrs. Spangler against the Labor Board are true or whether she had fish of her own to fry. The gentleman from Missouri supposes, because she said it on the witness stand, that it must be true, and he finds the Board's conduct very reprehensible. Had he waited a few days, however, before jumping to unkind conclusions against the Labor Board he would have found these same three St. Louis newspapers reporting that Mrs. Spangler herself is of uncertain veracity and that other witnesses considered her testimony completely false.

THE SPANGLER INCIDENT

This Mrs. Spangler is of no consequence. But it is important for us to know whether these frequent and sweeping allegations against the Labor Board have any foundation in fact. The gentleman, Mr. Speaker, did not go beyond newspaper accounts for his evidence of Labor Board wrongdoing. I shall therefore not be any more profound in my sources of information.

I have in my hand clippings from the three St. Louis papers during the days immediately following Mrs. Spangler's testimony that an agent of the Labor Board attempted to make her perjure herself under promises of bribes to set up her daughter in the beauty-parlor business. Again we find all three St. Louis papers in agreement as to testimony, but this time they all report the lame explanation of Mrs. Spangler's daughter that no beauty parlor, after all, was mentioned in any conversation which she could remember. They further report Mrs. Spangler's admission that she had consistently deceived fellow union workers during the time she was a member of the Ladies Garment Workers. The Star-Times has her saying, and I quote:

Everything I gave the union was false.

A REMARKABLE SELF-REPUDIATION

The newspapers further report that Mrs. Spangler admitted giving false testimony at a 1937 arbitration hearing; that under cross-examination she remarked concerning this incident—and I give her direct quote as reported by the Post-Dispatch:

I didn't care whether I told the truth or not. I knew whatever I said didn't make any difference, anyway.

I agree, from everything I find reported about her, that Mrs. Spangler's statements make very little difference to anyone, except as they may be picked up and accepted as gospel in a situation where false rumors endanger the industrial peace of the entire country.

Who is this Mrs. Spangler? A part-time union organizer who was one of those who signed the charges against her employer and then suddenly changed her mind. We find her, according to the St. Louis newspapers, signing a 35-page affidavit reciting all manner of allegations against the Labor Board, an affidavit which was drawn up in the office of the vice president of the company, and with the aid of Charles A. Spoerher, the latter being attorney for A. A. Ahner, a former labor spy and now the so-called industrial counselor for Mrs. Spangler's employer.

LABOR SPIES AND A. A. AHNER

If there is more in this story than meets the eye, I, for one, should like to know more about the connection of this 35-page affidavit of a doubtfully truthful witness and the man A. A. Ahner, whom the Forest City Manufacturing Co. has paid $18,110 over a 4-year period ending January 10. Part of that money, according to the Globe-Democrat, went for the employment by Ahner of women spies to keep Ahner informed of union activities among company employees. Ahner has been actively advising the company in regard to this Labor Board hearing since it first became a possibility. Since last October Ahner has been paid $2,400 in fees. During this hearing Ahner sits in the courtroom. On last Thursday—the day on which the gentleman from Missouri brought these matters to our attention—two witnesses refuted Mrs. Spangler's previous testimony that she had never seen A. A. Ahner until recently.

This is not the first time the Labor Board has run across the trail of A. A. Ahner. I will not mention the name of the St. Louis company involved, because that company has since made amends by complying in full with a cease-and-desist ruling of the Board. But I will read you what the Board's decision had to say in the year 1936 about this same A. A. Ahner and his connection with the company in question:

Ahner, before organizing his own companies, was what is called by detectives an "operative," and for 5 years St. Louis district manager of the Railway Audit & Inspection Co., a Nation-wide private detective agency engaged largely in "investigating" labor-union activities, breaking strikes, and furnishing guards and strikebreakers. He has had wide personal experience as a labor spy by joining labor unions to report their activities to employers.

OTHER CHARGES ANSWERED

I have examined this matter at length, because I felt that the gentleman from Missouri was somewhat hasty in condemning the Labor Board on the reports of what one witness at one of its hearings had alleged. But the gentleman, also last Thursday, made three other charges against the Labor Board. Those, too, I have examined by doing what I think we ought to do more often in such cases—going directly to the Labor Board and asking for facts. From the Board I have direct answers, which, I suppose, are susceptible of proof.

To the charge that three witnesses in a St. Louis hearing of a Labor Board case were denied the opportunity of testifying, the Board tells me that all three were given such opportunity and recites page numbers of the record to prove it. The rumor in this instance, it appears, started because the Board's examiner at first did refuse to hear their testimony, but upon a later showing that it might be relevant he permitted them to take the stand.

The gentleman further proposes against the Board's good name that its regional attorney at St. Louis made a speech to a union meeting in which he is supposed to have pleaded with the members not to desert the union. The Board, however,

informs me that both the company and an intervening labor organization later requested the trial examiner to strike from their answers all allegations alleging misconduct by Board agents. Again I am provided by the Board with page citations from the record to prove its contention.

The final allegation against the Board is that it has disciplined one of its regional directors by suspending him pending investigation of a newspaper report that he publicly declared that an employer has no chance before the Board. I presume the Board will in due time make public its findings on its investigation of this newspaper story. Meanwhile, especially in view of my own findings upon investigation of charges against the Board's agents, I intend to remain calm and in a state of suspended judgment.

LET US ASCERTAIN THE FACTS ERE WE CRITICIZE

I know that the gentleman from Missouri had no purpose other than to suggest that these rumors of Labor Board misconduct require investigation. I am happy to present him with the results of my own inquiry into the matters he views with such concern. I think in this critical time of appraisal of the Board and the act, and at this moment when the President of the United States is applying himself personally to the cause of peace between labor's divided houses, that we should not be too hasty to ascribe blame to an agency in whose proper functioning we have so large a stake.

Address Before Pennsylvania Manufacturers' Association

EXTENSION OF REMARKS
OF
HON. FRED C. GARTNER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1939

ADDRESS BY JOHN M. FLYNN, FEBRUARY 28, 1939

Mr. GARTNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of John M. Flynn, president, to the members of the Pennsylvania Manufacturers' Association at the annual meeting of the Manufacturers' and Bankers' Club, February 28, 1939:

For the first time in nearly 5 years hope brightens the horizon here in Pennsylvania. We are on our way back to sound sense and sanity in government. At Harrisburg economy and systematic savings are being substituted for long-continued extravagance and waste. In short, government in this Commonwealth is being brought back within its rightful sphere of operation and usefulness.

But there are no easy paths or short cuts. This change, which was effected through the election last fall and which became operative with the inauguration of Governor James on January 17, cannot be brought about overnight or in any but the hard way. I think it is for all of us to be grateful that when the Republican Party returned to the control of the affairs of this Commonwealth, it was with a Governor who has the experience, the sound viewpoint, the courage, and the determination to take the many and intricate problems of present-day State government in his stride. For the future is bound to hold many severe headaches for the James administration. It could not be otherwise with the vicious extravagance and waste and the downright mismanagement which have characterized the last 4 years. Everybody now knows that affairs at Harrisburg were in an unholy mess. But it was no accident. The situation left by the Earle administration could be well described by paraphrasing the remark of a once highly popular statesman: "It did not just happen; they planned it that way."

I think it is our duty therefore not only to have extreme patience as Governor James attacks the many and difficult problems that confront him, but to give him every possible cooperation as he heads the way in this common purpose of getting out of the financial morass and the legislative tangle that have been left by 4 years of spendthrift misrule. And if we would give the most intelligent help and cooperation it is necessary that we have a pretty clear understanding of just what confronts us.

Let's stop for a moment to look at the more fundamental aspects of the national situation.

If we accept the President's own estimates of Federal expenditures for the current and the next fiscal year, the seven successive fiscal years of the Roosevelt era—1933 to 1940—will give us these staggering figures:

	Billions
Federal expenditures during the 7-year period	57.1
Accumulated deficits of the 7-year period	22.7
Federal debt at end of this 7-year period	44.5

Throughout this 7-year period annual expenditures by the Federal Government will have averaged 8.2 billions of dollars a year. And through recurring deficits exceeding anything in American history over a like period—and averaging 3.2 billions a year—the national debt will have been brought to within half a billion dollars of its present statutory limit.

It is well to know what this national-debt figure means. It is seven times the total amount of money now in circulation in the United States. It is more than one-third of the entire assessed valuation of the 48 States. Pennsylvania's share, for example, will be three and one-half billions of dollars, which is more than the entire national debt ever amounted to prior to our entrance into the World War.

Yet in spite of those huge expenditures, the accumulated deficits, and the steadily increasing debt the American Federation of Labor calculates that the number of unemployed during 1938 was only about 10 percent less than when—in the name of national recovery—the Roosevelt administration began the greatest spending spree in all history.

Actually the situation is much worse than that. In 1929 the Federal Government was operated with 833,000 employees. In June 1938 the number was 1,194,000, exclusive of all "relief" and other "emergency" workers. The increase was 43 percent, and 42 percent of it has been since 1934 and hence within the Roosevelt administration. It is the inevitable consequence of the vast system of overlapping bureaus, agencies, and commissions which have been set up in the name of government during that period.

In other words, for the year 1938, the number of those dependent upon the regular jobs of Federal, State, and local governments, plus those on relief and made work, adds up to no less than 30,000,000 persons. The appalling fact is that out of our entire population, one in every four is living upon government. The ratio of producers to nonproducers has dwindled until now it is only 4 to 1. And the terrible significance of this situation is clear. Actually, that part of our population which creates wealth, which works for the future, has been continually diminishing, while that part which, directly or indirectly, lives upon the state has been ceaselessly growing.

Meanwhile the incentives to investment in productive and allied activities have been stifled not only by the terrifically increased burdens of general and pay-roll taxes, plus the persistent antagonism of government toward business, but by such disproportionate rises in costs of production as have, for example, held construction activities almost to zero over a period of years, and, in the case of manufacture, have advanced those costs by at least 20 percent over the peak year of 1929.

Col. Leonard P. Ayres, nationally known economist, recently made this significant statement:

"For a period of years prior to the depression electric utilities floated about a billion dollars of new capital and carried forward a program of construction amounting to about a billion dollars a year. Railroads were spending two billions a year in capital expenditures and for materials."

The present fact is that the electric utilities have been the subject of almost constant attack by the Government since 1933, in addition to which the Government has entered that field in a large way as a direct and powerful competitor of privately owned enterprise. Upon the other hand, our railroads have been operating under the great handicaps of depressed business and increasingly severe competition. Obviously, new capital is not entering either field, nor is it being expended upon a scale even approaching the previous period. As a matter of fact, the total of all new capital that was invested in all forms of corporate enterprise throughout the United States during the last 3 years averaged only about 20 percent of the annual average for 1929 and 1930.

So much for the national situation, about which one thing is very clear: If we are not to plunge headlong into that national bankruptcy which the President himself, as a candidate, warned would be the inevitable consequence of unrestrained spending, and "deficit piled upon deficit," the Government of this Nation must speedily and radically change its course.

Most observers agree that the result of the November elections in this and many other States was a distinct mandate to do that very thing. The Republican membership of the lower House of Congress was almost doubled. More than 100 of the Democratic Members were elected by majorities so slim that they barely made the grade. The Democratic majority has dropped from 227 to 87. But the important thing is that this is not a New Deal majority. Recent events have shown that the number of Democratic Congressmen who do understand the mandate of last fall's elections, and who therefore are opposed to the spending policies of the New Deal, is such that, when joined with the Republicans, it constitutes an anti-New Deal majority sufficient to defeat, or vitally amend, important legislation, although it may have the aggressive, and even the belligerent, support of the White House.

The fact, therefore, that the President himself does not recognize or will not concede this mandate, but upon the contrary may contest it and fight against it, is after all perhaps the best assurance that the people will express themselves so conclusively in 1940 that there cannot possibly be two opinions concerning their determination that Government shall function within the confines of reasonable income—that Government shall aid and not stifle national recovery.

When we turn to the Pennsylvania situation it is not surprising to find a complete duplication here of our national problems and difficulties. As has been said: This did not just happen; they planned it that way.

I have had one of our own staff compile the financial burden now bearing upon productive enterprise in this State. Experts in the fiscal affairs of the Commonwealth have examined that compilation and pronounced it accurate.

Following are the important State taxes and other direct burdens, and the share of each that is borne by productive enterprise, per biennium:

Capital stock tax	$30,000,000
Bonus tax	1,000,000
Corporate net income tax	51,000,000
Gasoline tax	25,000,000
Unemployment compensation tax	90,000,000
Administering workmen's compensation	1,200,000
Increased benefits workmen's compensation	34,000,000
Old age benefits (Federal)	63,750,000
Total	295,950,000

Of the above, $262,750,000 has become effective since January 1935.

Where does the money go? Well, part of it has been going for padded pay rolls. But that is not the big item, nor can the major saving be effected there. The fact is that during the calendar year 1938, expenditures (State and Federal) for all forms of relief in Pennsylvania exceeded a quarter of a billion dollars. The figure is staggering. More than 17 percent of our people are being carried upon relief, in one form or another.

The assistance expenditures by the State alone during 1938 amounted to $111,000,000, in round figures, divided as follows: Seventy-six millions for direct relief; twenty-four millions for State old-age assistance; four millions in aid to the blind; and seven and one-fourth millions under the heading of mothers' assistance.

But again that does not reflect the whole problem. For, in his State-wide radio broadcast of January 27, Governor James pointed out that the preceding administration not only had spent the $25,000,000 by which the revenues from so-called emergency taxes exceeded original estimates, plus the $45,000,000 procured by putting taxes upon a self-assessing basis, but likewise it had gotten rid of approximately $50,000,000 more, which should have been in the Treasury with which to carry on the government from the day the James administration took over, until the end of the current biennium on May 31, 1939.

This is just an outline of the staggering situation with which Governor James was confronted and which he must change drastically in order to put the Commonwealth upon an even keel. He has attacked the problem with heroic courage. During the campaign he pledged that there would be no new taxes, and, as you know, he has set himself and his administration to the desperate task of balancing the budget of the next biennium at approximately $372,000,000. That figure involves the liquidation of the fifty million deficit of the present biennium, and the Governor has frankly stated that if the budget is to be balanced at three hundred and seventy-two millions for the 1939–41 biennium, it will have to be through the saving of somewhere between fifty and seventy millions of dollars.

All that I have tried to set forth here is that the problems are many and of major proportions. But I believe, as I said in the beginning, that hope brightens the horizon. Unmistakably, a majority of the people of this Nation have set their face toward drastic, common-sense economy in government. In Pennsylvania we have a Governor who can and will carry that purpose to a victorious conclusion. Business, industry, and workers alike all have confidence in him.

More and more the truth is being recognized that no nation, no state, can go on indefinitely decreasing the number of those who produce its wealth and increasing the number of those who are dependent upon the declining number of producers. There is only one road back, and that is the hard way—by rigid governmental economies, by drastically reduced public expenditures, by a lightening of the tax and every other unnecessary burden upon business and industry, and by an intelligent protection of our markets and our workers. All of these things are necessary in order that the inducements may be restored for capital to flow into productive enterprise, so that private employment again may supply the purchasing power which is the necessary fuel of our economic machine.

Seven years of spendthrift experimentation, of pulling rabbits out of hats, has shown that sound methods are the only really honest methods. And under a courageous, common-sense administration now installed in Harrisburg, we in Pennsylvania are on our way.

Denver's Opportunity School—"For All Who Wish to Learn"

The Emily Griffith Opportunity School, which "teaches anybody anything—and turns public-school truants into eager students."

EXTENSION OF REMARKS

OF

HON. LAWRENCE LEWIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

ARTICLE FROM THE AMERICAN LEGION MAGAZINE, AS CONDENSED AND PUBLISHED IN THE READER'S DIGEST FOR FEBRUARY 1939

Mr. LEWIS of Colorado. Mr. Speaker, Denver is justly proud of its excellent public-school system, of which one of the unique and outstanding features is the Emily Griffith Opportunity School. Although now housed in a rather shabby old school building, at Welton and Thirteenth Streets in downtown Denver until better quarters can be provided, it is an institution which has attracted the favorable attention of eminent educators in all parts of the Nation. It is a monument to the vision and energy of Miss Emily Griffith, its founder and first principal.

Out of years of practical experience as a teacher in Denver, there came to Miss Griffith the vision of "A school which teaches anybody anything" and which she believed would "turn public-school truants into eager students." Thanks to this vision, to the ability of Miss Griffith to persuade the school authorities 22 years ago to allow her to try out her plan, and to her tact, enthusiasm, and tireless energy as Opportunity School's organizer and first principal, Denver is chiefly indebted for what has been proved to be, not merely another experiment in vocational education but a preeminent success.

Unhappily, Miss Griffith almost wore herself out in working to make her vision a reality and was obliged to retire 5 or 6 years ago. But the good work of the institution which she envisaged and founded goes on under the able direction of Mr. Paul L. Essert and Miss Mary F. Miller, heading an efficient and enthusiastic staff. The spirit which Miss Griffith imparted to the school still lives. A grateful city has renamed it The Emily Griffith Opportunity School. It is her monument.

In the American Legion Magazine for February 1939, Marc A. Rose sketches the work of this school. This article, as condensed and published in the Reader's Digest for February 1939, is as follows:

The boy was all hands and feet and a sullen scowl as his discouraged father shoved him through the crowded school corridor to the desk of Paul L. Essert, the principal. That's Essert's "office," the open hallway, near the front door.

"I can't do nothing with him," said the father, anger tightening his voice. "He runs away; he bums * * *"

Essert interrupted. "Leave him here. I can't talk to him with you around, in the mood you're in."

The man hesitated, shrugged his shoulders, walked away.

"Now, what's the matter?" Essert demanded.

"He says I've got to come to school here. I don't want to."

"In that case, don't worry; you won't have to come. As a matter of fact, I won't let you."

The boy looked a little affronted.

"Why can't I? Ain't I good enough?"

"You can't come here because you don't want to," Essert explained. "Nobody can. That's a rule here. So you've got nothing to worry about. But, look—you'd better stay long enough so your father will think we've had a good talk. I've got to make a trip around the school; part of my job. Come along."

So stubborn young Gus Placek trailed through the print shop, through a room where a dozen telegraph instruments clacked in amateurish rhythms, through the fragrant bake shop, through rooms where scores of typewriters raised an unholy din. He listened a few minutes to a girl making a speech before an audience of

60 people of all ages. He glanced at a sewing room, a beauty shop. He watched linotypers, bricklayers, carpenters. He stood for a long time before a lathe in the machine shop. Essert waited; said nothing.

"Well, that's all," said Essert, back at his desk. "See anything you liked?"

Gus came out of his shell.

"Say, mister, * * * them machines. Gee, they're swell. I'd like to run one of them. Could * * * how does a fellow get to do that?"

"Sure you'd like to?"

"Honest I would * * *," but then a shadow crossed his face. "What else would I have to do? What would I have to take?"

"Nothing," said Essert. "Nothing at all."

"But in school you always have to take somethin' you don't like. Arithmetic, or writing, or history, or things like that."

"Not here," said Essert.

And so Gus started to learn to be a machinist in the Denver Opportunity School. It wasn't long before he had to write out a slip requesting certain materials and explaining why he needed them.

"Can't read it," said the instructor. "Doesn't seem to make sense."

That happened a number of times. Gus was stymied; he couldn't get any further, it appeared, until he could do the "paper work" that is essential in any shop. So he entered a class in English. He was stymied again when he couldn't figure out three-fourths of seven-eighths of an inch, to mark where a hole had to be drilled. So Gus took up arithmetic. Did well at it, too; for the first time he saw some sense in it.

There's an end to this story. Gus is now a machinist, and a good one.

Ten thousand men and women, boys and girls, study in Denver's Opportunity School each year. The youngest on record so far was 13; the oldest, a Frenchman, a retired barber, got his high-school diploma at 82.

It is one of the most amazing schools in the world. It has no rules, no grades, no admission requirements, no diplomas, no graduations except in the regularly accredited high school, which is just one small department. It comes nearest of any school in existence to the ideal of giving "any kind of service for any individual when he comes and asks for it." So said a group of distinguished educators who investigated it carefully.

There's an inscription on the front of the shabby old building. It isn't a fancy Latin motto. It reads simply, "For all who wish to learn."

It means just what it says. There's a class for girls who are about to be married; I wasn't allowed to visit that. But I did look in on the class in gold mining. There's a class in beginners' English. We glanced through the door at a group of graybeards, and grandmothers, and dark Mexican girls, and one bright, eager young man, a refugee from Vienna. In an algebra class, a little old lady explained that she had had to be practical all her life, and now she wanted to learn something useless.

Experience has taught the Opportunity School to be wary of volunteering vocational guidance. Its advice almost always is, "Do what you really want to do." That is why nobody tried to dissuade the fat old Negro washwoman who wanted to study in the millinery class. It was just as well, for now she is making an excellent living at it. She has a flair for designing bonnets that enrapture middle-aged women of her race. Then there was the deaf-mute girl who wanted to learn beauty-shop technique. How would she ever get a job, the teachers wondered. But she did. "Got any more like her?" the proprietor demanded the other day. "I wish none of 'em could talk!"

About 1,500 students a year get jobs through the school. What about the other 8,500? Why, they already had jobs, most of them. Now they have better jobs. A young scholar working for his Ph. D. followed up 178 employed men and women to discover what they got out of the school. Ten showed no change in wages. Almost half of the rest had more than doubled their income because they had learned new skills. The others got raises of 10 to 100 percent.

This is all free, you understand; Opportunity School is part of the Denver public-school system. And Denver is immensely proud of it.

It is hard to say which of the school's many functions is the most valuable, but I incline to the belief that the most important is its training of employed people for the next step ahead—or sometimes, merely to keep their jobs. A class of railroad men, for example, is studying a new airbrake that is just being introduced. Garagemen are learning new techniques of welding. Scores of shopgirls are studying for advancement; often at the suggestion of their employers. There are two rooms full of employed secretaries who come for drill in speed dictation.

Nearly everybody in the class in public speaking has a job. The only trouble is that this class is too popular and overcrowded. Here it is not unusual for the clerk to meet his boss. The clerk wants to conquer his timidity, acquire poise and confidence that will make him a better salesman. The boss is there because he wants to learn how to make a good pep talk to his own staff. Besides that, he has a few pet ideas he would like to put across in the merchants' association, if he could only learn to make his points when he's on his feet.

Surprising things come out of that class. There was the newly widowed mother of three children who faced the problem of earning a living. She thought that maybe, if she could conquer her shyness, she could get a job in a store. When it was her turn to speak, she talked about the only thing she understood—how to cook a good dinner. It sounds fantastic, but a sales manager heard her that night, and now the widow lectures and demonstrates before large crowds for his company—which makes gas stoves.

Second in importance is the help the school gives to thousands who did not fit into a standard school: Middle-aged folk from the mountains, where educational opportunities were few in their youth; boys like Gus; maladjusted youngsters who are stubborn and unruly at desks, but given something to do with their hands, develop swiftly and eagerly. Others who, through a not uncommon psychological quirk, just cannot endure the ordinary school's regimentation, but thrive in the "no rules" atmosphere of Opportunity School—with no attendance records, no examinations, no grades, no required subjects, no specified length of courses. They study the one thing they want to learn, and if they are led on, like Gus, to study books as well, it is done so subtly that they never know it was deliberate.

Sooner or later, Paul Essert talks with every student—10,000 a year. Most of them come to him and tell their stories. The rest, he seeks out. One reason he has no office is that there's no room for one. Every inch of space is in use, day and night. Numerous classes meet in the halls, behind folding screens. But secondly, Essert likes to be accessible. It's the spirit of the place—the same spirit which leads Denver businessmen to teach classes for $4.25 a night. And it traces back to Emily Griffith, an eighth-grade teacher in Denver.

She was a kind of social missionary. When children were absent from her classes, she looked them up in their homes. Nine times out of ten, she asserts, the trouble at home was unemployment, and usually that was traceable to one of three things—the advance of the machine, lack of training, or broken English. She had a vision of a school that would train people to new skills, and, finally, she was allowed to start it in the old schoolhouse in downtown Denver. It was a tremendous success, and the spirit she has created has carried on since her retirement.

The Opportunity School teaches more than skill with hands. It is a character school. It builds self-respect and self-confidence. It teaches attitudes—regard for the rights of fellow workers, courtesy, neatness, the necessity of cooperation.

Employers know that. A card from the Opportunity School is as good a recommendation as a job seeker can get—and yet all it says is, "Gus Placek has been attending our classes in the machine shop for —— months." That's all it says—but you can't have one until the instructor thinks you are ready to get and hold a job.

The school has a creed: "Unlimited faith in the capacity of every normal human being, if given a fighting chance, to become a self-sustaining, self-respecting, happy member of society."

That's a little elaborate for some of the students in Opportunity School. But they understand the cards that are stuck all over the place. The cards say: "You can do it."

One Hundred and Fiftieth Anniversary of Congress

EXTENSION OF REMARKS

OF

HON. HIRAM W. JOHNSON

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Monday, March 6), 1939

RADIO ADDRESS BY HON. CHARLES L. McNARY, OF OREGON, MARCH 4, 1939

Mr. JOHNSON of California. Mr. President, I ask leave to have printed in the RECORD a radio address delivered by the senior Senator from Oregon [Mr. McNARY] on March 4, 1939, in observation of the one hundred and fiftieth anniversary of the first meeting of Congress.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In joyfully commemorating tonight the one hundred and fiftieth anniversary of the first scheduled session of the United States Congress it is natural that our thoughts should turn abroad as we contemplate our own good fortune.

We are an easy-going people. We have a tendency to take for granted the circumstances surrounding our daily lives. Just as we breathe fresh air without thinking about it so we live and move in an atmosphere of freedom and liberty without being particularly conscious of it. The thought never occurs to us that

we should not say exactly what we think about a policy of government or an official. We do not cast suspicious glances about and then whisper behind our hands. We speak out. We go to the church of our desire. We read openly our favorite newspaper. We wear the kind and color of shirt that we like.

We give no particular thought to all of this. Only on occasions such as today, when we take stock of ourselves do we realize what a blessed people we are. Perhaps you doubt that. If so, I invite you to cast your eyes abroad at this hour when clouds of war darken the horizon of other continents. Contrast what is happening in other lands with American life.

Abroad we see men who have set themselves up as autocrats of power, centering all authority in themselves. There we see men whose dictatorships are more autocratic than the rule of kings. Under the iron fists of these dictators we see other men persecuted and exiled because of the God they worship or the race to which they belong. We see men and women told what kind of work they must do, what they can read and hear, what they must eat.

Hanging over these people is the dreadful threat of being sent into armed conflict against each other at the sole word of rulers intoxicated with power and ambition. In this bloodshed, which already has taken place in parts of the world, the men who do the fighting will have no cause for grievance nor will they profit by the outcome. But they have nothing to say about the steps which lead to war.

What has happened to these people? Why are they doomed to such a miserable plight? The answer is that they surrendered the right to govern themselves for the illusory promise of economic security. Now they have neither economic security nor peace of mind.

Between the people of this country and the sorrowful fate which has fallen on those abroad, which I have just described, stands the American system of representative government. As long as that system prevails Americans will be safe from dictators and tyrannical rule. Let that system in its fundamental provisions be weakened and we shall be confronted by a danger greater than any we have ever known.

The survival of that system for 150 years is the significance of the anniversary we celebrate today. For today Congress assembled in joint session 150 years after its first scheduled meeting. Its place in the American Government today is in essence what it was on the day of its first meeting. Its authority has been kept intact. It remains the first bulwark of American democracy.

Point out, if you will, another government in the world that has not undergone substantial change in the last 150 years. There is not one. For a time during that period representative government grew in strength and flourished in many lands that had known only autocratic rule. But in more recent years, outside of this country, representative government has been ground down until in the totalitarian states it no longer exists. There the people are governed by decrees issued by one man.

In periods of stress and strain the wisdom and value of representative government—of people governing themselves through their freely chosen agents—always are questioned. It was so in this Nation during the Civil War. It was true again during the World War. It happened only lately during the cataclysmic economic upheaval through which we are passing.

Only a few years ago there were men who cried out against maintenance of the deliberative process in dealing with matters that affect the people. They said it was a waste of time; that it was inefficient. The country was better off when Congress was not in session, they asserted. Let one man determine what should be done, it was argued. Then let him be about the job of getting it done. Some even went so far as to suggest that this country needed a dictator. Not until later did they really know what they were proposing.

In response to such clamor, Congress surrendered in some matters its independence of judgment for a time. Discretionary power was voted to the President, which should not be given to any man. The President himself recognized the dangerous course on which we were bent when he declared that "we have built up new instruments of public power" which could be used to "provide shackles for the liberties of the people."

You will recall that a few years ago we were a country ruled in large part through Executive decree. Codes and Executive orders laid restraints on business and agriculture that Congress had not foreseen. Huge sums of money were voted to the President to be used as he determined. All of this was a departure from our traditional government in this country. But now we know that our system was not impaired and that the departure was only temporary.

Nevertheless, such a departure might have had serious consequences had it not been for the vigilance of the American people. Their faith in the wisdom of the American system of government was so deep-seated that our people refused to be tempted by the illusory promise of short cuts to good government. They became alarmed over what was happening.

Well they might have been alarmed! All history teaches that once the door is opened to usurpation of power no man living knows how long our civil liberties will survive. All of our truly great statesmen, all of our patriots, have so warned us from the beginning of our Nation. George Washington commanded that we be on guard when in his Farewell Address he declared that "the spirit of encroachment tends to consolidate the powers of all departments in one, and thus to create, whatever the form of government, a real despotism."

And the Father of our Country added: "Let there be no change by usurpation; for though this in one instance may be the instrument of good, it is the customary weapon by which free governments are destroyed."

Within the last year the American people decisively heeded this ancient admonition, just as they always have in times of danger since Washington first uttered his warning. They undertook to redress the balance of authority in the National Government. They took steps to make impossible the creation of further instruments of power which might in the hands of the wrong men be used to shackle the liberties of the people.

This they did by greatly reducing the swollen power of one party in Congress. Thus on the birthday of Congress we find that body reverting to its traditional independence. We find once again general acceptance of the principle on which our Government is built, namely, that "deliberative forces should prevail over the arbitrary."

For all of us this is a happy circumstance. It would have been ironic, indeed, if Congress, on this anniversary of its establishment, had been found to have surrendered the functions and the independence that are responsible for its survival. But more important is the fact that this country always has been served best when it had an independent Congress that functioned as the Constitution proposed.

It is an old saying that many heads are better than one. A large group of men, after deliberating and discussing policies of government, are less apt to be wrong than one man or a small group of men. Human nature and the pride of authorship necessarily blind men to the defects in their handiwork. Thus the more eyes and minds that scrutinize proposed policies before they are undertaken the better it is for the nation and the greater are the prospects for success.

The policy which our Government should follow in the present disturbed condition of world affairs serves as an illustration of what I mean. In several countries abroad the people have no influence in the framing of such policies. What is worse, they have little knowledge of what is happening. Not only are their newspapers censored but the decisions which may plunge them into bloodshed are made behind closed doors by a few men.

Here under our representative system of government such vital policies are hammered out on the anvils of legislative debate. The presence in the Nation of an alert and vigilant Congress is an antidote against secrecy in the formulation of foreign policy. Moreover, it constitutes a brake on hasty or ill-considered action. Thus if this country again is forced to take up arms—and may God forbid—our people at least will know the reasons and causes for such a course.

Our people can feel content that before this Nation again goes to war they will have a voice in the matter through their elected agents in the Congress of the United States. No one man—no small group of men—can issue the dreaded declaration of war on behalf of this country. It can be done only by Congress and, if at all, it will be done only after the most thorough deliberation.

For this reason alone—and there are many others—today should be one of genuine rejoicing on the part of the American people. For today we have evidence of the strength and vitality of our Government in its survival for 150 years. We know now as we have not known before of the wisdom and care with which the founding fathers established this Republic.

What is more, we have demonstrated again to a restless and turbulent world the strength, the vigor, and the endurance of American democracy. No greater contribution to civilization and world peace can be made than that we carry on unimpaired our traditional system of representative, republican government.

The Constitution

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Monday, March 6), 1939

REMARKS OF DANIEL WEBSTER IN THE UNITED STATES SENATE

Mr. WILEY. Mr. President, on March 7, 1850, 89 years ago today, Daniel Webster, speaking in the Senate of the United States on the subject of the Constitution, uttered some very important and wise remarks. I ask unanimous consent to have those remarks printed in the RECORD. I shall not read them to the Senate at this time.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

Mr. President, I wish to speak today, not as a Massachusetts man, nor as a northern man, but as an American, and a Member of the Senate of the United States. It is fortunate that there is a

Senate of the United States; a body not yet moved from its propriety, not lost to a just sense of its own dignity and its own high responsibilities, and a body to which the country looks, with confidence, for wise, moderate, patriotic, and healing counsels. It is not to be denied that we live in the midst of strong agitations, and are surrounded by very considerable dangers to our institutions and Government. The imprisoned winds are let loose.

And now, Mr. President, instead of dwelling in those caverns of darkness, instead of groping with those ideas so full of all that is horrid and horrible, let us come out into the light of day; let us enjoy the fresh air of liberty and union; let us cherish those hopes which belong to us; let us devote ourselves to those great objects that are fit for our consideration and our action; let us raise our conceptions to the magnitude and the importance of the duties that devolve upon us; let our comprehension be as broad as the country for which we act, our aspirations as high as its certain destiny; let us not be pygmies in a case that calls for men. Never did there devolve on any generation of men higher trusts than now devolve upon us for the preservation of this Constitution and the harmony and peace of all who are destined to live under it. Let us make our generation one of the strongest and brightest links in that golden chain which is destined, I fondly believe, to grapple the people of all the States to this Constitution for ages to come. We have a great, popular, constitutional Government, guarded by law and by judicature, and defended by the affections of the whole people. No monarchical throne presses these States together, no iron chain of military power encircles them; they live and stand under a Government popular in its form, representative in its character, founded upon principles of equality, and so constructed, we hope, as to last forever. In all its history it has been beneficent; it has trodden down no man's liberty; it has crushed no State. Its daily respiration is liberty and patriotism; its yet youthful veins are full of enterprise, courage, and honorable love of glory and renown.

Keep Out of War

EXTENSION OF REMARKS
OF
HON. ERNEST LUNDEEN
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 7 (legislative day of Monday, March 6), 1939

ARTICLE BY HARRY HANSEN IN THE NEW YORK WORLD-TELEGRAM OF MARCH 6, 1939

Mr. LUNDEEN. Mr. President, I ask unanimous consent to have printed in the Appendix an article by Harry Hansen, published in the New York World-Telegram on March 6, 1939. The article is headed Keep Out of War at All Costs, Advice of Stuart Chase in New Book Urging Complete Isolation of United States. In the midst of all the un-American, foreign-minded propaganda, it is refreshing to read a genuine American book.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York World-Telegram of March 6, 1939]

THE FIRST READER

(By Harry Hansen)

KEEP OUT OF WAR AT ALL COSTS, ADVICE OF STUART CHASE IN NEW BOOK URGING COMPLETE ISOLATION OF UNITED STATES

Every American who wants the United States to keep out of war at all costs and wants arguments to combat those who don't should hurry to a bookstore and get Stuart Chase's The New Western Front. It is the best exposition yet of the self-sufficiency argument, which Chase elucidates without getting completely befogged in abstract theories of government. Chase is interested solely in the welfare of the United States and advocates a cold-blooded plan for turning our backs on European troubles and building up our reserves of industry, employment, peace, and power.

When I mention Americans who want to "keep out of war at all costs" I want to stress "at all costs." Chase's plan means curtailing business investments in foreign markets and attempts to capture foreign trade, save for South America. It offers no practical help to democracies or minorities abroad. His navy does not contemplate becoming a part of the British defense plan. He wants us out of China so the Japanese and Chinese can fight it out. He gives but brief attention to refugees, saying merely that immigration is not needed today as it was once.

His book differs radically from Lewis Mumford's Men Must Act, although both men are trying to find a plan to keep the United States out of war. Mumford's plan of nonintercourse with dictator nations might begin tomorrow; Chase would enforce his restrictions only on belligerents, and he warns of the danger of economic boycotts. Economic considerations bulk so large in Chase's book that he has no time for sentiment, and although he admits that sympathy for a nation attacked might create a war spirit in the United States, he offers various plans to checkmate any attempt to get us in.

CURE UNEMPLOYMENT, ROOT OF WAR

Stuart Chase seems one of the few journalists who is not completely befogged by Nazi theories of the state. Lewis Mumford devotes most of his book, Men Must Act, to a discussion of the insidious character of nazi-ism and fascism and sees these theories creeping across the ocean in the form of ideas that stultify the democratic will. Moreover, he believes that theory comes first and the economic adjustment afterward, berating the Marxists for not seeing this plainly. Chase adopts exactly the opposite view.

Chase sees all democratic difficulties arise out of the emergency and keeps his eye on the chief argument—that men overturn their governments only when they have neither jobs nor food. He doesn't believe that the United States faces any great difficulty from foreign theories so long as it solves unemployment at home. He believes that one of the great factors making for war is boredom, and that this, too, is overcome with proper employment.

"In simplest terms, the inventors must find a method which will permit Americans to buy back what they can make," writes Chase. "We need an invention that will neutralize, scale down, transform the present debt burden and prevent it from accumulating in the future—an invention that will lead steadily to a pay-as-you-go economy." This is a nonexpanding economy and for that reason cannot tolerate a compounding debt. Chase wants a way of turning bonds into stocks, so there shall be no fixed interest charges, only earnings. He recommends "an economic program for democracy" (Vanguard Press) as a "sensible general program."

It is worth noting that one of Chase's suggestions has been anticipated already by the day's news. He wants the United States to lay in a stock of rubber, tin, coffee, and other products not easily available within our borders. In Saturday's dispatches it was reported that the Government is considering taking supplies of these products in exchange for the war debts.

STAY AT HOME THOUGH HEAVENS FALL

Stuart Chase's program will be attacked as an attempt to limit individual enterprise, and that is what it proposes. It would stop American corporations from fighting for goods abroad, penetrating into foreign fields in open competition with foreigners. During war it would seriously curtail exports to belligerents. Shippers would complain and lose. So would manufacturers. But Chase points out that if it costs a lot to stay out of war, it costs even more to go in. And one of the easiest ways to wreck the country is to permit huge sales to belligerents and a war boom.

"When war comes, if we care to pay the modest price of neutrality, we do not have to be dragged in." That is Stuart Chase's conclusion. He sees the United States with civilization in its keeping, though the rest of the world fall. "If the giant bombers roar from their hangars to destroy Paris, London, Berlin, Rome, Vladivostok, Tokyo, the United States can still carry on."

Here the reader will recognize a complete divorce from theoretical concern. One of the most-repeated arguments today is that America must save civilization—by participation. Another is that unless America enters a major war, the winner will come over and take us as his plum. Chase has sidestepped these arguments in his overwhelming confidence that a strong, self-supporting, well-armed United States will be impregnable. I think the weak spot in his argument is his belief that the United States can take care of this hemisphere. He has confidence in the integrity of South American nations. But unless these nations are impervious to European penetration, and are as self-sufficient as we, we may find ourselves compelled to man this lifeline.

Our Varied But United States

EXTENSION OF REMARKS
OF
HON. WILLIAM E. BORAH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Tuesday, March 7 (legislative day of Monday, March 6), 1939

ARTICLE BY WILLIAM ALLEN WHITE

Mr. BORAH. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article by William Allen White entitled "Our Varied But United States."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times World's Fair Section for March 5, 1939]

OUR VARIED BUT UNITED STATES

(By William Allen White, editor and author)

The American State in its relation to the Federal Government was a new thing in this old world when George Washington was

inaugurated 150 years ago. Federated States were not new; the idea of amalgamation of conquered States in an empire is almost as old as the written history of man. But a union of States, not primarily for defense, not obviously for economic advantage, but to preserve a democratic idea—that was new.

And it is still new at a time when we have a world's fair commemorating the one hundred and fiftieth anniversary of Washington's inauguration and looking down a vista perhaps equally as long into the world of tomorrow. For, whereas in 1789 the American Union was an ideal, today it is a working reality which has nowhere else been achieved.

The whole basis of the idea of the American Union of States was to preserve the liberty of the individual by guaranteeing his security and self-respect as an individual. That idea 150 years ago was amazing. It overturned the entire conception of the imperial State as the world had known it, for America created the union as the citizen's servant.

It was the idea of a union of the sovereign States that created the Nation as we know it today. That idea gave the citizen in his local valley, in his home mountains, on his particular plains, and by the waters of his own lakes not merely the right to develop his own national culture but also the spiritual leisure, the elbow room and the security of his liberty to build up, unmolested and unafraid, the local culture which he loved.

Each of the 48 States of this Nation differs from its fellows. No two of them are exactly alike. Each has its local culture and characteristics; but they add up into one great nation. Sometimes neighboring States are sufficiently similar to give rise to a distinct regional quality in various parts of our country. The South is all its own kind. So is New England. The Middle States between the Ohio and the Great Lakes—bounded on the west by the Mississippi and on the east by the Alleghenies—create a unique economic and social civilization in our Union.

The Prairie States between the Rocky Mountains and the Mississippi north of Mason and Dixon's line also have their own peculiar institutions, their own way of life, their own political predilections. Theirs is a rural civilization.

The Mountain States from Colorado, Utah, and Nevada to the Canadian line form a definite region, with its own marked social, economic, and political characteristics. Even the Pacific Coast States divide at San Francisco into two sections, north and south.

Yet within these regions every State differs from the other with some real distinction as "one star differeth from another in glory." In the South the States along the Gulf differ from the Southern States along the Atlantic. The variances are visible to the casual traveler. Also, curiously enough, Mississippi has quite another viewpoint from that of Louisiana; and Alabama, with its strong industrial interests, is not at all like either Louisiana or Mississippi.

Probably the matter of climate affects regional differences as, for instance, between the South and New England, between the Southern Pacific coastal civilization, and that, say, of the northern Ohio Valley, but the vital differences between neighboring States may not be attributed to climate.

What, then, makes two States, like Kansas and Missouri, so entirely unlike each other in their outer manifestations? Kansas, since the beginning, has boasted that it was the child of Plymouth Rock—a prairie Puritan civilization. Missouri, culturally, is of the South. She is as rock-ribbed in her adherence to the Democratic Party as Kansas is to the Republican. Why?

No serious economic divisions may be seen at the State line that borders these two Midwestern States. Yet at the State line one detects differences in the population. There they are, two States, in which different blood streams are reflected in different idioms.

Consider carefully any two bordering States in the Union and you will find curious divergences of dialect, social organization, blood, economic interest. They are not deep, but they are noticeable, and with the passing decades the differences do not tend to disappear. State boundaries are probably deepening.

What is it that creates our 48 curiously different American Commonwealths? Let us turn back to colonial days. There we find that the Thirteen Colonies were 13 little nations. Each approached the problems of the Revolution uniquely in minor matters.

Climate, the difference in latitude between South Carolina and Massachusetts, cannot explain why South Carolina as a colony grew into a class-conscious aristocracy and Massachusetts became a rampant democracy. By all the rules of colonization there should have been but one colonial civilization from Charleston to Boston, instead of a dozen kinds of Englishmen with a dozen different ideals.

One is tempted to toy with the thesis that it is indeed colonial ideals implanted with the first settlers, that some way in a mysterious psychopolitical germination produces the individuality that distinguishes a State. For each of our American States has gone through the colonial period, its pioneer era. The pioneers in every colony, in any territory, had a sort of yeasty strength. They formed the folk ways of each new settlement that afterward became a State. They begot the State—each of the 48 States.

Go to the fair and see the various State displays and you will see the differences. Natural resources will be on view, the metals, the harvest from the fields and forests and orchards, the dairy and fishery and factory products. Sunshine and scenery will be made much of, the mountains and lakes, the woods and the hills. America, in short. But also Florida and Maine, Missouri and Montana, Kansas and Colorado, and New York and all the other States. The differences are there and it takes no mystic powers for anyone to see them.

Yet with all these 48 separate Commonwealths, we are one people. The pioneer individualists held in their hearts one political ideal—to establish popular government. The Federal Government the colonists created was an enlarged copy more or less faithfully reproduced of the colonial type to which they were used. Similarly the constitutions of the new States carved out of the forests and the prairies by the pioneers of the eighteenth and nineteenth centuries in turn were and still are fairly exact replicas of the Federal Constitution.

Americans in the 48 States have all moved along abreast on the path of political progress made necessary by the industrial revolution. Generally speaking, the States have first made the necessary changes in their political forms—laws, constitutional amendments, judicial interpretations—which changing economic and social conditions required. When the States have proved that the new weapons of democracy were needed and efficient, the Federal Government has accepted and adopted them. Rarely has any State long occupied alone a salient that was untenable for the others. In our forward march as a united people, the experience of the States has been the wisdom of the Nation.

We are united fundamentally by a common language and a legal code based upon the English law. These foundations laid down a basis for expeditious change. Only in New Mexico is Spanish used with English as the language of the legislature and the courts. Only Louisiana has the Code Napoleon.

But, while in many minor folkways State boundaries are deepening, it is also true that national homogeneity is sinking deeper and deeper into our national patterns of thought and action. As our regions and the States in each region tend in certain picturesque but unimportant ways to deepen their local tang and flavor, the American people as a whole blend into a union of individual States "one and inseparable."

It all comes back to the dynamite of individualism which permeates our Constitution: that political theory of the servant State which is planted at the every bottom of our political organism. The town, the township, the village, the city, the county—all those first and lowest forms of our American political life are based upon the thesis that man the citizen is the creator and master of every institution of government. Nowhere, high or low, from constable to President, from country squire to the United States Supreme Court, is there in the American Government one legal creature or one man who can encroach upon the guaranteed rights of the humblest citizen.

Briefly, then, the citizen is the central figure in our form of government. He is the State; he is the Nation. Of which he is proud. But he cherishes his State as the organ of his unessential but vain idiosyncrasies, perhaps his cultural obstinacies. And he will continue to do so.

How can one who knows our Nation's 48 peculiar institutions—each of which means something to our people—envisage a time when those institutions, the States, will be no more? They are a fortress of our folkways and at the same time they are the pioneers of our political change. We built them in our pioneering strength, molded them to our liking and our needs; and we have made them ours, a part of us, an integral part of our Nation. They are our Nation and they shall continue so to be.

It is the gorgeous miracle of our American national life that these 48 individual States, however strongly each is marked, are all merged into a national way of life that makes our country one people, one blended blood, with one democratic ideal. Lincoln voiced it—a Government of, by, and for the people, established that the individual may remain rampant and triumphant.

Principles of Monetary Science

EXTENSION OF REMARKS

OF

HON. M. M. LOGAN

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Monday, March 6), 1939

LETTER OF A. N. McLEAN

Mr. LOGAN. Mr. President, I ask unanimous consent to have printed in the RECORD a letter addressed to former Senator Robert L. Owen by Mr. A. N. McLean, a very distinguished citizen of Canada, relating to Senate Document No. 23, which was prepared by former Senator Owen, and which has to do with the principles of monetary science.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CONNORS BROS., LTD.,
St. John, N. B., March 3, 1939.

Hon. ROBERT L. OWEN,
2400 Sixteenth Street, Washington, D. C.

DEAR MR. OWEN: I have just finished reading Senate Document No. 23, which was prepared by your good self. It is the most

ably written document I have ever read on the principles of monetary science. As you are aware, my business is world trade. We carry on active operations in over a hundred countries, where we export fish, and I have had reason to give a great deal of study to monetary problems. We make it a point to get the latest books from all parts of the world written on monetary subjects, by the very best writers. However, I do not mind telling you frankly that your exposition has given me more real sound, practical information than any other document of the many that have come to my hand. Your statements and conclusions are backed by facts and figures which no man can deny, and the great work that you are carrying on deserves not only the attention of the United States, but the rest of the world as well, for from my experience in doing business in many countries, I believe the troubles of the world are far more economic than political.

I desire to compliment you most sincerely. You have contributed what will go down in history as one of the ablest and most sound treatises on monetary science that has been presented to the world up to the present time. What we need now is prompt action before disaster or economic chaos overtakes us.

Yours truly,

A. N. McLEAN.

Philippine Independence

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Monday, March 6), 1939

ARTICLE BY H. FORD WILKINS APPEARING IN THE NEW YORK TIMES OF FEBRUARY 26, 1939

Mr. GIBSON. Mr. President, I ask unanimous consent that a portion of an article written by H. Ford Wilkins, appearing in the New York Times February 26, 1939, and entitled "The Filipinos View the Future With Misgiving," may be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, February 26, 1939]

THE FILIPINOS VIEW THE FUTURE WITH MISGIVING

(By H. Ford Wilkins, Manila)

Contrary to general belief, the Philippine question was not settled when the American Congress granted independence effective in 1946. President Roosevelt, in a recent message to Congress, expressed approval of a program drawn up by the Joint Preparatory Committee on Philippine Affairs, proposing that trade preferences given by the United States to products of the islands be reduced gradually over a period extending to 1960, thus avoiding the shock of their abrupt termination in 1946. Other matters were dealt with in the report of this committee made public last autumn. Questions that remain to be answered relate to Philippine finances, national economy, and civil rights. The final answer, if one is reached, will depend heavily on the attitude of the Filipinos themselves.

These people, numbering 15,000,000 or so, are thinking seriously, although not very clearly, about their future. As a people they are burdened with a confused idea of themselves and their place in a confused and war-soaked Asia. The objective which has been given to them is to prepare themselves for complete independence, but it does not appear that they are attaining this objective with any great enthusiasm or fire. Nearly one-third of the Commonwealth interregnum period has swept by.

With the approach of full independence a certain uneasiness is felt in the Philippines. It is not natural for Americans readily to comprehend that feeling because as a nation they never have experienced it from the same cause. America won her War of Independence; the Filipinos did not win theirs. If another country had stepped in and beaten off Great Britain during the Revolutionary War, occupied America and implanted a form of government strange to the Western Hemisphere, there might be an understandable parallel. Still, it would be hard to imagine a conquering nation willing to give the United States back to the Indians when a stable government had been evolved.

Something more than a generation of effortless peace, guaranteed security, and material progress has brought the Filipinos an appreciation of the benefits of the present arrangement with the Americans. This has been sharpened by Japan's conquests in neighboring China. Many, if not most, Filipinos have some inkling that Japan intends to dominate Asia, and they do not relish exchanging a benevolent American master for another whose ways and methods they have reason to distrust. At the same time they are reluctant to accept any alternative to running their own show.

Outside the more populous urban centers there has been but small change in the relatively happy norm of existence prevailing among Filipinos for the last several centuries. Nor is there any special inclination to undergo a radical change. Most Filipinos live an easy and a simple life. On the whole their needs are not great and they are only mildly industrious. The soil is productive, the waters are full of fish, the forests rich in timber, and the hills laden with gold and other metals. Luscious tropical fruits abound. Land is plentiful and far from overpopulated.

The average Filipino is neither primitive like the Negritos and the hill people nor yet modernized. He is a small, brown person weighing less than 125 pounds, somewhat lighter in color than the Cuban and darker than the Chinese. In root origin he is a Malay. His name is Spanish. He is indulgent, inquisitive, peace-loving, very sentimental. He is quick to resent injustice or impingement upon what he considers his rights. He is genuinely hospitable and fond of celebrating saints' days, feast days, departures, arrivals, national or church holidays, with a fiesta or party as elaborate as his means will permit. He is a fairly good Catholic and greatly admires intellectual attainments. He is no stranger to genuine culture.

The rural Filipino is accustomed to surroundings of natural beauty and is not insensible to them. Sunsets in the Philippines have been called the most beautiful in the world. The tropical forestation is dense and inviting, the broad plains and fertile valleys are a lush green. The mountains of Luzon and Mindanao are clothed in softly brilliant blue haze. The countryside is pastel.

Along with the bounties of nature the Filipino must accept her furies. The Pacific typhoons that sweep the islands during the months corresponding to fall and early winter in the United States are among the most severe in the world, capable of brushing flat large forest areas of hardwood trees 100 feet tall and leveling off populous settlements with the first few blasts of a storm that lasts all night and all day. Torrents of rain build gentle streams into fluid juggernauts. The islands have several volcanoes and lie in an active earthquake belt.

But the Filipino takes his disaster, for the most part, philosophically. Climatic conditions, despite their occasional rigors, have not contributed the sinews that thrive on frost and cold. Visited by a storm, the Filipino calls for relief and lives on the local or central government or the Red Cross until he gets back on his feet and puts another roof over his head.

The average Filipino may cultivate a small plot of ground in rice, tobacco, sugar, or other produce as a tenant farmer. He may dabble in politics or law or money lending or fish vending or gambling, according to his means, bent, or intelligence. He has a wife and four or five children and, if he is solvent, some relatives living with him. Unless he is born with a silver spoon in his mouth his solvency is in proportion to his enterprise. The normal wage for a working Filipino is about 40 cents a day in American money. With this sum, if he is not a spendthrift or a gambler, he can support a family, feed them three meals a day of rice and fish with a meat dish on special occasions and a few vegetables.

More or less accustomed to the comfortable things of life obtained without great effort, the Filipinos never have fully realized the meaning and responsibilities of independent national existence. Their nationhood is not closely woven; it is more synthetic than natural.

The country never has encountered a true baptism of fire. In the later days of Spanish rule, during the latter half of the nineteenth century, the Filipinos knew cruelty and oppression and among them was born a strong desire for independence as a means of escape. It produced a revolution against Spain and a subsequent insurrection against the Spaniards' conquerors, the Americans, when they took over the Philippines at the turn of the century.

This insurrection, led by General Aguinaldo, was short lived; it was followed by 40 years of peace, and growth which has no parallel in Asia, or perhaps anywhere. Independence persisted as a symbol, however, fostered by American ideals and kept alive as a political issue which has bounced more than one politician from the soap box to a comfortable job through sheer patriotic oratory, and kept him there.

On any question concerning independence for the Philippines the United States always has dealt with a few outstanding Filipino personalities who represented the whole country in deliberations and decisions affecting its future. Foremost among them is Manuel Luis Quezon, President of the Philippine Commonwealth and No. 1 Filipino.

Quezon lives in no grove-shaded nipa shack. His official residence is Malacañan Palace, former dwelling of Spanish and, later, American Governor Generals. A broad, spacious, low structure of weathered walls, vine-grown, it used to nestle like a southern plantation house on the banks of the Pasig River that flows through Manila. Constant additions to the structure since it became the home of the Filipino chief executive in 1935 have transformed its weathered stateliness into a magnificent combined executive office and mansion house, with rich new furnishings, expensive crystal chandeliers from Czechoslovakia, a garage full of long American automobiles; specious patios and newly landscaped surroundings extending to the flat lowlands across the river.

In his own special way Manuel Quezon is a dictator. He rules politically with an iron hand. His party organization is supreme. The opposition is sometimes vociferous but negligible in influence. By his critics he has been called one-third intuitive politician,

one-third humanitarian, one-third impatient martinet; he is as unpredictable as the weather, especially in showering his beneficences or his recriminations. Abstract justice is a passion with Quezon, yet he can be as ruthless in lopping off a political head as the most hardened of his dictatorial contemporaries.

Bantam quick, shrewd, and not without a measure of greatness, he has held for a third of a century the leadership of his people. He has it today because he represents the kind of hero the Filipinos worship—nimble of wit, dapper, adaptable, realistic, explosive, quick of humor, quick likewise of sympathy and sentimentalism; an indulgent friend and a resourceful political enemy. In Manuel Quezon, born of humble Spanish-Filipino parents 60 years ago, you have at once the common man and the natural leader. You have, distilled into a high concentrate, a typical Filipino.

The western mind, however, is not Quezon's sole audience in the experimental drama of American colonialism. His orchestra circle is crowded with his own people and the boxes and galleries are filled with oriental neighbors, all just as curious as the American impresarios to discover whether oriental actors can make a democratic show run smoothly. Playing to such a motley crowd has required quick changes of mental costuming. The requirement of adaptability he has fully met.

Almost since the inception of United States rule in the Philippines the country's development has followed divergent lines. Well-meaning American economists of the Taft era opened duty-free markets to Philippine copra, hemp, sugar, all its products, finally creating an absolute dependence upon American absorption of raw materials. At the same time the Filipinos were directed and encouraged to look toward independence, both economic and political, which, of course, precluded a protected market. To keep both feet solidly on the ground, one on each of these diverging lines, required acrobatics.

Outward conditions as well as internal ones have changed since the passage of the Independence Act and its signing in May of 1934. Comparative peace ruled in Asia then. Japan had already begun her great adventure on the continent of Asia, but few persons realized the scope and ambition of the gesture. The possibility of Japan's being a menace to a free and unprotected Philippines had been vaguely talked, but the Filipinos laughed heartily along with the Japanese at the idea.

There was a world depression, but otherwise there was no particular reason in 1934 why the Filipinos should not have welcomed with a burst of joy the action of Congress making good the long-standing promise of freedom. Surprisingly there was no great spontaneous reaction. Even then the idea had begun to get about that independence did not mean what the farmer, the fisherman, the laborer, the barrio dweller thought it meant—immunity from taxes and plenty of easy money for everybody.

And at the beginning of 1939, with the smell of independence in their nostrils, what do the Filipinos want? A sampling of the private thoughts of native people in their homes gives some idea of it. For the purpose of this article, impartial questions were submitted personally to 135 selected native people, men and women, rich and poor and middle-class. Trained men in their own neighborhoods, independent of political influence, presented the questions. Barrios, towns, cities, and farms scattered through 25 of the 49 Provinces, covering the islands from Aparri to Jolo, were included. First the people were asked whether they favored (1) immediate independence, (2) independence in 1946 with a preferential trade arrangement in the American market until 1960, or (3) permanent relationship with the United States.

The results are revealing. Almost half of those questioned (48.8 percent) preferred independence in 1946 with extended preferential trade. Less than a fifth (18.1 percent) favored immediate independence and about a third (33.1 percent) wanted the United States to remain permanently.

Then the question was put up in this way: "If you had to decide now, would you choose immediate independence at the risk of future Japanese control, or a permanent tie with the United States?" Nineteen declined to answer this question. Of the rest, 25.9 percent said they did not believe the Japanese would invade an independent Philippines, and anyway the Philippine Army (now 3 years old) could lick them if they did. The other 74.1 percent preferred retention by the United States.

Being a tractable people under strong leadership, the Filipinos will stand back of any solution to the problems of their future that their leaders evolve in common with the administration and the Congress of the United States. What will these leaders ask?

The present crop of Filipino destiny makers is confronted with a peculiar situation. Considering their own people, they do not feel that the time is ripe for a public change of front to the point of asking outright for permanent United States retention. Actually there is no pressing need for immediate remedial action. Owing to a fortunate American windfall in the shape of an outright yearly donation of $12,000,000 to $15,000,000 in proceeds returned to the Commonwealth from the excise tax on coconut products imported by the United States, the country is more prosperous than it ever has been—flush, in fact. The gradual tariff application under the terms of the independence law, unless modified, will begin to pinch painfully in 1941.

There are five courses which Congress might take if it changed the law at the request of the Filipinos.

First. It might grant immediate independence. Most of the Filipinos do not want this. The leaders do not want it, although they recognize that it might be forced upon them by American interests convinced that duty-free Philippine products are encroaching upon their markets. These interests are strongly bolstered by pacifist elements which believe retention of the Philippines is a menace to national security.

Second. It might arrange for permanent retention of the islands. Most Filipinos do not want this either, but there are many indications that the Filipino leaders may ask for it, probably on the basis of a dominion status, like Canada's. To save face they will not ask for it publicly, but may privately. They do not think that the United States would grant it, but it would be a good bargaining point from which to retreat into a petition for indefinite extension of trade benefits and American military protection under a continued Commonwealth status.

Third. It might adhere to the present arrangement, which provides for complete independence on July 4, 1946, full tariff application on all Philippine imports after that date, and withdrawal of American military protection. Should the Filipinos find Congress minded to follow this course, they would quietly court some other power, perhaps England, Holland, Germany, Italy, or Japan, looking for a favorable economic and protective arrangement in exchange for a stake in the Philippines. Feelers have already been put out, especially toward Japan.

Fourth. It might embark upon a realistic reexamination of the entire problem respecting the broader viewpoint of America's relations with the Orient, as suggested by High Commissioner Paul V. McNutt in a radio broadcast at Washington last Spring. If this reexamination reached conclusions matching Mr. McNutt's, permanent retention of the Philippines would be the answer.

Fifth. It might grant independence in 1946 with a modified tariff application and trade benefits extended to 1960; then complete independence. This is the course outlined in the report of the Joint Preparatory Committee to which the President has given his approval.

The present attitude of the Filipinos toward all this is fatalistic. Obviously they are not prepared for independence now and they will be scarcely more so in 1946 if present trends are followed. So warped is the national economy that the Filipinos do not even raise enough rice to feed themselves; they had to import a quantity last year, including one shipment from the United States. Flush with money, the government has laid plans for embarking upon a set of industrial and commercial ventures from which it hopes to derive a profit. Nothing is being laid aside for a rainy day. Nation-building is great fun. If the Filipinos' attitude were expressed in a motto, it would be this:

"In God (and the United States) we trust."

Recovery or Economy

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Monday, March 6), 1939

EDITORIAL FROM PHILADELPHIA RECORD

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial in today's Philadelphia Record, entitled "Recovery or Economy? We Can't Have Both."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Record of March 7, 1939]

RECOVERY OR ECONOMY? WE CAN'T HAVE BOTH

On December 6, 1929, there were gathered in Washington, D. C., 400 "key men" of industry, finance, and commerce. The conference was announced officially as "the greatest cross-section of American industry ever gathered together." The loudest applause of that conference was for Mr. E. M. Allen, of the Mathieson Alkali Works, of Buffalo, when he rose, denounced the United States Senate for delay on the Hawley-Smoot tariff, and cried:

"If Congress will only relieve the uncertainty, business will go forward."

The United States Chamber of Commerce told Congress the very same thing last week.

In 1930, Congress went the limit to "relieve the uncertainty." It passed the Hawley-Smoot tariff. At the suggestion of Secretary of the Treasury Mellon, it reduced income taxes. And President Hoover, with one conference after another, gave business the ball.

Business did not go forward. Not until after 1933.

We shouldn't forget these things.

Headlines of 1930:

"A. T. &. T. Announces It Will Spend $600,000,000 on Improvements."

"American Railways to Spend $1,247,000,000 for Construction."

"State of Pennsylvania to Aid Recovery With $155,000,000 Highway Plan."

"Du Pont Plant Expansions to Cost $25,000,000."

And three prominent Hoover administration leaders said:

"All the country needs is confidence."

Private industry did its best. But the country needed more.

Millions needed jobs. And buying power.

Headlines of yesterday:

"Brookings Report Offers Way To Cut Federal Budget."

"Economy League Demands Slash in Spending."

And the New York World-Telegram, calling economy "the hard way," urges "political self-denial," observes that "private spending is difficult enough to restrain" * * * and that a health program "looks like a good idea, but * * *."

How many editors, how many among all of us ever stopped to think what would happen to the economic system of this country if everybody did practice self-denial, if the whole country began economizing as these people demand?

If every person in this country were to refuse to spend 10 percent of his salary for 1 year—the decline in buying would wreck nearly every business in the land. It would be a national disaster.

America wasn't built by buying less. It was built by buying more.

Calling on the customers of American business to buy less is equivalent to calling upon the people to make business worse instead of better.

Sometimes it's a good idea to think about the meaning of words before we use them. The word "economy," for instance.

While the headlines clamor for economy—

We are interested in the story from Washington that an enormous number of businessmen are now gathered there, and that while their official spokesmen talk about economy, "what they fear more than anything else, despite their demands for a balanced Budget, is an abrupt decline in Government spending."

That information wasn't in the news. We received it from one of the most conservative of all the "confidential business services" which operate from the capital.

The businessmen don't want their customers destroyed.

They saw it happen once.

Let the administration go the limit in cooperating with business.

But that doesn't mean repeating the blunders of the old deal.

That doesn't mean abandoning work relief and the spending program.

Recovery depends on business selling more.

Business can't sell more if people spend less.

The Monopoly Investigation

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Monday, March 6), 1939

ADDRESS BY WENDELL BERGE AT ROCHESTER, N. Y., FEBRUARY 20, 1939

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Wendell Berge, special assistant to the Attorney General of the United States, at the convention of district No. 2 of the National Retail Credit Association, at Rochester, N. Y., February 20, 1939, on the subject the Monopoly Investigation—What It Means.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In recent years we have been struggling to adjust our economic life to new and better realities. We have made some progress, but it is apparent that there are many vexing problems yet unsolved. Millions of people are still unemployed. Others, though employed, are receiving miserably poor pay. Not only labor but also capital has its employment problems. Millions of dollars' worth of plants and equipment are idle or only partially producing. Unused plant capacity, like unused labor capacity, presents appalling national waste. Part of our population needs food and clothing and other necessities of life, to say nothing of some of the luxuries. We have these goods in abundance, or, at least, the means of producing them. But we are not getting the goods around. The channels of distribution have choked up.

For a vast majority of our people prices are out of reach of income. If people cannot afford to buy at prevailing prices, either prices must come down or consumption will fall off. According to old-fashioned economic theory, prices will come down to the level people can afford through the operation of competition. But the theory presupposes a free market—a condition which all too often does not exist. Today in all too many markets what actually happens is that private price control operates to keep prices up.

Roughly speaking, the general characteristics of a controlled market as distinguished from a competitive market are high prices, high unit profits, declining consumption, hence lower volume production, mounting unemployment of labor, and progressively increasing collective activity to maintain or increase prices in order to offset the financial effects of declining volume.

During the recent recession inventories piled up in many businesses because the goods could not be distributed at existing price levels as fast as they were made. We appeared to be choking ourselves with our own wealth. This brought to a focus a problem which had been observable for some time—the waste of unused productive capacity, idle machinery, and idle labor, because of the failure of our system of distribution to market at reasonable prices the products which that machinery and labor were capable of producing.

In a land where goods are plentiful, no mere theory can justify for long the failure of an economic system to get the goods around to those who need them. Our institutions must be tested by results, not theories.

What have been some of the results in recent years? According to figures computed by the Brookings Institution, during the 12-year period from 1922 through 1933, the amount of goods actually produced fell short of the amount which could have been produced by efficient use of our plant, machinery, and labor, by the colossal sum of $248,000,000,000. There are slightly less than 30,000,000 families in our population. Under an economy which could have utilized its productive capacity, each of them could have had $8,000 more in food, clothing, and housing, a sum greater than 87 percent of the families of the United States could save in a lifetime.

Again, our failure to utilize our productive capacity and adequately to distribute our goods is reflected in the income of American families. Eighty-seven percent of our population receives less than $2,500, 65 percent receives less than $1,500, and 11,000,000 families are fighting starvation. These families cannot purchase a sufficient quantity of needed goods at existing price levels to keep our machinery going and our labor employed.

If the present order is allowed to work badly enough for long enough, there is danger that sooner or later the people will rise up against it. It is hard to believe that a violent economic unheaval would not also affect our political institutions. Private property, free enterprise, individual initiative, and competition as characteristics of an economy seem to go hand in hand with those political characteristics which we call democracy. Private economic regimentation, on the other hand, is a force which seems to pave the way under modern conditions for dictatorial political organization. The post-war history of Europe reveals the sad truth that when economic freedom disappears, political liberties also somehow slip away. Private concentration of economic control in European countries has been a forerunner of the totalitarian states.

These are but some of the larger considerations which have emphasized the necessity in this country for a broad study of the forces which almost stalled our economic machine, with a view to finding remedies and solutions which are consistent with preserving the essentials of our form of capitalism and government.

It was these considerations which prompted the President last year to recommend the study which is now being made by the Temporary National Economic Committee. In calling for this investigation the President said:

"Unhappy events abroad have retaught us two simple truths about the liberty of a democratic people.

"The first truth is that the liberty of a democracy is not safe if the people tolerate the growth of private power to a point where it becomes stronger than their democratic state itself. That, in its essence, is fascism—ownership of government by an individual, by a group, or by any other controlling private power.

"The second truth is that the liberty of a democracy is not safe if its business system does not provide employment and produce and distribute goods in such a way as to sustain an acceptable standard of living.

"Both lessons hit home.

"Among us today a concentration of private power without equal in history is growing.

"This concentration is seriously impairing the economic effectiveness of private enterprise as a way of providing employment for labor and capital and as a way of assuring a more equitable distribution of income and earnings among the people of the Nation as a whole."

The President then recommended a thorough study of the concentration of economic power in American industry and the effect of that concentration upon the decline of competition.

Pursuant to the President's recommendation, Congress created the Temporary National Economic Committee, composed of three Members of the Senate, three Members of the House, and one representative each from the Department of Justice, Department of Labor, Department of Commerce, Treasury Department, Securities and Exchange Commission, and the Federal Trade Commission.

This committee was authorized to make a full study with respect to the matters referred to in the President's message and to hear evidence with a view to determining (1) the causes of concentration of economic power and financial control, and their effect upon competition; (2) the effect of the existing price system and the

price policy of industry upon the general level of trade, unemployment, long-term profits and consumption; and (3) the effect of existing taxes, patents, and other Government policies upon competition, price levels, unemployment, long-term profits, and consumption. The committee was authorized to make recommendations to Congress with respect to legislation upon the foregoing subjects, including the improvement of antitrust policies and procedure and the establishment of national standards for corporations engaged in interstate commerce.

As soon as the committee was organized under the able chairmanship of Senator O'MAHONEY, it was decided to allocate the different phases of the investigation to the various departments and agencies represented. Thus, for example, the Department of Justice agreed to make a study of the price policies of various industries as they affect competition, patent monopolies as they affect the concentration of economic power, and improvements in antitrust practice and procedure. Trained legal and economic experts commenced work immediately in the various departments and agencies to assemble the material which would be placed before the committee. This work has been under way since the middle of last summer and some of the results have already been presented to the committee.

The committee commenced hearings on December 1, 1938, and has been meeting quite regularly since.

It would be very difficult in the brief time available to describe in any detail the testimony which to date has been presented to the committee. I can only, in a general way, allude to some of it. In referring to testimony before the committee, I am referring, of course, only to matters of public record. Moreover, it is understood that nothing I say here today represents any official comment on anything pending before the committee of which I am only an alternate member.

At the beginning of the committee sessions three witnesses took several days to describe the principal business and industrial trends in this country over a period of a great many years. We were shown a picture of the American economy in terms of its performance, in terms of production, in terms of the value and volume of goods produced, in terms of consumption of goods, in terms of prices. This data, all of which was based on careful statistical studies, was designed to show us what is really happening in this country today. Where are the weak spots? Which industries are the more prosperous? What are the sources of our national income and how have they changed relatively year by year? These and a host of other questions were examined by these three witnesses.

Following this general survey, the committee turned its attention to certain particular problems of concentration of power. The first general subject taken up was patents. A patent, as you know, is a legal monopoly for a limited period granted by the Government to individuals on the theory that it will promote the progress of science and the useful arts. No doubt patents have their place in our economic system. However, they offer wide opportunities for unreasonable restraint of trade, and the monopolistic power that inheres in patents is subject to misuse. It was the belief of the committee that inquiry ought to be made to determine whether there were abuses in the operation of the patent system which should be ended either by new legislation or by action under present laws.

The patent situations in the automobile industry and the glass-container industry were chosen for examination, not because those industries were any better or any worse than many others, but because they illustrate situations which are more or less typical, and they involve products which are of interest to every consumer.

In general, the inquiry into the automobile industry revealed that patents in that industry are taken out primarily to protect manufacturers from infringement suits and that patents are quite freely licensed for use by competitors. There apparently is no organized effort in the automobile industry to stifle competition through suppression of patents, nor do the companies rely to any considerable extent upon royalties as a source of income. Indeed, the testimony shows that the Ford Motor Co. pursues a policy of licensing patents royalty free, and this company never maintains suits against others for infringement. It appears that the great automobile industry has grown up under a policy whereby the results of invention have been obtainable for use by all who seek to enter the industry, either free or upon reasonable terms.

In the early days attempts were made at suppression, but fortunately they were not successful. Thus originally there was in existence an association of licensed automobile manufacturers who owned the Selden patent, which in effect was a broad combination patent supposedly covering the automobile as a unit. When Henry Ford commenced to manufacture automobiles he went to this association and inquired whether he could join and thereby obtain the right to manufacture automobiles under this patent. Mr. Ford was told by this association that it was not yet convinced that Mr. Ford was not a fly-by-night producer, and he was denied membership and a license to use the patent. But although this association did not deem Mr. Ford a fit person to engage in the manufacture of motorcars, it was unable to stop him. He went ahead and manufactured automobiles anyway, and in the fall of 1903 he was sued for patent infringement by the association. This litigation over the Selden patent lasted for many years, but Mr. Ford finally won. If the Selden patent had been sustained, the Ford Motor Co. would probably have been put out of business.

The situation which might have existed in the automobile industry today if the association had succeeded in controlling the industry through the Selden patent is certainly interesting to contemplate. In all probability, instead of having an enterprising industry with many reasonably low-priced cars on the market, we would have an industry dominated by a small group which would control production and keep prices and profits at a high level. The advantage which the American people have derived from healthy competition in the automobile industry would largely have been lost.

By contrast, look at the glass-container industry. This is the industry which manufactures all glass containers, such as milk bottles and jars for the packing and preservation of fruit, food products, etc., in the form in which they reach the ultimate consumer. These containers are manufactured by modern machinery, the patents for which are substantially all held by two companies. One of these companies manufactures no glass containers; its business consists entirely of granting licenses to others. The other company is engaged in the manufacture of glass containers, and the evidence before the committee indicated that for many years it had not granted licenses to others under its patents. The licensees of the one company, together with the other company, manufactured approximately 96 percent of all glass containers produced in the United States. No matter how much capital or intelligence or ability a man might have, he would probably be unable to enter the business of manufacturing bottles unless he could get a license from one of these companies. The record before the committee shows a number of interesting instances of refusals by these companies to grant licenses desired by those who sought to compete with other persons previously licensed. Furthermore, the evidence before the committee indicated that prices of glass containers are not fixed by the free play of competitive forces but are established by a well-defined system of price leadership, and that patents are one of the principal means used to maintain this system

You can readily understand that if two companies have control of substantially all of the patents in an industry that control will almost certainly be used to suppress competition. New competition will probably not be licensed if it appears that it will interfere with the profits of present licensees.

It hardly accords with our traditions for a situation to exist in any industry whereby a company can in effect say to a man: "You cannot engage in this business because the field is already crowded. We do not think it best to permit any more competition because it might hurt our profits or the profits of some of our licensees. You had better find some other line in which to invest your capital."

It is situations of this kind which the committee is exploring, not for the purpose of exposing particular corporations or individuals but rather for the purpose of learning how our economic system is operating and what reforms and readjustments are needed. If it is possible under present law for a small group of persons to regiment a whole industry and thus make effective a type of private fascism, we at least ought to know about it. Perhaps, also, we ought to do something about it.

More recently the committee has been making some studies of certain aspects of the insurance business. Any study of the concentration of economic and financial power would not be complete without considering the effect of the concentration that takes place through insurance companies. Six life insurance companies have admitted assets in excess of a billion dollars each. In the aggregate all of the life insurance companies have admitted assets in excess of $26,000,000,000. Their assets are twice as great as the total assets of the Federal Reserve banks.

Obviously these insurance companies play a vital part in our economic life. I cannot better describe the purpose of the insurance inquiry than in the words of Chairman Douglas of the Securities and Exchange Commission, who said at the beginning of the inquiry:

"It is our present task to survey the economic power inherent in the vast investment funds controlled by insurance companies and to study the impact of that power upon our national economy. The scope of our problem is as broad as the sphere of influence of the insurance companies themselves. Inquiry into that problem of necessity takes us from Wall Street to Main Street, from the capital markets and financial centers of the East into the farm lands of the West and South. It will properly bring us in time to a consideration of the extent to which insurance-company influence permeates areas of national importance, such as the capital markets, the supply of mortgage funds available to farmers, railroad reorganization, and perhaps the financing of low-rent housing. It will of necessity demand inquiry as to the future of investment banking, and, indeed, the extent to which insurance companies have come to dominate security issues, underwriters, and investors. These are not boundaries of our making. They inhere in the character of the insurance business."

Some of you are familiar with the work of the so-called Armstrong committee which under authority of the New York State Legislature in 1906 inquired into the practices of insurance companies chartered or authorized to do business in New York. Hon. Charles Evans Hughes, now Chief Justice of the United States, was counsel to the Armstrong committee and did a memorable and constructive job. The study ofthe Armstrong committee was broad in scope and in the end the committee recommended certain reforms, some of which were translated into legislation.

It has been 33 years since the Armstrong committee reported. Since then there has been a tremendous growth in the insurance

business. It is our purpose, in effect, to bring the Armstrong study down to date.

I want to emphasize that this investigation does not attack or question the adequacy of the reserves of any company. Chairman Douglas has said that "No policyholder need have any concern that any fact brought out in this inquiry will in any way jeopardize the protection which he counts upon through his insurance policy." At all times it has been the purpose to conduct this inquiry in as scientific a spirit and in as objective a manner as possible. So much for the insurance phase of the committee's work.

In the high degree of development of our industrial civilization we have reached an interdependence previously unknown. The sensitivity of our whole system is much greater than formerly. The activities of a group of men in control of one industry are often felt throughout the whole economic system. Consequently, the actions of the little group who hold the controls are no mere private matters. They present problems which we would perhaps like to avoid because of their complexity but which we cannot avoid if we are going to keep our competitive order functioning.

I believe that we are prone to carry too far the analogy of a corporation to a person. A corporation has been held to be a legal person, and in many respects its legal relationships are the same as those of a natural person. However, the economic consequences of corporations are quite different from those of natural persons. Under the protection of the corporate cloak it has become possible for little groups of men having very little or no financial interest in a company to control its destiny. There is very little semblance of democracy left in some of these large organizations, because as a practical matter the stockholders have no effective control over personnel and policies. If the managers of corporate policy are not in fact responsible to the stockholders, the only checks upon their irresponsible action are the checks which competition or the Government may impose. Some checks there must be. Irresponsible use of power either in industry or government cannot long exist without destroying the democratic principle. Irresponsible power in any hands is dangerous.

Under modern conditions the concentration of economic power in private hands is the concentration in private hands of the power to effectively govern our lives in many respects. It is often the concentration of irresponsible power—power that is not accountable to the public whom industry serves, or to the stockholders whose money is represented in the industry, or to the Government.

In pointing toward solutions we will continue to hope that so far as possible competition can be restored as the natural checkmate upon the irresponsible use of power. To the extent that competition fails or cannot be restored, Government regulations will be inevitable. As an alternative to competition the people would demand responsible public regulation rather than irresponsible private regulation.

It is to preserve competition and protect industry and the public from private regimentation, that we have the antitrust laws. These laws aim at preventing restraints of trade and monopolistic control of prices. They aim at keeping the field open for honest competition. They aim at preserving individual enterprise and initiative. They are our greatest hope to avoid further general extensions of Government regulation. To the extent that these laws are inadequate and can be strengthened, it is to be hoped that the monopoly investigation will point the way toward vitalizing amendments. Undoubtedly some procedural changes can and should be made in the antitrust laws. As the investigation progresses probably some situations will be revealed calling for other additional antitrust legislation.

But more than legislation ought to result from these monopoly hearings. These hearings ought to result in a better understanding by the American people of how their economy operates, where the weak spots are, and the aspects of it which should be held onto and preserved whatever the cost.

In Germany, before the advent of the present regime, industry had already become highly organized by the adoption through trade associations and cartels of a strictly regimented control over production, marketing, and prices. Industry was organized from top to bottom. There were practically no areas left free for the play of individual initiative and competition. There was a place for everyone and everyone had to keep his place. This high degree of regimentation in industry obviously paved the way for political dictatorship. A leader for such a highly organized machine as Germany presented in the early thirties was inevitable. There had to be somebody at the controls. If it had not been Hitler it doubtless would have been someone else.

We in this country are determined to escape the twin evils of private economic regimentation and political dictatorship. The American tradition is all against them. We want none of them. We are against totalitarianism. And yet we are faced with the necessity of readjusting some of our traditional techniques and making them apply to the facts of modern industrial life. The period of transition may be a hard one but no doubt it can be surmounted if we will face it in the same spirit that we have faced and conquered many difficulties in this country before. Our task, both in Government and in industry, is to make democracy work; to gain for our people without sacrifice of democratic principles the economic advantages of modern industrial techniques. It is to the accomplishment of this task that the Government is dedicated, and the Temporary National Economic Committee is one of the instruments which we hope will help point the way.

National Labor Relations Board's Activities in New York Area

EXTENSION OF REMARKS
OF
HON. ROBERT F. WAGNER
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Monday, March 6), 1939

ARTICLE FROM THE NEW YORK TIMES

Mr. WAGNER. Mr. President, I ask unanimous consent to have published in the RECORD an article from the New York Times of Monday, March 6, 1939, giving the text of Mrs. Herrick's report on the National Labor Relations Board's activities in the New York area from 1935 through 1938.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From The New York Times of March 6, 1939]

TEXT OF MRS. HERRICK'S REPORT ON N. L. R. B. ACTIVITIES IN NEW YORK AREA

(The report of the second regional office, National Labor Relations Board, 1935 through 1938, made public by Elinore M. Herrick, director, follows:)

From the vantage point of 1939 the first phase of administration of the National Labor Relations Act, characterized by injunctions and by flagrant violations of law which flourished because too many employers were misled into believing that the act would be declared unconstitutional, is rapidly becoming only an unpleasant memory. Enlightened self-interest on the part of management and better organization among the workers have followed as a natural consequence of a series of five epoch-making decisions by the United States Supreme Court on April 12, 1937, in which the constitutionality of the act was sustained.

In reporting the history of the past 3 years of administration of the National Labor Relations Act in this region which comprises the most heavily industrialized areas of three States—New York, New Jersey, and Connecticut—I am aware that the improvement in labor relations here is more easily discernible than in some other parts of the country which still lag behind. Labor unions have never been the novelty here that they are in other sections. Yet during the first years following passage of the Wagner Act workers in this region were just as badly in need of protection from antiunion practices.

Despite the increasing compliance with the law by employers here, the act continues to stand as a bulwark to all the workers who would otherwise be subjected to improper pressure against union activity. Nevertheless the longer history of trade-unions in this area and their more extensive organization have contributed in large measure to the present situation which warrants me in saying with confidence that we look forward to an increasingly widespread and genuine acceptance of the law. This prediction seemed impossible in 1936.

THREE MAJOR TASKS NOW

We have now reached the point at which our major tasks are (a) to improve our administrative technique, (b) to interpret the law, and (c) to win support for its basic principles.

Some important lessons are to be learned from the experience of the past 3 years.

The concrete achievements of those years are measured in terms of cases settled by agreement, of workers reinstated with back pay after discriminatory discharge, of company-dominated unions disestablished leaving the workers free to organize according to their own desires, and of collective bargaining carried on in good faith with resultant agreements as to working conditions, and the establishment of machinery for the peaceful adjudication of disputes which are bound to arise from time to time even under liberal managerial policy, and the wisest union leadership.

Less easy to define are the changes that those years have brought about in our administration of the act. During the early days when we were attacked on every side we were constantly on the defense, fighting each step of the way to enforce the law. It was natural that the atmosphere surrounding the act became charged with hostility. This unwholesome atmosphere, happily, has been largely dissipated since the constitutionality of the act has been upheld and since employers have begun really to accept the basic principles of the law.

And so we have moved to the constructive position of interpreting the statute, of educating employers as to their responsibilities under the act, and of educating labor unions as to the responsibilities and limitations their very protection by the law implies. Employers have learned that they cannot be said to bargain in good faith if the answer to every proposal is a flat "No." Unions have learned

that they cannot slap a contract down on the desk and say, "Sign there or else we'll throw a picket line around the plant."

RIGHTS OF BOTH SIDES

The employer has a right to have the union's claim to represent a majority proved and has a right to a reasonable time for consideration of the union demands. The unions have a right to expect that collective bargaining in good faith will ensue and will result in some orderly procedure for determining working conditions.

VOLUNTARY COMPLIANCE WITH THE LAW REPLACES BITTER COURT FIGHTS

The New York region has handled one-fifth (21.1 percent) of the total cases handled by the other 21 regional offices, and its experience, therefore, is significant.

Of the 3,346 cases filed in the New York region, 91.2 percent have been closed. The method in which these 3,026 labor disputes have been adjudicated reflects the peace value of the National Labor Relations Act to the important New York, New Jersey, and Connecticut area. In marked contrast to the frequent injunctions of earlier days, 1,525 cases, or 50 percent of those closed locally, have been settled by peaceful and orderly agreements resulting from informal conferences held by the Labor Board with the parties to the dispute. These amicable settlements involved nearly a quarter of a million workers, or approximately one-sixth of all the workers involved in similar informal Labor Board settlements throughout the country, and represent also 23.8 percent or nearly one-quarter of all the cases settled informally throughout the country.

For the year 1938 alone these settlements carried with them $131,083.85 in back pay to workers discriminatorily discharged. A total of 2,454 workers have been reinstated in this region after illegal discharge, or one-fifth (20.4 percent) of the total reinstated throughout the country.

TABLE I.—*Manner of closing cases—second region, N. L. R. B.—1935 through 1938*

	Number	Percent
Total cases filed	3,346	100.0
Total cases closed	3,053	91.2
Closed by:		
(a) Agreement informally	1,525	50.0
(b) Dismissal by regional director	648	21.2
(c) Withdrawal	533	17.4
(d) Other means	347	11.4

CAUSES OF DISPUTES SOUGHT

The Board's approach to the problems involved in these closed cases has a very direct relationship to our success in securing prompt adjustments where required and in laying the foundation for future peaceful industrial relationships. When we have our first conference on a new case we ask the interested parties: "What is the dispute? What caused it?" We do not approach the conference initially from the standpoint of "Has the law been violated?" If the law has been broken, we'll find it out soon enough. No one enjoys the role of the accused. We try to take the sting out of that situation at the outset. The discussion on the cause of the dispute helps establish understanding of the law and lays the foundation for a more harmonious relationship in the plant. This informal atmosphere of discussion on neutral territory which is part of the initial process of sifting the charges which have been filed is also part of the vital educational process contributing to successful administration of the National Labor Relations Act.

If these efforts at adjustment fail, we must then determine beyond any reasonable doubt that a violation of law has been committed which required the application of the full formal procedure of the act.

In analyzing the work of the second region a comparison of our experience with that of the rest of the country is pertinent. There is a relatively quicker disposition of cases here as indicated by the 91.2 percent closed as against 76.2 percent closed by all the other regions. The compactness of this geographical area is an influential factor. There are no long distances to travel. A large number of companies have their main offices in the country's greatest business center, New York City, even though their factories are in other States. Similarly, the unions involved find the N. L. R. B. offices here readily accessible. Consequently it is possible for us, in the majority of cases, to get both parties to the dispute together informally within 3 or 4 days after a charge has been filed and before resentment, charge and countercharge have erected barriers which make amicable adjustment of differences extremely difficult to secure.

SPEED HELPS SETTLEMENTS

It is difficult to compare the percentage of cases closed by agreements during the initial informal stages of our procedure with the experience in other parts of the country. Many factors must be considered. Most important, of course, is the attitude of employers toward the law and the Board. The relative speed with which we have been able to handle our cases counts for a great deal in maintaining peaceful relationships. The degree to which a rather strict construction of the law is applied is another factor affecting the manner in which cases have been closed. Qualitative judgment must be exercised by the administrator in deciding what cases should be handled by formal proceedings, of course. Another important factor is the strength of the union organization in the plant at the time the dispute arose and the union's previous relationship with the management.

FORMAL PROCEEDINGS

Three hundred and fifty-three formal hearings have been held in the New York region since 1935, or 10.5 percent of all the cases filed. One hundred and seventy-three hearings were to determine if unfair labor practices had been committed and 180 involved determination of the appropriate bargaining unit and the certification of a bargaining agency. This latter question may be decided by the Board on the basis of evidence of union membership and without recourse to an ordered election, though where any conflict of claim or doubt of majority exists, an election must be held.

Of the 103 unfair labor-practice cases reaching the point of formal hearings, 62.4 percent were closed at some stage after issuance of formal complaints, in the main without recourse to the full administrative and legal procedure of the Board. Eighty-five were settled after institution of the formal proceedings, during the course of the hearing, by compliance with the trial examiner's intermediate report, or with Board decisions, and include six cases in which compliance with circuit court or Supreme Court decisions was secured. In one additional case the circuit court reversed the Board.

EMPLOYERS GIVE MORE AID

Five complaints were withdrawn by the Board during hearings which revealed insufficient merits or because witnesses were afraid to testify even in response to subpenas. Six cases were dismissed by the trial examiner or the Board because of insufficient evidence to sustain the complaints. Five were dismissed during the hearings because it was found that the Board did not have jurisdiction. In the main, this latter group of 16 cases belongs to the period when employers refused to cooperate in disclosing their side of the controversy during the informal investigation of the charges. However, we can now report a great improvement in this respect, for employers recently have almost without exception been willing to facilitate our inquiry into the facts surrounding the alleged violation.

Because more employers have begun to recognize, especially in the large plants, that they cannot know all that their subordinates do we are finding, as pointed out above, that settlements can be worked out during hearings with increasing frequency. A Labor Board hearing is often the only time the employers really see what has been done in violation of their own orders. Under these circumstances they are generally more willing to make restitution for any wrong done the employees.

More than one employer has said during the hearing:

"I didn't know that my foremen (or superintendent) were doing these things."

Another employer stated that he felt the Board's hearing procedure often gave management its only chance to find out that subordinates were violating the express commands of the top management to abide by the law.

DISMISSAL AND WITHDRAWAL OF CASES

So much emphasis has been laid by critics of the Board on the fact that a high proportion of the formal decisions and orders of the Board sustain the workers and the unions that an analysis of the cases in which disposition is made before a hearing is timely and illuminating.

MANY CASES DISMISSED

A large group of cases has been closed either by withdrawal of the charge or by dismissal by the regional director. Six hundred and forty-eight cases have been dismissed outright, or 21.2 percent in the second region, as compared with 14.2 percent elsewhere in the country. Of the 648 cases thus dismissed during the informal stages because no violation of law has been found or because the merits were too questionable to warrant a hearing or because of insufficient interstate commerce, and from which dismissal an appeal may be carried to the National Labor Relations Board, this region has been reversed by the Board in only five cases, three involving solely the question of our legal jurisdiction and two involving the merits of the case. Five hundred and thirty-three cases have been withdrawn by the complainants, amounting to 17.4 percent of the cases closed in this region, as against 28.0 percent in the rest of the country. Cases are withdrawn for a variety of reasons, such as weak merits, internal union situations which make it inadvisable for them to proceed, or lack of interstate commerce to sustain our jurisdiction.

We experience more difficulty here in securing the withdrawal of cases in which evidence of merit is lacking than do regional offices elsewhere, largely because there is such a strong rank-and-file element in the local labor movement. Union officials often feel that a dismissal gives them a protection from criticism from their membership which a withdrawal exposes them to. We do not object to this, for a dismissal is a clean-cut way of disposing of charges of doubtful or no merit.

It should be pointed out that the percentage of the total cases dismissed and withdrawn throughout the country is about the same as the percentage of the two groups combined in this region, although the distribution varies and a higher proportion are dismissed than withdrawn in New York.

Those dismissed cases, which should properly be counted as decisions in favor of employers, are too often overlooked by those who criticize the administration of the act as being partial to labor.

COOPERATION WITH STATE BOARDS

A higher percentage of New York cases are closed "by other means"—11.4 percent in New York as compared with 4.2 percent elsewhere—largely because we have in New York a similar State labor relations act and a State mediation board, both doing effective work and with whom we cooperate. Connecticut also has a

board of mediation and arbitration, which has been helpful. Cases which seem more suitable for handling by mediation are often referred to the New York Mediation Board or the similar Connecticut Board.

ELECTIONS

The second region has held 393 elections or more than a quarter (28.7 percent) of all the elections held by the Board throughout the country. Ninety-two thousand eight hundred and nineteen valid ballots were cast. Typical of the importance of these elections are the industry-wide elections in the boot and shoe industry, where by consent of both unions a poll was taken. Peacefully, without loss to the industry, the collective bargaining agency was changed and the new group took over for their duration the existing contracts negotiated by their opponents. Another industry-wide election was ordered by the N. L. R. B. in the shipping industry. This election resulted in bringing peace to a chaotic situation fraught with the imminent danger of violent outbreak such as had paralyzed the industry on the West coast.

JERSEY CASE IS CITED

Among important plant elections in which swift action by the Board averted serious loss to the employer and a possibly threatening public situation, one occurred in New Jersey. One thousand four hundred and forty-three workers of an internationally known company had taken possession of the entire plant, even barring the executives from the premises. Seven hundred and fifty thousand dollars' worth of ore was hot in the furnaces. If the sit-down were prolonged, this metal would cool and have to be chipped out bit by bit, preventing resumption of production for many weeks. Decisive action was needed. Our first demand was for evacuation of the plant. Immediately thereafter we arranged an election to determine the collective bargaining agency, for the sit-down had been precipitated to force collective bargaining, and representation was in question. Within 26 consecutive hours the plant had been evacuated, the election held, and the men were back at work. A $750,000 loss to the company was saved and the possibility of bloodshed avoided.

In the regular routine, elections by consent of all parties are of increasing frequency, indicating a fundamental change in the attitude of employers, who now say, "I'll bargain—but with whom? It's up to the Labor Board to tell me!" It is this type of election which comprises the bulk of the 393 we have conducted.

In many situations an employer confronted with the demands of rival unions has sought our help and received it. In practice we find it entirely practical to get one of the two organizations to file a petition which gives us the formal entrance into the situation which is required under our rules and regulations, and thus to meet the employer's appeal for help. Increasingly, too, employers are telling the unions when approached that they will have to go to the Labor Board first and, upon assurance by the Government that they represent a majority, collective bargaining will be undertaken promptly.

STRIKES

Three hundred and sixty-four strikes out of the total of 1,483 handled by the National Labor Relations Board have been in the New York region. There were 10 percent fewer strike cases in this region in 1938 as compared with 1937. Sixty-four and seven-tenths percent of these strikes were settled. The 1,229 petitions to determine the collective bargaining agency filed in New York comprise 36.7 percent of all the cases handled here.

FEWER STRIKES ARE REPORTED

The number of petitions filed has steadily increased with each year, indicating an increase in use of the Board's machinery in preference to strikes to force recognition of the union. It is rarely that after a union victory at the polls an employer fails to bargain collectively. Election results psychologically remove a barrier to bargaining that the mere assertion of majority representation or even proof afforded by a check of union membership cards against pay roll seldom affords, although many of our cases are settled in that way.

Another indication of the increased acceptance of the law in this region is a decrease of 7 percent in the volume of work in 1938 as compared with an increase of 17 percent throughout the rest of the country.

SPEED IN ADJUDICATION OF DISPUTES

As pointed out earlier, it is important for future harmonious relationships that a dispute be adjusted before ill will has become deeply rooted. Our administrative processes in the second region have been speeded up. For example, comparing the time required to close a case in the period from July 1, 1937, to December 31, 1937, with the similar period in 1938, we find a marked reduction of time consumed in all but one category.

TABLE II.—*Time required to close cases*

	July 1 to Dec. 31, 1937, median days elapsed from filing to closing	July 1 to Dec. 31, 1938, median days elapsed from filing to closing
Cases dismissed	50	[1]65
Cases withdrawn	68	60
Cases settled by agreements	60	40
Cases closed by transfer to National Labor Relations Board after hearings	95	45

[1] This increase in time is accounted for by a recent ruling permitting an extension of time within which an appeal from dismissal can be taken by the complainant.

SPEED AVERTS HARDSHIPS

This shorter time means, of course, less hardship to the workers and less suspense and anxiety to the employers—also less expense to them where back pay may be involved. These figures also reflect a greater cooperation by employers; fewer obstacles put in the way of a speedy adjudication. But there is still considerable room for improvement in the length of time required for final disposition of cases.

CONCLUSION

In the cases now being brought to the Board we find an increasing number in which we must point out to the unions the necessity of exhausting all their other remedies before filing charges with the National Labor Relations Board. The Board has held that violation of a contract may not be considered a violation of the act. Many of these cases arise in shops where a union contract providing machinery for grievance adjustment exists but in which a union shop chairman or other officer may have been discharged allegedly for too great militancy in pressing the claims of the unions. Here again, as has been so often pointed out in this report, our function becomes largely educational.

Often the management will balk at submitting the grievance to arbitration, claiming that to do so impairs its proper disciplinary power. Sometimes the union will reject that proposal or refuse to invoke the machinery of the contract. But our job in this type of case is to show both parties how to get the fullest benefits from their contractual relationship, thus effectuating one of the prime purposes of the National Labor Relations Act, to "encourage practices fundamental to the friendly adjustment of industrial disputes arising out of differences as to wages, hours, or other working conditions."

The Port of New London

EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Monday, March 6), 1939

EDITORIAL FROM MANCHESTER (CONN.) HERALD

Mr. MALONEY. Mr. President, I ask unanimous consent that there be published in the Appendix of the RECORD a very interesting editorial from the Manchester Herald, of Manchester, Conn. This editorial is not only timely, but exceedingly interesting from the standpoint of naval and maritime affairs; and I am sure that it will prove interesting to the governmental agencies, as well as to the shipping industry and the general public.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Manchester Herald]

THE PORT OF NEW LONDON

With all sympathy to New York, we in Connecticut can afford a feeling of hope for ourselves. The monopoly port of New York apparently has had its day, and is approaching an overload condition. It is getting too big to be economically or efficiently operated. With New York's decline comes Connecticut's chance.

We have in the port of New London the finest harbor on the Atlantic coast, nearer to Europe by a day than is New York, closer to the open sea by 3 hours than is that port. New London is a safe harbor for ships to make and is protected. Its great undeveloped waterside beckons to the construction of piers.

In the wintertime, when Canadian ports are closed, New London can become the natural shipping point for that Dominion's products which would arrive via the Central Vermont Railroad. Incoming passengers from Europe, bound to Chicago and the West, can land here and be half way to Chicago before their ship now can reach New York.

These and a hundred other arguments have long stood in favor of New London's development. But New York up to now has had the strangle hold. Transportation systems have spent millions in New York development and want to get the return from their investment. They believe that they cannot afford to invest large sums at several points which would, it is claimed, force them to enter their investments into competition, the one with the other. New York has been the sacred cow of ocean transport, against which no one could compete.

Now, with relocation in the air, there is at last a chance for Connecticut if this State will grasp it.

Here in eastern Connecticut can be located large shipping plants of national industries; here can be erected all types of factories for a diversity of industries nurtured by foreign trade and sea-borne commerce. New London is the doorstep over which we should deal with the world.

We should remember this in all of our plans for building. No bridge, for instance, should be erected in such a manner that it will

one day hinder the free flow of large shipping up the Thames. The waterside should be left free and open for the building of docks.

The rebirth of the port of New London has been the dream of forward-looking men who believe in Connecticut as being destined to something greater than to be the bedroom and storeroom for New York. We have in our own hands the opportunity to help ourselves.

The development of the port of New London is not merely an incident to conjure with in the passage of time. It is the key to the immediate rebirth of prosperity in eastern Connecticut.

American Foreign Policy

EXTENSION OF REMARKS

OF

HON. M. M. LOGAN

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Monday, March 6), 1939

ARTICLE BY HENRY L. STIMSON

Mr. LOGAN. Mr. President, I find in this morning's Washington Post an article written by Henry L. Stimson, former Secretary of War and former Secretary of State. The article is so in harmony with my own views that I ask unanimous consent that it be published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of March 7, 1939]

STIMSON WARNS UNITED STATES CANNOT STAND ALOOF—FORMER REPUBLICAN CABINET MEMBER SUPPORTS ROOSEVELT'S FOREIGN POLICY AS SAFEGUARD TO DEMOCRACY

(By Henry L. Stimson, former Secretary of State and War)

There is an increasing number of our people who feel that, in the face of the situation abroad, our Government should follow a policy of farsighted affirmative action rather than one of drift and negation. Their belief is that in the former lies the best hope for the prevention of war; while by the latter we should run the most serious risk of becoming ultimately dragged into war.

Recent actions indicate that this may be also becoming the policy of our Government. I refer, for example, to the action of the Secretary of State in persuading our airplane manufacturers not to sell planes to nations—notably Japan—which are engaged in bombing helpless civilian populations; the action of the Export and Import Bank in making a loan of $25,000,000 to China; the action of the Government encouraging the sale of large numbers of airplanes to Great Britain and France in the emergency which confronts those nations; the very frank and outspoken answer which Mr. Welles, of the State Department, addressed to the German Ambassador on the subject of the provocative utterances of the Government-controlled Nazi press, and finally the January address of the President to Congress indicating that it was the intention of our Government to bring our influence to bear upon aggressor nations by methods which were "short of war, but stronger and more effective than mere words."

I have long been in favor of such a policy. I believe that our foreign policy cannot with safety be geographically limited to a defense of this hemisphere or of our own continental boundaries. On the contrary, I think that if we should stand idly by without protest or action until Britain, France, and China are either conquered or forced to make terms with militaristic aggressors, our own hemisphere might become economically so affected and militarily so endangered that it would be neither a safe nor happy place to live in for a people with American ideals of life. On this point I think that the statements of the President in his January address to Congress and of Secretary Hull last year are sound and timely.

These great and fundamental issues are now being widely discussed. The policy of the Government has been sharply criticized. It may not be inappropriate for me to attempt to analyze some of these criticisms and what seem to me to be the answers to them. By way of premise I fully recognize that this problem of war prevention has become much more serious and difficult by the setback to world cooperation for peace and by the growth of international lawlessness which has taken place during the past decade. But that does not relieve us of the problem. We must still face it and solve it if possible.

MEDDLING CRITICISM SCORED

One very common objection to such an affirmative policy of our Government is in substance that we are needlessly irritating and antagonizing nations with whom otherwise we might safely live in peace and that we are meddling with what really does not concern us. These critics say that democracies have lived in the same world with autocracies before; therefore they should be able to do so now. I think that the fundamental error involved in this objection is an imperfect appreciation of the basic aims and methods of the so-called Fascist governments, by which term I mean the three nations united by the so-called Berlin-Rome-Tokyo axis.

Recent history has thrown much light on these characteristics, but even now it is hardly appreciated what a complete reversal of the whole trend of European civilization they represent. If all the modern fascism meant were a system under which a nation voluntarily submitted itself to an autocratic ruler and under him was willing to live quietly and at peace with its neighbors, we might agree that it was a domestic matter which concerned that nation alone, and that it was not our business to meddle with it.

But it is becoming every day more clear that fascism is not such a system. On the contrary, it is now evident that it is a radical attempt to reverse entirelly the long evolution out of which our democracies of Europe and America have grown, and that it constitutes probably the most serious attack on their underlying principles which those principles have ever met.

TAUGHT TO SCORN FREEDOM

We know now that the inhabitants of those countries from childhood up, by means of meticulous and absolute government control and by the skillful use of modern engines and methods of mass propaganda, are being taught to reject freedom; to scorn the principles of government by discussion and persuasion instead of force, and to despise the neighboring nations which practice such principles.

We now know that those Fascist nations have created a skillful technique for foreign aggression and that they are in fact girded under virtual martial law for threats and, if necessary, for acts of force upon their neighbors.

In succession the attacks upon Manchuria, north China, south China, Ethiopia, Spain, Austria, and Czechoslovakia have shown us the error of likening modern fascism to a domestic system with which the rest of the world could live in peace.

Furthermore fascism has involved a serious moral deterioration; an increasing and callous disregard of the most formal and explicit international obligations and pledges; extreme brutality toward helpless groups of people; the complete destruction within their jurisdiction of that individual freedom of speech, of thought, and of the person which has been the priceless goal of many centuries of struggle and the most distinctive crown of our modern civilization.

Such a loosening of the moral and humane ties which bind human society together gives powerful confirmation of the basic unfitness of such a system for organized international life.

LINCOLN SAYING HOLDS TRUE

It strongly suggests that in our modern interdependent world Lincoln's saying holds true, that a house so divided against itself cannot permanently stand.

Today the neighbors of a Fascist nation are compelled to live in anticipation of immediate forceful attack. Such a situation is obviously the reversal of all civilized international society as we have known it in the past.

Today, instead of the family of nations being composed of states whose individual sovereignty is mutually recognized and respected, it also contains a powerful and united group of states armed to the teeth which is continually threatening and attacking some of its neighbors.

Does any thoughtful man believe that inaction or soft words from us would prevent similar attacks being made against the United States today if a Fascist government believed that such attacks would be useful and could be carried through with success?

On the contrary, it is now clear that we are confronted with serious danger which will exist until the liberal movement regains its faith, its courage, and its momentum, and until the people of the Fascist nations themselves become convinced of the futility of their systems and compel the necessary changes.

CONFUSED THINKING

Today those people are so shackled by censorship and controlled by government propaganda that no early change can be anticipated. It may be delayed until economic or military disaster compels it, but in the meanwhile the danger of a general war hangs over us.

The prospect is as somber as it is without parallel in our experience. The danger is as formidable as it is imminent. In my opinion, it can be successfully resisted only by the farsighted readiness and cooperation of the nations which are opposed to such a system.

Another objection to an affirmative policy by our Government is that it will drag us into war. This is an objection which seems to me to be based partly on confused thinking and partly on emotion—or, to speak plainly, on undue timidity. It is true, as history has shown, that if a general war actually takes place we shall very probably be ultimately dragged into it.

When war has once begun the combatant nations become so desperate and so reckless that, however cautious we may be, our rights and interests will eventually be so trampled upon that our people will insist on defending them by force.

But that is not the present question. What we are discussing now is the prospect of preventing such a general war from actually breaking out. That is an entirely different matter.

Even if they are impervious to moral reasons, these aggressive Fascist nations understand very well the possible dangers as well as the possible advantages of force, and they may be deterred from beginning a war by timely and vigorous warning of the dangers which they will thereby certainly incur.

Even more important, peaceful nations may be encouraged not to make surrenders which will ultimately endanger our safety, if they now receive from us in advance encouragement and actual assistance which it lies within our power to give them.

No one realizes more strongly than I do the uniquely secure position, geographically as well as in the possession of vital natural resources, which the United States occupies today. Today we are more nearly self-contained than any other nation in respect to the raw materials necessary for making war, and today we are also practically safe from that new terror of war—the bombing of large cities from the air.

HOW SHALL WE USE ADVANTAGE?

But the question now is, Having these unique and powerful advantages, how shall we use them? Having this present security from attack, how shall we conduct ourselves in this threatening world? Shall we bury our heads in the sands of isolationism and timidly await the time when our security shall be lessened and perhaps destroyed by the growing lawlessness around us; or shall we use our present strength and security from attack to throw our weight into the vacillating scales in favor of law and order and freedom?

Today our Government can with safety speak unwelcome truths to a dictator or do unwelcome acts which it might be extremely hazardous for a weaker European neighbor of the dictator, either to do or utter. Recent events have indicated that such activity by us may produce extremely wholesome reactions in the cause of peace. On the other hand, it is far more inconceivable that a threatened or devastated France or Britain or Holland might be forced to cede to a Fascist nation some of its possessions in the Western Hemisphere or in the Orient or make commitments to that nation which would be even more dangerous to our safety. Would our position be bettered by idly waiting for that to occur?

There is a flood of reaction and violence overruning the world today. Our faith is that this is temporary; that the great progress of many long centuries will not be permanently lost, but that after the social and economic dislocations caused by the Great War are readjusted, the progress in freedom and in the humanities will be resumed.

In the meanwhile and until the present violence has spent its force that flood must be held back from overwhelming us. During that interval each liberty-loving nation which stands confident in its own strength and freedom is a strong point of defense. But that defense is not complete unless there is created among all such nations the fullest sympathy and encouragement as well as a readiness to assist to an extent proportionate to the danger.

OPPOSED TO NEUTRALITY

What I have written may explain why I am unalterably opposed to the doctrine preached in many quarters that our Government and our people must treat the nations on both sides of this great issue with perfect impartiality; that, for example, we must sell to a nation which has violated its treaties with us as well as trampled upon the humanities of our civilization the very instruments with which to continue its wrongdoing quite as freely as we sell to its victim the instruments for its self-defense.

I am opposed to such doctrine because I am confident that we are confronting an organized attack upon the very basis of our civilization, and because I know that this civilization was only achieved by the development of what we call law and the humanities; by the respect for justice and fair play to all men; by the principle of the sovereignty of reason rather than force and by the Christian principle of the equal value of all human personalities.

Such a civilization can only be preserved if we keep alive in our people their faith in these underlying principles. And I see no surer way of destroying their faith than by teaching them that in such a conflict as is now going on in the world neither they nor their Government shall discriminate between right and wrong, between an aggressor and his victim, between an upholder of law and a violator thereof.

CANNOT SACRIFICE PRINCIPLES

How can we expect to keep alive in our citizens the principles which have produced our civilization and upon the continuance of which rests the hope of a future rule of law and justice in the international world, if we now sacrifice those principles to a motive of timid expediency and a desire to make the present easier at the expense of both the safety and the moral character of the future?

I have outlined the fundamental principles upon which I believe that an affirmative foreign policy for this Government can safely rest. I am clear that in such a policy today lies the best hope for the prevention of a general war.

But the prevention of war today is not as easy nor as certain as it might have been if the nations of the world, including ourselves, had followed during the past 20 years wiser and more cooperative courses than we actually did follow.

Therefore, no matter what we now do or do not do we cannot ignore the fact that our effort to prevent such a war may fail. We cannot ignore the fact that at almost any moment an armed attack may be aimed by the Fascist group of powers against the vital safety of one of the two peace-loving nations upon which today rests in large part the safety of our own civilization—Great Britain and France.

INVOLVE BOTH NATIONS

Such an attack would almost inevitably involve both of those nations and from present appearances would be cooperated in by all three of the Fascist powers. In that event, only one course could be depended on ultimately to save the present hard-earned civilization upon which our own national welfare rests.

Today the aggressive group is more powerful in the air and on the land than even France and Britain combined, and it is probably sufficiently strong at sea to pin down the British and French Fleets to European waters, leaving exposed to the powerful Japanese Fleet the whole western Pacific Ocean, including the English-speaking dominions of Australia, New Zealand, and even western Canada, as well as the naval base at Singapore, which is the key to the protection of those regions.

The defense against such joint action in Europe and Asia by Fascist powers can only be securely accomplished by the common action of the naval power of the three large democracies, including the United States.

ISOLATION DISASTROUS

Should any one of these three nations attempt to remain isolated, the result would bid fair to be ultimate disaster to them all; on the other hand, conviction on the part of the Fascist powers that such common action was in contemplation would be very potent to prevent the attack altogether.

We are prone to forget that the defensive policy of peace-loving nations like ourselves must always have not one but two main objectives; our Secretaries of State and foreign ministers must not only endeavor with all their might to prevent their nations from being dragged into war; but, secondly; and quite as important, we must endeavor to make sure that if, contrary to its desire, our country is dragged into war, it shall go in under such conditions that it will not lose but win the war; that it will not be exposed to the worst evil of all—ultimate conquest by a brutal enemy.

Sir Edward Grey, former Foreign Minister of Great Britain, has told us in his memoirs how for 9 long years before the great war he labored for these two objectives against the constantly growing menace of Prussianized Germany.

He labored assiduously for a better understanding with Germany which might prevent war, but precautions were also taken looking toward military cooperation with France in case he were unsuccessful in this first objective.

Consultations took place between the military experts of Great Britain and France to insure that, if Germany ultimately made war against them, the fleets and armies of those two nations could act in cooperation with a minimum of confusion and delay.

THERE WAS NO ALLIANCE

There was no alliance. In fact explicit record had been made, that the conversations of the military experts should not constitute an obligation to render armed assistance on the part of either nation; and when war came France did not know until the British Parliament met on August 3, 1914, that they would actually have full British assistance.

But on that fatal day when Edward Grey's hopes of peace were falling into ruin about him and he knew that he had failed in his desperate effort to prevent war, he also knew that these vital steps had been taken for military success in the war which was being forced upon him.

Subsequent history quite clearly showed that except for these prudent plans of cooperation, not only on the outbreak of war might the British fleet not have been united in its commanding position, but the first great sweep of the German armies in France might have been successful.

Today the German mailed fist has far less velvet concealing it than in the years preceding 1914.

And the German power is flanked by two other strong nations which speak the same language of force and use the same methods. It is not a time for America to forget the lessons of such a recent past.

DOMESTIC POLICIES ATTACKED

In what I have written I have been happy to express my approval of certain recent acts and statements of the foreign policy of the present administration. I regret that this approval cannot extend to certain acts of its domestic policy. These last seem to me to be in conflict with the foreign policy in which I concur.

In his January address to Congress the President truly stated that the success of a national foreign policy depends upon having behind it a strong and united people.

But national strength is not promoted by an extravagance which comes dangerously near the impairment of our national credit. It is not promoted by discouraging the business welfare of the country upon which depends the economic power of the Nation.

It is not promoted by novel and haphazard experiments with the Nation's finance.

National unity is not promoted by appeals to class spirit. Nor is it promoted by methods which tend to disrupt the patriotism of either party or the effective cooperation of the two, upon which the coordinate working of the American Government depends.

In carrying out a foreign policy adequate to meet the emergency of the present world the President should have the support of all parties and citizens. If he will disregard both the annoyances and the temptation common to the policies of normal times, and if he will confine himself to the proven paths that lead most surely to political unity and economic strength, I believe he may win that support.

But he must lead toward that accomplishment. No other can.

HENRY L. STIMSON.

NEW YORK, *March 6, 1939.*

Affirmation of Christian Pacifist Faith

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Monday, March 6), 1939

ARTICLE FROM MAGAZINE FELLOWSHIP OF MARCH 1939

Mr. CLARK of Missouri. Mr. President, recently a hundred of the most eminent clergymen in the United States drew up what is known as an Affirmation of Christian Pacifist Faith, which is published in the current number of the magazine Fellowship. It is very short, and I ask unanimous consent that it be printed in the Appendix of the RECORD, together with the names of the signers.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

[From the magazine Fellowship of March 1939]

AFFIRMATION OF CHRISTIAN PACIFIST FAITH

(What direction can be found in the gospel for the Christian and the church today when they are faced once more with the prospect of imminent war? The following statement is an attempt to formulate the answer given by Christian pacifist faith. It was drawn up by the original group brought together in New York by the Ministers' Peace Covenant. As it appears here it is the result of a long process of discussion and careful revision. Its sponsors hope it will serve as a medium which will strengthen Christian faith in the power of good as found in the cross to overcome evil as represented in war. To enlarge this Christian witness, they invite you to add your name to the "First 100" signers at the end of this article by writing Allan Knight Chalmers, 2929 Broadway, New York.)

We believe that God is the Father of all mankind, that His will as revealed in Jesus Christ is universal love, and that Christ's gospel involves the faith that evil can be overcome only with good.

We believe that in the cross is revealed God's way of dealing with wrongdoers, and that to this way all Christians are called.

We believe that war, which attempts to overcome evil with more evil, is a denial of the way of the cross.

We believe that the church is called to the way of the cross.

We believe that when the state in the prosecution of war seeks to compel the denial of the gospel, the church must resist at whatever cost.

We believe that God leads his church into new life through obedience of the individual believer in refusing war for Christ's sake.

Therefore we proclaim to a world which is once again madly preparing for war that the gospel of God as revealed in Jesus Christ which leaves us with no other choice but to refuse to sanction or participate in war, contains also its hope of redemption. We affirm our faith that the mission of the church today is to witness with singleness of heart, at whatever cost, to the power of good to overcome evil, of love to conquer hatred, of the cross to shatter the sword.

(The seven paragraphs above are a brief summary of the important statement which follows. Together these pages present an affirmation of faith which we invite all whose convictions are here expressed to sign.)

As believers in the gospel of God as revealed in Jesus Christ, we hold that good is the only force which can overcome evil. Therefore we are pacifists, for the pacifist is one who in the face of hatred and war puts to the test of action the faith that the nature of God as universal love makes certain that evil must yield to good. War, whether aggressive or defensive, whether waged for a "just" or an "unjust" cause, attempts to overcome evil with more evil. We identify ourselves with the judgment uttered by the Oxford World Conference of Churches, "War involves compulsory enmity, diabolical outrage against human personality, and a wanton distortion of the truth. War is a particular demonstration of the power of sin in this world, and a defiance of the righteousness of God as revealed in Jesus Christ and him crucified." It is therefore for us as followers of Jesus Christ morally and spiritually impossible. This conviction does not originate in any political situation. It does not emerge out of any doctrinaire opinion that force is always wrong. It is not caused by a sentimental horror of bloodshed. It is simply our conviction that the gospel of Jesus Christ involves commitment to the faith that evil can only be overcome with good. If we are mistaken in this we have misunderstood the gospel.

This conviction arises from the cross, where we see God's way of dealing with wrongdoers. In the face of violence, Jesus Christ turned away from retaliation and violent resistance. Life and property were secondary values to Him. The primary question was for Him and must be for us, How can the evil man be redeemed and brought into a just and friendly relationship to God and man? This redemptive purpose involved the choice of the cross. Sacrificing not only His personal safety but that of His friends and even of His cause, He won for them all immortality. Nonviolent, forgiving love alone reconciles man to God and man to man. For us as well as for Jesus, to choose this way requires that we must also choose to accept whatever suffering it involves. Therefore we believe that all Christians are called to live the way of the cross today.

War and preparations for war constitute a denial of the way of the cross for they attempt to overcome evil with more evil. We cannot believe that the Christian, whose every act must accord with his supreme loyalty to the God of love, can ever in the name of Christ drop bombs on helpless women and children, which is a characteristic act of modern war, or on any of his brothers, whether soldiers or civilians. Since the method of war does not vary in accordance with its purpose, whether defensive or otherwise, we cannot believe that any kind of war is truly redemptive. The tragic dilemmas which confront humanity today because nations still trust the way of selfishness and war cannot be resolved by pointing at others as guilty, or by attempting to visit judgment upon the transgressors. We have all sinned and come short of the destiny to which God has called us. The cross convicts us of our own guilt and demands that we make restitution even to the point where we penitently bear suffering for our own and our brothers' sins. Only thus, we believe, can the vicious circle of war leading to more war be broken and a permanently peaceful international order be established. If the suffering love of the cross is not for us the concrete and living alternative to the infliction of suffering in hatred on others in war, if it does not today constitute for us the basis for a lively hope of overcoming war, then it seems to us that we have rejected Christ not only as a moral guide for humanity but also as the Saviour of the world.

We believe that the church as well as the Christian is called to the way of the Cross. It is the body of Christ and is created by His spirit to carry on His redemptive work. The church belongs to Christ and is not dependent on any other power. False concern for institutional welfare sometimes makes the church forget that her sole guide is the life and teachings of her Master. The imminence of the universal death, destruction, and hatred of world-wide war, however, requires that the church repent and set her house in order for a day of great trial and the privilege of participating in cosmic processes of redemption which may yet save the world from destruction. Her only commission is to witness in words and deeds to Christ's way which is the way of the Cross. Refusal at whatever cost to abandon its ministry of reconciliation is itself a deed of constructive witness to the gospel.

Today no greater challenge to the way of the Cross lies before the church than in her relations with the state. Centuries of effort to build civilization on a secular basis and feverish policies of armament and empire have brought the state today to the place where increasingly it is claiming absolute power. To unify and prepare itself for war it attempts to assume control not only of the bodies, but also of the consciences of men. The church cannot tolerate having the state become an authority in the moral realm. Under no circumstances can it grant to the state the right to claim from Christians the supreme loyalty which belongs only to God. Being concerned with eternal values the church must challenge the temporal concerns of the state and stand in judgment upon it whenever it violates, or commands Christians who may be its citizens to violate, the love of God or the brotherhood of man. This already has come to mean persecution, and it will yet involve even more, but the church has no more right to expect exemption from suffering than her Lord.

The church will discover new truth and fresh power through the obedience of the individual church member to his Lord. The way of Christ is always open and the need for a living witness in faith was never greater than today. The Christian is never shut up to a situation in which he has no choice but to do wrong. Wars come, but Christians need not take part in them, and thus on command of the state commit sin against their primary allegiance to God. On the other hand, the inescapable pervasiveness and imminence of war offers opportunity for witness to the way of love on such a scale that through God's grace incalculable influences for peace may even now be loosed by courageous and faithful loyalty at whatever cost.

We stand at a crisis in history where the most solemn responsibility rests upon each Christian and upon the Christian church. In such an hour we call upon the church to trust God and to resist evil only with good, repudiating utterly all war and repenting prayerfully of all ways of life which lead to war, accepting the full cost and responsibility of the cross. If this involves persecution by the Caesars of our day, we call upon the church to enter into deeper fellowship with that church which refused to serve in Caesar's armies, and to invite into its unbreakable spiritual community the men and women of all lands who pray night and day for peace. In contrition and deep faith we reaffirm our undivided loyalty to the universal God of love and to the church of Him who refused to be Caesar or to overcome Caesar with Caesar's weapons. We proclaim to a world which is once again madly preparing for war that the gospel of God, as revealed in Jesus Christ, which leaves us with no other choice but to refuse to sanction or participate in war, contains also its hope of redemption. We declare our conviction that the mission of the church today is to witness with singleness of heart at whatever cost to the power of good to overcome evil, of love to conquer hatred, of the cross to shatter the sword.

Government Reorganization

EXTENSION OF REMARKS
OF
HON. GERALD W. LANDIS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1939

Mr. LANDIS. Mr. Speaker, I am opposed to the reorganization bill. The people of my district in the State of Indiana are against any reorganization bill that will give more power to the President of the United States.

This was one of my chief issues in the 1938 campaign. I was elected in a district which is normally about 18,000 Democratic.

I would like to remind you that we gained 80 seats in Congress in 1938 and never lost an old seat.

If you pass the reorganization bill, this House will be full of Republicans in 1940.

Twenty-first Anniversary of Signing of the Federal Reserve Act

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 7 (legislative day of Monday, March 6), 1939

EXERCISES COMMEMORATING TWENTY-FIFTH ANNIVERSARY OF THE SIGNING OF THE FEDERAL RESERVE ACT

Mr. HILL. Mr. President, on December 3 last, exercises were held commemorating the twenty-fifth anniversary of

the signing of the Federal Reserve Act. On that occasion appropriate addresses were delivered, and a bas relief of the distinguished senior Senator from Virginia [Mr. GLASS] was unveiled at the Federal Reserve Building. I ask unanimous consent to have printed in the RECORD the proceedings on that occasion.

There being no objection, the proceedings were ordered to be printed in the RECORD, as follows:

CEREMONY ON THE TWENTY-FIFTH ANNIVERSARY OF THE SIGNING OF THE FEDERAL RESERVE ACT (DECEMBER 23, 1913–38)

INTRODUCTORY REMARKS BY HON. MARRINER S. ECCLES, CHAIRMAN, BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

Senator GLASS, honored guests, ladies and gentlemen, we are met here today, as you all know, to commemorate the twenty-fifth anniversary of the signing of the Federal Reserve Act by President Wilson. I take great pleasure, on behalf of my associates of the Board of Governors, in welcoming you and in asking you to join with us on this occasion. It is one of importance to all of us who are interested in the Federal Reserve System. It has historic significance, I think, as we look back over the history of the United States and recognize the part that the Federal Reserve System has played in peace and in war during the last quarter of a century.

The record is a creditable one. The System has rendered a public service, a service essential in our country, as it is in every other civilized land. It is fitting, therefore, that we should pause for a moment to mark this occasion and to hear from the Honorable HENRY B. STEAGALL, chairman of the Committee on Banking and Currency of the House of Representatives, who for so many years has been identified with the development of banking legislation, who has been a stanch friend of the Federal Reserve System and a champion of sound, forward-looking banking measures in the public interest. He has been constantly and closely associated with the distinguished Senator from Virginia, whose portrait in bronze he will unveil. I am especially gratified that Chairman STEAGALL could come here today. He made the trip from his home in Alabama only for the purpose of being present this morning.

I think I may tell you also that when Senator GLASS was informed of the proposed unveiling as a part of this ceremony his natural reluctance to have it take place was overcome only because he was told that the Board had reached a decision, based upon a conviction shared by all of my colleagues and myself, that we could in no better way observe this occasion than by placing and unveiling his portrait here.

Before I present Representative STEAGALL I want to read a letter which I have received from the President of the United States:

DECEMBER 23, 1938.

MY DEAR MR. CHAIRMAN: May I not express my congratulations to you and, through you, to your associates of the Board and of the entire Federal Reserve System upon the occasion of the twenty-fifth anniversary of the signing of the Federal Reserve Act by President Wilson which you are observing today. Had it been possible for me to be present, I would have taken pleasure in joining with you, your colleagues, and your guests in the observance of a quarter century of distinguished service which has been rendered to the country's banking and thus to business, industry, and agriculture by this distinctly American institution in which all who were associated with its creation, and particularly those who, like myself, served in Woodrow Wilson's administration, justly take pride.

It is especially appropriate that you are marking the anniversary by unveiling on the wall opposite the portrait of President Wilson, a bas-relief of Senator GLASS, of Virginia, who, as one of the original sponsors of the act, has always been its defender.

The Federal Reserve System represents one of the great forward steps in dealing with our economic system. On this occasion we may well recall for our guidance now and in the future President Wilson's words, fittingly inscribed under his portrait:

"We shall deal with our economic system as it is and as it may be modified, not as it might be if we had a clean sheet of paper to write upon; and step by step we shall make it what it should be."

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

I should also like to read a letter from Senator McAdoo, who was the first Chairman of the Federal Reserve Board:

SANTA BARBARA, CALIF.,
December 17, 1938.

DEAR MR. CHAIRMAN: I have just received your letter of December 14, together with your telegram of December 16, inviting me to participate in a "simple" ceremony to be held December 23, 1938, in the Federal Reserve Building, commemorating the twenty-fifth anniversary of the signing by President Woodrow Wilson of the Federal Reserve Act, during which, you advise me, there will be unveiled a bas-relief in bronze of CARTER GLASS.

It is with sincere regret that I find myself unable to participate in these ceremonies. I rejoice that you are celebrating this historic event which has resulted in vast benefits to the American people. It is impossible to calculate the profound effects the Federal Reserve System has had upon our development during the past quarter of a century, but we can readily see that without it or some effective substitute our progress as a Nation would have been seriously impeded and restricted.

I am delighted that a bas-relief of my distinguished friend and colleague, the Honorable CARTER GLASS, is to be unveiled on this occasion. I am gratified that this recognition of his magnificent services in the formulation and passage of this great measure through the House of Representatives and his continuing and important contributions to the success of the system since its establishment is to be accorded during his lifetime. Too frequently those who have rendered immortal service to the country are not recognized until long after they have passed into eternity.

Cordially yours,

W. G. MCADOO.

I have also received a letter from the chairman of the Committee on Banking and Currency, Senator ROBERT F. WAGNER, reading as follows:

NEW YORK, N. Y., *December 22, 1938.*

MY DEAR MR. CHAIRMAN: I regret exceedingly my inability to be present and participate personally in the ceremony on the twenty-fifth anniversary of the signing of the Federal Reserve Act by President Woodrow Wilson.

I extend most cordial felicitations to the Board of Governors of the Federal Reserve System and to CARTER GLASS, to whom the Nation owes an eternal debt of gratitude for his leading part in the drafting and enactment of the Federal Reserve Act. He remains to this day the outstanding defender and exponent of the law which he fathered. This occasion signalizes for the American people a great victory in progressive action, and for CARTER GLASS a major personal triumph.

With kindest personal regards and best wishes, I am,

Very sincerely yours,

ROBERT F. WAGNER.

It gives me great pleasure to present the Honorable HENRY B. STEAGALL, of Alabama.

ADDRESS OF HON. HENRY B. STEAGALL, OF ALABAMA, CHAIRMAN, COMMITTEE ON BANKING AND CURRENCY OF THE HOUSE OF REPRESENTATIVES

Twenty-five years ago yesterday the chairman of the Banking and Currency Committee of the House of Representatives, in presenting the conference report on the Glass-Owen bill, expressed the view that the measure embodied legislation which had been sorely needed for many years. The passage of the Federal Reserve Act did not represent any hasty or immature judgment.

The necessity for currency reform had been recognized by advanced thinkers throughout the Nation. The country had become accustomed to periodic money panics, resulting in disastrous disturbance to agriculture, industry, and commerce, and special congressional committees had made repeated studies in search of a remedy. During these unfortunate periods the people found themselves without the supply of credit and currency indispensable to the normal flow of trade and commerce. At such times it even became necessary to resort to barter or the issuance of scrip with which to meet the requirements of business. An illustration of which I have personal knowledge is to be found in the case of many banks in small communities that were unable to secure payment in currency of their deposits in the large banks in financial centers. Under these conditions the large banking interests were in control of the Nation's supply of credit and currency, virtually holding the power of life and death over every other business interest in the land. The situation demanded fundamental reform, and the passage of the Federal Reserve Act was the answer of statesmen to that demand.

The party then in power had declared that banks existed for the accommodation of the public and not for the control of business, and the Congress proceeded to make that principle a living reality.

Happily for the Nation, the people had summoned to the office of Chief Executive a man with a vision unclouded by selfish interest and with an unwavering devotion to the public weal. The task was so stupendous that it presented a challenge to the leadership of the President, and required leadership in Congress possessing the same lofty patriotism, rare courage, and consummate skill.

At that time a modest, unobtrusive, self-styled "country editor from Virginia" was chairman of the Committee on Banking and Currency of the House of Representatives and leader in the House in all matters of legislation touching banking and currency. During his years of service in the House he had quietly and studiously acquired vast stores of information useful to him and to his committee in meeting the problems confronting it. It is no exaggeration to say that deeper or more painstaking study was never given to any measure than was given to the Federal Reserve Act by the chairman of the House Banking and Currency Committee. Of course he was ably supported by his associates, but his was the responsibility, his the task of piloting the legislation through his committee and to final passage in the House. This was accomplished. The historian of the future, looking back over the period encompassed by the passage of this act, will be amazed, not only at the wealth of information brought to bear at all critical stages, but at the consummate ability with which the chairman of the Banking and Currency Committee of the House met the onslaughts of opponents, both within and without the Halls of Congress.

It is doubtful that any great measure ever encountered more stubborn and relentless opposition than was arrayed against this proposal, both in the Congress and in the big-business circles of the country. A horde of powerful lobbyists, such as seldom seen, gathered in Washington, filling the air with dire predictions of confusion and chaos to follow the passage of the act.

The chairman of the Banking and Currency Committee of the House, now the beloved Senator from Virginia, with the consummate courage that has characterized his entire career, undaunted and undisturbed by the clamor of the hour, pursued the even tenor of his way until he achieved the goal that ushered in the dawn of a new day of freedom for the legitimate business interests of the Nation. No measure was ever presented to the House of Representatives by any chairman of a committee with a more comprehensive grasp of the measure in hand and of all pertinent information that could be desired by the House. The masterly manner of presentation has never been surpassed in the history of the House. Objections were met with devastating facts or reason. Opponents became supporters, and the final vote was a triumph of leadership seldom equaled in the House.

The Federal Reserve System afforded a supply of currency and credit adequate to the growing demands of the country. The volume of industrial production increased by 30 percent in 2 years following the inauguration of the System, with corresponding improvement in agriculture and expansion in trade and commerce. During the same period the national income increased approximately $15,000,000,000. The System supplied facilities for financing the Government during the period of the World War. The volume of Government securities handled through the Reserve banks during that period amounted to approximately $50,000,000,000. The System enabled us to finance the Great War and to hasten its conclusion. It is today the greatest instrumentality of the Government for meeting the problems of the present. Strange as it may seem, if at any time after the System had been tested by experience a proposal had been offered to repeal the law, it would have encountered even more strenuous opposition and from the same sources that opposed the original measure and indulged such dire predictions of disaster to follow its enactment.

The part played by the illustrious Senator from Virginia in connection with the establishment of the Federal Reserve System made him the choice of the President for Secretary of the Treasury, in which capacity he rendered most able and conspicuous service. This does not by any means complete the story of his career. Senator GLASS, as chairman of the Committee on Banking and Currency of the House of Representatives, gave profound study to the subject of farm credits and the Federal Farm Loan Act was sponsored by him and passed under his leadership.

Since the passage of the Federal Reserve Act he has been its constant defender and protector, and as Senator he has sponsored and supported new legislation to strengthen the System and to enlarge its service to the public—always in conformity with the original purposes of the act. Senator GLASS saw the evils and dangers attending the orgy of speculation during the period preceding the great depression and under his constructive leadership legislation was enacted that terminated many of the evil practices which obtained and brought about the desired improvement since recognized. He is the accepted authority in the Senate in matters of legislation relating to banking and currency. His activities cover a wide range too extensive for review here and have left deep and lasting imprint on the Nation's financial structure. His lofty patriotism, great learning, and superb courage have endeared him to all his associates, as well as to the people of the entire Nation.

A great Roman said that he would rather posterity would ask why he had not held public office than to inquire why he had. Historians in the years to come will wonder why Senator GLASS was not made the nominee of his party and elevated to the Presidency of the United States following the Wilson regime. His name will have a place in history such as coveted by the great Roman.

We know not how long this marble structure or this bas-relief will survive the vicissitudes of time, but the name and fame of CARTER GLASS, of Virginia, will endure to enrich the annals of the Republic.

Senator GLASS, we unveil this bas-relief placed here as a testimonial to your distinguished public service and as an expression of esteem and admiration of those who know you and love you.

(Mr. STEAGALL then unveiled the bas-relief of Senator GLASS and those present arose with an ovation of applause. The Star-Spangled Banner was played by the Marine Band amid continued applause.)

Mr. ECCLES. Ladies and gentlemen, that concludes the ceremony.

Great Britain and the Balfour Declaration

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

Mr. SABATH. Mr. Speaker, I believe my record in this body will bear me out when I state that I have never hesitated justly to criticize even the largest and most powerful of American newspapers when I felt they deserved it for wholly unjustified and vicious attacks upon our great President and the American Congress. But I want to be fair. When I feel they deserve praise for an editorial defense of the cause of humanity and justice I will never withhold my unstinted approbation.

It is with a great deal of satisfaction and pleasure that I now express my sincere thanks to Mr. Hearst for an editorial which appeared recently in his newspapers under the heading "England's Betrayal."

The world still recalls and always will remember England's shameful betrayal of democratic Czechoslovakia to the arch-tyrant Hitler. But Mr. Hearst well raises the question whether England has now fallen even so low as to deliberately disown its pledge to set up a national Jewish homeland in Palestine. Upon the assurance of Great Britain that they would be protected in Palestine, the Jewish people, to the number of more than 400,000, have settled in that once barren and almost valueless domain, and have changed it from a desert to the proverbial land of milk and honey, increasing by their industry its value by a hundredfold.

Are they now, Mr. Hearst inquires, to be deserted for the benefit of a mere handful of Arab terrorists? It seems unthinkable that Great Britain could, indeed, descend so low. Mr. Hearst states the fundamentals of the new crisis for the Jews in Palestine so succinctly and eloquently that I desire to reproduce his editorial in full:

ENGLAND'S BETRAYAL?

Reports from London indicate that Great Britain may disown its promises to set up a national Jewish homeland in Palestine.

Should that prove true, should England turn its solemn pledges to the Jewish people into scraps of paper—the entire world will be aghast.

In November 1917 the Balfour Declaration committed Great Britain to "view with favor the establishment in Palestine of a national home for the Jewish people."

Six years later Great Britain took over Palestine under a mandate which specified "the mandatory shall be responsible for placing the country under such political, administrative, and economic conditions as will secure the establishment of the Jewish national home."

In the past 20 years, more than 400,000 Jews settled in Palestine. With faith in England's promises, the Jews transformed a desert into a land "flowing with milk and honey." They established 230 colonies, built the thriving city of Tel Aviv, with a world port, wiped out malaria, developed industry and commerce, built a university and hospitals.

Can England callously overlook all that—and the promise it holds for the future—because it wants to play politics with the Arabs? For surely no one believes England has fallen so low as to be intimidated by a handful of Arab terrorists.

The proposed betrayal of the Jews comes at a particularly poignant time. The Jewish problem in Europe is acute. Hundreds of thousands are homeless, hopeless refugees.

Palestine offers a haven to these persecuted, harassed people. Zionists declare that Palestine can absorb 100,000 refugees immediately and 100,000 more each year for the next 5 years.

Shutting the gates of Palestine against these refugees will constitute a high crime against civilization.

The mandate should be preserved. The Balfour Declaration should remain in force.

GREAT BRITAIN'S MANDATE SHOULD BE HELD SACRED

The Balfour Declaration was not only a promise to Jewry, it was a sacred promise to the American people. In 1918, as I recall it, Lord Balfour visited this country with a British commission seeking the assistance not only of the Jews, but of all Americans. I heard him give his solemn pledge, and the pledge of his Government, that Great Britain would never shirk the responsibility of maintaining Palestine as a national homeland for the Jewish people.

The American people responded nobly to Lord Balfour's plea for aid. We kept the faith. Can England repudiate her word and still have honor?

The New York Times of March 3, 1939, has this to say:

BRITAIN IN PALESTINE

By the terms of the mandate which it accepted in Palestine, the British Government pledged itself to create in that land "a national home for the Jewish people." That phrase has meant different things to different men. To some it has meant a political state, to some it has meant a cultural renaissance, and to others it has meant a place of refuge and the promise of a fuller life. But whatever it has meant to different men, the very minimum of meaning that can possibly be attached to it is a pledge that Britain will continue to conserve what has been created in Palestine under British guidance.

No matter what pressure is brought to bear from whatever sources, the British Government cannot with honor surrender this measure of responsibility. It cannot afford to leave room for the slightest doubt that whatever plan for the settlement of a long-vexed question may be brought forward, whatever policy is pursued in London, whatever constitution is proposed for Palestine, the full strength of the British Empire will be used to protect not only the men and women who have put their trust in Britain's word but the new world which these men and women have built with sacrifice and courage.

In our country we hold a trust to be sacred. The foregoing editorials are but samples of many which have recently appeared in newspapers all over the country. They show to how close a degree Americans are following the policies of Great Britain in Palestine.

Extension of Oil and Gas Prospecting Permits

EXTENSION OF REMARKS

OF

HON. FRANK O. HORTON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1939

RESOLUTION BY THE LEGISLATURE OF WYOMING

Mr. HORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution recently adopted by the Legislature of the State of Wyoming:

Senate Joint Memorial 3

Joint memorial memorializing the Congress of the United States of America to immediately and favorable consider and act upon H. R. 2662 and H. R. 2663, being acts to amend the Federal Oil and Gas Leasing Act of February 25, 1920, as amended

Whereas there are now pending in the current session of the Congress of the United States of America two proposed bills to further amend the Federal Oil and Gas Leasing Act, as amended, and being H. R. 2662 and H. R. 2663; and

Whereas said H. R. 2662 proposes to extend certain oil and gas prospecting permits issued under said Federal Oil and Gas Leasing Act; and

Whereas said H. R. 2663 provides for the issuance of oil and gas leases with reasonable and workable rental, royalty, and bond provisions; and

Whereas said proposed legislation is necessary in the public-land States in order to promote the prospecting for minerals on the public domain located in the Western States, will be of great importance to all the citizens of Wyoming, will assist public education, will increase employment, and will add to the prosperity of this State and of the Nation: Now, therefore, be it

Resolved by the Senate of the State of Wyoming (the house of representatives concurring), That the Congress aforesaid be, and it is hereby, memorialized to immediately and favorably consider and act upon said bills—H. R. 2662 and H. R. 2663—so amending said Leasing Act in the interests of the citizens of the State of Wyoming and of the United States; and be it further

Resolved, That certified copies hereof be promptly transmitted to the President and Vice President of the United States, the Speaker of the House of Representatives, United States Senator JOSEPH C. O'MAHONEY, United States Senator HARRY H. SCHWARTZ, and Representative FRANK O. HORTON, and to the chairman of the Public Lands Committees in the United States Senate and House of Representatives.

Birds of a Feather

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

ARTICLE BY DR. V. O. WATTS

Mr. AUGUST H. ANDRESEN. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I am quoting herein a very significant expression of Dr. V. O. Watts, of Northfield, Minn., as it appeared in the Northfield News on Thursday, March 2, 1939, as follows:

[From the Northfield (Minn.) News of March 2, 1939]

BIRDS OF A FEATHER * * *

(By Dr. V. O. Watts)

Mr. Thomas Amlie, recent Roosevelt nominee for the Interstate Commerce Commission says "that in his economic views he is not a Marxian but a Veblenite." Let's see what this means.

"Business enterprise," said Veblen, "is typically directed to the gain of the businessman at the cost of the community. The aim of the businessman is to upset or block the industrial process," because "the smaller produce he can continue to turn out for a given return * * * the better it suits his purpose." In short, the highest achievement in business is the nearest approach to getting something for nothing. Therefore, he maintained, businessmen are incompetent to manage industry.

The remedy for our economic ills, Veblen believed, is simple: "Disallowance" of all corporation securities, articles of partnership, and other legal instruments which give title to property not used by the owner.

This involves much more than confiscation of the larger properties. For Veblen also proposed to disallow property rights wherever anyone hires someone else, even down to the household goods on which a domestic servant is employed. (The Engineers and the Price System, pp. 156–159).

In place of business control of industry Veblen would set up a soviet of engineers. Money, monetary guides, and monetary incentives would be abolished. Industry would be guided by technicians using the logic of inanimate facts and working according to a comprehensive set of rules and blueprinted orders.

This new order, Veblen predicted, will eventually come about through the complete break-down of business management and some sort of revolution. "When things get bad enough some sizable element of the underlying population * * * will forsake or forget their moral principles of business as usual, and will thereupon endeavor to take this businesslike arrangement to pieces and put the works together again on some other plan."

In all of this it is hard to find wherein Veblen differs from Marx. And those who still believe in the merits of business enterprise may be excused for questioning the fitness of Veblenite Amlie for the Interstate Commerce Commission.

In fact they may justly ask what are the aims of a President who makes such a nomination.

Adequate Farm Relief and Monetary Reform

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1939

Mr. PATMAN. Mr. Speaker, in order for this Nation to be prosperous, it is absolutely necessary that the farmers receive a larger share of the national income than they are now receiving and more than they have received in recent years. Considering the fact that every major law represents a compromise of view or a sacrifice of opinion on the part of practically every Member of the House and the Senate, I doubt that it will be possible for any law to be enacted to help farmers that will receive anything like the unanimous approval of the farmers themselves. I personally believe the present law can be improved upon in many ways, but major changes should not be made this year, since it would interfere with allotments and cause trouble that the farm program has caused in the past by reason of delay in allotments and making payments to farmers.

PRESENT ADMINISTRATION HELPED FARMERS

I believe it is the duty of this Congress to provide parity income for the farmers. It cannot be done quickly, I realize, but we must continue to work on this problem until that goal has been reached. All of us who have the interest of the farmer at heart are deeply grateful to the present administration, which has made it possible for the enormous sums of money to be made available to the farmers for the purpose of correcting—at least in a substantial way—the great difference between what the farmer has been receiving and what he is entitled to receive for his production. For the first time in the history of this Nation, billions of

dollars have been placed into the pockets of the American farmers by the Federal Government and from funds contributed by people all over the Nation. This money has not only helped the farmers; it has helped everybody. By increasing the purchasing power of the farmer, the income of the workers is also increased, which increases the workers' purchasing power. In addition, the national income is increased several times for every one dollar paid to the American farmer. Therefore, it is in the interest of all the people whether they live on the farm or not or whether they are interested in farming or not that the buying power of this great group should not only be held up, but should be increased in order to help the entire Nation, as well as the farmers. Discriminatory freight rates is another question that must be settled in order to give the producers a square deal.

MONETARY CHANGES

The price of any farm commodity depends upon the supply and demand of the product and the supply and demand of money. As money goes up in price or becomes more valuable, everything else, and especially farm products, are lowered in price in proportion. If we have a short cotton crop or a short wheat crop and there is not enough cotton and wheat produced in any one year to more than supply the domestic market, yet it is possible for the price of cotton and wheat to remain low if money is made sufficiently scarce. In other words, the value of money has as much to do with the value of farm products as any other one thing that I know of.

It is not generally known that our money supply is controlled largely by people who are selfishly interested in making the supply scarce. Twenty-four banks, 13 of them in one city, own one-third of the banking resources of the 16,000 banks in the entire Nation. A few men controlling a few banks control the corporate wealth of this Nation.

FEDERAL RESERVE BANKS NOT GOVERNMENT INSTITUTIONS

Many people believe that the 12 Federal Reserve banks belong to the Government and that the Federal Reserve notes, which represent most of our currency are issued by these banks for the Government. The truth is, the Federal Government does not own one penny of stock in these 12 Federal Reserve banks. This stock is owned by private banking corporations and the money is issued for these private banks based upon the credit of the Nation, absolutely without cost except a few cents for every thousand dollars charged up for the actual cost of printing.

It is time for the American people to wake up on the money question. The science of money should be taught in the public schools. It is strange that people do not know any more about money which governs the price and value of practically everything else.

HOW $1,000,000,000 A YEAR CAN BE SAVED

It is my belief that the Federal Government should not pay interest on its obligations. This change cannot be made quickly or suddenly, but it can be made eventually, and in that way the Government will save a billion dollars a year, which could be used to provide parity income for farmers, old-age pensions, or for other worthy purposes. In addition the States, counties, and cities should be able to get their money from the Federal Government to refinance existing obligations and provide for new obligations that are issued solely for public purposes from the Federal Government for a small service charge not exceeding one-half of 1 percent interest per annum; possibly much less. In this way the States, counties, and cities would save approximately $750,000,000 a year and would reduce by one-half the taxes now paid by the people in these different States, counties, cities, and political subdivisions.

I know these things cannot be accomplished quickly. It will take time. A start should be made now. The No. 1 step is for the Government to purchase the $132,000,000 worth of stock in the 12 Federal Reserve banks and operate these banks as Government institutions, as they should be operated. They are not in the banking business. They are in the money-issuing business. At least that is their most important duty.

BOOK ON MONEY

The Honorable Robert L. Owen, former United States Senator from Oklahoma, who was chairman of the Committee on Banking and Currency of the United States Senate when the Federal Reserve Act was passed, has prepared and contributed to the people of this Nation, without charge, one of the best books on money I have ever had the privilege of examining.

This book by Senator Owen is in the form of a Senate document. It is designated Document No. 23, Seventy-sixth Congress, first session. It is referred to as—

National economy and the banking system of the United States. An exposition of the principles of modern monetary science in their relation to the national economy and the banking system of the United States.

This book is written in language that a student in elementary grades can understand. It deals with such questions as:

Why money was invented; forms and functions of money as a medium of exchange and as a measure of value; the necessity for stable money; the quantitative theory of money; how prices are influenced; how the value of money influences the price level; how money can be contracted and expanded; velocity of demand bank deposits; how banks create and destroy billions of dollars of money annually; money in relation to debt, interest, labor, and monopoly; the inflation "bogey"; the effects of stable money on banks, manufacturers, merchants, contractors, agriculture, wage earners, teachers, the submerged third, the wealthy class, and others; and Lincoln's monetary policy.

I quote one paragraph on page 58 of this booklet:

There are other devices and practices to the disadvantage of the borrower. This is one of the penalties which naturally flow from turning over to privately owned corporations and banks the creation of our money and a practical monopoly of our money supply; and the power of the banks to contract the money supply and thereby increase the burden on the debtor, whose income and whose property is diminished in value by the process of contracting the volume of money.

This book should be read by every student in our schools. It should be studied by every person in public life. I would like to see it made a textbook in our public schools.

COPY OF BOOK AVAILABLE WITHOUT CHARGE

Anyone desiring a copy of this book—Senate Document No. 23, Seventy-sixth Congress, first session—should request his Representative or one of his Senators to send him one, as they may be obtained from the Document Room in the United States Capitol without charge.

In These 6 Years

EXTENSION OF REMARKS

OF

HON. FRANK O. HORTON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1939

EDITORIAL FROM THE CHARLESTON (S. C.) NEWS AND COURIER OF FEBRUARY 4, 1939

Mr. HORTON. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following editorial from the News and Courier, of Charleston, S. C., of February 4, 1939:

[From the Charleston (S. C.) News and Courier of February 4, 1939]

IN THESE 6 YEARS

The policies of the United States in the last 6 years have well-nigh destroyed the South's export of cotton, and have therefore depressed the price of lands. They have increased the national debt about $24,000,000,000, or 120 percent. They have not perceptibly reduced the number of the unemployed; indeed, they have immensely increased unemployment in this part of the country by compulsory reduction of crop acreages.

The cry of the poor from the great cities is louder and more despairing now than it was in 1932.

The gold value of the dollar has been reduced, and the bond of the United States to pay in gold of a weight and fineness specified in the bond has been deliberately violated. The United States has broken its word to creditors.

The Government's policies make the possessor of gold a bootlegger, and the law is enforced as never it was against the bootlegger of whisky.

The Government has spent $13,000,000 for the support of artists who failed to produce salable goods, paying them about $90 a month, and plowboys in South Carolina, not on relief, taking care of themselves and asking no favors, are earning about a dollar a day.

Taxes in these 6 years have been enormously increased.

In the country, in South Carolina, is more idle money than has been at any time since the Confederate War—read the bank statements and you will not dispute it. It is idle because confidence in business has been destroyed. Who wants to build a cotton mill when the mills we have are struggling under the burden of taxation and harassed and restricted by meddlesome laws?

Who wants to save money when government in a hundred ways diligently spreads the notion that to save it and to have it is not respectable? Is not the American theory now dominant that all employers are oppressors and that all rich men are tyrants and rascals?

What has the United States to show for the last 6 years? Unfinished dams. In some instances, abandoned dams and canals. The balance of power in elections transferred to the relievers and the body of officeholders enlarged from 450,000 to more than 800,000. Immensely increased taxation, remember, and no reduction of unemployment.

In 1917 when the United States entered the World War its best defense was its credit. It owed less than $2,000,000,000—less than is appropriated for relief in a year now. Men and women—and children—bought Liberty bonds, bought "till it hurt"—and it did not hurt, for the bonds were payable in gold, were as good as gold. (Under the Wilson, Harding, Coolidge, and Hoover administrations was no repudiation of a gold bond.)

This country could defend itself effectively in war again, but the money to wage it would not be raised by selling bonds to its people. They no longer believe in its bonds. "Minute Men" speakers would be greeted sullenly and with a hollow laugh. The United States to defend itself would seize the property of the people. Hitler's methods would be the only methods practicable.

Such is the condition to which the United States has come in 6 years of peace. The people of South Carolina share the responsibility for it. They vote. They have leaders.

Frank and Jesse James in Review

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Monday, March 6), 1939

ADDRESS BY HON. HARRY B. HAWES

Mr. TRUMAN. Mr. President, I ask leave to have printed in the RECORD an address delivered by Hon. Harry B. Hawes, former Senator from Missouri, before the Missouri Society at Washington, D. C., February 25, 1939, entitled "Frank and Jesse James in Review."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Missourians, last month your congressional delegation and others were invited to witness a preview of the movie Jesse James. The picture is excellent; the acting well done. It is especially worth while for those interested in horseback riding, fighting, and pistol marksmanship.

Following the picture review, we entered into a sidewalk conversation, wherein all the assembled Missourians agreed that while, as drama, the reel is intense and interesting, it is historically inaccurate.

Your new president, Congresman ZIMMERMAN, knowing that I possess two revolvers owned by Jesse James; that my acquaintance with his brother, Frank James, extended over some years, and that I had personal relations with the leading lawyers in the celebrated Frank James trial, requested me to appear this evening and attempt to draw an historically correct picture of the real James boys.

The work could have been done better by either of your Senators or some of the Members of the House. Senator CLARK is an experienced historian, Senator TRUMAN hails from Independence, where the James boys operated. Congressman BELL represents the Independence district; JOSEPH SHANNON sometimes changes his discussion of Jefferson into a more tragic discussion of the James boys, and RICHARD DUNCAN'S district includes the district where Jesse James was born and killed.

But the call came, and I must attempt to do my bit.

My first move was to call upon the Congressional Library for such books and papers as it had relating to the James boys. There I discovered there were but three volumes: One by Maj. John N. Edwards, entitled "Noted Guerillas or the Warfare of the Border," the second, "Quantrill and the Border Wars," by William Elsey Connelley, and the third, by Robertus Love, entitled "The Rise and Fall of Jesse James."

From these three books comes what there is of written history. Major Edwards was in favor of the property right in slaves and was pro-Missourian; William Connelley, a scholarly man, was an abolitionist and pro-Kansan.

The Edwards book draws a picture of courage, conviction, and patriotic guidance; the Connelley book paints Quantrill and his men as murderous, unprincipled brutes. The third book, that by Robertus Love, is less partisan and seems to draw a fairer, better-balanced account and is confined more closely to the career of the James boys.

We note the dates of publication: Major Edwards' book was printed in 1877; Connelley's in 1909; Mr. Love's in 1926. Mr. Love's later book sustains the old assertion that real history must be written remote from the action or the times that beget prejudice, heat, and passion.

A fourth book, "American State Trials," edited by John D. Lawson, was published in the year 1919, and devotes nearly 200 pages to the trial of Frank James.

The newspaper and magazine articles of the last 10 years were developed largely from these four books and it will be observed that, relying upon our great Congressional Library, the authorities are not exhaustive.

The James boys belonged to the western half of Missouri; they were essentially the product of an environment; they grew up in an atmosphere of border warfare.

In February 1821, at which time Missouri was admitted to the Union, it was accompanied by what has since become historically known as the Missouri Compromise, which declared that all territory west of Missouri and north of latitude 36°30' should forever be free from slavery.

Some years ago, I was called upon to deliver an address over a national hook-up on the one hundredth anniversary of the opening of the Santa Fe Trail, which extended from St. Louis to the great Southwest and California; and during the same year, on another occasion, to deliver another address over a national hook-up on the subject of the One Hundredth Anniversary of the Oregon Trail, which led from St. Louis to the Northwest and Oregon.

We know that the Mormons began their long march from Independence, Mo., to Utah, and that the Pony Express with its fast delivery of mail, started from St. Joe and reached far into the West and Southwest. These were the overland routes.

But Missouri's story and its development have been controlled largely by three mighty rivers. The Mississippi River extending along our northern boundary to the Gulf, drains the waters of 31 States. Down the Ohio River, in flatboats, came what were called in those days "alligator men", carrying the early frontiersmen, their families, and their freight to the Mississippi River and then to Missouri. And down the Illinois River came the early French settlers. Just a few miles above St. Louis flowed the great Missouri River. Far distant to the west, in the mountains, where I remember some 35 years ago, after a hard day, shooting an elk, we washed our hands in a little stream. Upon inquiring where it emptied, the guide said: "You fellers are from St. Louis. This water is going to pass right by St. Louis", and that was 1,000 miles away.

Up the great Mississippi came the Spaniards; down the river came the French; and later the English from the Ohio. At various periods the flags of five different nations flew over the little village of St. Louis, named after a French king and in this vicinity were many settlements carrying the names of the saints. In one of these, Ste. Genevieve, I found in some old archives the record of a visit of a bishop, of Bardstown, Ky., to the little village of St. Louis, wherein he wrote: "They had a wicked playhouse and indulged in dancing."

In the early days, immigation into one section of our State was almost all Irish. Their descendants still control that locality in one of our northeastern counties.

In '48 and '49, due to a political revolution in Germany, came the highest type of German-Americans, who settled in our county.

But, the predominating immigration in later periods had their source in the New England States and from Kentucky, Tennessee, and Virginia. The New Englanders went in large number to Kansas. Those from the South settled throughout Missouri.

Here were two types, with two diametrically opposed political views. The settlers in Free Soil Kansas were opposed to the institution of slavery and favored the liberation of slaves. Southern Missouri settlers were slave owners and believed in that institution.

The border feud between western Missouri and eastern Kansas started long before the Civil War. They were fighting across the border line from 1854 to 1861.

Residents along the Kansas border (called "Jayhawkers" by the Missourians) would cross the border to liberate slaves, and the Missourians (called, by Kansas, "Bushwhackers") would retaliate by crossing into Kansas in an effort to affect elections of Representatives favorable to the perpetuation of slavery.

There were invasions from both sides, and it was in an atmosphere of this kind that the James boys were born. It was largely a southern element on the Missouri side and a northern element on the Kansas side.

The parents of the James boys were from Kentucky. Zerelda Cole, their mother, was educated in a Roman Catholic convent at Lexington. She married a Baptist minister, Robert James, who was then a student at an academy in Georgetown, Ky.

At the time of their marriage the Reverend Robert James was 23 years of age, his bride 17. Visiting the mother of Zerelda a year later in Clay County, the young couple liked Missouri and settled there. The father was an energetic clergyman who preached on Sundays and farmed during the week. He organized several congregations and became widely known in his section as an evangelist.

The father organized a company to visit the California gold fields and never returned, dying in California 3 weeks after his arrival.

Both boys attended Sunday school and church. One of the historians reports that a thoroughly reliable minister reproached young Jesse for his conduct. I quote Mr. Love:

"Jesse," said the old pastor, "Why don't you stop these things you're doing?"

"If you tell me just how I can stop," Jesse replied, "I'll be glad enough to stop; but I don't intend to stop right under a rope."

"Well, anyhow, you ought not to forget your religion, Jesse. You were brought up religiously. Your father was a good man of God. I'm sorry you've forgotten your bringing up, Jesse. Get back to your religion."

The outlaw thrust his hand into his inside coat pocket and drew forth a small book, which he handed to the minister.

"It was a copy of the New Testament," said the venerable clergyman, in relating the incident shortly before this was written. "I looked through it and was astonished. Never in my life have I seen a Bible so marked up, showing such constant usage."

Between the extremes of horrification and glorification of the partisan chronicles of that day, somewhere between lies the truth and, despite the temptation to emphasize the extreme, my remarks are intended to be confined to authenticity and facts.

One danger lies in an inclination to create a legendary figure, and we must not permit our boys and girls to accept the myth for the actuality.

Sometime in the year 1400 a legendary figure, Robin Hood, first appeared in English romance and poetry. He is supposed to have robbed the rich and given to the poor; to have led a merry life of outlawry, protected in his depredations by the lowly, whom he defended.

If not cautious, we may build another mythical character from the lives of the two boys who were the product of environment, who robbed and murdered in a setting which in part condoned these things.

They did not pick pockets, steal by stealth, burgle in the nighttime, nor rob the poor of a few dollars; and it is true that the line of friendship was sharply drawn and seldom violated. The horse and the revolver were their instruments of assault; they were credited with having respect for women, being fond of children, kind to dogs; but they did murder ruthlessly; they did rob and steal; burn and destroy property; run off horses and cattle; and violate law and order in their raids.

Human life with them was not a sacred thing; it was wiped out without mercy; arson and theft were part of their plans; surprise, marksmanship, and revolvers their agencies.

It is true they were the victims of well-developed feuds, where life was held cheaply and reprisals seemed justified. Their earliest years were associated with bloody deeds before the Civil War. During that period they were under command of superior officers and troops at war; but after Lee's surrender tens of thousands of soldiers returned to find their homes burned, rotten fences, horses gone, former slaves in public office—home to dire poverty, distress and desolation; yet these men did not murder and burn and rob—they went to work!

So, while we may sympathize, we should not exceedingly glorify actions which were better controlled in many districts under circumstances almost as provocative.

We all admire courage, marksmanship, horsemanship! There was romance if not chivalry itself when those men wore uniforms, even though crude plumes decked their hats as old daguerreotypes picture them for us, and carried three or four pistols. But this does not weigh with the thoughtful man as against law and order and humane readjustment.

In this border warfare no prisoners could be taken because there were no prisons. There were no ambulances or hospitals for wounded. It was wipe out or be wiped out. When action began, it was live or die.

QUANTRILL

The James boys both at times served under Quantrill and Frank was with him at the time he was captured and later died of his wounds in Kentucky.

Connelley described him: "Of the Civil War in America he was the bloodiest man. Of the border he was the scourge and terror. Idolized for his ferocious blood madness, * * *. With red hands he gave fair cities to torch and pillage and reveled in the groans and cries of the helpless and innocent victims of his ruthless, inhuman crimes."

This historian gives Quantrill's birthplace as Canal Dover, Ohio, and the date of his birth as July 31, 1837. With much evidence of authenticity, Quantrill always claimed that he was born in Hagerstown, Md., and came from a family of Southern sympathizers and of proslavery proclivities.

Major Edwards asserts that he was born at Hagerstown, July 20, 1836, and did not move to Ohio until his 16th year. Robertus Love accepts the Connelley version of the birth in Ohio, and tried to separate fiction from fact, but Quantrill's own assertion of his nativity and expeditions to avenge the alleged slaying of a brother in Kansas and his claim of having personally killed 30 of the men who had murdered his brother were generally accepted as true.

Mr. Love states: "Many of the guerrillas conceived themselves to be fighting for vengeance. Relatives of many of them had been murdered or mistreated otherwise by Kansans in the border warfare over the free-soil problem, preceding the Civil War. They accepted Quantrill's tale gladly, as partial justification for their own course in fighting under such a bloodthirsty leader. Because of his supposed wrongs and his desperate course in redressing them, Quantrill became their immediate and intimate hero. The guerrillas who survived the war continued to believe the Quantrill invention, for it was altogether that. To this day most if not all of the small group of surviving Missourians who rode under the Quantrill banner believe that their chief told them the truth and that he was a much-wronged man."

Edwards states: "Charles William Quantrill was to the guerillas their voice in tumult, their beacon in a crisis, and their hand in action. * * * His was the central figure, and it towered aloft amid all the wreck and overthrow and massacre that went on continually around and about him until it fell at last as the pine falls uprooted by omnipotence or shivered by its thunderbolt."

But, all three authorities agree that Quantrill was a handsome man, devoid of fear, a wonderful horseman, a crack shot; that he was educated; wrote fluently; carried on a correspondence almost weekly with his mother and other relatives; was in his way generous to those who surrounded him; that his flair was for a fine horse; a plumed hat; his method a charge on horseback. He never used a rifle; his weapon was the revolver, and we find that the James boys, in nearly all their outlaw exploits, adopted his method of the horse, the surprise, the revolver. They continued in this way after his death in the field of outlawry.

In a small band that crossed the Mississippi and entered Kentucky, Frank James rode with him.

As to the object of his entering Kentucky there is again difference of opinion. Connelley was not sure whether he was trying to reach Washington to attempt the assassination of President Lincoln or on his way to Richmond to confer with General Lee. He had with him Frank James, and Connelley describes the journey over the old Hawesville Road, of murders on the way, and, finally, the wounding, surrender, and death of Quantrill. How he made his headquarters in the Green River country, plundered the town of Hickman, Ky., entered Danville (where I attended school), and there robbed citizens, plundered a store, and destroyed a telegraph office.

At Wakefield, Ky., he was asked by Miss Nannie Dawson to write in her autograph album, which he did in four verses, the first of which read:

"My horse is at the door
And the enemy I soon may see,
But before I go, Miss Nannie,
Here's a double health to thee."

Very fair verse for one whom Connelley describes as a scamp and a murderer, and Edwards describes as a hero and a soldier.

Capt. Edwin Terrill, then about 19 years of age, with a company of Federal troops, pursued Quantrill's band and finally encountered them at Taylorville. The Missourians were dismounted; Quantrill was asleep in a hay loft. Terrill's men charged; then a running fight began. Young Terrill had a wound but was enabled to use a revolver.

The chronicle states that he probably fired one of the shots that reached Quantrill while he yelled continuously: "Give 'em hell, boys! Give 'em hell!"

Frank James found his wounded chief. They first thought his wounds were not serious, but Quantrill felt that they were mortal.

Captain Terrill finally effected the capture. Quantrill fired as he ran, was struck by a bullet under the left shoulder-blade, which reached the spine and created paralysis below his arms. Another shot carried off the index finger of his right hand. He was moved in a wagon to Louisville, delivered to Gen. John M. Palmer, and died of his wounds in 1865. Frank James remained with him to the end.

ORDER NO. 11

Quantrill probably had more to do with forming the character for outlawry of the James boys than any other living man, but the whole community in which they lived was affected by the famous Order No. 11. Major Edwards is rather fair about it in his treatment and exonerates General Ewing from personal responsibility for the issuance of this order. He states:

"General Order No. 11 came from district headquarters at St. Louis, where Schofield commanded, and through Schofield from Washington City direct. Ewing had neither choice nor discretion in the matter."

Describing the order: "It required every citizen of Jackson, Cass, Bates, and a portion of Vernon Counties to abandon their houses and come either into the lines of designated places that were fortified, or within the jurisdiction of said lines. If neither was done,

and said citizens remained outside beyond the time specified for such removal, they were to be regarded as outlaws and punished accordingly. Innocent and guilty alike felt the rigors of this unprecedented proscription. For the Union man there was the same line of demarcation that was drawn for the secessionist. Age had no immunity; sex was not regarded. The rights of property vanished; predatory bands preyed at will; nothing could be sold; everything had to be abandoned; it was the obliteration of prosperity by counties; it was the depopulation of miles upon miles of fertile territory in a night."

The picture by the celebrated painter Capt. George C. Bingham of burning and plundered homes and a sky with flames and smoke and long trains of helpless fugitives still finds a place in many of the homes of Missouri.

It is disagreeable to resurrect and present again some of the brutalities that grow out of war, and in some cases out of bureaucracy as apparently was Order No. 11.

It does not require a vivid imagination to visualize the effect upon all living persons in the four counties covered by this order of evacuation and concentration, nor surmise that it was vigorously opposed and disobeyed; but it must be remembered that it was the burning and massacres at Lawrence, Kans., that was the inciting cause for its issuance.

THE JAMES BOYS—JESSE'S DEATH

After the death of her husband, Rev. Robert James, Mrs. James later married Dr. Reuben Samuel. Dr. Samuel's household was charged with harboring—and probably did harbor—some of the guerrillas and bushwhackers. There was retaliation and punishment.

On one occasion one of the so-called regulators produced a cord, tied the doctor's hands behind him, threw a noose over his neck, and suspended him from a tree. Mrs. Samuel had followed the party, and as they rode off she cut the rope and saved her husband's life. Later the regulator found young Jesse and whipped him soundly with the end of a rope. The lesson did not impress young Jesse; the regulators returned and Mrs. Samuel and her daughter, Sue, were placed under military arrest and detained for several weeks.

She had two younger children by Dr. Samuel and these were permitted to accompany her. The third child (arriving later) was named Fannie Quantrill.

Passing the war period to peacetime outlawry, the most serious depredation was robbing the bank at Liberty, Mo., in February 1866. Ten of the young gangsters effected the robbery. About $60,000 was taken, of which $45,000 was in bonds, the balance in gold and currency. The cashier's name was Bird. The grinning robber said: "All birds should be caged. Get inside the vault, Mr. Bird, and step lively." Mr. Bird obeyed.

Next followed the robbery of a bank at Lexington, Mo. This netted $2,000 in cash. Then a bank at Savannah was attacked. The owner's son returned the fire of the outlaws and drove them away, followed by a posse, and the desperadoes became definitely known as the James gang.

After Savannah came Richmond, in May 1867, resulting in the death of eight persons and a loss of $4,000.

Clay and Jackson Counties and all Missouri becoming dangerous, they crossed into Kentucky and robbed a bank at Russellville and rode away with $14,000.

By this time the Pinkerton Detective Agency was on the trail and things became uncomfortable, so the James boys went to California, acting upon the advice, "Stay away awhile, boys, and it will all blow over."

Returning in 1869, a bank was robbed in the usual manner at Gallatin, Mo. The cashier was slain and, so the story goes, the horse of one of the James boys was killed and they escaped riding tandem.

For a time they took refuge in Kentucky, Texas, and Indian Territory. Then, in 1870, they invaded Iowa and robbed the bank at Corydon.

In 1872 a bank was robbed at Columbia, Ky. The cashier, refusing to deliver the vault keys, was murdered. Only about $200 was taken.

Ten thousand dollars was taken from a race track near Kansas City in September, 1872.

In 1873 the gang later rode 400 miles to Ste. Genevieve, the first white settlement on Missouri soil. There they obtained $4,000 in silver.

Following this came an innovation: the robbery of a train. Their loot totaled $3,000. Later, the same night, another train passed, carrying $75,000 in gold, a mistake by hours.

In 1874 there was another innovation—a stagecoach was robbed between Malvern and Hot Springs, Ark.

The Pinkertons became active to capture or kill. This great agency was then the most powerful of its kind in the United States, with branches in various portions of the country, operated by skilled men.

Now the banks, the railroads, express companies and stagecoach companies, led by the Pinkertons and various law enforcement officers of the different States, were hunting with increased energy.

It is remarkable that for 8 years they proceeded without success, owing largely to the gang's shift to unexpected points

But in '74 there came a change. The Little Rock Express from St. Louis was to stop at Gadshill, Mo. The conductor stepped to the ground. He was confronted with the muzzle of a pistol. The engineer and fireman were ordered to walk into the woods. Two men went through the Pullman cars, collecting $2,000. Another $1,000 was taken from the safe; the mail bags yielded $2,000 more.

Posses from Piedmont, Ironton and adjacent towns trailed the bandits. Railroads and express companies offered new rewards and the Pinkertons again took the trail. Finally, it resulted in the death of two Pinkerton operatives and John Younger, a member of the gang, who was killed at the age of 24.

Shortly after this there was a stagecoach robbery in Texas, about 23 miles southwest of Austin. The loot from this robbery was estimated at $3,000.

In 1874 a Kansas-Pacific train was robbed near Muncie, Kans. This produced about $1,000.

Then followed a robbery in Huntington, W. Va., in September 1875. From a bank, so the chronicle states, they collected several thousand dollars.

There was a robbery of a Missouri-Pacific train at Otterville, Mo., in Cooper County. This provided the gang with nearly $2,000 apiece.

They then started north for Minnesota. They went on horseback, wearing linen dusters which concealed both their clothes and their weapons. The excellent horseflesh they rode attracted some undesired attention. This was in 1876, and it proved a Waterloo for the Missourians.

A full account of the attempt to rob the bank would consume an hour, but the details have all been rather carefully chronicled. Two Northfield citizens were slain. Approximately 1,000 men participated in the pursuit that followed. When the fighting was over Jim Younger had five wounds; Cole Younger, 11 wounds; Thomas Coleman Younger was on his back, badly wounded.

Later the Younger boys pleaded guilty and were sentenced to imprisonment for life in the prison at Stillwater.

Robert Younger died in the penitentiary in 1889. Coleman and James Younger survived. The rest of the gang got back to Missouri.

The professional dead shots were routed. Amateurs won the day. James Younger, on his parole, is reported to have killed himself because his citizenship had not been restored, which prevented him from marrying his sweetheart. Cole Younger in later life became an evangelist.

The names of most of the other members of this outlaw crew have been chronicled; their individual exploits given; their punishment, through violent death or imprisonment, recorded; but time will not permit stepping aside in this brief summary to give the list.

At long intervals the James boys visited their mother. The Pinkerton operatives found this out, and finally there came a scene that the reel carried with some accuracy: Surrounding the home of Mrs. Samuel, the Pinkertons first threw lighted balls of cotton, and then a bomb which blew off the right forearm of Mrs. Samuel. One of the small boys had his side pierced; little Archie died before dawn; Mrs. Samuel's arm was amputated; the little Negro servant was wounded.

Inflamed, the people of Clay County called the bombing of the Samuel home "the crime of the century"; they were indignant; public sympathy began to favor the James boys.

Many interesting stories are recorded of Jesse James' generosity. One is the story of his giving a poor woman money to pay off her mortgage—quite a large sum. She paid the mortgage and secured a receipt which lifted the mortgage; and, the chronicle goes on, later the boys held up the man who held the mortgage and took back the money from him.

This story went the rounds and must have had its effect. Sam Allender relates the incident as having been told to him by Frank James about his brother Jesse. This is romance with a vengeance, or truth testing credulity to the breaking point. Incidentally, Sam Allender served under me in the St. Louis police department and was an excellent officer.

Mr. Love states: "But in the ordinary relations of life, Jesse James was actually an honest man, whether you see fit to accept the statement or reject it." He relates his paying a debt of $265 which he could have avoided—of paying for horses that he had taken.

"In some ways, Jesse James was a strictly honest man, as I have discovered, to my own surprise, in my investigations. There were times when he went out of his way to discharge a duty which many a man in good social and civic standing would do his utmost to 'duck'."

Regarding the married lives of Frank and Jesse James, he states: "Morally speaking—and in this instance sexual morality is meant—these outlaws must be credited with having been thoroughly circumspect, in the absence of all evidence to the contrary."

Jesse James was 27 when he married. It was the end of a courtship of almost 9 years. His conduct in the presence of women was exemplary; his language was always circumspect.

Jesse James was killed in his own home by Bob and Charley Ford. These two men had been members of the gang. They were welcome in the household. The motive was the $10,000 reward, alive or dead. The Fords, as a matter of fact, received only a small portion of the big reward; the rest was divided between officials who had connived at the killing.

Jesse unbuckled his belt, laid two revolvers—one a Colt, the other a Smith & Wesson—on the bed, mounted a chair, with a dusting brush in hand; with his back to the Ford boys, he was dusting and rehanging a picture.

Both Ford boys drew their guns. Bob, quicker than Charley, fired one shot from the Colt which struck near the base of Jesse's skull and came out through the forehead.

This took place soon after breakfast. Mrs. James had left the room, thus Jesse was alone with the two Ford boys.

The revolvers now in my possession are an improved Colt 45 and a Smith & Wesson. They came into my possession through the Honorable Robert L. Bates, of Excelsior Springs; the chief of police of Excelsior Springs had taken them from young Jesse James, who stated the guns were carried by his father.

After Jesse James' death some of the headlines of the papers of the day are interesting: The St. Joe Gazette: "Jesse, by Jehovah!" St. Joe Evening News: "Judgment for Jesse"; Kansas City Journal: "Good-bye, Jesse!"

There had been many reports about the death of Jesse James, but on the morning after the tragedy Mayor Frink, of St. Joseph, said, "I fully believe it this time."

The Kansas City Times (now the Kansas City Star-Times) stated: "Frank James might find a safe asylum in either the Herald office of St. Joseph or the Post-Dispatch office at St. Louis. These papers mourn the loss of his brother Jesse as they have never mourned the loss of any of Missouri's great men."

The Post-Dispatch replied: "It becomes our solemn duty to inform you [Times] that you utter a malicious and vicious and utterly indefensible lie when you say this paper has mourned the loss of Jesse James," etc. The Post-Dispatch later commented: "We have never ceased to believe that Crittenden inflicted more disgrace on the State by the manner in which he brought about the murder of James than the bandit could if he had been left to continue his career. His death was a blessing, but the manner of his taking off was a reproach upon our civilization."

And then the Post-Dispatch pointed to the support of its position by the New York Sun, World, Telegraph, Graphic, and Tribune, and the Chicago Inter-Ocean and News, the Cincinnati Enquirer, the Louisville Courier-Journal, and other great national dailies. Even Carl Schurz wrote in similar vein in the New York Evening Post.

Charles Ford shot himself to death in a weed patch near Richmond, Mo. Bob Ford lived for more than 10 years. Finally, at Creede, Colo., he opened a bar and gambling den. He had with him a mistress whom he passed as his wife.

A deputy sheriff, Ed Kelly, was in love with this woman. On one occasion he shot Bob Ford, wounding him. Later, Kelly, having resigned as deputy sheriff, entered Ford's barroom and emptied two loads of buckshot into Ford, killing him.

Kelly was convicted of the crime and served a term in the penitentiary but was subsequently released and was later killed in a sidewalk fight with a town marshal in Texas.

The Fords were denounced in the old border song, which is sung even to this day—

"Jesse James had a wife;
She's a mourner all her life;
His children, they were brave.
Oh, the dirty little coward that shot Mr. Howard!
And they laid Jesse James in his grave."

The name Howard was the alias under which Jesse James lived in St. Joseph.

FRANK JAMES SURRENDERS

On October 5, 1882, Maj. John Edwards, of Sedalia, accompanied by Frank R. O'Neil, then a reporter on the Missouri Republican (later the St. Louis Republic), and who, as managing editor of the St. Louis Post-Dispatch, a quarter of a century later, went to Mexico and brought back the witnesses that broke the boodle crimes in St. Louis, accompanied by a man named Winfrey, entered the old McCarthy House at the State capital, Jefferson City, Mo. Mr. Winfrey was a tall man, rather thin, with sandy side whiskers and gray-blue eyes. They strolled around the lobby and later on the street.

Arriving at Governor Crittenden's office Major Edwards introduced Mr. Winfrey as Frank James. Perhaps it is best for me at this point to quote Mr. Love verbatim:

"One of the politicians, sitting back against the wall about 20 feet away, gasped: 'Good God! I can't believe it?'

"Nevertheless, it was so. Frank James, cool, calm, collected, master of such emotions as he felt, opened his coat, revealing a thick leather belt crammed with cartridges and showing at the middle a big bronze buckle marked 'U. S.' He unbuckled the belt and removed it. Attached to it was a holster from which protruded the gleaming handle of a big six-shooter, Remington .44. Holding the belt in his left hand, with his right hand he plucked the pistol from the holster and deftly moving his fingers down to the polished barrel extended it handle foremost toward the Governor of his native State.

"Governor Crittenden," said the elder and abler brother of the last Jesse James, "I want to hand over to you that which no living man except myself has been permitted to touch since 1861, and to say that I am your prisoner."

James had given Frank O'Neil a long interview which was withheld from publication until after the surrender. The headline in the Missouri Republican was, "He Came In."

When the trial was over, Frank moved to St. Louis and I knew him very well. Quiet, unassuming, he never talked of war days or the outlawry which followed them.

My friend Grattan Kerans, a leading newspaper writer, said that it was impossible to get Frank to talk of the events of the past and it was only on short and at unexpected moments that he did so, and then the narrative was brief and noncommital.

Frank James was employed at a theater, where his reputation kept order, and later acted in the capacity of a watchman and assistant starter of races at the old fair grounds. It is at that place I used to meet him frequently. Pleasant, though taciturn, he was an agreeable acquaintance. My contact with him came through Col. Jack Chinn, the famous Kentucky horseman who, with his son, Kit, started the races in St. Louis and vicinity for many years. Colonel Jack was a fighter in his day. I well remember as a boy visiting him at the old Southern Hotel in St. Louis. He had been shot through the neck by a policeman as he was drawing a knife. I had been a guest at his old home near Harrodsburg, Ky., and called almost daily on the family who were in attendance while the colonel was recovering from his wound, and each day I called he repeated, "Just think that I was shot through the neck by a pot-bellied policeman!" It was the great humiliation of the colonel's life that it had to be a policeman and one with a large stomach who had inflicted the wound.

FRANK JAMES' TRIAL

The dramatic surrender of Frank James was followed by his trial at Gallatin, Mo., in August 1883.

In the series of American State Trials, a law publication, we find 191 pages, nearly all in fine type, devoted to this hearing.

The grand jury of Davies County returned an indictment against Frank for the murder of Frank McMillan. The prisoner pleaded not guilty. Not many witnesses were heard. It became a contest of court strategy and of clashing eloquence. The Younger boys were in a penitentiary in Minnesota. The charge was that on July 5, 1881, the so-called James gang held up and robbed the C. R. I. & P. Railroad at Winston, Mo., killed the conductor and a passenger named Frank McMillan.

The prosecution was directed by William H. Wallace, one of the most eloquent orators that ever lived, a genius with words. He later became the chief advocate of Nation-wide and State-wide prohibition. I shall mention the names of only those men whom I knew well.

For the defense there appeared John Finas Phillips, Congressman, and later Federal judge; John M. Glover, Congressman from St. Louis, and Joshua Alexander, a Congressman from western Missouri, and later Secretary of Commerce, and finally, Gov. Charles P. Johnson, the outstanding criminal lawyer of his day, whose reputation was not only State-wide but national in character. My first appearance in court was with Governor Johnson. I was associated with him for some 3 years. He was the most picturesque figure I have ever seen in a courtroom. Handsome, dramatic, persuasive, he had the power to melt a jury.

The closing appeals for the State were made by Wallace. Governor Johnson finished for the defense.

James was identified by a number of witnesses as having been in the vicinity of the robbery before and after. The credibility of these witnesses was attacked because of their character and evil reputations. But there was one witness who nearly convicted James because he quoted Shakespeare. The defense cleverly promoted the theory of mistaken identity, but there was only one man who identified Frank James as a Shakespearean scholar, the Reverend James Machette.

Quoting the witness:"Inquired of Willard (Frank James) where he had been between the Shenandoah Valley and this section, and he never answered me but said, 'What do you think of Bob Ingersoll?' We discussed Bob for some time till we differed. * * * In conversation with Scott, he observed he would take me for a minister of the Christian Church, and I answered that I was. * * * Willard acquiesced in that but said there was no man ever lived like Shakespeare, and declaimed a piece and remarked, 'That's grand,' which observation I endorsed."

The arguments that followed show that the statement of this minister that one of the gang was a Shakespearean scholar and could quote Shakespeare, set him apart, as none of the others had read Shakespeare. It nearly ruined the defense, because Frank James was fond of Shakespeare and quoted him fluently and none of the other outlaws did.

It may interest you to have just a sample of the oratory at the close of the trial. Wallace had been able to bring in the name of Jesse James, although he had long since been dead. Just a paragraph.

"Farewell, Jesse James, prince of robbers! Missouri cries a long, a glad farewell! Cruelest horseman that ever wore a spur or held a rein, seeming oftener like death himself on his pale horse charging through the land, than feeling man, farewell, farewell! Foulest blot that ever marred the bright escutcheon of a glorious State, farewell! farewell!"

Later, at another place, he observed: "A man, gentlemen, may change the exterior of his person but he cannot change the complexion of the mind therein. This is a most remarkable mental characteristic for a western bandit. To say that it is nothing uncommon for a train robber to go through the land spouting Shakespeare is preposterous."

Just one illustration of the flow of language by Gov. Charles P. Johnson (my old associate) for the defense: "History shows not his parallel. Back of the time covered by this investigation his career begins amid the fierce conflicts of border warfare, and though bearing a name stained with crime his course has been marked by an unwavering adherence to a great revolutionary cause, fidelity to friends, and an audacious bravery unquestioned; he is the product of our own civilization, a sequence of our past political history."

On one occasion Gen. Joe Shelby appeared and apologized to the court for an alleged contempt. This was the general's statement: "If anything I said during my examination yesterday offended the dignity of this court, I regret it exceedingly, Your Honor. As to what I said in regard to others, I have no regrets to express."

General Shelby said he had listened attentively to the court and was very glad His Honor had spoken so fully, as it gave him an opportunity to refute a slander.

"I am charged with drawing a revolver; it is false, and the man who said so said what was false."

The COURT. The information came from the marshal of Lexington, who had given it under oath.

General SHELBY. He has lied if he said so.

These 191 pages are delightful reading for a lawyer. It might be helpful to some law student, but after the eloquence was over 12 good men and true brought in a verdict of "Not guilty."

YOUNGERS PARDONED

The story of the James boys would not be complete without reference to the pardon of the Younger boys, two of their companions in most of their adventures.

Capt. Carter Bronaugh, my personal friend, undertook the work of securing the pardon. He enlisted nearly all of the leading officials of that day—Governors, Senators, Congressmen, and others. I was one of those who signed the petition.

Active in the movement was former Senator Stephen B. Elkins, of West Virginia, who assisted financially and in other ways in procuring the pardon.

Young Steve Elkins was a Missourian who was captured by Quantrill and ordered to be executed, but Bud Younger, a trooper, was a former friend of Elkins and had himself detailed to take out the spy (as he was called) and shoot him. Elkins said to Younger: "Well, Bud, I reckon it's all up with me; I know the rules." Bud replied: "I reckon it is, Steve, unless you light out and run like hell now; and for God's sake keep your mouth shut about this, for you know if Quantrill ever learns I didn't kill you, he'll kill me."

As stated in another place, one of the Youngers was killed by a Pinkerton, another killed himself, but Cole Younger remained to become an evangelist.

Frank James died at the old James farm where he grew up.

Cole Younger died a year later and he, like Jesse James, was buried at the Younger homestead.

LAW REIGNS

What wonderful changes time has encompassed! Peace on the Kansas-Missouri border, good will, and even some political agreement, as Kansas has even gone Democratic.

Today when the gunman appears the law on both sides cooperates and the gunman becomes the general public enemy. The early abolitionists have disappeared. The slaveowners and those who believed that the Negro was property have passed away.

In 1884, when Grover Cleveland was elected President, I was a boy in Texas. I recall how the Negroes were told they would now be returned to slavery. They believed it and disappeared, hiding in that vicinity in the Red River bottoms.

Our home was left without servants, so mother became cook and I washed the dishes—a great and tragic humiliation for me. But I found a way which even today in emergencies proves successful—my hound dogs did the trick when mother took her naps. Dishes, pots, and pans were placed upon the back porch, the dogs were called, the dishes cleaned, and both dogs and myself were happy, and mother, not understanding the plot, was grateful. Try it. It beats the new electric washer in speed and general satisfaction for both man and beast.

That was the last I heard of slavery.

My grandfather was the Confederate Governor of Kentucky. All five sons were in the army. One was killed and three wounded, so the days of my youth were replete with stories of "the wood's colt," border forays and the bitterness that comes from war between brother and brother and between father and son. The same horrible family separations we find in Spain today.

I was assigned the duty of speaking for the Sons of Confederate Veterans at a national Confederate reunion in Louisville, Ky., and watched the miles of parade pass by—the old battle flags, the State banners. They moved a trifle slow, but not too slow. As they passed along it put a tear in the eye and a throb in the throat; but the old boys cheered and they gave the Rebel yell, now a lost art no radio artist can produce.

On they went with the State banners, the battle flags mended and patched by loving hands, brave old men with malice gone. No bitterness in their hearts; they had gone through strife and sudden death and in the even harder years of readjustment after the war. They were from all the Southern States, keeping step, keeping time, shaking hands, and cheering. And at the head rode a man on a horse. The horse seemed to understand. He must have been carefully selected; behaving, yet he misbehaved. He seemed to know he carried a chief.

This prancing horse headed miles of gray uniforms—all in gray, gray, nothing but gray. But on this cavorting horse was "Fighting Joe" Wheeler, dressed in the blue uniform of a United States officer.

Not only was the war over, but that blue uniform leading the gray drew the curtain for the last time on bitter thoughts that are harder to kill than men.

The early forefathers were wise men; they had come from the various nations of Europe; they had crossed the big water in little ships guided by the stars; and, when they wrote a new plan of government, they had back of it war, experience, and suffering. They came out of a fiery crucible and have left for us an orderly Constitution to preserve liberty of thought and action.

Fellow Missourians, you come of a fighting breed. Your forebears "took it on the chin," stood for what they thought was right, surrendering their opinions to no one, but are now expressing these opinions in an orderly way.

We can only attempt to keep the record clear, that our youngsters may not be dazzled with false glamor.

We can but smile a little, maybe weep a little, but demand that facts shine through.

The Livestock Industry

EXTENSION OF REMARKS

OF

HON. FRANK O. HORTON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1939

RESOLUTION BY THE LEGISLATURE OF WYOMING

Mr. HORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Legislature of the State of Wyoming:

House Joint Memorial 3

A joint memorial memorializing the Congress of the United States to consider means of protecting the livestock industry which is seriously threatened by the importation of meats and meat products

Whereas the production of livestock constitutes a major Wyoming industry; and

Whereas the industry is being seriously affected by importations of meats and meat products at prices below American production costs; and

Whereas this importation of meats and meat products is recognized as unfair and unjust competition and seriously threatens the industry at home: Now, therefore, be it

Resolved by the House of Representatives of the Twenty-fifth Legislature of the State of Wyoming (the senate concurring), That the Congress of the United States be and it is hereby memorialized to consider means of protecting the livestock industry which is seriously threatened by the importation of meats and meat products: Be it further

Resolved, That certified copies of this memorial be sent to the President of the United States Senate and the Speaker of the House of Representatives, and to United States Senators JOSEPH C. O'MAHONEY and HARRY H. SCHWARTZ, and to Representative FRANK O. HORTON.

The Republican Viewpoint on National Issues

EXTENSION OF REMARKS

OF

HON. CARL E. MAPES

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1939

RADIO ADDRESS BY HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS, MARCH 6, 1939

Mr. MAPES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Honorable JOSEPH W. MARTIN, JR., of Massachusetts, on the Republican viewpoint on national issues, given over a network of the National Broadcasting Co. on the Washington Star National Radio Forum on March 6, 1939:

Through the magic of the radio, we are celebrating tonight a Nation-wide birthday party—the one hundred and fiftieth anniversary of balanced representative government under our American Constitution, the greatest charter of freedom and the most cherished protector of equal opportunity in all human history.

The First Congress under the Constitution assembled in New York on March 4, 1789—150 years ago last Saturday. From that memorable date runs the glorious epic of America, a story of achievement and triumph without parallel in the annals of man.

In the meeting of that First Congress, there came to reality the dream which had been the most alluring aspiration of the human spirit from the very dawn of history—"government of the people, by the people, and for the people."

It is an occasion of great patriotic significance and an appropriate moment for sincere national thanksgiving—thanksgiving

that through all the economic stresses and strains, all the wars and revolutions, and all the vast economic and social change throughout the world during these 150 years, the Constitution of the United States survives today in all its essential principles of orderly and progressive government under law.

But our Constitution survives not only as a written instrument defining the powers and authorities of government delegated to the Congress, the President, and the judiciary by the sovereign people of America; it survives also as a living and a vibrant spirit of government and human relations—as a symbol of the creed of fair play, of reasonable temper, and of broad tolerance, so deeply rooted in every American heart.

That, as I see it in the perspective of history, is the great significance of the Constitution of the United States today—that its noble principles have been translated from the mere wordage of an epochal document in history into the great political solvents of tolerance, patience, charity, and good will among men, governing the relations of a mighty nation of 130,000,000 people in their daily striving for peace, progress, prosperity, and genuine social security.

CHATTER OF REVOLUTION

We hear much chatter in these troubled times that our scheme of government is outmoded; that the Constitution no longer can serve our swiftly moving civilization; that we must prepare our minds for some new system contrived since the "horse and buggy" days.

But on such an occasion as this, when we pause to reappraise the fundamentals of our system of self-government, all such dark forebodings of revolution quickly take their proper place in the thought of our people.

The idea of revolution in America today and the many suggestions advanced for some fundamental change in our scheme of government in favor of one or another of these new European systems of compulsion and purge are but the clatter of confusion in minds bewildered by the tasks of the hour.

This Nation would be served well if all such immature talk were to cease at once.

The American people are irrevocably devoted to the American way of life, and they should be encouraged and stimulated by every power of government to press forward in the work of perfecting their institutions and improving their methods of administration in the light of the glorious achievements of these 150 years.

PRACTICAL MEASURES NEEDED

Today we can best honor the Constitution and the founders of the Republic by taking every action possible to restore a robust popular confidence in the safety and security of our scheme of orderly checks and balances in government, and by encouraging a vivid national confidence in the future of American opportunity.

Such actions are the acid test of genuine patriotism in these times.

But confidence is not built upon words alone. Pledges must be fulfilled—promises performed.

Eloquence never balanced a budget.

Eloquence alone never put a struggling railroad on its feet.

Eloquence alone never put a man to work at honest American wages.

Good intentions are the substance of recovery only when they are translated into sound and wise policy.

As leader of the minority party in the House of Representatives, I have pledged before, and I repeat now, that our Members are eager and anxious to lend every aid to the administration in a program to bring about solid and sustained business recovery. This pledge has been given, and is here repeated, without qualification.

We express an earnest hope that before another month has passed the President will send to Congress at least one specific recommendation calculated to give substance to the glowing promises made by Secretary Hopkins at Des Moines, Iowa, 10 days ago.

GOVERNMENT ECONOMY

Meanwhile we shall continue our daily fight for a beginning toward real Government economy.

In county after county and in State after State the people voted last November for a curtailment of Federal extravagance and for a beginning on policies which would tend to relieve the country of the present crippling burden of taxation.

No working population ever can hope to prosper permanently under prevailing policies of taxation.

No farming population ever can prosper so long as 27 cents of every income dollar must go for taxes.

Taxes are too high!

The Government is spending entirely too much money!

Our people demand a restoration of common sense, prudence, thrift, and ordinary good management in the handling of the Federal business.

GOVERNMENT REORGANIZATION

Government economy to eliminate costly overlapping in the Washington bureaucracy is needed urgently. Such economies would mean further vast savings to commerce and enterprise through the elimination of duplicating Government contacts. These can and should be accomplished in the American—the constitutional way.

Our great Federal bureaucracy today carries a total of 917,000 employees on the civil pay roll as compared with 565,000 6 years ago.

This increase of more than 350,000 persons on the Federal pay roll, exclusive of expansion in the military services, has been accompanied by a tremendous increase in the number of boards, bureaus, commissions, authorities, divisions, and administrative sections throughout the Government.

Many of these new agencies today are stumbling over each other, working at cross purposes; are even arrayed in open conflict over policies and programs—all at the expense of the people.

In not a few cases this confusion has induced a condition of utter paralysis in the Government functions.

Such costly overloading of bureaucracy must be stopped.

In the so-called Economy Act of March 20, 1933, President Roosevelt was given blanket authority to consolidate and reorganize the various Government departments. This authority, however, expired after 2 years, on March 20, 1935.

In this 2-year interval the President effected only 17 regroupings by Executive order, 8 of them of minor nature in the Veterans' Bureau, and the others relating principally to such secondary agencies as the Geographic Board, the American Battle Monuments Commission, the Alien Property Custodian, the Bureau of Mines, and the Division of Territories and Island Possessions.

THE NEW DEAL BUREAUCRACY

But while these 17 minor regroupings were being worked out over a period of 2 years, no less than 34 new agencies of government were created to administer various ventures and experiments of the New Deal.

Today these new agencies alone employ more than 150,000 men and women, and many other segments have been added to the towering structure of our Federal establishment since March 1935.

The latest figures reveal that altogether since March 1933 the present administration has created no less than 74 new agencies of government.

Their unrelenting flood of Executive orders encroach upon the most intimate daily concerns of our people in every State of the Union.

It would be folly to assume that all of these new agencies are focusing their energies upon ways and means to revive public confidence in the American scheme of private enterprise.

ECONOMY PLEDGES OF 1932

Such, briefly, is the record of extravagant expansion in Washington during the last 6 years. This is the performance realized by the American people on that important section of the Democratic national platform of 1932 which pledged:

"We advocate an immediate and drastic reduction in Government expenditures by abolishing useless commissions and offices, consolidating departments and bureaus, and eliminating extravagances to accomplish a savings of not less than 25 percent in the cost of Federal Government * * *."

When that promise was made the civil pay roll of Federal Government was a little less than $100,000,000 for the month; but in December 1938, the last month reported officially by the Civil Service Commission, this pay roll was $141,924,984.

It is hard to believe that an administration with such a record could accomplish a real program of government economy, free of all implications of one-man government and dictatorship.

Despite this unpromising background, we on the minority side stand ready to cooperate actively in any program the President may submit in fulfillment of that ringing promise he gave the American people from Sioux City, Iowa, on September 29, 1932, when he said:

"I shall use this position of high responsibility (the Presidency) to discuss up and down the country, in all seasons, at all times, the duty of reducing taxes * * *. This I pledge you, and nothing I have said in this campaign transcends in importance this covenant with the taxpayers of this country."

In that pledge to the American people President Roosevelt voiced the sentiments not only of the Republican and Democratic Parties but of all our workers and farmers.

Likewise Mr. GARNER, then Speaker of the House, said on the floor on March 29, 1932:

"On January 6 of this year—that is, 1932—after a 2-hour session and a full discussion, our joint committee—composed of House and Senate Democrats—unanimously decided upon this language as expressing what should be the Democratic policy in the Senate and the House of Representatives:"

And here is what the Democratic joint committee of the House and Senate then agreed upon:

"It is of primary importance that the Budget be balanced promptly."

And that, as I have said, was on January 6, 1932, exactly 7 years and 2 months ago.

Since that time the national debt has been doubled, increased from roundly $20,000,000,000 to $40,000,000,000.

FEDERAL TAXES TRIPLED

Nor is this the whole story of fabulous New Deal spending.

For the fiscal year 1933, total receipts of the Federal Government from all forms of taxes and customs were exactly $2,080,000,000. But for the fiscal year ending June 30, 1938, the actual Treasury receipts from taxes were $6,242,000,000.

These are the official Treasury figures taken from the President's Budget message to Congress on January 5 of this year.

They show that in 1938 Federal taxes were three times the 1933 total; yet in the intervening years the national debt, nevertheless, has been doubled.

EXCESSIVE TAXES MAKE UNEMPLOYMENT

Taxes are paid, as President Roosevelt has so well said, "in the sweat of every man who labors."

And our experience has been during these last 6 years that even more taxes are paid in the anguish, worry, and fears of the men who can't find jobs. The more taxes and spending the less recovery.

That is why we still have 10,000,000 unemployed today.

That is why we have lost so much of our former large export market for farm products.

CONSTITUTIONAL GOVERNMENT DEMANDED

Do these problems bear directly upon the larger issue of the preservation of balanced constitutional government?

I think they do.

First, the inordinate expansion of our Federal bureaucracy flows directly from the temporary overthrow of constitutional forms in the hysterical rubber-stamp sessions of Congress between 1933 and 1938.

Likewise, the great increase in Federal spending, the run-away extravagance and shameful waste, all flow directly from the system of blank-check appropriations granted the President by those rubber-stamp Congresses.

Here we see the direct practical results of violence to our fundamental constitutional principles.

Had the New Deal adhered faithfully to our Constitution in the days when the New Deal controlled Congress, we might have avoided many of the difficulties in which we now find ourselves.

Moreover, had the Constitution been defended and sustained faithfully by every department during these last 6 years, we would not face today the task of restoring national confidence in the permanence and vitality of our basic institutions and processes of government. We would not need a new "breathing spell" to eradicate from the minds of the people the unhappy recollections of court-packing, crack-down, and purge.

To this degree, at least, are the problems of our day related directly to the fundamental issues of government expounded in the Constitutional Convention of 1787 and in the First Congress of 1789.

That is why I hold that the challenge before America today is to redeem once more the sacred covenant of liberty and freedom and to restore our American Constitution in all its vigor as a charter of honest government.

The Republican minority in Congress accepts this responsibility to a man.

MEANING OF THE NOVEMBER ELECTIONS

It has been our duty in Congress to analyze carefully the election returns of last November to determine exactly what the American people voted for and what they voted against.

The uniform sweep of that election as a protest against reckless extravagance in government, against the astronomical public debt, against long-continued unemployment, and against increasing cheap imports of farm products from all directions—these demands for change are not to be evaded or ignored.

Our studies show that, in gaining 80 seats in the House of Representatives, the Republican congressional campaign converted a Democratic majority of approximately 5,000,000 votes in 1936 into a Republican majority of 500,000 in 1938.

These figures are for the 38 contest States outside the South.

They mean that in point of popular vote throughout the entire two-party area, the Republicans are the majority party of the United States today.

Although our candidates carried more than 50 percent of the vote in these 38 States, we have only 39 percent of the roll call in the House today.

More significant, the Republican congressional candidates carried more than half of all the counties in the United States outside the South—1,135 out of 2,058.

The Republican Party today controls one or both houses of the legislature in 24 States.

These are the fundamental factors which emphasize today's strong resurgence of fundamental Americanism.

THE REPUBLICAN MANDATE

Pursuant to this national mandate from the polls, our party in Congress has set itself to the task of reestablishing balanced government.

Special committees of inquiry already have been created to survey the issues of national defense, the emergency powers of the President, and national-debt policy. Additional special committees will be appointed as the administration's legislative program is disclosed.

Our fundamental purpose is to avoid such hasty legislation as has led to grave difficulties in the past.

The process of unscrambling the hit-or-miss administrative measures of the last 6 years has begun, and will be pressed as rapidly as orderly procedure will permit.

PROTECTION ASSURED MINORITY GROUPS

But our mandate for Americanism does not sanction a narrow or overbearing jingoism. The Republican Party today regards the protection and security of minority groups as the keystone of our constitutional scheme. Bigotry, intolerance, racial and class prejudices have no place in this mighty Nation of opportunity and equality under law.

We need the help of all our people in the great tasks before us. Every citizen can make his contribution toward restoring business confidence, to the end that we may provide real jobs for our 10,000,000 unemployed at honest American wages.

Here is the supreme challenge to representative government—to rescue our 10,000,000 unemployed from the hopelessness and despair of the W. P. A. dole—to bring solid and sustained prosperity once again to this land of plenty.

AMERICA DEMANDS PEACE

Finally, our great responsibility is to keep this Nation out of war.

Our defenses must be strong, but they must not be pledged in any military alliance abroad.

Our task is at home.

Our first line of defense is that Saturday line which edges up to the pay windows in our mills and shops. Unless these lines stand impregnable democracy will be lost.

We cannot protect this first line of defense by plunging into an offensive and defensive military alliance with half of Europe.

Peace is the great healer.

Peace is the highest aspiration of freemen.

Peace is the very essence of progress and prosperity.

Any other policy in America would be a betrayal of the sturdy public morality and the glowing social idealism which inspired our Constitution and are its heartthrob today.

Pine Flat Project and Proposed John Muir-Kings Canyon National Park

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1939

ADDRESS BY HON. HAROLD L. ICKES AT FRESNO, CALIF., FEBRUARY 14, 1939

Mr. GEARHART. Mr. Speaker, in the high Sierras which rim on the east the great San Joaquin Valley of California lies one of the world's greatest scenic regions. Its majestic grandeur is not exceeded in magnificence anywhere else on earth. Towering snow-capped mountains, precipitous granite cliffs, peaceful meadows, and mirrowlike pools, gigantic trees of great antiquity, some of them already over 2,500 years old when the Christ was born nearly 20 centuries ago, are to be observed on every side. One stands appalled as he contemplates the wonder of it all.

At the base of these majestic mountain spires lies the famed San Joaquin Valley, fertile beyond the legendary productiveness of the ancient Valley of the Nile. Down the many channels of the myriad tributaries of the yet unconquered River of the Kings flow the constantly melting waters of the snow-crowned monarchs of the mountains, sometimes rushing in riotous flood, sometimes moving quietly and in friendship to man, but, alas, until this very day, too often in squanderous waste and destruction, too seldom in aid of man's carefully laid plans.

In order that the beauties of the high mountains might be made accessible to the restless, wandering, pleasure-seeking people of the world under the most attractive and alluring circumstances; in order that this wondrous region of scenic marvels may be preserved in its natural wilderness state by those most skilled in mountain recreational management, I have introduced a bill to create in the honor of the father of all national parks a new national park to be known as the John Muir-Kings Canyon National Park, a park that will include the wondrous mountain area that I have just described.

In order that the abundant though uncontrolled waters of this highly scenic area may be made to do the work of man down on the cultivated plains of this incomparable fertile valley of the great San Joaquin; in order that its industrious home builders may be spared the periodic frustrations incident to successive property-destroying floods and land-parching water scarcities, each in accordance with the cruel whims of nature's God, I have introduced another bill to authorize the construction of the Pine Flat project, an irrigation, reclamation, flood-control, and power-generating project which, when eventually constructed, will make that great San Joaquin Valley, the interior basin of the State of California, "blossom as the rose" and create in the heart of this most-favored section a "man's paradise on earth."

Mr. Speaker, it is with tremendous happiness and satisfaction that I learned that these two legislative proposals have met with the approval and have been accorded the enthusiastic support of the Department of the Interior and of its most able Secretary, the Honorable Harold L. Ickes. Had I but paused to recall his ardent support of the Great

Central Valley project during the early, uncertain days when the legislation authorizing that greatest of all reclamation projects was making its tortuous way through the legislative hopper; recollected his sustained interest in all of our California mountain and valley irrigation and reclamation problems down through the years, I would have assumed in confidence that he would in due time lend the powerful influence of his eloquent voice in support of the most worthy measures I have just proposed. He could not have done otherwise. Such is my confidence in the righteousness of our cause.

I am sure that the people of interior California who were so fortunate as to have heard his inspiring speech at Fresno, Calif., on February 14 last, his compelling appeal for these two measures, will ever recall in grateful remembrance his message and pledge of cooperation and good will. Because of the strength his approving voice brings to our cause, so near and dear to me, so tremendously important to those that I am here endeavoring to represent, my gratitude knows no bounds.

In order that the arguments he advances, the reasons he points out, may not be lost to those who did not have the privilege of hearing him, either at the great civic banquet at Fresno or over the ether waves of radio stations KARM or KMJ, I am, the entire membership of the House of Representatives approving, their unanimous consent having been given, extending in the CONGRESSIONAL RECORD at this point the speech as he delivered it, a copy of which I have received from his hands.

It is as follows:

MID-CALIFORNIA CONSERVATION

I cannot think of any place in the United States where I would rather be at the present moment than in Fresno, Calif. I hope to come back here again within the next 2 years for two important and pleasant duties—to take part in the dedication of the John Muir-Kings Canyon National Park and to turn the first shovelful of earth for the Pine Flat irrigation dam.

The circumstances under which I come to Fresno at this time are particularly pleasant. Your Congressman, Hon. BERTRAND W. GEARHART—that's what we call him in Washington, but I believe you know him in Fresno as "BUD" GEARHART—last week introduced three bills in the House of Representatives at Washington. All of us, the people of the San Joaquin Valley and the State of California, Congressman GEARHART himself and I are vitally interested in these bills.

THREE BILLS

The first bill provides for the construction of lateral canals for the Central Valley project in order to extend the benefits of irrigation to additional sections of interior California in the region of Sacramento to Bakersfield. The value of such a project is self-evident.

The second bill authorizes the Bureau of Reclamation to construct the Pine Flat irrigation and flood-control reservoir, together with power dams on the Kings River which are found feasible in connection with the Pine Flat project.

The third of Congressman GEARHART's bills is for the establishment of the John Muir-Kings Canyon National Park, a proposal of both local and national importance, and not unrelated to the Pine Flat project. In one important respect they supplement each other, because a national park in the Kings Canyon country would help preserve the watershed and thus increase the value of the Kings River for irrigation and electric power.

ALL THREE PROJECTS CLOSELY LINKED

The Pine Flat irrigation project and the John Muir-Kings Canyon National Park proposal are closely linked, because they both relate to the use of the same general land area; to the use of public lands under the control of Congress and the President. It is extremely necessary to see that these two projects are properly coordinated. Part of the lands jointly affected by the irrigation project and the national-park proposal are essential for economic development. Part of them are primarily important for recreation, which in areas of high scenic value calls for preservation and protection.

If the Federal Government should establish the John Muir-Kings Canyon National Park, without at the same time mapping out a policy for irrigation and power development for this region, there would be danger that the national park might have boundaries conflicting with a sound economic policy.

If, on the other hand, the Government should go ahead with irrigation, and power-dam construction before establishing a national park, there would be danger that this commercial development would damage an area primarily important as a scenic and recreation asset.

By mapping out both of these important projects together, it is possible to harmonize them without injury to either. If either of these projects were put forward without regard to the other, there would be uneasiness and apprehension among the friends of the other measure, and where you have apprehension you generally have needless antagonism.

PROTECT RECLAMATION AND RECREATIONAL VALUES EQUALLY

It has been easier to make a joint approach to these questions of economic and recreational use because both the Bureau of Reclamation, which deals with irrigation, and the National Park Service are in the Department of the Interior. Many months ago I asked the heads of these two Bureaus to thresh out every issue on which there might be a conflict of interest, and adjust them so that all legitimate rights might be protected—the right of the people of the San Joaquin Valley to the use of the waters of the Kings River, and the right of the people of California as well as of the Nation to the recreational value of the Kings Canyon wilderness.

I am happy to state that our Bureaus have been assisted in this effort by the attitude of the people of the San Joaquin Valley, and especially by those who are most closely connected with irrigation. It is a pleasure to find that such men as Messrs. Boone and Kaupke, of the Kings River Water Association, have confidence in our endeavors to reach a harmonious understanding on all of our common problems, and that the people of the San Joaquin Valley have confidence in Messrs. Boone and Kaupke. Where this spirit exists, problems that might otherwise have seemed formidable begin to melt away.

JOHN MUIR FIRST TO URGE PARK STATUS

Take, for example, the movement first begun nearly a half century ago, to place Kings Canyon in our national-park system. John Muir was the first to propose this, as far back as 1891, just after he had completed his successful effort to make the Yosemite Valley a national park. Kings Canyon, John Muir said, contained canyons which rivaled those of Yosemite in grandeur. The whole high Sierra in the Kings watershed he termed a "surpassingly glorious region" which should be made into a grand national park "for the recreation and well-being of humanity." Emerson Hough and David Starr Jordan and William Colby were among those who, in succeeding years, made the same plea. The Sierra Club of California led the movement for action in Congress.

FOREST SERVICE SUPPORTS PARK PROPOSAL

The Forest Service of the United States, during the terms of four Chief Foresters, has steadily supported the proposal that Kings Canyon be made a national park. The action needed in Congress involves a transfer of land already belonging to the public. This land is now included in the national-forest system and can be made into a national park simply by changing its status under Federal law, without cost to the Government. The Forest Service is willing that this should be done, because, although the land proposed for a park is in national forests, it is of low value for timber or other economic resources.

DEPARTMENT OF AGRICULTURE APPROVES

On this account, Chief Forester Graves endorsed the national-park proposal in 1920 and Chief Forester Greeley in 1924, followed by Chief Forester Stuart in 1928. And only yesterday I had the pleasure of making public a letter in which Secretary of Agriculture Wallace informed me that these past declarations in favor of the park stand good today. The record of the Department of Agriculture and of the Forest Service is 100 percent in favor of Kings Canyon for a national park. I mention this the more particularly because one of the obstacles encountered by the Kings Canyon National Park project in recent months has been the unauthorized opposition to it by several minor regional employees of the Forest Service here in California.

OPPOSITION OF REGIONAL FOREST RANGERS UNAUTHORIZED

I can understand how they were led into this opposition by a feeling of bureau loyalty, even to the extent of trying to make a policy of their own. It often happens that Government employees, with the best intent in the world, become so interested in the details of administration of those objects consigned to their care, that they forget the larger national outlook. When this occurs it is usually accompanied by a feeling of hostility toward other Government bureaus; and if that happens to break out in two bureaus at once it leads to a sort of petty civil war which must be rather mystifying to the public. And all the time the higher responsible officials are working in complete harmony.

CHIEF FORESTERS AT WASHINGTON APPROVE

This has been the situation regarding the Kings Canyon National Park proposal. There has been conflict in the field, here in California, between the Forest Service and the supporters of the John Muir-Kings Canyon National Park. In Washington, the Department of Agriculture has adhered, without change, to the policy, first declared in 1920 through Chief Forester Graves, that it favors making this area a national park.

LETTER OF SECRETARY HENRY C. WALLACE

It is now my pleasure to read to you from a letter written by Secretary of Agriculture Henry C. Wallace to the chairman of the Committee on Public Lands of the House of Representatives. The latter had asked for his opinion on the Kings Canyon National Park proposal, and Secretary Wallace replied as follows:

"The proposed park and the specific boundaries relating thereto are endorsed by this Department. While the measure contemplates a transfer to the national park of a large area now comprising parts of the Sequoia and Sierra National Forests, the utilities present in this area are chiefly parklike in character and may properly be given a national-park status."

LETTER OF SECRETARY HENRY A. WALLACE

You may have noticed that I said that this letter was written by Secretary of Agriculture Henry C. Wallace. The present Secretary of Agriculture is Henry A. Wallace, the son of Henry C. Wallace, who was Secretary of Agriculture in the cabinets of Presidents

Harding and Coolidge. The letter from which I have quoted, endorsing the Kings Canyon National Park project, was written by the elder Secretary Wallace on January 17, 1924. I now shall read to you a letter written by his son, my colleague in the Cabinet of President Roosevelt. On February 7, 1939—that was last Tuesday—Secretary of Agriculture Henry A. Wallace wrote to me as follows:

FEBRUARY 8, 1939.

The honorable the SECRETARY OF THE INTERIOR:

DEAR MR. SECRETARY: Reference is made to proposals to create a John Muir National Park in California and include within it what is known as the Kings River Canyon country, most of which has been part of the national-forest system administered by this Department.

In one form or another this matter has, as you know, been under discussion for many years. This Department is clearly of record that in its opinion much of the Kings River country is of national-park caliber. The major issue around which discussion has centered is that of water resources.

My understanding is that boundary lines as shown on certain recent maps have to a very large extent taken the matter of water resources into consideration. This note, however, is to let you know that the Department of Agriculture will approve creation of a national park within the general territory under discussion and will join with you in consideration of the specific boundaries described by proposed legislation in an effort to expedite the situation.

My reason for making this reservation with respect to boundaries is that I have not yet seen the bill defining them, and they are, of course, a matter that should have our mutual consideration.

Sincerely,

H. A. WALLACE, *Secretary.*

I may add that I anticipate no difficulty in reaching an understanding as to boundaries, because the proposed park whose boundaries were approved by the Department of Agriculture in 1924 included all and more of the Kings Canyon country than is included in the bill of 1939.

AGRICULTURE DEPARTMENT'S SUPPORT CONTINUOUS

Thus you see that the proposal to place Kings Canyon in the national park system has had the unbroken support of the Department of Agriculture from the time it first came before a committee of Congress in 1920. The Government departments concerned in the administration of the public lands have been united as to the wisdom of this proposal.

Why is it, then, that the establishment of this park has been so long delayed? Chiefly, I believe, because there has been no general study of the relationship between the park and the economic use of the waters of the Kings River, and no plan of action covering the whole field. Now we do have such a plan of action, and for the first time there is a good chance to get somewhere both with the national park and with irrigation development.

LINKING THE PROJECTS

Let me remind you that during these years when the Kings Canyon national park proposal was meeting with difficulties because it was traveling alone, the Pine Flat Reservoir project was also getting nowhere at the same rate. There was a Pine Flat bill before Congress in 1924, and I suppose there has been one there most of the time since then. Nothing came of these proposals. They were introduced and they died.

PINE FLAT

The present Pine Flat bill, which Congressman GEARHART has introduced, is based on studies made by the Bureau of Reclamation and the flood-control engineers of the United States Army. It authorizes the Bureau of Reclamation to build a dam at Pine Flat, on the Kings River, 25 miles below the proposed national park, and to build power dams at sites found to be feasible. It provides that the Federal Government shall make a grant of money toward the building of the Pine Flat Dam, as well as for the power dams, to be repaid out of the sale of power. The remainder of the cost would be financed by the irrigation interests.

In the drafting of the bill for the John Muir-Kings Canyon National Park, the Pine Flat project was taken into account. Two areas, discussed as possible location of power dams, are excluded from the park boundaries, but may be included by proclamation by the President if they are abandoned as reclamation enterprises. It was necessary to leave this portion indefinite, because the power study by the reclamation engineers had not gone far enough to justify a final location of the power dams.

The point I would emphasize, in this connection, is that Congressman GEARHART'S bill for Pine Flat carries a power dam authorization which will make the Federal Government responsible for producing power from the Kings River, wherever it can be produced most economically. The location is up to the engineers. The financing is up to Congress.

All of this depends, of course, upon congressional action; and whether Congress acts will depend to a considerable extent upon the way all the various interested elements work—whether they work together or against each other.

FLOOD CONTROL, POWER, IRRIGATION AND PARK

You have here two measures which are interrelated. Back of the Pine Flat bill you will have the unanimous voice of California, based on the economic benefits of irrigation and power. It will be a support effective because united, but nevertheless handicapped by coming from a single State. Back of the park bill you will have the majority voice of California, and a national support as well, coming from the friends of national parks in every State of the Union.

IRRIGATIONISTS AND PARK ADVOCATES UNITE

If the support for these two bills can be merged, so that the friends of the John Muir-Kings Canyon National Park become the friends of the Pine Flat Reservoir, and the friends of the Pine Flat Reservoir are seen to be the friends of the national park, it is going to make things a lot easier for both measures. If that happens, each bill will have what it most needs—national support for a local project—that is, Pine Flat—and local support for a national project—that is, the John Muir-Kings Canyon Park. A combination of these two must be victorious.

NATIONAL PARK A GREAT ECONOMIC ASSET

You people of Fresno and of the San Joaquin Valley in general have a particularly deep interest in this national-park proposal. A national park becomes a part of the life of the communities located near it and one of their important economic resources. I have to smile when I read that somebody has talked about a national park locking up economic resources. Does anybody think that an economic resource was locked up when Sequoia National Park was established? On the contrary, it opened up one of the biggest economic assets in California. This is likewise true of the other national parks in your glorious State. Whenever a tourist is advised to visit the Mariposa grove of big trees in Yosemite National Park, he does so by the Wawona Road; that is to say, by way of Fresno.

SAVE THE REDWOOD MOUNTAIN SEQUOIAS

I have been talking all this time about the Kings Canyon and of the John Muir-Kings Canyon National Park. At the other end of it, beyond General Grant National Park, is the Redwood Mountain and Redwood Canyon giant sequoia grove. I don't suppose many people who are listening to me have been on Redwood Mountain, or down in the canyon, but you will go there when it becomes part of the John Muir-Kings Canyon National Park. Redwood Mountain is privately owned. It is threatened with destruction, not because the owners want to cut it but because they can't help themselves. They must sell the property or lose it, and we want them to sell to the Government.

If we succeed in saving Redwood Mountain—and we must save it—California will have one more great national park, with the grandest mountain scenery in the State, worthy of its name, John Muir—and a grove of big trees comparable to any in the Sierras.

With the cooperation of Congressman GEARHART, we are trying to do something more than make Kings Canyon a national park. We are trying to make it a wilderness national park. The State road that has been built into the valley of the South Fork opens the finest scenic area of the Kings Canyon to the motoring public, and thousands of visitors will throng its floor. The bill that has been introduced forbids the building of roads beyond the floor of the canyon. It excludes all artificial developments from the wilderness area, except foot and horse trails and trailside shelters, and it forbids exclusive concessions.

I urge you people of the San Joaquin Valley to constitute yourselves the protectors of this wilderness. In the long use it will be to your financial advantage to do this, because when you overdevelop an area of great beauty in order to bring greater throngs of visitors, the final effect is to destroy its beauty, and thus to kill the goose that lays the golden egg. But beyond this, I urge you to join in protecting the Kings Canyon wilderness forever, because a true and beautiful wilderness has become the most priceless thing in America. Let us keep this one for the benefit of ourselves and our posterity.

The Department of the Interior is eager to do its share, both in guarding and protecting the land that deserves to be in a national park, and to help the people of the San Joaquin Valley realize the greatest possible benefits from the waters that come down out of the mountains.

Before my term of office expires I hope to return here to help to dedicate the John Muir-Kings Canyon National Park and to stand by the side of your able and efficient Representative, BERTRAND W. GEARHART, watching precious water making a garden out of what is now a potentially rich desert.

Six Years of Job Insurance in Wisconsin

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1939

ARTICLE FROM NATION'S BUSINESS FOR MARCH 1939

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written

by Mr. Fred H. Clausen, appearing in Nation's Business for March 1939:

[From Nation's Business for March 1939]

SIX YEARS OF JOB INSURANCE

(By Fred H. Clausen)

Wisconsin has often been referred to as the Guinea Pig State for economic and social legislation. To a large extent this may be so, although in recent years we observe that other States are seriously contending for the title.

The role guinea pig is an honorable and useful one if the results of the experiments are studied carefully and used. If they are ignored, then the voice of experience falls on inattentive ears and an opportunity is wasted.

As applied to compulsory unemployment compensation laws enacted by the various States, this situation has existed and, I fear, will continue unless some lessons are learned from what has already happened. This is the one excuse for the gospel testimony that now follows.

With a backlog of agitation which started 16 years ago, Wisconsin employers have been compelled to consider not only the impact of a proposed penalty system for involuntary unemployment but to try to understand the principles involved.

After prolonged discussions and debates, the Wisconsin law became a fact in 1932.

Since then we have had substantially more experience than any other State and we submit that, although 6½ years is not a long time, it is the most sustained record that can be drawn on for observation and analysis.

It was our good fortune that Wisconsin lawmakers and the proponents welcomed the active interest and criticism of the employers who were expected to pay the freight. That cooperation has been maintained through an advisory committee to the industrial commission, made up of three representatives each of employers and labor organizations. As one of the members, I can testify that we have gotten along together and have helped to evolve a law that works. This set-up might not have functioned if the law's administrators had assumed a superior attitude and ignored the problems that are met in everyday employment. As Wisconsin employers survey the field of State unemployment compensation laws, we can say at least that our system is distinctive. The fact that so few other States saw fit to follow us or profit by our experience makes it all the more important to justify ourselves and even have the temerity to offer some gratuitous advice which, if accepted, may help us to protect what we have. Self determination by States under the present criteria of the Social Security law is at stake. The fact is easily determined if recent emanations from Washington sources are fully understood.

Let us refer to these principles we value so highly.

1. The Wisconsin law contains the basic principle of trying to retain employer-employee relationships.

In other words, the worker has definite knowledge that the benefit checks he receives are drawn on a fund which his own company established at the time he worked there and that these benefits are measured by the length of his employment and his earnings from that employer. There is no jack pot or pooled fund which is prevalent in most other States.

There is less chance for the worker who gets the benefits to develop the idea that the State owes him a living. He would prefer to believe that he earned the right to benefits when working for the employer out of whose fund the benefits are paid. There are those among social-security advocates who believe that unemployment compensation is a method of poor relief for limited periods and that this socialized fund collected from employers must be pooled and that no contributor has a right to concern himself as to who receives his payments.

We have found a great deal of satisfaction in learning promptly who the claimants for benefits are and how much they receive. We know, too, that these payments operate as a form of dismissal wage to workers whom we are unable to continue on our own pay rolls. That is inherent in a company reserve system.

2. The Wisconsin law contains the needed incentive for each employer to minimize the extent and duration of his unemployment by providing a premium for good performance and a possible penalty for excessive lay-offs.

The merit or experience rating provisions in various State laws have either a practical possibility of attainment or they are a delusion because unworkable.

Of 11,000 Wisconsin employers under our act it is estimated that more than 2,000 will pay a reduced 1-percent contribution in 1939. Their company reserve balances will have equaled or exceeded 7½ percent of their annual pay roll. On the other hand, about 400 accounts, most of them relatively small, are overdrawn and will require a 3.2-percent rate for the new year. Unless we are disturbed by outside influences, the number of employers on the reduced rate will increase from year to year with the result that such employers will strive to attain the 10-percent reserve level which will thereafter make it necessary to contribute only amounts equal to the annual drafts on their own company reserve accounts.

AN INCENTIVE IS VITAL

For us it is difficult to understand the attitude of some employers in other States who show little interest in the company reserve system with its attendant incentive for improved continuity of employment through reduced contributions and the avoidance of eventual higher costs. It would appear that they are perfectly willing to depend on other industries to help carry their load or that they look upon these compulsory contributions as just another tax which must be borne.

Careful consideration must lead to the conviction that it is a shortsighted policy to disregard the impact on the fund through excessive payments and in some cases utilize the existence of the fund by draining it for the benefit of your own employees. We believe that, without the free and simple operation of incentive experience rating, the eventual cost of maintaining reserves is bound to be increased. This, in our minds, is justification enough to make every effort to sustain the Wisconsin plan.

3. On the administration side, we appreciate the fact that employer reporting has been minimized and that the effort continues to simplify and reduce record keeping and report preparation.

Wisconsin doesn't need quarterly wage reports on all its 450,000 covered workers. We avoid the job of handling more than 1,000,000 useless reports on steady workers. We ask ourselves, Why should the State demand time cards on workers who are not potentially eligible for benefits?

Our wage and separation reports with the employer's initial expression of liability on all discharged workers form the bases for contact with the law's administrators and intelligent prompt disposition of each claim. The record now being made for prompt payment of benefits has eliminated practically all complaints.

The Federal law assumes 10 percent of the standard rate of 3 percent of pay roll as a reasonable cost of administration. We have never exceeded an expense-allowance rate of three-tenths percent, and for 1938 it was less than 0.25 percent.

Let us now consider the future of State laws applicable to compulsory unemployment compensation. There are several reasons for concern:

1. The growing demand for a nationalized system with Government regulation and administration. State self-determination will then disappear.

2. Discounting of company reserve plans and substitution of a socializing scheme for relief payments out of one general fund regardless of source and with less and less emphasis on employment records of recipients.

3. Discouragement of experience rating that has any substantial incentive for improved continuity of employment. Experience rating in form but not in fact is now offered by a recent report of the Bureau of Unemployment Compensation in these words:

"In summary it appears that the chief recommendation is that only such a rating formula be adopted as will yield a fixed average contribution of 2.7 percent of the aggregate State pay roll. This recommendation offers the soundest approach to an experience rating program."

This is the recommendation of a tax collector, not a person responsible for the continued employment of workers and the welfare of industry.

"Hang your clothes on a hickory limb,
But don't go near the water."

What is there sacred about the 2.7-percent and why should it be imposed if not required?

May we not suggest to all employers that their active interest in the form and substance of their State laws on this important subject should be an immediate and direct obligation.

History is in the making and you will do well to sit in during the writing. That is what our more extended Wisconsin experience has taught us.

It Can Happen Here

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1939

LETTER FROM RAY N. DAVIS

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a letter from Mr. Ray N. Davis, a prominent resident of my home city of Tacoma, Wash. Mr. Davis is an active official of Democratic clubs and has demonstrated his understanding of international affairs on many occasions. He shows a pronounced liberal slant in his writings and thereby reflects the sentiment entertained by vast numbers of the people who reside in my congressional district.

I consider that the letter hereto appended touches upon a subject of vital moment to all American people. He points out the menace inherent in the continued unchecked and unmolested spread of fascism. He discerns the danger in the predilection for retreat now developing so rapidly in the

so-called democracies. With penetrating eye, Mr. Davis recognizes the danger to our own country of permitting intolerance, anti-Semitism, and red-baiting tactics to continue without protest. Mr. Davis expresses the views entertained by hundreds of thousands of Americans that if we do not curb these subversive forces working in our midst the growth and consequent power of intolerance will be so tremendous that it will become insuperable, virtually impossible to combat. Let us recognize the significance of the prairie fire which is approaching on the horizon and let us watch the ramparts lest we be engulfed in the ensuing conflagration.

Mr. Davis' letter follows:

IS FASCISM BORING FROM WITHIN?

TACOMA, WASH., *February 24, 1939.*

Mr. JOHN M. COFFEE,
House of Representatives, Washington, D. C.

DEAR SIR: The demonstration staged by the German-American Bund last Monday night in Madison Square Garden and again last night in Los Angeles makes it evident that if this country is to survive as a democracy this organization must be dealt with energetically and without delay. Their use of so-called uniform storm troops for the purpose of beating up any objectors certainly must stop. It will be no time at all until other organizations adopt the same tactics. Next these storm troops will be armed and we shall have privately armed and supported armies in this country. This is the way Hitler made himself master of Germany, Austria, and Czechoslovakia. Are we to suffer a fate similar to these countries?

The Government is spending huge sums for arms against foreign enemies while our internal enemies are making the use of those arms impossible. This country can never resist a foreign enemy while that enemy has the full support of a large group within our borders. France and England are good examples of this very thing. First the dictators divided those countries internally so resistance to an external enemy was hopeless. This makes their armament programs useless and gives the dictators full sway in Spain, Africa, and anywhere else. The same technique is being used here.

If a Franco could be found for Mexico tomorrow, German and Italian troops could be landed there and not molested in the least by the United States, because if we are not already divided hopelessly, such organizations as the bund would soon see to it.

It is my opinion that we are about to be made the next victim of the dictators. Proof is the way President Roosevelt's speeches have been lampooned by the dictator press and then picked up by our press as a mistake of the President's. Next is this bund and its uniformed troop. Further, the attitude of our State Department on neutrality toward China and Spain. The dictators already have a party in this country backed by the American press, a few scalawag Republicans, and Democrats of the MARTIN DIES stripe.

Something must be done and soon if we are to avoid being made a tool and vassal of the dictators as England and France now are. What to do I am unable to suggest. However, I do suggest that the liberals in Congress let the people know what this danger is by use of the radio and speeches on the floor of the Chamber. Any other methods that could be devised should also be used.

Making laws against such insidious activities failed in other countries, but maybe would work here if made soon enough. At least the use of uniformed troops by political organizations must be stopped if we are to preserve order and peace for ourselves.

If this thing gets a real start in this country, it will be very difficult to combat because of the nature of our Government. First, we have 48 States. They demand that affairs legislated on by the National Government must be truly interstate. There will be 48 ideas on this subject. Second, we have a free-press and free-speech tradition that absolutely must not be violated. However, any organization or party that would deny others free speech and free press when in power should be suppressed. Third, we have a long tradition of toleration of political ideas that must also be preserved. With these handicaps, just what can be done?

But meet this problem and solve it we must, or we will surely lose our liberty.

Please see what can be done. Many people have talked to me in the past 3 days on this subject. Like myself, they have the jitters, for who wants to live in any unfree land?

Yours very truly,

RAY N. DAVIS.

Reorganization Act of 1939

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1939

Mr. THORKELSON. Mr. Speaker, after listening to the debate on H. R. 4425, the Reorganization Act of 1939, as propounded by the gentlemen from Missouri and North Carolina, I can readily foresee a purge in the United States no different from that which caused bloodshed in Europe. It is always well to remember that the American people are beginning to think for themselves. They are not going to tolerate socialism and communism imported from Europe. The small minority who are advocates of these "isms" are sticking their necks a long way out, and I predict they will be cut off.

The many Communists who have been appointed to positions in the Federal Government is sufficient evidence to show which way the administration leans. Such appointments are un-American, and those who make them are no better than the appointees.

We have been asleep for a long time, and we are still slumbering, but when our people become thoroughly aroused, I am positive that Congress will be instructed to clean house and the people will help to perform such necessary house cleaning.

It is difficult for a new man to understand how anyone can support this reorganization bill, a bastard offspring of the last bill, and it is no better than its parent. It is not to reorganize the Government. It is not to reduce expenses. It is for one purpose alone—to centralize greater control in some evil power in our Government.

How can anyone stand up and defend this measure, and state to the Members that this bill is necessary and that Congress is not capable of performing reorganization, is an insult to Congress itself.

I did not see this bill until March 6, 1939, and I believe one of my colleagues said the same when he addressed the House yesterday. I question the purpose and the good faith of a committee that brings a bill of this type on the floor without giving our people an opportunity to study a measure which is going to deprive them of their birthright. I am, however, much more alarmed at the manner in which all bills come out of the committees. They are so obscure and confusing, interwoven with legislation and appropriation, that no one can vote on them intelligently. The purpose of the bills and of the administration that backs them can only be to destroy our Government, as this administration has done in the last 6 years.

I do not like to see a bloody revolution, yet as I observe the submissiveness and blindness of some of the majority Members in their acquiescent attitude to administration leaders, I realize the end is near.

The National Health Act was introduced in the Senate February 27. It is a brother to the Reorganization Act of 1939. It is for no other purpose than to turn over full control to the President and his bureaucrats. The Democrats are in the majority and can pass any legislation they please, which they have done.

To hasten final dissolution and destruction of our Government, I advise you to pass both of these acts. After you have borrowed and appropriated $10,000,000,000 more we will be bankrupt and you may then pack your baggage and go home.

After having performed this noble deed you may in your declining years listen to your master's crack of the whip and cogitate upon the aid you rendered in the destruction of your own Government. You will not be so cocky then as you are now, because you will be despised by every patriotic man and woman who sees you.

The legislation should be passed now, while you are in power. You are responsible; you should therefore clean the slate. Your action of today may be responsible for destruction of life tomorrow. I want you to be accredited with that. I want it to be a crown of glory for those who vote for this bill and betray our people. Congress should know that it cannot shift its power to others; that in the very act of passing this power it dishonors its oath of affirmation.

The reorganization bill of 1939 will reorganize and consolidate the Government under one man. It will not reduce cost, and it will not simplify. It will, instead, complicate much more than now. This bill will create a costly totalitarian, communistic state.

I now quote from the bill, section 301:

The President is authorized to appoint not to exceed six administrative assistants and to fix the compensation of each at the rate of not more than $10,000 per annum. Each such administrative assistant shall perform such duties as the President may prescribe.

This paragraph informs you about the dictator, and the Members of Congress should know that they elected him, and not the people. This congressional fiasco will cost the taxpayers of the United States $60,000 per year for six administrative assistants. That is the beginning. The Lord only knows how much it will cost for administrators or how many it will add to the Federal pay rolls, for no administration adherent will be discharged or left unemployed.

I quote from the bill, section 9:

Whenever the employment of any person is terminated by a reduction of personnel as a result of reorganization effected under this title such person shall thereafter be given preference, when qualified, whenever an appointment is made in the executive branch of the Government.

So the purpose of this act is not to reorganize or to provide reduction in the cost of operating the Federal Government. It is not to aid the people by reducing taxes. It is, instead, the opposite, for it adds more cost to the Government's operations, which, of course, will have to be met by greater taxation.

Now, what is the act for?

I quote from the bill, section 1 (a):

The President shall investigate the organization of all executive agencies of the Government and shall determine what changes therein are necessary to accomplish the following purposes.

The question now arises, What can the President do? And the answer is nothing, for he must employ someone to do the work for him. If he appoints the same caliber of men that he has recently appointed, even my colleagues on the right may visualize what might happen. There is too much socialism and communism in the Federal Government now, and this bill will, if nothing else, help to promote that tendency.

What is he further supposed to do?

I quote from the bill:

To reduce expenditures to the fullest extent consistent with the efficient operation of the Government.

Does this mean anything? Certainly not, for this bill has already appropriated $60,000 per year for additional help, and nothing is said about how much more is to be appropriated or if anyone is to be eliminated.

I quote from the bill:

(2) To increase the efficiency of the operations of the Government to the fullest extent practicable within the revenues.

For the past 7 years, I believe, the Government has spent about $10,000,000,000 per year, or between sixty or seventy billion dollars. If this was not enough revenue to meet the present attempt at efficiency, just how much will be needed to meet contemplated efficiency, if you please?

I quote from the bill:

(3) To group, coordinate, and consolidate executive agencies of the Government, as nearly as may be, according to major purposes.

It would be interesting to know what is meant by "as nearly as may be, according to major purposes." It lacks good sense and common reason. It is simply incomprehensible.

I quote from the bill:

(4) To reduce the number of such agencies by consolidating those having similar functions.

Nothing prevents the President now from reducing and consolidating Federal agencies either with the same functions or overlapping functions. The President does not need this bill to do that—to correct overlapping functions—he has that power now, and I am sure that every Member of Congress would welcome such action on his part without the slightest objection. It is well to bear in mind, however, that the Federal Government is now overlapping and reaching into every State in the Union—so much so that State governments are strangled by the Federal Government. Nothing is said in this bill about eliminating such duplication.

I quote from the bill:

(5) To eliminate overlapping and duplication of effort.

I shall leave interpretation of this to the Federal experts, for they, no doubt, understand the overlapping of efforts. It speaks for the efficiency of the present administration.

I quote from the bill, section 1–5b:

The Congress declares that the purpose specified in subsection (a) may be accomplished in great measure by proceeding immediately under the provisions of this title.

I want to ask those responsible for the bill—the gentlemen from Missouri and North Carolina—how they determined that Congress has such ability. Yesterday both of them stood here on the floor and said, "Congress does not have the ability to reorganize the Government." I am of the opinion that there are many responsible men in Congress who are much more capable of reorganizing the Government than the President or anyone else in our bureaucratic Government. At any rate, it is the duty of Congress to do so.

Sections 2 and 3 are for one purpose only—to place everything under Federal control—under the control of the President, if you please. I shall quote a part because it is a little out of the ordinary for it mentions corporations owned or controlled by the United States.

I quote:

When used in this title, the term "executive agency" means any executive department, commission, independent establishment, corporation owned or controlled by the United States.

The remainder of these two sections, as I said, places practically everything under the control of the President.

This bill creates a despotism in the United States and places a dictator in charge of the Nation; and, gentlemen, it is done by the Congress of the United States, a body which has taken an oath or obligation "to preserve, to protect, and to defend" the people's rights so that liberty and free government may prevail. It is done, my friends, by a body of men elected to represent the people and no one else. If we survive, I hope this may be a lesson to our people never again to elect anyone except those who will remain strictly within the Constitution of the United States. This reorganization bill—H. R. 4425—is not only unnecessary but it is clearly and sharply unconstitutional. I here and now challenge the President, the Supreme Court, or any Member of this Congress to show me where in the Constitution power is delegated to Congress to enact this legislation. If this act is passed, Congress not only betrays the people but will go down in history as traitors to the Nation.

What Is National Defense?

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1939

Mr. JOHNSON of Oklahoma. Mr. Speaker, a few minutes ago the first national-defense bill considered during this session was voted on by this House after only a few hours of debate. The fact that only 15 votes were mustered against the bill to strengthen our armed forces is conclusive evidence that there has been a marked change in the attitude of Members of Congress since the last session, at which time a much more modest defense bill was considered by Congress.

The vote this afternoon was also abundant evidence that the country is becoming decidedly more preparedness-minded. There is no question but that the rank and file of Americans have become convinced by events of recent history that if America is to have any assurance of remaining at peace with the world that she must be prepared for any emergency on land, in the air, and on sea.

Mr. Speaker, I did not hesitate to support the first defense bill today as I have consistently supported defense programs in the past, irrespective of the political complexion of the national administration that has presented such a program.

I hope to be able to support further defense policies and programs in order to maintain the safety and security of our citizens from any enemy, actual or potential.

This bill, if agreed to by the Senate, will add 3,025 bombers and fighting planes to America's present very deficient air forces. In my judgment, the importance of building up an efficient and capable air defense is not only desirable but of vital importance to every citizen of the United States. All these additional ships, so it is understood, will be constructed within the next 2 years.

Should America ever be dragged into another war, which, of course, I do not for a moment anticipate, especially if and and when this Nation is reasonably well prepared, planes will undoubtedly play a much more important part in the future than in the past.

In addition to this, America must have much stronger coast defense, more effective antiaircraft guns, and more and faster destroyers for the protection of our own shores, including over 2,000 miles of unprotected Alaskan coast line.

So long as our rearmament program, coast defense, and fortifications are for actual national defense I shall enthusiastically support such a program. If, on the other hand, your committee brings in another bill, which it is understood is in the making, proposing to extend our defense line four or five thousand miles farther west to Guam, for instance, where there are no American citizens, in order to threaten or attempt to bluff some foreign enemy, actual or imaginary, I cannot see my way clear at this time to support such a program, even though it may be presented to this Congress in the name of national defense.

May I add in this connection, as I have contended in the past, that if this great Nation is to embark on a real practical program of national defense, this Congress must not stop by building planes, cruisers, coast defense, and the strengthening of all component parts of the Army, important and essential as all that is admitted to be.

A Nation-wide program of soil conservation is real national defense. We might have the greatest Army in the world and the largest battleships, but if we go on depleting our soil this Nation will find itself eventually in a similar position that poor, helpless China is now—unable to feed her people, to say nothing of carrying on a war.

What is flood control but national defense? The same is true of a Nation-wide reforestation program. Other nations have included many of these things as a vitally important part of their national-defense program.

It is conceded by all military experts that no nation can be really prepared for war that does not have a good system of highways. While in Germany, in 1937, I saw many great three- and four-lane highways extending in every possible direction from Berlin. The fact that France has a poor highway system was one of the greatest handicaps to the allied armies during the World War.

Incidentally, the building of dams, the conservation of soil, and the constructing of a Nation-wide system of two-, three-, or four-lane highways would go a long way toward solving the perplexing and tragic unemployment problem, which should also receive much consideration in the planning and carrying forward of America's program of national defense.

Reorganization Bill

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1939

Mr. BRADLEY of Michigan. Mr. Speaker, I favor reorganization. Who does not when he drives around this city of Washington or who does not when he drives around any city—large or small—yes; even the smallest of hamlets, and sees, hanging on pillar or post or painted in gilded letters on the windows for all to see, the magic alphabetical insignia of some Government agency or bureau. Who does not favor reorganization when he can hardly drive 5 minutes on any highway in the country without passing one or more of the one-hundred-thousand-and-odd Government cars carrying bureaucrats hither and yon to pry into your affairs and mine—while we are living in this beneficent age of planned economy? Yes; I favor reorganization—reorganization was a vital issue in my campaign last fall when I received a mandate from my constituents back home. That mandate was economy, to do my part toward restoring this Government to a sound financial basis and restoring to this Congress the powers that belong to it and which it has so carelessly given away during the 6 years of the New Deal. Yes; I favor reorganization for economy and efficiency. I favor the elimination of useless bureaus and bureaucrats who have fastened themselves like gigantic barnacles on the ship of state. My people back home would expect me to favor any sound reorganization plan.

Yesterday I listened carefully to the splendid detailed description of this bill put forth by the able gentleman from Missouri [Mr. COCHRAN], and so ably elaborated upon by our colleague from North Carolina [Mr. WARREN], and I have carefully studied the bill. It becomes apparent that in the draft of this measure care has been taken to eliminate therefrom the controversial items to which my colleagues on this side of the House so strenuously objected in the last Congress. I grant that this measure has little in it on the surface which would appear detrimental to the interests of my constituents or the country at large; but, Mr. Chairman, I raise these questions:

First, if the previous Congresses delegated their powers through blank-check appropriations to the President of this country, and he in turn created these bureaus and agencies, why does he not now discontinue or dissolve or coordinate these agencies himself without further demand from the Congress? If there be need for this reorganization bill at this time, and if this administration is so sold on economy and efficiency at this time, why does it continue to create new bureaus and new agencies?

Why does this Congress continue to appropriate hundreds of millions of dollars for the perpetuation of these so-called emergency establishments?

Yes, I favor reorganization but, if we are going to reorganize, let us do it with economy and efficiency in mind and let us be careful to see who is going to do the reorganizing and how much economy and increased efficiency we may expect to result from such a reorganization.

The Brookings Institution advised us yesterday, as follows, and I quote:

> The entire Budget for the operation of emergency administrative agencies, including the administration of all emergency activities, amounted to $1,827,318,000 in the last fiscal year, which was approximately 17.65 percent of the total amount available for expenditures. The remaining $8,500,000,000 was appropriated for various functions and activities which the administrative reorganization would not touch.

It goes on to state that—

> The overwhelming bulk of the administrative expenditures is made by a relatively small number of large agencies which do not seriously duplicate or overlap other agencies and would not be affected to any appreciable extent by structural reorganization. The 30 largest agencies contain more than 99 percent of all the civilian employees of the executive branch.

And most of these are specifically exempted in this bill.

So, Mr. Speaker, it appears from that that very little actual monetary saving and very little increase in efficiency can result from the passage of this legislation. Now, let us consider for a minute the President who would be instructed to effect these changes. Does his past record, do his recent utterances, indicate to this body that he can be relied upon to reorganize the executive branch with economy and efficiency in mind? Business is stagnant in this country; unemployment is rampant; people are bewildered by the constantly changing governmental picture and ever-increasing governmental regulation. Why add to that chaos? In his speech

in this Chamber on January 4 the President said—and I quote:

> And even after such reorganization, it will take time to develop administrative personnel and experience in order to use our new tools with a minimum of mistakes.

Are we to take from that, that during these 6 years these bureaucrats have not been trained in their duties; are we to take from that that the imposition of new duties upon them will result in further chaos and confusion? I think his own words indicate the answer is emphatically "Yes." Can we rely on him for economy, while over the radio and in the newspapers daily we hear and read of his threats to chastize the economy bloc in Congress? Despite the powers given him early in his incumbency, has he yet shown one move toward economy at any time since the first 4 months of the New Deal, and as a result of which at that time we experienced the greatest economic come-back in our history?

And now we come to the question of the duties of this Congress. I say it is time for this Congress to take back unto itself the powers that belong to it. I say it is time for the President, if he has in mind a definite plan of reorganization, to submit it to the Congress and let us approve of it by our affirmative action, as proposed by that able gentleman from Virginia, Senator BYRD, rather than by meekly reserving to ourselves the right to negative the President's action by concurrent negative resolution of both Houses.

Yes, Mr. Speaker, I favor reorganization for economy and efficiency, but I do not favor giving to this President the right to play a game of solitaire chess with Government bureaus as the pawns.

This bill, to my mind, is being offered at this time with but two purposes in mind. It is a weak and puny attempt on the part of the majority to put us on the spot, on this side of the House, for 1940, by saying we refused to approve of a bill to provide for economy in Government and, secondly, and foremost, it is being introduced in this session to satisfy the whim of the gentleman in the White House who is determined that his will must continue to prevail over this Congress.

Mr. Speaker, here is one new Member of this body who is not afraid of being put on the spot and who is always going to vote for the best interests of his constituents and the country as he sees it and who is determined that insofar as he is able to promote it, this body shall take back unto itself the powers granted it by the Constitution, and, therefore, I am going to vote "no" on this reorganization bill.

Anniversary of the Convening of the First Congress

EXTENSION OF REMARKS

OF

HON. CARL E. MAPES

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1939

RADIO ADDRESS OF HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS

Mr. MAPES. Mr. Speaker, under leave to extend my remarks in the RECORD I include an address by Hon. JOSEPH W. MARTIN, Jr., of Massachusetts, on the occasion of the one hundred and fiftieth anniversary of the convening of the First Congress, over a hook-up of the National Broadcasting Co., on Saturday evening, March 4, 1939, as follows:

> In writing his bill of rights for Pennsylvania, Benjamin Franklin declared "a frequent recurrence to fundamental principles * * * is absolutely necessary to preserve the blessings of liberty and keep a government free."
>
> There is no more appropriate occasion for a "recurrence to fundamental principles" than today when we observe the one hundred and fiftieth anniversary of the first scheduled convening of the United States Congress. For this is the anniversary of the day on which the American system of representative government really commenced. The survival of this system for 150 years, making it the oldest form of government now in existence, should renew the faith of all Americans in the fudamental principles on which it is based.
>
> Those fundamental principles are set forth in the American Constitution, which the great British statesman, Gladstone, described as "the most wonderful work ever struck off, at a given time, by the brain and purpose of man." In that document is the framework for our republican and representative form of government and we cannot fully appreciate the latter without first understanding the former.
>
> Despite recent assertions to the contrary, the American Constitution was not a bold experiment along new lines. It had its roots deep in the experience of the Anglo-Saxon people. Its provisions were based on victories in behalf of liberty won during almost 600 years in the fight which began at Runnymede in 1215.
>
> Nor were the framers of the Constitution, for all their youth, adventurers in politics or visionaries toying with speculative theories. They were practical men with a knowledge of the hard facts of political and economic life. Not only history but their recent experiences with the Crown of England had taught them the excesses to which power vested in the hands of one man could be used.
>
> So, in setting up the new American Government, they determined that our country should never fall under the domination of a single man or a small group of men. These founding fathers feared disunion with all its dangers, but they feared an autocratic government even more. Abuse of power was to be prevented at all costs.
>
> Their purpose, as Justices Holmes and Brandeis pointed out a few years ago, was "not to avoid friction, but, by means of the inevitable friction incident to the distribution of the governmental powers among three departments, to save the people from autocracy."
>
> In order to effect their objective of saving the people from autocracy the framers of the Constitution built a government on the foundation of a system of checks and balances. Authority was divided, first, between a national government and the State governments, with the people retaining all power not specifically delegated to one or the other. Secondly, the power delegated to the National Government was distributed among three branches—the executive, the legislative, and the judicial, each to remain independent of the other.
>
> This is the essence of American representative government. Yet it was not a novel or untried idea. Twenty-one years before the Constitutional Convention met the Massachusetts House of Representatives, in a letter to the Earl of Shelburne, drafted by Samuel Adams, referred to the "legislative, executive, and judiciary powers of the government, in the opinion of the greatest writers, always to be kept separate."
>
> Moreover the Constitutional Convention found this principle written into the constitutions or bills of rights of six of the thirteen original States. It was not there by accident. It was deliberately written into those early State consitutions and subsequently into the Federal Constitution as the best means which could be devised to save the people from autocratic rule or the whims of a single man or coterie of men.
>
> In applying this principle of a government of checks and balances the framers of the Constitution undertook to curb an excess of power of one branch of government by balancing it with an effective power in another. They did not wish the Executive or the legislature or the courts singly to be the supreme master of American government.
>
> Above all, they strove to assure the independence of the Congress which they established as the representatives of the people. They never intended Congress to be a rubber stamp, subservient to the will of the Executive, giving him discretionary power to function as he pleased. They recognized the necessity for the Executive to make to Congress recommendations for the welfare of the country but they intended that Congress should exercise its judgment on the wisdom of such measures.
>
> It never occurred to the framers of the Constitution that any Chief Executive would ever confront Congress with a "must" program of legislation, and that if Congress declined to accept such "must" orders it would be accused of refusing to obey the mandate of the people. Such eventualities never occurred to the Constitutional Convention, because they were entirely foreign and hostile to its conception of the Government being established for the American people.
>
> Under the American system the Members of Congress were not supposed to be agents or servants of the Chief Executive. They were to be the representatives of the people and responsible to them alone for their actions. Alien to our governmental philosophy is the thought that Members of Congress must be "yes men" to the President.
>
> Thus the first article of the Constitution provided for the establishment of Congress and the manner of its election. The authority of the Federal or National Government is set forth specifically as the powers of Congress. Therein are enumerated the powers to lay and collect taxes and duties, regulate commerce among the States, coin money and regulate its value, to declare war, to raise and maintain an Army and Navy, and to make all laws necessary and proper for the administration of the National Government, and to carry out the specific powers granted to Congress.

All these things Congress may do—and alone. Bare mention is made in the Constitution of the powers of the President. He shall be the Commander in Chief of the Army and Navy; he shall execute faithfully the laws enacted by Congress; he may grant pardons and reprieves for offenses against the laws of the United States, and he may make appointments to vacancies during the recess of Congress. These things he may do alone. But unless Congress has granted him the authority, he may not make major appointments without the advice and consent of the Senate when in session. Lodged in the Senate is the full authority to refuse to advise and consent to the President's appointments for any reason at all, or for no reason, as that body sees fit. Nor can the President, under the Constitution, make treaties without the advice and consent of the Senate.

Nor can he pay money out of the Treasury unless it has been appropriated by congressional action. The founding fathers realized that the power of the purse was the power of parliament, and they took care to lodge in Congress the final authority over the national exchequer. They specifically provided that "no money shall be drawn from the Treasury but in consequence of appropriations made by law." And they did not contemplate an evasion of this provision through blank-check appropriations which placed in the hands of the President large sums of money to be expended as he alone deemed wise and proper.

The President may veto a law distasteful to him but even in this respect his will cannot prevail over that of two-thirds of the Members of House and Senate. Yet even though Congress is an independent body, when it desires to be, its will is not supreme and unrestricted. The Constitution, with its Bill of Rights, forbids Congress to trespass into specified fields of action. The Constitution denies Congress the right, for instance, to enact any law which would interfere with freedom of press or speech or curb the right of any man to worship God as he pleases. Private property cannot be seized without just compensation, and the right of trial by jury cannot be abridged. Should Congress overreach its authority, it would be checked by the Supreme Court, just as it is the duty of Congress to check the President when he exceeds the authority imposed in him.

For 150 years now, under this system of government, America has grown and flourished. From 13 States sprawling along the Atlantic seaboard our country has become a great continental empire, stretching over many thousands of miles and giving sustenance and happiness to 130,000,000 people. No other land ever has been as happy and free as this, none ever has been so prosperous.

For these blessings we must give thanksgiving to a kindly Providence. But we also must pay tribute to the wisdom and skill of those who framed the Constitution of this Government and to all those patriotic Americans who, serving in House and Senate during the last 150 years, fulfilled the obligations imposed on them to preserve the representative and republican form of government in this country.

The majority of the Members of Congress have not at all times been jealous and vigilant to preserve the priceless heritage of the independence of their agency of government. There have been occasions when, forgetful of the lessons of man's experience, majorities in Congress have abandoned independence and willingly have become subservient to the Chief Executive. On such occasions our country and the cause of liberty and freedom have suffered.

Yet such occasions in our history have been rare and they never have been prolonged. Whenever the Congress has surrendered its rights and its independence the people have taken a hand in the matter. Convinced of the inherent wisdom of the American system of government, our people have been unwilling to risk the intrenchment of autocratic rule through deviations from the Constitution, even when made in the name of the noblest motives and objectives.

We have lately passed through such a period and today our rejoicing over the survival for 150 years of our form of government is made more hearty by the thought that again Congress is returning to its traditional place of independence. No longer can it be said that Congress is a "rubber stamp" body for anyone. No more do we hear of "must programs," which must be enacted irrespective of what the majority in Congress think about them. Slowly but surely Congress is resuming those functions and prerogatives provided for it by the Constitution.

With the restoration of Congress and our Government to a constitutional basis, I venture the prediction that it will not be long before America goes forward again to a better and higher standard of living and to a happiness and contentment greater than any we have previously enjoyed. Already on every side men and women of every party rejoice in the return to a more evenly balanced representation in Congress. It has imbued a feeling of security which is being reflected in giving the country courage to plan for the future. The people know they are now safe from unwise and fantastic experiments. Solutions for all our problems can be found within the framework of our traditional American Government, and it is only when we depart from that basis that we remain in chaotic and troubled waters.

I know of no better way to conclude this brief "recurrence to fundamental principles" on this historic day than to recall and give fresh emphasis to the prophetic words uttered in the first session of the First Congress by a Representative from my State of Massachusetts, Fisher Ames.

"I appeal," asserted Ames, "to that maxim which has the sanction of experience and is authorized by the decision of the wisest men: to prevent an abuse of power, it must be distributed into three branches, who must be independent to watch and check each other. The people are to watch them all. While these maxims are pursued our liberties will be preserved."

Silver Purchase Program

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7 (legislative day of Monday, March 6), 1939

STATEMENT SIGNED BY 68 MEMBERS OF THE ECONOMISTS' NATIONAL COMMITTEE ON MONETARY POLICY

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement relative to the silver-purchase program, signed by 68 members of the Economists' National Committee on Monetary Policy.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

From December 21, 1933, to date the Federal administration, by Presidential proclamation, has been fixing the prices to be paid to domestic producers of silver. These prices have ranged from 64.64 cents to 77.57 cents per fine ounce. Under this system of arbitrary Government price fixing our silver producers have been receiving large subsidies. Their size is determined by the pleasure or discretion of the administration. The present price paid for domestic silver is 64.64 cents per fine ounce, and represents a subsidy of approximately 50 percent above the prevailing world price of silver.

Since the effectiveness of the proclamation which fixes the present price of domestically produced silver expires on December 31 of this year, we, the undersigned members of the Economists' National Committee on Monetary Policy, urge that the prevailing policy of subsidizing our silver producers be discontinued. We urge its discontinuance in the interests of a sounder currency and the general welfare. It is particularly undesirable to leave to the discretion of any administration the question of what the price of silver and consequently what the subsidy to our silver producers shall be.

We also recommend, in the interests of a sounder currency and the public welfare, the repeal of the Silver Purchase Act of 1934, which is diluting and weakening our currency structure with overvalued and inflated silver and silver certificates.

Official Corruption

EXTENSION OF REMARKS
OF
HON. CLARENCE E. HANCOCK
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1939

Mr. HANCOCK. Mr. Speaker, under date of January 18, 1939, Governor Lehman sent a message to the Legislature of New York on the subject of official corruption. He made several recommendations to safeguard the public service against officials who weaken the confidence of the people in government, engender disrespect for law and discredit trustworthy public officials by betraying their trust. He urged that the appearance of evil and the temptation and opportunity for wrongdoing be avoided.

Among the Governor's specific proposals is the following:

I recommend legislation which will prohibit a district attorney or his assistants, in any county having in excess of 120,000 population, from engaging in the private practice of the law as an attorney or counsellor either in or out of court. Experience shows that the powers of a district attorney are sometimes subject to abuse where the district attorney is permitted to carry on a private practice. Temptation to favoritism in the conduct of his office is ever present so long as he is engaged in his profession privately for private gain. Even if temptation is not yielded to, the impression made upon the public generally is distinctly unfavorable to a proper respect for our law-enforcement agencies.

The logic of the Governor's recommendation with respect to the district attorneys of the counties of New York applies with equal force to the district attorneys of the United States. I am quite sure the salaries are such that the Department of Justice will have no difficulty in employing competent men, even if the district attorneys and their staffs are prohibited from engaging in private practice while holding office.

Accordingly I have today introduced a bill in line with the thought of Governor Lehman, and in the prohibition against private practice I have included United States marshals.

I think the bill merits consideration, and I have made this extension of remarks in the hope that it will attract the attention of Members to the bill.

Need Is Recognized for Permanent Public Works Program

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1939

EDITORIAL FROM THE WASHINGTON EVENING STAR OF MARCH 7, 1939

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's Washington (D. C.) Star, in which the writer makes pertinent observations about P. W. A. proposals. I have introduced a bill which would set up a permanent P. W. A. agency and I feel Congress should promptly consider proposals which my colleague, Mr. STARNES of Alabama, and myself have sponsored.

[From the Washington Evening Star of March 7, 1939]

FUTURE OF P. W. A.

Proposals for a permanent Public Works Administration or similar agency are before Congress. Hearings are being held now on the Byrnes bill to establish a Public Works Department which would take over not only the present P. W. A., but such relief agencies as the Works Progress Administration, the Civilian Conservation Corps, and the National Youth Administration. Another bill, introduced by Representative JOE STARNES, Democrat, of Alabama, provides for a permanent P. W. A., but its size and scope would be greatly limited and it would have no direct relief functions.

Secretary Ickes, testifying at hearings before the Senate Unemployment Committee on the bill introduced by Chairman BYRNES, of that committee, supported the idea of retaining in the Government establishment some organization for the handling of public works. President Roosevelt and other administration leaders have indicated approval of such a plan. Secretary Ickes favors a Public Works Department of Cabinet status if there can be included in the department all governmental construction activities, but he appeared skeptical whether a general agreement could be reached among parties involved in such a consolidation.

Doubt also was expressed by Mr. Ickes as to the advisability of including relief agencies in the permanent public works establishment. There are many other persons who would join with the Public Works Administrator in pondering the wisdom of joining the two recovery plans. While there seems to be sound reasoning behind various proposals for continuing the P. W. A. in skeleton form, at least, from one depression to another, the thought of fastening the W. P. A. on the Government as a permanent institution inspires no enthusiasm among taxpayers.

The record of Mr. Ickes' P. W. A. has been such as to win public confidence. The money expended has produced something tangible and beneficial and permanent—in addition to providing needed employment for thousands of workers. Undoubtedly some such organization as this will be needed in future times of stress, but a P. W. A. cannot be built and made to function efficiently overnight. Long-time planning by experts is essential. The sensible plan, it would seem, is to maintain a permanent public works planning agency of some sort, ready to act promptly and effectively when an economic crisis develops.

One Hundred and Fiftieth Anniversary of the Congress

EXTENSION OF REMARKS
OF
HON. ANDREW C. SCHIFFLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1939

ARTICLE FROM THE WHEELING (W. VA.) INTELLIGENCER

Mr. SCHIFFLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wheeling Intelligencer, of Wheeling, W. Va.:

[From the Wheeling (W. Va.) Intelligencer]

(By Charles Brooks Smith)

WASHINGTON, March 4.—(Thoughts while looking down upon the joint session of Congress March 4, 1939, from a scribe's place in the press gallery.)

Wish they had postponed this ceremonial event until April 30, the anniversary of the date when George Washington became President, took the oath of office at the old Federal Hall in New York's Wall Street, facing Broad.

Wonder if any President in these past 150 years has been so trusted as Washington at that time!

Fears, doubts, apprehensions must have registered on the faces of the assembled Members. They awaited with a strained calm the word from their leader.

Washington, painfully sensible of what he deemed his imperfect fitness for the responsibility, had said:

"Be the voyage long or short, although I be deserted by all men, integrity and firmness shall never desert me. I hold it of little moment if the close of my life be embittered, provided I shall have been instrumental in securing the liberties and promoting the happiness of the American people."

He had never let the people down, so they believed him. Congress might be distrusted, or the wisdom of the provisions of the Constitution, or a man might distrust himself, but there was none who did not trust Washington.

For that supreme moment the people's faith was absolute.

There was no Supreme Court as yet; so, to Robert Livingstone fell the distinction of administering the oath. Looking down, we

could not imagine that statesmanlike Chief Justice Charles Evans Hughes turning, after an inaugural oath, to cry out: "Long live the President of the United States!"

One hundred and fifty years! And what have we? "A democracy if we can keep it," said Benjamin Franklin when the Constitution was signed. That answer still stands after 150 years of constitutional government.

A first President who had had his fill of war and its attendant suffering.

The first line of defense in his day was Fort Washington on the banks of the Ohio River. Today, Senators are squabbling over whether that first line in the Pacific shall be the Hawaiian Islands or a speck in the ocean called Guam.

On the Atlantic side it has been suggested that our line of defense may be the Rhine.

Wasn't it Mr. Justice Brandeis who wrote about "the curse of bigness"?

That President came to the inauguration by coach; this one from a review of battle maneuvers in the Caribbean intended to test the strength of our naval defenses.

Congress had been in session 8 weeks when Washington arrived. Little had been done by the Senate pending the settlement of how the President should be addressed.

"Bonny Johnnie" Adams held out for "Your Excellency." Virginia's Richard Henry Lee for "Your Highness."

Washington settled that by refusing them both.

Neither of the disputants could have envisioned the scene of March 4, 1939.

Ninety-six Senators, 435 Representatives assembled in a Capitol as yet undreamed of, in a Federal city which, as yet, was only a gleam in George Washington's eyes.

And here comes the Sergeant at Arms with the mace, announcing the President of the United States of America.

Franklin Delano Roosevelt replaces George Washington. JOHN NANCE GARNER, of Uvalde, Tex., replaces John Adams, of Braintree, Mass. (Alike only in the ruddiness of complexion, wouldn't JOHN GARNER cuss a Texas bad word if he were called "Bonny Johnnie"?)

KEY PITTMAN, of Nevada, President pro tempore of the Senate, in place of John Langdon, of New Hampshire. (The same John Langdon who had supervised the building of ships during the Revolution and had staked his entire fortune to equip Gen. John Stark's Brigade, was later to refuse the appointment of Secretary of the Navy.)

The suave, gracious, distinguished-looking gentleman from Alabama, WILLIAM B. BANKHEAD, replaced Frederick A. C. Muhlenberg, of Pennsylvania, as Speaker of the House of Representatives.

There was a German-American family to be proud of—the Muhlenbergs.

The Reverend Peter Melchoir Muhlenberg, pastor of Old Trappe Church. And his three sons, John Peter Gabriel Muhlenberg, who preached his last sermon in a colonel's uniform covered by his clerical robe; Frederick, ordained minister, had to flee New York when the city was captured by the British; the youngest, Henry, also an ordained minister, had to flee Philadelphia when it was taken.

John Peter sat in the first Congress when his brother was chosen Speaker.

(From this strain came the Hershey farmers, who set an example for public officials by going into the great Hershey chocolate plant and taking out the sit-down strikers after they had held the great plant for a week, 200 of them keeping thousands of workers from their jobs within 3 miles of the Pennsylvania State police barracks.)

They knew—without waiting for a Supreme Court decision—that the application of just good horse sense from the common people was the solution for some very troublesome questions.

Subconsciously there was a haunting voice whispering from out the mists of tradition: "The law is common sense."

Neither a quorum of Senate or House of Representatives appeared in their respective Chambers on the day we celebrate—March 4, 1789.

Only 13 Members of the House appeared on that March 4.

But the Representative from that part of Virginia now West Virginia was in his seat. He was Alexander White, from the eastern Panhandle.

George Washington was one who never permitted attention to duty to go unrewarded, so he summoned Alexander White from his home at Woodville to be one of the three commissioners to lay out the city of Washington and erect the public buildings.

The Senators who represented (West) Virginia in 1789 were as opposite as the Senators of today.

There was Richard Henry Lee, who had never wearied in promoting intrigues against acceptance of the Constitution. He didn't believe constitutional government a workable scheme.

The other Senator, William Grayson, had faith in the future of democracy. Without his aid and encouragement Manasseh Cutler never could have achieved his dream of a Northwest Territory, freed forever from the curse of slavery.

Just as diverse opinions characterized the delegations from each State.

"The only thing we have to fear is fear", was the theme of President Franklin Delano Roosevelt's inaugural address.

Now, 6 years later, what have we?

The answer to this question is still the same—still the answer which Benjamin Franklin gave—"A democracy—if we can keep it."

Forest-Fire Control

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1939

RESOLUTION BY THE LEGISLATURE OF TENNESSEE

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution recently adopted by the Legislature of the State of Tennessee:

Senate Joint Resolution 15

Resolution urging an increased Federal appropriation for forest-fire control

Whereas additional Federal funds are urgently needed in Tennessee for forest-fire control; and

Whereas there has been introduced into Congress a bill (S. 228) providing for an increase in the Federal appropriation for forest-fire control from $2,500,000 to $9,000,000; and

Whereas Tennessee's portion of Federal funds for forest-fire control would be materially increased if this bill is passed by Congress: Therefore be it

Resolved by the Senate of the State of Tennessee (the house of representatives concurring), That the members of the Tennessee delegation in Congress be requested to give their full support to this bill.

Port of Bay City, Oreg.

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1939

RESOLUTION OF THE LEGISLATURE OF THE STATE OF OREGON

Mr. ANGELL. Mr. Speaker, the Port of Bay City is a municipal corporation organized under the laws of Oregon, having for its major purpose improving the harbor conditions at Tillamook Bay, in Tillamook County, Oreg. At the time of its organization there were within its boundaries large tracts of merchantable timber which was the source of the greater portion of the revenues of the port district. The district incurred indebtedness which approximates $296,000 for the purpose of developing the port and carrying on necessary work in convention therewith.

In 1933 a disastrous fire destroyed a large portion of the stand of timber in the district, permanently depriving the district of the principal source of its revenue. Recently, a disastrous storm visited Tillamook Bay, destroying a great amount of property and resulting in much damage to the entrance to Tillamook Bay. It will require the early construction of a jetty, and other remedial work, in order to protect the harbor from further damage.

The port district is without funds to prosecute the necessary works to protect the port and prevent further damage, and an emergency exists. The Federal Government should, in carrying out its policies in protecting ports and waterways, give relief.

The Legislature of the State of Oregon, now in session, recently passed House Joint Memorial No. 5, which is as follows:

House Joint Memorial 5

To the honorable Senate and House of Representatives of the United States of America in Congress assembled:

We, your memorialists, the Fortieth Legislative Assembly of the State of Oregon, convened in regular session, respectfully represent that:

Whereas the Port of Bay City is a municipal corporation duly organized and existing under and by virtue of the constitution

and laws of the State of Oregon, and organized principally for the purpose of improving the harbor conditions at the entrance of and on Tillamook Bay, in Tillamook County, Oreg.; and

Whereas at the time of the organization of such port it embraced within its territory and subject to taxation many millions of feet of standing and merchantable timber, upon which such port depended for the revenue necessary to carry out its purposes; and

Whereas in 1933 a fire destroyed a large portion of such timber, thereby eliminating the principal source of revenue of such port and rendering it financially impossible for such port to pay its outstanding indebtedness approximating $296,000, or to further carry on the necessary works in connection with the improvement and maintenance of such port; and

Whereas, during the present winter, a storm caused the washing out of the north end of Bay Ocean at the entrance of Tillamook Bay, which will require the early construction of a jetty at the south entrance of Tillamook Bay in order to protect not only the harbor, but also lands bordering on Tillamook Bay, and said port is without revenue, as well as without sources of revenue, to carry on the work immediately necessary; and

Whereas the improvement of the entrance to Tillamook Bay, as well as the maintenance of said harbor, is of general interest to the welfare of the people of the United States: Now, therefore, be it

Resolved by the House of Representatives of the State of Oregon (the senate jointly concurring therein), That the Legislature of the State of Oregon does petition the Members of Congress from the State of Oregon and the whole Congress of the United States to consider favorably and to pass such legislation as may be necessary to permit and direct the assumption and payment by the United States of the present and outstanding indebtedness of the Port of Bay City, and the appropriation of such additional sums as may be necessary to forthwith improve the entrance to Tillamook Bay in Oregon by the construction of a jetty at the south side of such entrance and to construct and maintain the necessary seawall to protect Bay Ocean Peninsula; and be it further

Resolved, That a certified copy of this application be sent forthwith to the Congress of the United States, to each Member of the Congress from the State of Oregon, and to the President of the United States.

A Challenge to Freedom of the Air

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1939

RADIO ADDRESS BY HON. RICHARD B. WIGGLESWORTH, OF MASSACHUSETTS, MARCH 1, 1939

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks I include the following statement which I made on Wednesday evening, March 1, 1939, over the Mutual Broadcasting network:

Friends of the radio audience, a short time ago the facilities of the Mutual Network were utilized by Chairman Frank R. McNinch, of the Federal Communications Commission, in support of a bill recently introduced in the Senate, which if enacted into law would, in my judgment, place one man, presumably the present Chairman of the Federal Communications Commission, in virtual control over all radio broadcasting in the United States.

The bill has been denounced by Senator WHITE, of Maine, as "crude in draft, wrong in principal, political in purpose, carrying in its terms and implications a sinister threat to all our communications facilities and to the country itself." It has been characterized by Gen. Hugh Johnson as "dynamite for democracy." As compared with the proposal to pack the Supreme Court with a view to obtaining majority opinions, the bill would appear to be a proposal to unpack the Communications Commission with a view to eliminating minority opinions.

I am indebted to the Mutual Broadcasting Co. for this opportunity to express certain views in opposition to the proposed legislation.

Ever since the adoption of the Constitution, freedom of religious belief, freedom of speech, freedom of the press have been fundamentals of our American life. Their preservation is vital, not only to the individual but to the proper functioning of our form of government. With the development of radio broadcasting, with its enormous power in the formulation of public opinion, freedom of the air likewise becomes a matter of paramount importance to the American people.

Radio broadcasting is conducted over a limited number of channels or frequencies. These channels or frequencies must be regulated in the public interest, but we should never forget that they belong to all the people. If they are not regulated fairly and in a manner to maintain freedom of the air, then freedom of expression in America will be largely undermined.

I am opposed to enactment of the proposed bill at this time because, in my judgment, it constitutes a challenge to freedom of the air. I am opposed to it also because I believe it is advanced at this time in the hope of concealing from Congress and the country facts which they are entitled to know, and because I believe, and have long believed, that a thoroughgoing investigation of broadcasting and its regulation under the Federal Communications Commission should be conducted with a view to obtaining all the facts before any new legislation is enacted.

Chairman McNinch has referred to the bill as "a new communications program." He has stated that he himself helped to devise the bill. The bill is generally supposed to reflect the views of Messrs. Corcoran and Cohen, reputed coauthors of the Government reorganization bill a year ago and of various other New Deal legislation.

I quote in this connection from the December edition of Business Week under the heading "Say 'Uncle' to Corcoran":

"The Federal Communications Commission is the latest to feel the weight of Thomas Corcoran's hand. He is not only rewriting the basic law under which the F. C. C. is functioning; he is giving orders to the Commission. 'We're getting rid of so and so,' he telephoned one Commissioner. 'You vote with us or else.'"

I quote also from the December 7 edition of the Washington Post, under the heading "Bill Reported in Making to Scrap F. C. C.; Three-Man Board Believed Aim":

"Legislation designed to abolish the Federal Communications Commission and to substitute a more centralized administration is being drafted by Thomas G. Corcoran * * *. It is believed to have the approval of Chairman Frank McNinch."

Chairman McNinch when questioned recently before the House Committee on Appropriations, of which I have the honor to be a member, denied any knowledge of the latter article, stating that he had not read it and that as far as he knew, no legislation had been drafted by any human being in connection with the Commission.

Nevertheless the bill introduced in the Senate only a few days later complied exactly with the prediction. It is in fact a bill to abolish the Federal Communications Commission as we have known it and to substitute a highly centralized, if not dictatorial administration. I quote from the February 17 edition of the Washington Times-Herald in this connection under a heading referring to Chairman McNinch entitled "What's He Trying to Hide With This F. C. C. Reorganization?":

"The tactics of handling this bill for a new communications and radio commission (S. 1268) have been to pass it off as a mere 'administrative change.' But the effect would be to make one man the absolute dictator with unrestrained power over what shall be told the people of the United States by wire and wireless."

When Congress passed the Federal Radio Act of 1927 and the Federal Communications Act of 1934 it set up a normal type of commission with normal quasi judicial powers like the Interstate Commerce Commission and other agencies with which we are familiar. It imposed upon that Commission many powers and duties in connection with the regulation of radio and other communications. Having in mind the far-reaching importance of the work of the Commission, it entrusted the responsibility to seven Commissioners, not more than four to be from any one political party.

What does the new proposal contemplate? It contemplates at one and the same time the elimination of the Federal Communications Commission as we have known it in the past and the creation of a new commission with identical duties and powers.

What is the purpose of this action? The purpose is to free the new Commissioners from limitations normally imposed by quasi judicial responsibilities and to centralize insofar as possible the control over all radio broadcasting in America in the hands of the chairman of the new commission.

How is this purpose to be accomplished? It is to be accomplished by a series of steps, three of which may be said to be of major importance.

First. No provision would apparently be made for the customary hearings before experienced trial examiners with independent civil-service status. Their duties would apparently be imposed upon attorneys or other agents of the Commission without civil-service status under the general counsel of the Commission. In other words, the functions of judge and prosecutor would apparently be centralized and largely merged. The bill would apparently continue this unusual and, to my mind, unjustified centralization of functions already brought about under the recent leadership of Chairman McNinch, in defiance, in my judgment, of the spirit if not the letter of the civil-service laws.

Second. The number of Commissioners would be limited to three. This limitation would be in direct opposition to the judgment of both Houses of Congress in 1927 and in 1934. It is said to be urged without the recommendation of the Communications Commission as a whole or other interested and informed persons. Its advocacy at this time is in striking contrast to the pending proposal to increase the number of Interstate Commerce Commissioners from 11 to 16.

Its espousal by Chairman McNinch is startling in the light of his statement in 1937 when he said "the aggregate wisdom and judgment of seven minds is surely greater than any two or three of the seven." Contrast this statement with his statement a short time ago over this network after some 16 months of experience when he said, "The bigger the commission the less effective and the less efficient it is apt to be. In my opinion the best way to guard against these faults and weaknesses is to put both the

power and responsibility for regulation in a small group." This statement seems to have been inspired by the fact that certain members of the Commission have consistently insisted on voting as their conscience has dictated and refused to act as rubber stamps. Sincere differences of judgment and minority opinions are apparently not welcome in dictatorial fields.

Third. The Commission would be divided into three divisions, each under an administrative assistant, all "under the administrative supervision of the Chairman."

When Mr. McNinch became Chairman of the Federal Communications Commission some 16 months ago he proceeded to abolish the three main divisions of the Commission of three members each existing under the authority of the 1934 act. Experience had shown, he indicated, that these divisions were really only composed of two Commissioners, because "the impracticability of the Chairman keeping himself currently informed and attending meetings has resulted in two members of the Commission carrying an unnecessary load of responsibility and exercising an undesirably large portion of the power and functions of the Commission." Moreover, "when cases came before the whole Commission upon appeal * * * those Commissioners who had not worked on the other two steps were so unfamiliar with it, it seemed to me they were hardly in a position to sit as judges and arbiters * * *."

Now it is proposed to re-create the divisions which were abolished by Mr. McNinch and to place the administrative assistants of all divisions "under the administrative supervision of the Chairman." Without developing the terms of the bill further it may be said that even a casual reading of its provisions emphasizes the enormous power which it would place in the hands of the new Chairman.

Under existing law the Chief Executive has the power to determine what radio frequencies shall be reserved for use of the Army, Navy, and other Government agencies requiring radio communications. He also has the power if, in his opinion, there exists a war or threat of war, or state of public peril, or disaster or other national emergency, or in order to preserve the neutrality of the United States for such time as he may see fit to take over private radio business under such regulations as he may prescribe with compensation to the owners.

The Corcoran-Cohen-McNinch bill, if enacted into law, would bring the Federal Communications Commission, a quasi judicial agency, in large measure under Executive domination. This proposal, embodied in general terms in the original Government reorganization bill a year ago, excited widespread condemnation by the American people. The bill would arm the executive branch of the Government with almost complete dictatorial power in this vitally important field in American life.

Stripped of all pretense to again quote Senator WHITE, of Maine, "the bill, in disregard of all previous congressional purpose, and drafted without congressional study, proposes, through his administrative control of the division assistants and his influence as chairman, to vest in one man authority over the vast communications interests of this country."

It is a challenge to freedom of the air.

My attention has recently been called in this connection to an interesting article appearing in the February 11 edition of the Saturday Evening Post. The article is written by Stanley High, a former White House confidant. It is entitled, "Not-so-free Air." I recommend it.

One further word in reference to the terms of the proposed bill. Chairman McNinch in his broadcast has referred to it as "a new communications program." The fact is that the bill, as drafted, proposes no new program whatsoever. On the contrary, it specifically provides that the "provisions of the Communications Commission Act of 1934, as amended, shall continue in full force and effect and apply to the Commission and the members of the Board to the same extent as said act is now applicable to the Federal Communications Commission and the members thereof." Despite many questions of major policy which must be determined for proper regulation and which Congress has sought to determine over a period of years through the Federal Communications Commission, not one single recommendation for change in policy is embodied in the provisions of the proposed legislation.

I have already indicated that I am opposed to the enactment of the proposed bill at this time for several reasons. I am opposed to its enactment because in the light of all that has transpired in recent years, it is impossible for me to escape the conviction that it is advocated at this time in the hope of concealing from Congress and the country facts and practices in the field of radio broadcasting regulation of which they should know. I am opposed to its enactment at this time because I believe, as the bill itself emphasizes, that a thoroughgoing congressional investigation of broadcasting and its regulation under the Federal Communications Commission is essential before policies can be defined and proper legislation enacted.

For years there has been a rising tide of criticism and complaint directed at the door of the Federal Communications Commission. For years it has been subject to criticism for alleged sins of omission and commission. For years there has been apparent criticism by some members of the Commission of the actions and decisions of other members of the Commission. "It is notorious," says Chairman McNinch, "that for several years before I became Chairman of the Commission it was handicapped by dissension and division." Chairman McNinch, of course, was appointed as a trouble shooter, not as a trouble maker, with a view to eliminating the basis for charges laid at the door of the Commission.

Time does not permit of detailed discussion of these charges. I may, however, refer to one or two of them in passing.

No one can read the Federal Radio Act of 1927 and the Federal Communications Act of 1934 without realizing that Congress had in mind certain definite objectives. Among those objectives were the elimination of private ownership in radio channels or frequencies, the elimination of undesirable trafficking in Federal licenses, and the elimination of monopoly or the evils of monopoly. The provisions of the two acts, which are substantially the same in terms insofar as the regulation of radio is concerned, make clear the intent of Congress to achieve these objectives among others.

Nevertheless, the charge has been made, and made repeatedly, that we have failed to achieve them under the Federal Communications Commission. It is charged that we are confronted today by virtual monopoly, that we have failed to eliminate private ownership or its equivalent in radio channels, that we have failed to eliminate undesirable trafficking in radio licenses, with all the possibilities with which we have been familiar in the past in other fields for the capitalization of earnings and profits to the detriment of the people.

I shall not take the time to discuss in detail the evidence in support of the charge of monopoly which has been made available from authoritative sources. It has included testimony of members of the Federal Communications Commission before the House Committee on Appropriations. It has included public statements by present or former members of the Federal Communications Commission and the Federal Radio Commission. It has included statements from publications of standing in the radio broadcasting field, as well as statements from other authoritative sources.

The Commission has been aware for years of the charge of undue monopoly operating to the disadvantage of the country as a whole. It has been repeatedly asked by Members of Congress for its findings and recommendations in this connection. Only recently Chairman McNinch indicated that he was not in a position to state whether or not the charge was well-founded. All that appears to have been done by the Commission in this connection is to appoint three of its members as a committee to investigate the charge. Two of the three members appointed formerly served on the Radio Division of the Communications Commission. They are therefore in the position of investigating charges against themselves. General Johnson has characterized the investigation as "a witch hunt by some of the witches themselves."

I have not the time to discuss in detail the evidence advanced in support of the charge that the Commission has failed to eliminate private ownership or its equivalent in radio channels and has failed to eliminate undesirable trafficking in radio licenses. I may mention in passing, however, that in tables furnished to Congress by the Federal Communications Commission showing the transfers of radio licenses in recent years, there will be found instance after instance of transfers for a consideration far in excess of the replacement cost of the radio station transferred. Other instances will be found of the transfer by lease for periods far in excess of the original license, limited by law to a maximum of 3 years. All of these transfers were under the control of the Commission.

One striking case of this character is afforded in the transfer of station KNX, Los Angeles, to the Columbia Broadcasting System. The replacement value of the station amounted to $217,000. After the deduction of accounts receivable, cash, and goodwill, the value of the physical property amounted, I am told, to about $63,000. The consideration paid for the transfer amounted to $1,250,000, about 20 times the value of the physical property transferred.

Among the leases referred to is a lease for a period of 10 years with an option for renewal for 10 years and still another lease for a period of 99 years. The lessor in certain instances appears to have obtained not only a fixed rental but a substantial percentage of the profits realized by the lessee.

The Commission has been aware for years of the charges made in this connection, including the possibility of capitalization of earnings and profits, to the detriment of the American people as a whole. Their findings and recommendations have been repeatedly sought by Members of Congress. Yet as late as January the Commission stated that it had formulated no policy or recommendation in the matter.

The Commission today stands charged with an absolute failure to formulate major policies fundamental to the proper regulation of radiobroadcasting. We have no national communications policy today. Chairman McNinch has so stated in January. We have no standards of program service despite the thousands of complaints received by the Commission in each and every year. No policy has been formulated, as I have indicated, as to the issue or transfer of radio licenses. No policy has been defined in respect to experimental licenses; in respect to the possible payment of license fees; in respect to many other important matters within the field of radio regulation.

It is fair to state, I think, that regulation to date has proceeded in large measure in the absence of any well-defined policies by the Commission under frequent charges of favoritism, politics, and worse.

Under existing conditions both Houses of Congress have just refused to make any appropriation of funds whatsoever for the Commission for the next fiscal year. Surely Congress and the country are entitled to the truth in the light of the charges made.

For years I have been interested in the proper regulation of radio broadcasting. For years both in Congress and elsewhere I have joined with other Members of Congress on both sides of the aisle in advocating a thoroughgoing congressional investigation of

broadcasting and its regulation under the Federal Communications Commission. I have done so because it has seemed to me that such an investigation was absolutely essential if we are to have proper regulation of this activity which has come to play such an important part in our national life.

A year ago the move for a proper congressional investigation gained powerful support in the House of Representatives. It was reported favorably to the House by the powerful Rules Committee after extended hearings. It received a powerful vote on the floor of the House. It was defeated only because of opposition by the White House for reasons not publicly stated, because of the argument advanced on the floor of the House that the Monopoly Committee under the leadership of Senator O'MAHONEY, of Wyoming, would be in a position to conduct the proposed investigation, and because it was urged that Chairman McNinch should be given further opportunity as a trouble shooter.

Well, the Monopoly Committee has not conducted the investigation, the President of the United States has now announced publicly that he is "thoroughly dissatisfied" with conditions at the Commission and recommends remedial legislation, and Chairman McNinch admits that legislation is necessary. In discussing such legislation in his appearance in January before the House Committee on Appropriations he made the following statement:

"There will be legislation in all human probability which will bring up the whole subject in which I know you are interested and it will give everybody an opportunity who is interested in it, "because"—I emphasize the words—"there could be no such legislation, I take it, without an opportunity for thorough and full investigation and examination of the Commission, its work, its action, et cetera."

I agree with these sentiments 100 percent. There has been no thoroughgoing congressional investigation in this field for many years. In order to legislate wisely, we must first investigate the results of our experience to date.

Let's have the facts and all the facts before we legislate. And then let's enact not the Corcoran-Cohen-McNinch bill but legislation which will assure proper regulation of radio broadcasting in the public interest and guarantee to all the preservation of "freedom of the air."

Mr. Speaker, my attention has just been called to the following statement by Paul Mallon, well-known political commentator, in his column of February 27, under the heading "Radio":

Congress is not going to let the Federal Communications Commission fall into the control of one man. The Tommy Corcoran-McNinch bill and plan is doomed.

For the best interests of America, I sincerely hope that Paul Mallon's prediction is correct.

American-Philippine Relations

EXTENSION OF REMARKS
OF
HON. C. ARTHUR ANDERSON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1939

STATEMENT OF HON. JOAQUIN M. ELIZALDE, RESIDENT COMMISSIONER FROM THE PHILIPPINES, BEFORE THE COMMITTEE ON TERRITORIES AND INSULAR AFFAIRS

Mr. ANDERSON of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following statement of Hon. JOAQUIN M. ELIZALDE, Resident Commissioner from the Philippines, made before the Committee on Territories and Insular Affairs during hearings on Senate bill 1028:

Mr. Chairman and members of the committee, your committee, for a generation, has been studying problems arising out of American-Philippine relations. You are fully aware of the situations and circumstances under which the present political and economic ties between the United States and the Philippines have been brought about. I need not, therefore, retrace the varied course which Congress has charted since the American occupation of the islands nor detail the different policy-making measures looking to the development of the Philippine government and its economy.

Following the 10-year adjustment period after the Spanish-American War, you initiated, by your Tariff Act of August 6, 1909, and subsequent Tariff Act of 1913, free trade between the United States and the Philippines. Since then, for a period of 30 years, the commerce of the two countries has developed on a free-trade basis. Under this plan the existing structure of our economy has been built.

I will not narrate the circumstances attending the acceptance of the independence act by the Philippine Legislature, inasmuch as they are likewise well known to the members of this committee. The law, as a matter of fact, represented the fulfillment of our aspirations, and the representatives of the people of the Philippines gratefully accepted the generous proffer of independence made by Congress, with all its stipulated conditions.

Neither will I dwell at length on those phases of the problem which have already been discussed and submitted for your consideration.

I would like to make an observation at this time pertinent to the inquiries made by your distinguished chairman, Senator TYDINGS. It should be definitely stated that the consensus of opinion in the Philippines is that the Tydings-McDuffie Act has operated satisfactorily up to the present time, and has proved a most constructive measure for the adjustment of Philippine political and economic problems. The framers of that act may well be proud of their accomplishments and results, and I know that the Commonwealth transition period is working, generally speaking, to the satisfaction of all parties.

I should like also to redirect your attention at this time to the cabled statement of the President of the Philippine Commonwealth, contained in the letter which was read into this record on February 27, in which he expresses for the Philippine government and our people, as I do now, eternal gratitude to the people of the United States.

The bill before you does not in any way deal with the political status of the Philippines.

The political question was definitely settled by the Independence Act of 1934, and the Philippine Republic shall come into existence on July 4, 1946. The present legislative proposal has to do with the factual, practical phases of trade, commerce, finance, indebtedness, currency, property rights, and all of those other matters of status and rights which arise as a result of the political settlement.

The bill covers two periods: First, the remainder of the Commonwealth period, until July 4, 1946, and second, the post-independence period, from 1946 to 1960.

It is not limited in its objective to a mere amendment of some of the provisions of the Tydings-McDuffie Act; it proposes as well the establishment of a new trade relationship between the two countries based on the gradual elimination of trade preferences during a 15-year period included between July 4, 1946, and December 31, 1960.

I stress the fact that there are two distinct phases of the bill under consideration and that these are essentially separable for the purposes of analysis and consideration.

REMAINDER OF COMMONWEALTH PERIOD—1939–46

The first 5 years of the Commonwealth, under the Independence Act, that is, the period between 1935 and 1940, are years of free trade, with the exception of certain specific limitations. As to American products entering the Philippines, there is no restriction.

The Commonwealth government, authorized by and promulgated under the provisions of the Tydings-McDuffie Act, enjoys a large measure of self-government. You are doubtless aware of some of the policies that have been inaugurated since the establishment of the Commonwealth in November 1935.

But the second 5-year period of the Commonwealth, between 1941 and July 4, 1946, marks a distinctive change in Philippine-American trade relationship. Under section 6 (e) of the Independence Act, there shall be imposed upon articles exported to the United States from the Philippines a graduated export tax, ranging from an amount equal to 5 percent of the United States duty, in 1941, to 25 percent of the United States duty in 1946. And it is to certain phases of this second 5-year period of the Commonwealth to which the first section of the proposed bill relates.

At the time of the passage of the Independence Act, the Philippine government made representations concerning certain relatively minor details of the law which, unfortunately, had escaped the notice of the framers of the act. I refer to those provisions affecting coconut oil, cigars, scrap tobacco, and pearl and shell buttons.

It seemed obvious to those intimately familiar with these Philippine industries that they could not withstand the imposition of even the first export tax, amounting to 5 percent of the United States duty in 1941.

I have said that these matters are of relatively small importance, and that statement is true in the light of the broad, fundamental political questions which faced Congress at the time of the passage of the Independence Act.

But, in fact, while of relative unimportance, compared to those great political questions, the effect of the provisions of the Independence Act on the industries to which I have referred, become of serious import primarily to the industries themselves in the Philippines and, indirectly, to the whole economic fabric of the islands.

Today the changes which have been proposed in the bill before you with respect to coconut oil, cigars, scrap tobacco, and pearl and shell buttons are of the greatest importance to our economic stability during the second portion of the Commonwealth period, 1941 to 1946. The remedies suggested by the pending bill in these matters are requisite during the Commonwealth period, as they affect, first, the particular industries to which I have referred and the employment of a large number of our people in those industries, and, second, they are necessary from the standpoint of their social value in the working out of our employment and related problems.

I will not bore you with an analysis of these matters, which have been treated at length elsewhere. I call your attention, however,

to the fact of a typical industry—the embroidery industry of the islands. It is essentially a domestic, home industry, where many are employed, and the aggregate value of the exports of these products to the United States can be no barometer of the importance of the industry in the matter of employment and social values.

It is reasonable to assume that when Congress decided to give to the Philippines a period of 10 years, during the Commonwealth, until 1946, to make its preliminary economic adjustment, it undoubtedly intended that such a plan would accrue to the benefit of all Philippine industries. It is logical to conclude that no one intended to be less solicitous of the welfare of the coconut oil, cigar, tobacco, and pearl-button industries, which employ a large portion of our labor, than they were as to the other industries of the islands.

This particular phase is covered by section 1 of the present bill, which proposes to replace the imposition of export taxes on cigars, scrap tobacco, coconut oil, and pearl or shell buttons by setting up absolute quotas for these commodities and providing for the progressive decrease of such quotas at the rate of 5 percent yearly up to 25 percent in 1946. I believe that the plan is an earnest and intelligent attempt to solve the situation and gives the industries above mentioned the best possible opportunity under the circumstances for settlement.

CHANGES SINCE THE INDEPENDENCE ACT

Subsequent to the enactment of the independence law Congress passed two integral acts which have the effect of modifying the operation of the stipulated provisions of the Tydings-McDuffie Act, the Jones-Costigan Act of 1934, and the Cordage Act of 1935.

It also enacted the Revenue Act of 1934, which provides, among other things, for a tax of 3 cents per pound on coconut oil processed from Philippine copra either in the Philippines or in the United States, and for the remittance of the proceeds of the tax to the Philippine treasury.

Through friendly negotiations, the Cordage Act of June 14, 1935, changed a duty free quota of 3,000,000 pounds to an absolute quota of 6,000,000 pounds. This measure, which will be in operation until April 30, 1941, seems to be working satisfactorily to all concerned. The pending bill calls for changes which in several points differ from the present Cordage Act.

The passage by Congress of the Jones-Costigan Act on May 9, 1934, imposing an absolute quota on sugar, also affected the Tydings-McDuffie Act to some extent. I should mention here, however, that although the Philippines was given a quota under the Sugar Act higher than that granted in the Independence Act, we have never taken advantage of a single pound of the additional quota allotted us over and above the 850,000 duty-free tons specified in the independence law.

At the time, we opposed the Revenue Act of May 10, 1934, section 602½, which imposed an excise tax of 3 cents per pound on coconut oil, President Roosevelt wrote to Congress on May 28, 1934, as follows:

"There are three reasons why I request reconsideration by the Congress of the provisions for a 3-cent per pound processing tax:

"First, it is a withdrawal of an offer made by the Congress of the United States to the people of the Philippine Islands;

"Second, enforcement of this provision at this time will produce a serious condition among thousands of families in the Philippine Islands;

"Third, no effort has been made to work out some form of compromise which would be less unjust to the Philippine people and at the same time attain, even if more slowly, the object of helping the butter- and animal-fat industry in the United States."

Under the traditional policy of reciprocal relationship, established as early as 1902, the taxes accruing from the coconut-oil tax are returned to the Treasury of the Philippine Commonwealth, and, under the Sugar Act, an appropriation is authorized to be refunded to the Philippine government annually in an amount equal to the tax on the processing of Philippine sugar.

It is well to remember that the bill before your committee does not change the fundamental provisions of these two acts, enacted after the passage of the independence law.

The oil excise tax funds, regularly remitted to the Philippine Commonwealth, are being used for the purpose of furthering the realization of a constructive program of economic adjustment.

It is pertinent to remember, however, that while these taxes will accrue to the Philippine Commonwealth during the Commonwealth period, such refunds to the Philippine Government will terminate on the day of independence, July 4, 1946. So that the bill before you, in whatever respect it relates to these taxes or revenues, does so only with respect to the Commonwealth period.

Bill S. 1028 provides that the proceeds of the excise taxes shall be paid into the Treasury of the Philippines to be used only for the purpose of adjusting Philippine economy to a position independent of trade preferences in the United States and in preparing the Philippines for the assumption of the responsibilities of an independent State.

There is one phase of the preparedness period (Commonwealth period) to which I desire to advert, momentarily, although frankly the bill before you does not contemplate legislation in this regard.

Under the provisions of the Independence Act, foreign affairs of the Philippine Commonwealth, during the preparedness period, prior to independence, are under the direction, supervision, and control of the United States, and the Philippine Commonwealth is obligated to submit to the President of the United States, for his approval, all legislation of the Philippine Assembly affecting currency, coinage, imports, exports, and immigration.

It is likely that the Commonwealth will have the cooperation of the United States Government in matters which must logically arise prior to the actual date of independence but having to do with the relationship of the Philippines with the rest of the world, beginning on the date of independence. It must be obvious that, as an independent nation and under any legislative enactment looking to the ultimate removal of all preferences between the United States and the Philippines, the Philippines will be required to look to the rest of the world in the adjustment of its economies. In the very nature of things, there must be some preparation prior to the actual date of independence in respect to such matters.

We are hopeful that the same cooperative spirit which has been manifested throughout our long relationship with the United States Government will be accorded us in the matter of preparing for these international contacts, prior to the actual date of the birth of the Philippine Republic.

Privileges enjoyed by Filipino residents in the United States, prior to the inauguration of the Commonwealth government, should be preserved and maintained to the same extent that American residents in the Philippines are guaranteed their rights in the Philippines under the Independence Act. Citizens of the Philippine Islands should enjoy in the United States all of the rights and privileges which they enjoyed under the laws of the United States in force at the time of the inauguration of the government of the Commonwealth of the Philippines.

There is also the particular case of Filipino civil-service employees who have honestly and loyally given the best years of their useful lives to the United States Government but who, after 1946, may find themselves in an undefined and unclarified status, and faced with menacing danger of losing their life-long means of subsistence. May I also point out that the Merchant Marine Act has recently caused serious unemployment among Filipino seamen who, for years, have served faithfully and efficiently on American ships? I sincerely believe that, in justice to these men who have rendered honorable service, they should be properly protected by some amendment in the pending bill.

THE POST-INDEPENDENCE PERIOD (1946–60)

May I now turn to the provision of the bill with respect to the period after independence, 1946–60? The bill provides in section 4 that after July 4, 1946, to December 31, 1960, the preferences of 75 percent existing as of that date shall be progressively eliminated by a reduction of 5 percent annually so that by December 31, 1960, the relations between the United States and the Philippines shall be on a nonpreferential basis.

As to the post-independence period, we have accepted the proposal, contained in the bill before you, as implementing the findings and recommendations of the Joint Preparatory Committee appointed by the President of the United States and the President of the Philippine Commonwealth. The plan represents an agreement.

As Philippine Resident Commissioner to the United States, I respectfully urge the adoption of the proposals contained in the bill covering that period.

While we felt that the minor deficiencies of the independence act with respect to coconut oil, tobacco, cigars, etc., would probably be corrected, we were not unmindful of that provision of the Independence Act contemplating a conference prior to independence, the purpose of which would be to recommend the nature of trade relations between the two nations in the future.

At this juncture I quote the provision of the independence act with respect to trade relations after independence. Section 13 of that act provides:

"That at least 1 year prior to the date fixed in this act for the independence of the Philippine Islands there shall be held a conference of representatives of the Government of the United States and the government of the commonwealth of the Philippine Islands, such representatives to be appointed by the President of the United States and the chief executive of the commonwealth of the Philippine Islands, respectively, for the purpose of formulating recommendations as to future trade relations between the Government of the United States and the independent government of the Philippine Islands. * * *."

The President of the United States and the President of the Philippines created on April 14, 1937, the Joint Preparatory Committee on Philippine Affairs to study trade relations between the United States and the Philippines, and to recommend a program for the adjustment of Philippine national economy. In dealing with the question of the trade relations between the United States and the Philippines, after independence, the committee was circumscribed in its scope by definite terms of reference outlined on March 18, 1937, which provided that, "preferential trade relations between the United States and the Philippines are to be terminated at the earliest practicable date consistent with affording the Philippines a reasonable opportunity to adjust their national economy. Thereafter it is contemplated that trade relations between the two countries will be regulated in accordance with a reciprocal-trade agreement on a nonpreferential basis."

It is apparent that any adjustments in American-Philippine economic relations must be placed in harmony with a policy, which the Honorable Francis B. Sayre has referred to as the historic policy of the United States for more than a century, in his statement to this committee, which follows:

"It has been the historic policy of the United States for more than a century to carry on its trade and commerce with the foreign countries on the most-favored-nation basis or, in other words, on the basis of equality and nondiscrimination. Every preference

granted exclusively to one nation constitutes a discrimination against all others and discrimination invites retaliation, counter-discrimination, and rising trade barriers. A preferential trade arrangement between nations is a form of trade barrier which, particularly in recent years, we have been striving earnestly to eliminate. To continue indefinitely, or to declare that we intend to continue indefinitely, a preferential arrangement with the Philippines after their independence would, therefore, be in direct conflict with our fundamental commercial policy of nondiscrimination and trade liberalization. The single exception to our historic policy is the case of Cuba. Such an exception should not be extended."

Trade-relation proposals for the post-independence period 1946–60, are in accordance with the recommendations of the joint preparatory committee and may be considered as based on the principle of reciprocity. While American products receive progressively the declining tariff preferences in the Philippine market, our products receive similar advantages in the American market, with the proviso that some of the Philippine products are limited by specific quotas, as in the case of Philippine sugar and cordage. On the other hand, no quantitative limitation is imposed on American products, except in the case of cigarettes, which are to be placed on a quota basis to be progressively reduced in the same manner as Philippine coconut oil, cigars, and tobacco, in lieu of the imposition of customs duties.

Of course, in analyzing this new plan of trade relationship, one can only foresee a shrinkage in our exports to the United States. The consequent diminution of our imports from the United States must be anticipated. It is reasonable to expect that our present trade with the United States will suffer a serious reduction, but that must be the price of the adjustment to a nonpreferential basis.

It is doubtful if the sugar industry will be able to absorb the graduated duties throughout the post-independence period. It is unlikely that it can continue to come into this country when it has to pay the same or a higher rate of duty than Cuban sugar, because of the longer haul and other factors.

As illustrative of the ramifications of our economic problems, may I refer generally to the international sugar agreement, signed by both the United States and the Commonwealth of the Philippines, and which will expire in 1942? In view of the possibility of the extension of this agreement throughout the post-independence period, the Philippines might, under certain circumstances, find it impossible to fill the sugar quota allotted for the United States market and yet, by the operation of the international sugar agreement, may also be denied a quota in the world's markets.

One of the reasons why it is agreed that the adjustment of our economy must be gradual and generous is because, in assuming responsibilities for national defense, foreign affairs, the employment of experts in the development of industries and of our economy in general, we are bound to face considerable additional expenses which we could not possibly take care of if our income were suddenly reduced through prompt liquidation of our most important industries.

IN CONCLUSION

The distinguished members of this committee are too conversant with the multiple problems of independence and self-government to warrant extensive analysis by me of the circumstances and conditions which the independent Philippine Republic will face upon the realization of their long-hoped-for independence. It is true that we ask for generous treatment. There is no denial that we come to you at this time with a plan representing a formula for cushioning the impact of a change from dependency to sovereignty. But the proposals made under such circumstances and conditions should not rightfully be judged as a mere dollars-and-cents plea, neither should the justice of the present proposals be weighed in the light of mere sentimentality on the one hand, or the history of statistical relationship on the other. I prefer to look upon the present situation as a conference to discuss a fundamental problem that has to do with the future of two great peoples.

We were not unmindful of the seriousness to our Philippine economy of those minor provisions of the broad Tydings-McDuffie Independence Act, but, as I have stated, we felt that these minor matters would be settled during the Commonwealth period to our mutual satisfaction and best interests.

Likewise, we weighed and considered the seriousness of the problems that face us after independence, some of which I have tried to present to you here, and all of which are dealt with in the proposals of the pending bill affecting our relationship after July 4, 1946.

Section 13 of the Tydings-McDuffie Act itself is an eloquent expression by the Congress of the United States that both the United States and the Philippines, which accepted the act, looked to some future settlement of trade relations after independence.

I hope I have made clear the fact of the two distinctly separate proposals contained in the pending bill.

Looking at the American-Philippine situation in its broad aspect, the friendly relationship which has existed during the past 40 years should not, in my opinion, be marred by economic considerations.

During the twoscore years of your guardianship you have generously prepared us for the assumption of the vast responsibilities incident to a free and independent state; you have preserved and maintained our Christian religion; you have provided help to develop for us a system of education that has been a benefit to all our people. By laying the economic foundation for the maintenance of a democratic institution, you have enabled us to sustain our high standard of living; and, above all, you have inculcated in us an abiding national consciousness.

These achievements are permanent monuments to America's enlightened experiment in colonial government, and should forever remain a source of honor and pride to the American people, for which we will always be grateful.

I thank you on behalf of my government and the Filipino people.

President Roosevelt Praises Civil Aeronautics in Letter to the National Aviation Forum

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1939

LETTER OF PRESIDENT ROOSEVELT TO THE NATIONAL AVIATION FORUM

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter sent by President Roosevelt to the National Aviation Forum, which held in Washington February 20–21 most important sessions:

THE WHITE HOUSE,
Washington, January 24, 1939.

To the National Aviation Forum:

Civil aviation is clearly recognized as the backlog of national defense in the Civil Aeronautics Act which set up the effective machinery for a comprehensive national policy with respect to the air.

Underlying the statute is the principle that the country's welfare in time of peace and its safety in time of war rests upon the existence of a stabilized aircraft production, an economically and technically sound air transportation system, both domestic and overseas—an adequate supply of well-trained civilian pilots and ground personnel.

This new national policy set up by the Congress views American aviation as a special problem requiring special treatment. Aviation is the only form of transportation which operates in a medium which knows no frontiers but touches alike all countries of the earth. One fact which stands out is that hardly another civil activity of our people bears such a direct and intimate relation to the national security as does civil aviation. It supplies a reservoir of inestimable value to our military and naval forces in the form of men and machines, while at the same time it keeps an industry so geared that it can be instantly diverted to the production of fighting planes in the event of national emergency.

I hope the forthcoming national aviation forum will give serious thought to the many phases which enter into aeronautics as a national problem.

FRANKLIN D. ROOSEVELT.

The Federal Trade Commission

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 2 (legislative day of Monday, February 27), 1939

ADDRESS BY HON. CHARLES H. MARCH, MEMBER OF THE FEDERAL TRADE COMMISSION, BEFORE THE ANNUAL MEETING OF THE MINNESOTA BAR ASSOCIATION, DULUTH, MINN., JULY 12, 1938

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject of the Federal Trade Commission, delivered by the Honorable Charles H. March, member of the Federal Trade Commission, before the annual meeting of the Minnesota Bar Association, Duluth, Minn., July 12, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, members of the judiciary, ladies, and gentlemen of the bar, I am home. You can well appreciate my feelings at this moment, to be back again midst familiar and dear scenes and

associations; to mingle with my brothers of the bar of my home State; to see again my closest friends.

You will, I am sure, realize the feeling of privilege that is mine in being invited to address this important body of the legal profession that has had and will continue to have an increasing effect in shaping the laws of this State and the entire country. I am proud of my early association with this organization as one of its charter members. The sound and elevating principles inculcated in those early days, indigenous to the soil from which I sprang, has ever remained with me as a guiding light in dealing with the many problems confronting me as a Federal official in Washington. Herein lies one of the many reasons why I am proud to be a son of the State of Minnesota.

My friends, we are living in an age of change. We are living at a time when it is, perhaps, more important than ever to reexamine and rededicate ourselves to the fundamentals upon which this Nation is founded and under which it has risen to greatness. The history of thousands of years records the long struggle of mankind upward toward the light of liberty and self-government. It shall be my purpose to draw your attention to this idea of freedom and democracy, which is fundamental and of deep significance; and in the discussion of this subject it shall also be my purpose to allude to some of the things we must be alert to guard against, lest our heritage of self-government, individual liberty, and opportunity be curtailed, if not entirely lost.

Self-government has ever been the goal of mankind. Its struggle began with the dawn of civilization. All peoples of the world have striven for self-government. It is democracy's objective and purpose. In 1776 our ancestors had the fortitude, the courage, and the conviction of purpose to establish the first great democratic nation of the world. The principles of democracy, of self-government, of liberty are basic to us, to our institutions, and our whole life. We justly cherish these principles and rightfully we are quick to defend them from alien ideologies.

When our forefathers came to this continent they fled from oppression, exploitation, and dictatorships. They turned their faces west to this land to found a civilization and government wherein true self-government, freedom, and individual initiative were to have opportunity to come to fruition. And that fundamental idea of self-government, liberty, individual effort, produced a Constitution and a government of law that have made ours the greatest Nation on earth.

Today we see springing up in various parts of the world a departure from the idea of self-government and freedom for the masses. We see peoples in other parts of the world apparently clamoring for dictatorships. Little do they realize the price they are paying. I say to you they are running after false gods, the gods of tyranny and regimentation. Liberty and the right of self-government are being trampled upon, the peace of the world menaced. This trend in certain other countries is sufficient to give us pause and to remind ourselves of the gratitude we owe for our democratic institutions and principles. We want none of their dictatorships, their oppression, their ruthlessness. Our course to follow is that of democracy, for therein lies the greatest measure of freedom and human happiness. Democratic principles are the bulwarks of freedom, prosperity, and security.

Not only do we see the departure from these true principles of liberty in foreign countries, but there are tendencies in our own land which, if allowed to continue, would fetter and strangle our economic and political well-being. It behooves us all to be alert to these tendencies and to stand guard. And the legal profession is second to none in its responsibility to take the lead against such enemies within our gates.

Among the questions posed by these tendencies is that of monopoly. This question has ever been the concern of liberty-loving people, and at no time in our recent history has it been more acute and more pressing for solution than at present. The entire situation is now up for thorough examination by a select committee of the Government known as the Temporary National Economic Committee, created by joint resolution of Congress.

The problem of monopoly seems to be ever with us. It has been of pressing concern to the people since ancient times. The fight against it has gone on through the ages and to each new age it is newly vital. When brought under control as to one form it is not uncommon to find it break out in another form. In its broadest aspects, the problem, which is one of concentration of wealth, is a world problem. It underlies the civil war in Spain, the Communist revolution in Russia, the death of democracy in other countries. It has toppled kings from their thrones. It will drive to disaster dictators, whether economic or political, who thwart the masses in their effort to achieve a better standard of living and greater economic security. The whole world is in revolt against that philosophy of unnecessary scarcity which has been the philosophy of private monopoly. Any general monopolization of the means of production and distribution carries with it limitation of purchasing power. The inability of millions to produce, to purchase, and to consume is but the reflection of such monopolization.

For the past half century or more the control of monopoly in this country has been a pressing national issue. The progressive elements in both major political parties have never lost interest in it, and the platforms of both now pledge a renewed attempt to enforce and strengthen the laws designed to protect the public against monopoly.

The passage of the Sherman Antitrust Act of 1890, which is still on the books, was the culmination of prodigious efforts to prevent monopoly from overwhelming our people. In 1914 the need for supplementing the Sherman Act was sufficiently crystallized so that steps were taken to deal with certain of its phases through creation of the Federal Trade Commission. In the experience under the Sherman Act up to that time it was found that it was largely through the use of unfair competitive practices and the employment of certain specific devices that monopoly was able to gain a foothold. To deal with these specific methods the Federal Trade Commission Act was passed, also the Clayton Act, supplementing the Federal antitrust laws.

FUNCTIONS OF THE FEDERAL TRADE COMMISSION

The Commission was set up, on the one hand, as a quasi-judicial body, and, on the other, as an agency of inquiry and study in the field of business. Mr. Justice Stone, speaking for the Supreme Court in the *Keppel case* (291 U. S. 304), stated that the Commission "was created with the avowed purpose of lodging the administrative functions committed to it in 'a body especially competent to deal with them by reason of information, experience, and careful study of the business and economic conditions of the industry affected,' and it was organized in such a manner, with respect to the length and expiration of the terms of office of its members, as would 'give to them an opportunity to acquire the expertness in dealing with these special questions concerning industry that comes from experience.'"

Congress provided in the Trade Commission Act that unfair methods of competition in interstate commerce shall be unlawful, and conferred upon the Commission the power and authority to prevent their use. Subject to right of court appeal, the Commission was authorized to determine what is unfair in the competitive struggle. Authority of such great importance to business had never theretofore been conferred upon an administrative agency. Commission proceedings in these matters are judicial in nature and character. It operates like a court. It hears cases of unfair methods of competition between business competitors, enters findings of facts on the pleadings, testimony, and evidence, and issues cease-and-desist orders where justified by the facts and the public interest. The issues in these cases are drawn upon formal complaint entered by the Commission and answer filed by the respondent. Trials are conducted by trial examiners of the Commission, before whom counsel for the parties appear, examine witnesses, and produce the evidence. At the conclusion of the trial the presiding examiner makes his report and the case then goes before the entire Commission. Briefs are filed by counsel on both sides and oral argument heard by the Commission. Thereafter the Commission renders its decision. And if it is of the opinion that the practice in question constitutes an unfair method of competition, the findings of fact of the Commission, as well as its cease-and-desist order based thereon, are entered. The case may be carried to the United States Circuit Court of Appeals, and, upon certiorari, to the Supreme Court of the United States.

The cease-and-desist orders are, of course, in the nature of injunctions to protect competitors and the public. Any businessman or other interested party has a right to complain to the Commission, and if upon investigation it appears to the Commission that the matters complained of are unfair and that action to correct the same would be to the interest of the public, formal proceedings may be undertaken. Such cases of unfair competitive conduct in commerce are brought to the Commission at the rate of over 2,000 annually, and the decisions of the Commission cover a wide range of competitive practices. They constitute a large body of semijudicial rulings on the important subject of fair practices in business and go far toward checking the growth of the seeds of monopoly.

TRADE-PRACTICE RULES

The cease-and-desist order proceeding is what might be termed the compulsory method of eradicating harmful practices in business. The Commission has also provided a voluntary cooperative method in what is known as the trade-practice conference procedure. Voluntary correction of unfair competitive methods is most desirable, and the Commission is always glad to assist in bringing it about, rather than be compelled to use the compulsory processes of the law. The elimination of unfair competitive practices is essential to sound business prosperity and a valuable deterrent to monopolistic encroachment. Businessmen generally are recognizing this. Members of trade and industry, therefore, are finding it more and more to their own benefit to cooperate in setting up fair-trade rules by availing themselves of the facilities of the trade-practice conference procedure of the Commission. Experience has proved the value of this cooperative effort within the law between legitimate business and the Commission. To date the Commission has conducted such conference proceedings for close to 200 industries, and by this joint and friendly action many bad competitive problems have been solved.

GENERAL INVESTIGATION OF THE COMMISSION

It was also in its organic act of 1914 that the Commission was given broad powers of inquiry and study of corporate practices and business problems. This was intended as another dike against the monopolistic flood. For example, section 6 (a) empowers the Commission—

"To gather and compile information concerning, and to investigate from time to time, the organization, business, conduct, practices, and management of any corporation engaged in commerce, * * * and its relation to other corporations and to individuals, associations, and partnerships."

It is also empowered to obtain reports from business; to investigate the manner in which antitrust decrees are carried out; upon direction of the President or of Congress, to investigate and report facts relating to any alleged violation of the antitrust acts by any corporation; upon application of the Attorney General, to investigate and make recommendations for the adjustment of the busi-

ness of any corporation alleged to be violating the antitrust acts; to publish reports of its investigation and to classify corporations.

In these provisions the Congress sought to give effect to the view that corporate practices and intercorporate relations in industry require impartial investigation and study by a body of experts; that disclosure of the facts will permit of the operation of an enlightened public opinion which in turn may be relied upon to bring about correction of abuses. The history of the Federal Trade Commission Act has indeed proved the theory to a very substantial degree that once the real facts in a given situation are clearly made available to the people, public opinion will effectuate the needed reformation.

Much legislation of outstanding importance has sprung from investigations and studies made by the Federal Trade Commission under its general powers of inquiry to which I have referred. Let me illustrate by citing a few examples:

Packers and Stockyards Act, 1921: Beginning in 1918, the Commission conducted an investigation of the meat-packing industry as part of a general food inquiry. This led to correction, by consent decree, of certain monopolistic abuses and, in addition, it resulted in the enactment by Congress of a general regulatory statute known as the Packers and Stockyards Act of 1921.

Grain Futures Act, 1921: Following a Commission investigation of the grain trade the Grain Futures Act of 1921 was passed by Congress.

Radio industry: Under resolution of the House of Representatives, the Commission conducted an exhaustive investigation of the radio industry and made a comprehensive report thereon to Congress in 1924. Upon this record the Department of Justice took action under the Sherman Act against certain corporations, and this culminated in a consent decree. The Commission's investigation and report also contributed materially toward the enactment of the Radio Act of 1927 and was directly responsible for most of the provisions therein. Similarly provisions of the Communications Act of 1934 were predicated in a large measure upon matters developed in this investigation.

Securities and Holding Companies Acts: The Securities Act of 1933 and the Public Utility Holding Company Act of 1935 followed the Commission's reports in its exhaustive electric and gas utility investigation. This inquiry was made pursuant to Senate Resolution No. 83, Seventieth Congress (1928), which directed a searching examination of the corporate relations, financial development, practices, and public advantages and disadvantages of holding companies, together with certain political and propaganda activities. The Commission's reports to Congress are embraced in nearly 100 printed volumes, and the Public Utility Holding Company Act of 1935 was a direct consequence of the abuses revealed in this study by the Commission.

The inception of various other Federal statutes may largely be found in Trade Commission inquiries and studies. Some of these are:

The Export Trade Act of 1918, commonly referred to as the Webb-Pomerene Act.

The Perishable Agricultural Commodities Act of 1930 and the amendatory act of 1937.

The Federal Power Act of 1935.

The Robinson-Patman Antidiscrimination Act of 1936.

Robinson-Patman Act: The Robinson-Patman Antidiscrimination Act, administered by the Commission, was designed by Congress to eliminate certain discriminatory practices of monopolistic character which the Commission's report on chain-store inquiry reveals. That act prohibits the use of price discrimination, direct or indirect, to injure competitors or to destroy competition. It also prohibits certain specific practices such as brokerage, commissions, allowances, under certain situations which are deemed to be destructive of fair competition. While this statute was only passed in June 1936 quite a number of cases have risen thereunder and decisions by the Commission touch the entire field of commodity distribution.

Wheeler-Lea Act: In March of this year the President signed what is generally referred to as the Wheeler-Lea Act, constituting the first revision of consequence of the Federal Trade Commission Act of 1914. The Wheeler-Lea Act greatly strengthens the hand of the Commission in dealing with unfair methods of competition. While the original act of 1914 prohibited, and empowered the Commission to prevent unfair methods of competition, the Wheeler-Lea Act broadens this power to include unfair or deceptive acts or practices in interstate commerce. A major effect of this amendment is to make it plain that the Commission in its corrective quasi-judicial powers may act not only when the alleged unfair business practice is harmful to competitors, but also when it is harmful or injurious in its tendency to the public regardless of whether a competitor has been injured.

Another outstanding feature of the Wheeler-Lea Act is the incorporation into the law of provisions whereby certain specific additional powers are conferred over false or deceptive advertising of foods, drugs, devices, and cosmetics, as those terms are defined in the statute. Such practices are made subject to various forms of corrective action, namely, (1) temporary injunction where such appears in the interest of the public, (2) criminal prosecution where the advertisement is issued with intent to deceive or where the product in question is injurious to health irrespective of the intent, (3) cease-and-desist order of the Commission enforceable by the United States circuit court of appeals, or when the same has become final after the lapse of 60 days without appeal, to civil penalties collectible in a suit by the United States. All in all, the various provisions as to foods, drugs, devices, and cosmetics found in this Wheeler-Lea Act make it plain that no stone shall be left unturned in completely eradicating such indefensible and harmful trade practices.

THE CLAYTON ACT

The various statutes I have mentioned are in effect scattering outposts against the encroachments of monopolistic tendencies. Moreover, as far back as 1914 there was erected still another fort. It was the Clayton Act, to which I have already alluded. One of the principal phases of the evil against which this statute was arrayed is the merger of competing corporations. The act, under parts of which the Federal Trade Commission operates, prohibits the acquisition by one corporation of the capital stock of a competing corporation or the consolidation of two or more competing corporations by acquisition of stock, where the effect may be to substantially lessen competition, tend to create a monopoly, or restrain trade. At the time this legislation was placed on the books it gave to the people great hope of its usefulness in stemming the tide of monopoly; but, as has been repeated in other occasions in this field of legislation, loopholes or avenues of escape in the legislatively erected armor were developed largely as a result of judicial interpretation. It was found that monopolistic mergers could easily escape the Clayton Act by the acquisition of assets instead of the acquisition of stock. This technicality soon became crystalized in the decisions of the courts, and by it the Clayton Act provisions against monopolistic mergers were rendered nugatory and virtually ineffectual.

SO-CALLED RULE OF REASON

Let us look for a moment at another thing that has arisen to break the legislative dikes erected against monopoly. It is one thing to inveigh an evil in general and quite another thing to apply specific remedies. Our laws in this field appear to be one thing on the statute books but quite another under the judicial interpretations. Out of the many interpretations of these laws found in the decisions there have grown confusion, looseness, and uncertainty that have encouraged the development of monopolistic practices, and the keystone to much of this encouragement of monopoly is the notorious "rule of reason." When this rule was read into the antitrust act by the Supreme Court the gate was opened and left swinging in such uncertain fashion as to let into the sheepfold the economic wolves of special interests and monopolistic greed. No greater condemnation of this miscalled rule of reason, or what is essentially the same thing, namely, the doctrine of good and bad trusts, can be found than has come from the lips of high official authority itself. President Taft, referring to the matter, stated in a message to Congress:

"I venture to think that this is to put into the hands of the Court a power impossible to exercise on any consistent principle which will insure the uniformity of decision essential to best judgment. It is to thrust upon the courts a burden they have no precedents to enable them to carry and to give them a power approaching the arbitrary, the abuse of which might involve our whole judicial system in disaster."

In a dissenting opinion Mr. Justice Harlan used the following vigorous condemnation of this rule-of-reason interpolation in the Sherman Antitrust Act:

"The Court by its decision, when interpreted by the language of its opinion, has not only upset the long-settled interpretation of the act but has usurped the constitutional functions of the legislative branch of the Government. With all due respect for the opinions of others, I feel bound to say that what the Court has said may well cause some alarm for the integrity of our institutions."

In an earlier report on behalf of the Senate Judiciary Committee by Senator Nelson on a bill to amend the Sherman Act it was stated:

"To inject into the act the question of whether an agreement or combination is reasonable or unreasonable would render the act as a criminal or penal statute indefinite and uncertain, and hence to that extent utterly nugatory and void, and would practically amount to a repeal of that part of the act."

The report also states that—

"The injection of a rule of reasonableness or unreasonableness would lead to the greatest variableness and uncertainty in the enforcement of the law."

Is it any wonder that under these circumstances the monopoly question again comes to the fore as of vital importance? The immense aggregations of corporate wealth and control, the development of new and subtle devices, the fact that our protective wall against monopoly has developed weaknesses make it necessary that action be taken to more effectively guard against this strangling octopus if we are to save our economic and political freedom.

If the effort to destroy monopoly is directed only against such as can be shown to have abused their power, it may be questioned how far reaching the relief will be, for the effect of monopoly on the concentration of wealth and the consequent limitation of purchasing power of consumers are not conditioned wholly on behavior. In its report to the President in November 1934, concerning the basing point system of the steel industry, the Federal Trade Commission used these words:

"If the capitalistic system does not function as a competitive economy there will be increasing question whether it can or should endure. The real friends of capitalism are those who insist on preserving its competitive character."

Recently the Federal Trade Commission completed an investigation of agricultural income. This study revealed for the first time the startling progress of monopoly in the manufacturing of agricultural products. It was found that three tobacco manufacturers in 1934 bought approximately 70 percent of all tobacco consumed domestically.

In livestock three packing companies bought 40.8 percent of the cattle and veal calves and 25.3 percent of the hogs. Agriculture is the means of livelihood of nearly a third of our population and the basic industry for all others. It has made little progress in the direction of organized control of its own prices or production. Without such control it has had to bear the full impact of monopoly both in buying and selling. For years before the crash in 1929 agriculture was not prosperous, although other industries were enjoying a sort of wild prosperity, achieved largely at the expense of agriculture. Perhaps what then passed for national prosperity was only the prosperity of monopoly. It should be plain to all that with agriculture prostrate even the pseudo prosperity of monopoly could not continue.

Mere receipt of greater income by our agricultural population, whether from prices driven upward by natural or artificial causes or from subsidies paid by the Government, is in itself no permanent remedy. So long as there exists the power of monopoly to control the prices of what the farmer buys, increases in the farmer's income are but the occasion for equivalent increase in the prices he must pay. His relative position is not improved. Indeed, it is possible for his relative position to grow worse notwithstanding an increased income. The same is true also of other unorganized groups and classes of our population.

Almost 2 years ago I made this prediction:

"A most disturbing and puzzling feature of the present business improvement is that with industrial production back nearly to predepression levels, we still have substantial unemployment. It should be clear that unless these unemployed have their buying power restored, we shall sooner or later suffer another depression." And so we did, as attested by this so-called recession.

Today monopoly, the ancient oppressor, is knocking at our door. We must conquer this foe, or I assure you that no matter how efficient we may be we will never really extricate ourselves from our present anomaly of apparent overproduction on the one hand, with millions going hungry and in want amidst this plenty.

In its final report to the Senate on its chain-store investigation, the Federal Trade Commission said:

"Should the trend of the past 20 years, and particularly of the last decade, continue for a like period, we shall have a condition in some lines of chain merchandising that few will dispute is monopolistic."

The Brookings Institution has reported that even during our fabled prosperity of 1929 nearly 6,000,000 American families, representing more than 21 percent of the total population, each had an annual income of less than $1,000, while about 12,000,000 families, representing more than 42 percent of the population, each had an income of less than $1,500 a year.

Monopolistic ownership or control of the means of production connotes dictatorial power over the things produced. It determines the amount to be produced, restricts the freedom to engage in productive pursuits, and consequently the amount of labor that may be employed. By fixing prices, it limits or restricts the quantity of goods which may be consumed.

Price fixing and other monopolistic schemes have been familiar to men of all ages from ancient China and Egypt through the days of European mercantilism to the present. And men of all ages have observed that the common people, caught between the jaws of their own need and the power of monopoly have had their lives crushed and their children's children sold into economic slavery.

It is my belief that the late severe economic depression can be traced in large degree to reprehensible practices of selfish interests, many of which were unsoundly and excessively capitalized. These practices were not properly controlled because the country had become so blinded by temporary prosperity as to accept the theory that monopolies were beneficial rather than dangerous.

What happened? In their greed for profit monopolistic enterprises charged more than the traffic could bear. They have little or no regard for ultimate consequences. By eliminating competition they thought they were on their way to greater success and greater riches. Actually, however, as it turned out, fewer people were able to buy the products of the big business enterprises which had concentrated output in their own hands, for that very concentration deprived many of their means of livelihood and thus destroyed their purchasing power. The result, so often called overproduction, would probably better be termed "underconsumption."

It is my conviction that to allow great interests a free hand and to permit them to destroy competition would be to make war against the very principle on which our Government was established, namely, equal opportunity for all who may be fitted to improve their position by reason of their own energy and initiative. By this I do not mean that it was ever intended to protect the lazy or incompetent. I do mean that the right of every man to use his brain and energy and gain a fair reward therefor should be preserved and protected.

Society is an organism through which flows the lifeblood of commerce. When any part of society monopolizes more of that lifeblood than it can use the other parts suffer. Even in the part which has the excess supply congestion and disease appear. And just as infection in the less prominent parts of our bodies may produce decay and death so infection in the humbler parts of our social and economic organism may destroy it.

Monopoly and the impoverishment of the common people until it was a choice between the bread of charity or the blood of revolution has ever been the herald of moral decay and national death. So passed the glory of republican Greece and the grandeur of democratic Rome, and, if we may judge the future by the past, so may perish the greatest republic that "ever gleamed like a priceless jewel on the skeleton hand of time." Self-interest, humanity, patriotism, religion itself, all admonish us to weigh well the problem of the hour—a problem born of human progress, forced upon us by the mighty revolution wrought in the industrial world by steam and electricity, and that problem is: "Shall the average American citizen be a slave or a sovereign?"

The illustrious Abraham Lincoln said: "I believe this Government cannot endure permanently half slave and half free." And by the same token neither this nor any other government can endure half monopolized and half free, because monopoly is slavery.

We must not fail to protect our heritage, so well expressed in the verse of John Boyle O'Reilly:

Here * * * on this soil
Began the kingdom, not of kings, but men!
Began the making of the world again;
Where equal rights and equal bonds were set;
Where all the people equal franchised met;
Where doom was writ of privilege and crown;
Where human breath blew all the idols down;
Where crests were naught, where vulture flags were furled,
And common men began to own the world.

Prohibition of Certain Political Practices

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 8, 1939

RADIO ADDRESS BY HON. JOSEPH F. GUFFEY, OF PENNSYLVANIA, MARCH 7, 1939

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject of The Prohibition of Certain Political Practices, delivered by the distinguished Senator from Pennsylvania [Mr. GUFFEY] over the Columbia Broadcasting System on March 7, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I want to thank the Columbia Broadcasting System for making it possible for me to tell the citizens of the United States something about the bill I recently introduced in the Senate. The purpose of this bill is to put an end to the extravagant and corrupting use of money at the polls in the elections of candidates for Congress.

This bill is brief—it contains not more than 250 words—and to the point. It prohibits any candidate for Federal office, or any committee or party organization representing such a candidate, from paying anyone for acting as watcher, election official, or ballot clerk at the polling place; or for soliciting votes for or against a candidate.

It also makes it illegal for any person to receive any pay from a candidate, or the political party or a committee representing him in compensation for such activities.

The bill makes it a misdemeanor to pay out or accept compensation for such activities at the polls, punishable by a fine of not more than $500 or by imprisonment for 1 year, or both.

In my opinion, such legislation is long overdue.

I cannot claim to speak of election practices in all the States. But I do know that in many States the custom of paying a huge army of watchers at the polls from political funds amounts to nothing more than the wholesale purchase of votes.

It is the theory of our democracy that only two things should govern the selection of a candidate for high office, namely: His own ability and character, and the principles for which he and his party stand.

However, in modern times another element has come to take equal rank with individual character and party principle. And that element is the amount of money which a candidate or his party is able to spend in an election.

There is no use attempting to hide the fact that an election today is a mighty expensive business—and with good reason.

In other days, when our population was smaller, it was not difficult for a candidate for Federal office to make himself and his policies known to the constituents.

Frequently he was known personally by most of the citizens who cast their ballots for or against him. He could reach them all by speaking from the stump; and the gazettes of the day, without the whole world as their newsfield through the agency of radio and cable, discussed his candidacy, his character, and his policies at length.

Campaigns in those days were not costly, since the business of a campaign, which is to inform the electorate on a candidate's character and his policies, could be conducted at little expense.

Today the huge growth of our population has put an end to those simple and inexpensive methods of campaigning.

In my own State of Pennsylvania, for instance, there are more than 4,000,000 registered voters.

To reach those voters, to present one party's side of the story in a State-wide election, entails use of the radio, of newspaper advertising, of party publications, handbills, billboard signs, speaking tours, and scores of other media.

If a party attempted to reach every one of those 4,000,000 registered voters, in order to present its side of the story, and if it spent only 25 cents to reach each voter, that would entail legitimate campaign expenditures of more than $1,000,000.

So, you can see why money has come to be one of the most important and often even the deciding factor in political campaigns.

A candidate stands little chance of being elected unless his personality and his policies are favorably known to the voters. To make him known requires expenditures of large sums, for even the most legitimate of campaign expenses.

And when to these legitimate expenses is added an extravagant and corrupting system of hiring watchers and canvassers on election day, then truly the man with the biggest money bag stands to control the election, and democracy is made a farce.

And here I repeat that the practice of hiring watchers at the polls and canvassers to bring the vote in is frequently only a legal disguise for the outright purchase of votes.

Anyone at all familiar with politics has frequently heard this explanation of a one-sided vote in certain election districts, or even whole cities, "Such-and-such a candidate's money ran out by noon, and all his watchers went over to the other side."

In plain English, the better-heeled candidate, backed by interests with the most cash, was able to purchase the vote.

Likewise, anyone familiar with politics knows that on election day someone in his precinct is equipped with a fund of one- and five-dollar bills. Ostensibly for the purpose of paying watchers, but actually a cash-on-the-barrel fund for trafficking in votes.

That this system leads to corruption and desecrates the fundamentals of democracy goes without saying.

Again, here I can cite an instance from my own State of Pennsylvania. In 1927 the United States Senate refused to seat William S. Vare, who had been elected Senator, simply because the funds expended in his campaign were so large. There is no doubt that the campaign was won by use of a vast slush fund used on election day for hiring watchers and canvassers at the polls.

I am hopeful that this bill will receive the favorable consideration of Congress. For I know that many other Representatives and Senators, on both sides of the political fence, believe that this system of election-day bribery—for it can only be called that—is dangerous to the political health of our Republic.

And here I would like to suggest something to those citizens who are interested in safeguarding State as well as Federal elections.

As you know, Federal laws can govern only those general elections in which Federal offices are directly affected. A Federal law cannot control primary elections in which party candidates for Congress are nominated or State elections for State officers only.

My suggestion is that this movement be extended to the States, and that similar bills be enacted in State legislatures to prevent hiring of watchers and canvassers in primary and State elections.

To put such measures on both Federal and State statute books will help restore democratic principles in election campaigns and safeguard the political health of our Republic against the canker of cash control of the ballot.

There is no need and no justification for this vicious system.

I know that every political party can find plenty of sincere and loyal party members only too willing to guard their party's interests at the polling place and to help in getting the voters to the polls.

Too frequently these loyal and sincere party members—be they Democrat or Republican—are pushed aside, simply because they can be counted upon to vote their convictions. And in their place appears a horde of political mercenaries, attracted only by the smell of campaign cash and prepared to sell their ballot to the highest bidder.

The legislation which I have introduced would put an immediate end to this corrupt and corrupting practice.

Since even the most legitimate expenses of political campaigns are so great, we must limit campaign expenditures somehow before money becomes the only criterion of political preferment.

Thus the act which I have introduced has a twofold purpose: It brands as illegal corrupt acts which have been performed under the guise of legality, and it seeks to restore our elections to democratic campaigns of personalities and principles instead of making them contests of cold cash.

I thank you.

Frances Perkins, Strecker, and Harry Bridges

EXTENSION OF REMARKS

OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

Mr. THOMAS of New Jersey. Mr. Speaker, assuming that the Supreme Court overrules the circuit court of appeals in the Strecker case, will this justify or excuse Frances Perkins, Secretary of Labor, in appealing this case to the Supreme Court?

Of course, she will claim that it does, and that now the way is open to proceed against other aliens, such as Bridges. She will further claim that by appealing the Strecker case she has clarified the differences between the rulings of other circuit courts and the ruling of the fifth circuit, and that she has secured a controlling decision from the Supreme Court which will serve as a guide in all future deportation cases involving this section of the statutes.

To one who is not thoroughly acquainted with the record on appeal in the Strecker case and with the Labor Department file of Bridges and the distinctions which exist in the two cases, this argument by Miss Perkins might seem plausible. However, as a matter of fact, a review of Miss Perkins' career as Secretary of Labor convinces me that the Government's victory in the Strecker case and the clarification of the law concerning the deportation of aliens by the Supreme Court was the last thing that Miss Perkins actually desired.

A victory for the Government in the Strecker case will be a victory won in spite of the efforts of Miss Perkins to sabotage the deportation laws of the United States and to protect Bridges against deportation.

In the hearings before the subcommittee of the Committee on Appropriations of the House of Representatives of the Seventy-fifth Congress, third session, on the Department of Labor appropriation bill for 1939, Congressman Bacon, since deceased, in a letter addressed to Frances Perkins under date of February 4, 1938, said:

Hon. FRANCES PERKINS,
Secretary of Labor, Washington, D. C.

MY DEAR MME. SECRETARY: In going over the testimony at our subcommittee there apparently was some confusion as to the inquiry that I made respecting an opinion rendered in 1934 by Mr. Wyzanzki, or someone in the Solicitor's office. To clarify the information that I wanted to obtain, I desire to herewith amplify my question, as my inquiry in committee was apparently misunderstood, as follows:

Has any opinion or opinions, formal or informal, ever been rendered by anyone in the Solicitor's office of the Department of Labor since your incumbency as Secretary of Labor which placed any interpretation or definition, administrative or legal upon the act approved October 16, 1918, as amended by the act approved June 5, 1920, referring to the exclusion and expulsion of anarchists and similar classes?

If the answer is "yes" to this question, will you please furnish me for the use of the subcommittee, or furnish the clerk of the subcommittee, with a copy of such opinion or opinions. I have been informed that such an opinion was rendered in 1934.

It is my purpose to incorporate this letter and your reply in our hearings on the Department of Labor appropriation bill. I am requesting the chairman to hold up the final printing of the report awaiting your reply.

Respectfully,

ROBERT L. BACON.

In reply, Miss Perkins, under date of February 4, 1938, said:

Hon. ROBERT L. BACON,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN BACON: I have your letter of February 4, 1938, in which you clarified the questions you had asked me when I appeared before the Subcommittee on Appropriations with respect to certain opinions rendered by the Solicitor of the Department. I understood you to ask whether there was some opinion which suspended or abrogated immigration laws relating to the deportation of aliens. I stated that there had been no such opinion. I understand that you now ask me to furnish you with any opinion, formal, or informal, which has been rendered by anyone in the Solicitor's office during my incumbency with respect to the act of October 16, 1918, as amended by the act of June 5, 1920, referring to the exclusion and expulsion of anarchists and similar classes.

The Solicitor informs me that the only opinions which have been written have dealt with particular cases, and that the files show that no general opinion construing this section of the law has been written in recent years.

The most striking of these is an opinion in the case of Borich by the former Solicitor Wyzanski, dealing with the question of membership in a trade-union unity league as a ground of deportation, which was apparently the subject of testimony by former Commissioner MacCormack before your subcommittee in hearings on the 1936 appropriation bill. I therefore presume that this is the memorandum you desire. The question there discussed is now largely academic, since such remnants of these unions that still exist have not been for some years affiliated with the Communist International, according to information in the possession of the Immigration Service.

Sincerely yours,

FRANCES PERKINS.

The memorandum by Solicitor Wyzanski, to which Miss Perkins refers and which appears in the hearings on pages 24–26, is as follows:

To the COMMISSIONER OF IMMIGRATION AND NATURALIZATION:

DEAR SIR: You have asked my opinion whether the Secretary of Labor, acting under the authority of the act of October 16, 1918 (40 Stat. 1012), as amended by the act of June 5, 1920 (41 Stat. 1008, 8 U. S. C., sec. 137), ought to deport Frank Borich, an alien, on the ground that he is a member of the National Miners Union.

In my opinion the Secretary of Labor ought not to deport the alien on the ground stated.

The voluminous file of the Department of Labor clearly shows, and the alien himself admits, that since 1928 he has been connected with the National Miners Union, first as organizer and later as national secretary. The National Miners Union's original or 1928 constitution shows that it is primarily a militant left-wing labor organization interested in a 6-hour working day, minimum wages, social insurance, and national labor agreements, achieved through strikes and an alliance of coal miners, railroad, and transportation workers. The greater part of the constitution is devoted to provisions relating solely to the organization, administrative functioning, and financing of the union.

However, in article 1 of the original constitution, it is stated that the union shall "affiliate itself with the class-conscious labor movement of the world, and declare adherence to the program, principles, and statutes of the Red International of Labor Unions." This Red International of Labor Unions, to which reference is made, is a "revolutionary world union of workers," operates in the United States through the Trade Union Unity League, i. e., the T. U. U. L., and advocates a "united struggle against international capitalism" rather than the "nationalistic and patriotic stand of the reformist trade unions." There is in the record no evidence, other than this declaration, that the National Miners Union has ever been closely connected with the Red International, and Borich claims that this declaration was omitted from and repudiated by the present constitution of the National Miners Union, supposed to have been adopted on March 20, 1932.

Moreover, the actual history (as distinguished from the platform) of the National Miners Union does not reveal that the organization has ever indulged in any physical or verbal attack upon the American political structure, although it, like more conservative bodies, may have severely criticized individual governmental officials, and, like other labor unions, may have violated particular governmental orders. Throughout its life the union has been an industrial force rather than a political one. Its conflicts with the United Mine Workers of America and with operators of coal mines have been its chief preoccupation. It may have had individual Communists for leaders. It may have accepted the thesis of the class struggle. It may through cooperation with the Trade Union Unity League have tried to promote labor organization on a vertical and industrial basis (an end which can hardly be criticized by officials of this administration and supporters of General Johnson). But there is no evidence that as an organization the National Miners Union has ever executed or advocated policies aimed at the overthrow of the Government of the United States.

Under these circumstances I am of opinion that the National Miners Union is not itself an "organization * * * that * * * teaches the overthrow by force or violence of the Government of the United States," and is not so closely related to any revolutionary organization advocating such a doctrine that mere membership in the union should be treated as affiliation with the revolutionary organization.

I do not mean to say that the case is so clear that a reasonable man could not reach a different result from mine. The evidence about the nature of the union is conflicting and susceptible of different interpretations.

If a Secretary of Labor decided that this National Miners Union and like vertical unions, by emphasizing class struggle and similar doctrines, showed that they were inherent parts of a Communist scheme to overthrow the Government of the United States by force or violence, and if a Secretary of Labor issued warrants ordering the deportation of the members of all such unions, the courts would not release the aliens on writs of habeas corpus (*United States ex rel. Borich* v. *Marshall*, unreported (C. C. A. 3, Oct. 19, 1933); *Kjar* v. *Doak*, 61 F. (2d) 566 (C. C. A. 7, 1932); *Wolck* v. *Weedin*, 58 F. (2d) 928 (C. C. A. 9, 1932); *Berkman* v. *Tillinghast*, 58 F. (2d) 621 (C. C. A. 1, 1938)).

But the function of the courts under our deportation system should not be forgotten. The courts do not and cannot hear appeals from the Secretary of Labor. A judge can set aside a deportation order only when the Secretary has committed an "error so flagrant as to convince a court of the essential unfairness of the trial" (*United States ex rel. Vajtauer* v. *Commissioner of Immigration*, 273 U. S. 103, 106 (1927); cf. *Lloyd Sabaudo Societa* v. *Elting*, 287 U. S. 329, 335–336, 338 (1932)). In other words, there never can be a court decision (though there may be dicta) holding that the Department of Labor was incontrovertibly right in ordering a deportation. A judge in quashing a writ of habeas corpus merely decides that the Secretary had some evidence justifying deportation; he may feel that the Secretary would have been at least equally justified in making a decision not to deport, but in his official capacity the judge has no right to say so.

There is an important reason for emphasizing at this point the limited role of the courts. One Secretary may have a strong dread of political revolution accomplished through industrial organizations. Or one decade may find the American people alarmed at the supposed menace. These fears may lead to the issuance of warrants for the deportation of members of such industrial organizations. And since there will be some evidence to sustain the Secretary of Labor, our courts cannot set aside the warrants. But succeeding Secretaries of Labor and later decades may view the danger as less real and may interpret the facts differently or weigh the evidence with altered results. It is of cardinal importance that in such close cases the Secretary of Labor should recognize that he is free to decide either way; no court decision, even on the very case that he is considering, can properly be cited to restrain his choice; if he selects deportation he should realize that it is because it is his administrative pleasure to perpetuate the policies of his predecessor and not because it is his duty under court decisions.

The instant case seems to me to be one in which the Secretary of Labor, while she would be, and indeed has been, sustained by the courts in ordering deportation, ought not to have gone so far. The National Miners Union is one of a group of left-wing labor organizations. Membership in each such union is avowedly solicited only from those working in a particular industry. Activities are directed almost exclusively in economic channels. Antagonism, if any is promoted, is toward the older and more conservative unions, not toward democratic government.

For the United States to deport a man merely for membership in such a union is to deport a man for seeking to overthrow conservative union domination, not for seeking to overthrow the Government of the United States.

At this particular time, when the Government is giving to workers "the right to organize and bargain collectively through representatives of their own choosing," regardless of the radical character of the representatives (National Industrial Recovery Act, sec. 7 (a), 48 Stat. 195, 198), when it is encouraging left-wing labor leaders to present their radical views before deputy administrators charged with the formulation of codes of fair competition, it is only consistent for the Department of Labor to leave unmolested members of a left-wing labor union unless the union is a mere subterfuge for political sedition or unless the individual member himself teaches the overthrow of the Government of the United States by force or violence.

Upon the record as it now stands, neither the Board of Review nor I feel justified in finding that Borich himself advocates such overthrow, or that he belongs to any purely political movement that has that goal. (The evidence on this point shows nothing more than that some articles bearing a name resembling Borich's were reprinted in radical papers like the Daily Worker.) In the absence of such a finding and with merely membership in the National Miners Union proved, I do not believe Borich should be deported. If he is deported on the narrow ground proved, every other alien member of this union must be deported. To such an extreme we ought to proceed reluctantly and only after clear and convincing proof that the political institutions of our country are actually menaced.

I may further add that in my opinion the principle that I have stated seems to me to apply to membership not only in the National Miners' Union but in all left-wing labor unions that are not mere shields for political revolution, such as the Marine Workers Industrial Union, the National Textile Workers, International Labor Defense, and the Trade Union Unity League.

CHARLES E. WYZANSKI, Jr., *Solicitor.*

In view of the opinion of the Solicitor of the Department of Labor, and in view of definite assurances that the Trade Union Unity League has severed any affiliation it may have had with the Red International of Labor Unions, I hereby direct that hereafter no warrant for the deportation of any alien shall be issued or executed if the sole ground for the warrant is his membership in any of the following organizations: National Miners Union, Marine Workers' Industrial Union, Metal Workers' Industrial League, Tampa Tobacco Workers' Industrial Union, the National Textile Workers, International Labor Defense, and the Trade Union Unity League. The order shall not be construed to prevent the issuance or execution of warrants for the deportation of aliens who themselves advocate the overthrow by force or violence of the Government of the United States or who are members of political organizations that advocate a similar goal.

DANIEL W. MACCORMACK,
Commissioner of Immigration and Naturalization.
TURNER W. BATTLE,
Assistant to the Secretary of Labor.

The foregoing clearly shows a definite policy, as early as 1934, by the Department of Labor and by Frances Perkins, its Secretary, responsible for the enforcement of the deportation laws, to avoid the performance of her legal duties by evading the issue, through distinguishing left-wing labor organizations from left-wing political parties; and so it follows that after Miss Perkins had, by an administrative act, eliminated from deportation members of left-wing labor organizations, which prior to her administration had been deported, she attempts still further to narrow the deportation laws by seizing upon the Strecker case as an excuse for dicsontinuing deportation proceedings against those aliens who are members of the Communist Party.

It follows, therefore, that the appeal taken by Frances Perkins in the Strecker case—an appeal taken in the face of previous universal holdings of Federal courts that membership in the Communist Party was a sufficient ground for deportation where it was shown that the Communist Party advocated the overthrow of the Government of the United States by force and violence—was taken for the sole purpose of further restricting and nullifying the deportation statutes of the United States with respect to Communist radicals.

The decision of Frances Perkins to postpone deportation proceedings against Bridges and other Communist aliens until a determination by the Supreme Court in the Strecker case was purely a scheme or device to protract the stay of Bridges within the United States. Regardless of the decision of the Supreme Court of the United States, her action has already resulted in protracting the stay of Bridges and other Communist aliens within the United States for approximately 1 year.

Needless to say, if the Supreme Court reverses the Circuit Court of Appeals for the Fifth Circuit and orders the deportation of Strecker, no credit should be given to the Secretary of Labor, for such a determination by the Supreme Court, for had it not been for the efforts of MARTIN DIES, chairman of the Committee on un-American Activities of the House of Representatives, and his exposure of the manner in which the Strecker case was being handled, the presentation of this case before the Supreme Court might well have resulted in so narrowing the issues before the Court as to have secured from it a holding favorable to Strecker.

Furthermore, any victory which the Government of the United States may secure in the Strecker case will be secured despite the efforts of Frances Perkins to sabotage this case in her desire to evade enforcing the immigration laws of the United States. A study of the Bridges file clearly shows that Frances Perkins has attempted to so narrow the issues against Bridges as to restrict the character of the testimony which may be introduced against him. In the original application for a warrant against Bridges, Bonham, the inspector at Seattle, recommended that a warrant should be issued against Bridges on nine grounds; but the Department of Labor only issued a warrant against him on four grounds, as follows:

(a) In that after he entered the United States he became a member of an organization, association, society, and group that believes in, advises, advocates, and teaches the overthrow by force and violence of the Government of the United States;

(b) In that after he entered the United States he became affiliated with an organization, association, society, and group that believes in, advises, advocates, and teaches the overthrow by force and violence of the Government of the United States;

(c) In that after he entered the United States he became a member of an organization, association, society, and group that causes to be written, circulated, distributed, printed, published, and displayed printed matter advising, advocating, and teaching the overthrow by force and violence of the Government of the United States;

(d) In that after he entered the United States he became affiliated with an organization, association, society, and group that causes to be written, circulated, distributed, printed, published, and displayed printed matter advising, advocating, and teaching the overthrow by force and violence of the Government of the United States.

It is my contention that prior to any hearing on the Harry Bridges case a new warrant of arrest should be issued against him by the Secretary of Labor, including seven additional grounds, to wit:

First. In that he believes in, advises, advocates, or teaches the overthrow by force or violence of the Government of the United States or of all forms of law.

Second. In that he believes in, advises, advocates, or teaches the unlawful damage, injury, or destruction of property.

Third. In that after he entered the United States he became a member of an organization, association, society, or group that believes in, advises, advocates, or teaches the unlawful damage, injury, or destruction of property.

Fourth. In that after he entered the United States he became affiliated with an organization, association, society, or group that believes in, advises, advocates, or teaches the unlawful damage, injury, or destruction of property.

Fifth. In that he believes in, advises, advocates, or teaches sabotage.

Sixth. In that after he entered the United States he became a member of an organization, association, society, or group that believes in, advises, advocates, or teaches sabotage.

Seventh. In that after he entered the United States he became affiliated with an organization, association, society, or group that believes in, advises, advocates, or teaches sabotage.

The evidence in the Bridges file, in the Labor Department, amply justifies these additional charges in the Bridges warrant. A new warrant against Harry Bridges including the foregoing charges should be forthwith demanded of Frances Perkins, to forestall her from proceeding against Harry Bridges on only two questions of fact, to wit, membership or affiliation with the Communist Party. This new warrant should be served upon Harry Bridges without delay so that prompt and complete disposition of the Bridges case can be taken as soon as the Supreme Court acts upon the Strecker case.

Democratic Congressman With Weak Convictions Should Take Note That Republicans Failed Utterly to Prevent Overwhelming Endorsement of New Deal in Chicago Primaries

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1939

Mr. SABATH. Mr. Speaker, for 25 years efforts have been put forth, under four different Presidents, to bring about a reorganization of the complicated and outgrown machinery of this Government in the interest of economy and efficiency.

I honestly believe that every Democratic Member of Congress who recognized his responsibility to the people and to the leadership of a great and noble President, Franklin D. Roosevelt, would today unhesitatingly vote for the administration reorganization bill now before this House.

I do not blame the Republicans for their opposition to this measure. They have shown time and again during the consideration of the bill that they are merely playing politics, merely striving to embarrass the President, only that and nothing more. They have conclusively demonstrated throughout the entire debate their insincerity for all constructive legislation. Yes, they do talk a great deal about consistency and economy, but each and every one of them has voted in committee, not only once but at every opportunity, to emasculate the bill and make it so unworkable that it might be defeated at some stage before finally becoming a law.

The amazing thing to me has been the spectacle of some gentlemen who were elected under the Roosevelt banner and who, in most instances, obtained their election by making the voters of their districts believe they were in full sympathy with the high purposes of the New Deal, today again rendering aid and comfort to the enemy—the Republicans. Some of those representing States which have received the greatest benefits under the present administration have unceremoniously joined hands with the opposition. The amendment of the gentleman from Texas [Mr. SUMNERS], would set, in my opinion, a most dangerous precedent, but evidently that possibility to him and gentlemen from Virginia, Maryland, and some other States would be no great matter. They take all they can get from the administration, and

seek more. Somehow or other they do not seem to understand the meaning of the words "appreciation" or "reciprocity." They are not fooling anybody but themselves. I feel that in the near future, very likely in the next election, they may, the same as others before them who have deserted the party in a crucial test such as this, come to deserved grief. They seem to rely upon the repeated statements of the Republicans that the people have lost confidence in our great President, and that they no longer need to stand by him or cooperate with him, but unless I am greatly mistaken they are destined to learn otherwise.

NEW DEAL WAS AN IMPORTANT ISSUE IN THE CHICAGO CAMPAIGN

In my own city of Chicago we have just been through an important primary election. Most of the newspapers, vicious and slanderous in their attempts to defeat Democratic Mayor Edward J. Kelly, waged a terrific and unrelenting battle, one that continued hard-fought right up to the moment of the close of the polls. The Republican opposition, unable justly to criticize the mayor's splendid record, made the New Deal the big, outstanding issue of the campaign. The Republicans viciously attacked every act of the President, including his policies on rearmament and national defense, his relief program, the A. A. A., the C. C. C., and nearly all other measures.

Mayor Kelly and his campaign aides evaded no issue. They stood four-square behind the President and declared proudly that a vote for Mayor Kelly would be accepted as an endorsement of President Roosevelt and the New Square Deal.

Now then, my friends, there were two courses the voters could have followed. One was to show their confidence in the President; the other was to allow themselves to be led by a prejudiced and unfair press. And it is important that all Democrats take note of what happened. Mayor Kelly polled approximately 607,000 votes, a total in excess of the combined votes received by a strong opposing Democratic candidate and also the Republican candidates. Even more significant was the Democratic ratio of votes cast—over three times the number cast for the Republican ticket.

The voice of the voters is decisive. This is just one more demonstration that the masses are standing firmly behind the President and his New Square Deal policies.

The Democratic Members of this Congress would do well to pause and consider the Chicago results. They are but typical of the feeling of men and women all over the country.

ANTI-ROOSEVELT PROPAGANDA PROVES INEFFECTIVE

In Chicago, just as in other cities and towns from east to west, the newspapers are doing their utmost to undermine the confidence of the people in the administration. A continuous stream of propaganda emanates from well-organized and well-financed lobby groups, all in the interest of the economic royalists and special privilege. But the people can be deceived up to a point, and no further. And when it comes right down to the question of supporting the President or supporting those who oppose him, they do not leave any doubt as to where they stand. They are with the President.

I hope the Democratic Members will recall the tactics of the Liberty League and other reactionaries in the past. They sought to undermine the credit of the Nation with an inflation-scare program; with hue and cry they predicted the destruction of the Constitution and screamed "dictator." The attack against the reorganization bill when it was before us in the preceding Congress was so bitter and well organized that for the time being it was defeated. Seldom before in the history of legislation has so much misrepresentation and vituperation been indulged in to defeat a simple business proposition involving both efficiency and economy—a policy that has been recommended by four previous Presidents of the United States. But the people have now caught up with that campaign of lies, and I am positive a reorganization bill will pass the House today.

The people of this country, the laborer, the farmer, the small-business man, all have rightful confidence in the President. His sincerity and honesty of purpose are so widely recognized that each attack serves but to endear him to the American people.

Mr. Speaker, all of us here on last Saturday, on the historic occasion of the celebration of the one hundred and fiftieth anniversary of the meeting of the First Congress, heard the addresses of the President, the Chief Justice, Senator PITTMAN, and our distinguished Speaker. I hope you were all as deeply impressed with their patriotic appeals for the unity of the Nation as I was. The very future of our country, its progress and welfare, depends upon such unity. This is the time for us to work shoulder to shoulder, to recognize Franklin D. Roosevelt as a great leader, and to work with him.

BIG BUSINESS HAS PERSISTENTLY REFUSED TO COOPERATE WITH THE PRESIDENT

Consider unemployment, for instance. Big business has forgotten the tragic years under Mr. Hoover, and they give no credit for the measure of prosperity they have enjoyed under this administration. In order to force repeal of the capital gains and undivided-surplus taxes, and to prevent passage of the wage and hour bill, the great industrialists and their allies deliberately adopted a "cut off your nose to spite your face" policy, and now, today, still blame a recession for which they alone were responsible upon the President.

It must be sickening to every well-informed man to read daily in the Wall Street Journal and other Wall Street-controlled newspapers, and to hear Republicans on the floor insinuate and charge that the President is opposed to legitimate business. Every well-informed and fair-minded person must know that these insinuations and charges are willful and deliberate falsehoods. They know that the President is not only with the small-business men of the Nation, but also with every large business that is legitimate and conducted in accordance with the law. The only ones that really have an axe to grind are the few overlords who feel that they are a law unto themselves and should not be checked in the pursuance of even strictly illegal business schemes, and other branches of big business which have made a specialty of violating antitrust laws.

If business and the money power had worked in unity with the Government, millions of the still unemployed could have returned to work, and the appropriation of $4,000,000,000 would not have been necessary. Since business did not and would not cooperate it was up to Congress to see that the unemployed were fed, clothed, and housed. There was nothing else for us to do.

BUSINESS NOT SO BAD OFF AS REPRESENTED

In an attempt to discredit the President before the country, these avaricious bosses of industry have been loud in their cries that business under Roosevelt has suffered. But in a statement issued this month by the National City Bank of New York appears the following relative to the true condition of business, and which proves conclusively and beyond successful contradiction that the charges of bad business conditions are utterly false:

> The outstanding feature of the year's results was the sharp rise in profits that occurred in the fourth quarter, accompany the upturn in general business activity. A group of 200 large companies, * * * in the final 3 months, according to preliminary figures, made a gain of 13 percent. * * *

The public, informed only by newspapers and inspired editorials, also has the picture constantly before it of industry staggering under increasing burdensome taxes. This same report, however, discloses that while the net profits after payment of taxes of all manufacturing corporations in the United States in 1933 aggregated $77,000,000, there has been a steady increase yearly under the administration of Franklin D. Roosevelt to reach $2,548,000,000 for 1936, the last year reported.

Taxes in some instances may have increased during this period as much as 50 percent, as claimed, but profits, after taxes were paid, have increased up to 700 percent. These facts, hidden from the public in the reactionary press, are well known to the big business tycoons who, nevertheless, still try to mislead the people by outrageously false propaganda against the administration.

VIRGINIA HAS FARED WELL UNDER THE PRESENT ADMINISTRATION

Mr. Speaker, I can well understand why big business has set out to destroy the present administration. It is because big business wishes to destroy the policies of the administration which are in the interest of the masses of the people of this country. Under Hoover and previous Republican Presidents the Government did not and could not control special privilege because special privilege controlled the Government. But under Roosevelt the money changers and tax-dodging moguls of Wall Street have not been able to escape the payment of just taxation and dictate Government policies as heretofore. So Wall Street is now carrying on a desperate and determined campaign to get Roosevelt out of power so it can get back in power itself.

As I say, I can understand what is back of the campaign of the privileged classes in this country against Roosevelt policies. But what I cannot understand, and what I wish someone would explain, is why Representatives in Congress of States like nearby Virginia which, under this administration, have derived the greatest and most substantial benefits under the administration of Franklin D. Roosevelt, have from the very first so bitterly opposed the President's program.

Virginia, for instance, during the period between 1934 and 1938, received from the Federal Government, under the Roosevelt administration, in the form of grants and loans, including Federal housing mortgage and improvement loans, assistance to the extent of $426,738,664. Certainly this is not a sum to be sneezed at or one to indicate that Virginia has been entirely overlooked by the Roosevelt administration which, however, has been so ruthlessly attacked from certain high quarters in that State.

Maryland, during the same period, received aid aggregating $380,699,258. These vast sums enabled thousands upon thousands of citizens of Virginia and Maryland who otherwise would have remained unemployed, to obtain jobs at good wages within their own States and thus support their families.

Mr. Speaker, the Representatives of these two adjacent States cannot be ignorant of the fact that in addition to the millions in benefits they have received from this administration, thousands of homes have been built there which bring to State, county, and municipal treasuries additional millions in taxes from employees in the Federal service in the District of Columbia, but who have their homes and reside in Maryland and Virginia. If this truth were brought home to the residents and taxpayers of these two States it might dissipate to some extent the unjust criticism now indulged in. I cannot help but notice, in this connection, that the Representatives in Congress from Virginia and other States who complain the loudest never refuse appropriations or aid from the Roosevelt administration whenever there is a chance to get them.

NATIONAL ECONOMY LEAGUE, TRUE TO FORM, WOULD HAVE US DESERT THE NEEDY AND UNEMPLOYED

Only yesterday I received a nicely worded letter from the so-called National Economy League. From its letterhead I see there has been quite a change in its executive committee. Of 20 members on the committee 14 are from New York State alone, 1 each from Maryland, Massachusetts, Pennsylvania, Connecticut, and Minnesota. And who are they? Check their names and you will find they are Republican corporation lawyers and officials of the great financial institutions and banks of the country. On page 4 of the league's report is carried what they list as "unnecessary" Federal expenditures. It compares Government expenditures in 1931 and 1932 with those of the present fiscal year, and I list some of their "unnecessary" items, as follows:

	1931 (under Hoover)	1939 (under Roosevelt)
Relief of all kinds	None	$2,785,000,000
Public Works (all)	$373,000,000	1,356,000,000
A. A. A. payments	None	708,000,000
Social Security	None	833,000,000
Railroad Retirement	None	107,000,000

Now, these faultfinders feel, evidently, that we should eliminate all types of relief, stop public-works construction, A. A. A. payments, social-security and old-age benefits, leaving the financing of these worthy enterprises to the respective States, which are both unwilling and unable to raise the necessary funds to foot the bills.

On all sides, Mr. Speaker, we are confronted with the propaganda of malicious lobby organizations and special-privilege groups. From the newspapers we can expect only distorted interpretations of the administration's policies. But the people will not be fooled, and they will mark well the conduct of their representatives in Congress and judge them by the extent to which they cooperate with the administration.

The American Way

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1939

RADIO ADDRESS BY HON. T. V. SMITH, OF ILLINOIS, FEBRUARY 21, 1939

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I include a radio speech by Hon. T. V. SMITH, Congressman at Large from Illinois, on the American Way, broadcast on February 21 in a debate with Senator ROBERT A. TAFT on Foundations of Democracy.

The speech is as follows:

Kinsmen in Texas, neighbors in Illinois, friends in Maine, women and men of America, greetings from an ignorant man and a Congressman at Large of Illinois.

To join for 13 weeks now in timely discussion with the junior Senator from Ohio [Mr. TAFT] is a patriotic privilege for a son of the South and a present citizen of the middle border. The calendar of the season is dotted with distinguished symbols of our common concern. Two Sundays ago we celebrated a national martyr of my own State. Mr. TAFT spoke at Cincinnati; I at Chicago—celebrated this man whose life and death saved the Union. Tomorrow we pause to acknowledge the greatness of one whose faith and steadfastness gave this Nation birth. Only six Sundays away we shall commemorate the name of the great Virginian who spiritualized our early Revolution with an immortal declaration of faith in mankind and who later as Chief Executive wonderfully widened the boundaries of the Republic which Washington had founded and which Lincoln was to save.

In between, only 10 days hence, Mr. TAFT and I will join in celebrating here with our fellow servants of the Republic the one hundred and fiftieth anniversary of the National Congress, to the separate branches of which he and I are honored to belong.

I have no doubt that I speak for the Senator as for myself in saying that in the presence of so gracious a cloud of witnesses, living and dead, any narrow partisanship will be lifted from meanness to magnanimity by the patriotism which we share—share with each other and share with you, our fellow countrymen.

The American way, to which we now turn our attention, is a way of life as well as a way of law and government. So much of the public talk of government is done by lawyers that we are tempted to forget—lawyers are, at least—that the American way is a way of life, of life the first and final object of government. Throughout these discussions I shall tax myself to remember this humble thing which citizens are less tempted than lawyers to forget: That in the beginning was life, that life is a living thing, and that life is by all rights a lovely thing.

This humane emphasis upon life, as distinct from law, sets us Americans apart from foreign fanaticisms, and sometimes leaves us at odds with one another. Not enough at odds with one another, however, to allow a patriot to call a fellow citizen a Communist unless he be a Communist, nor a Fascist unless he be a Fascist, nor a fellow American a Nazi at all unless he be proved to be cruel or crazy, or both. To escape fanaticism we must find names nonfanatical for one another here at home. For this distinction between life and law is allowed by our Constitution itself. After setting up governmental machinery for the manufacture of law, the construing of law, the execution of law, our fathers turned around and said, as it were, in the Bill of Rights: "But most of life is to be exempted from the reign of law." They exempted, first, what law cannot cover if it would—thoughts and feelings; and then they exempted what law should not cover if it could—speech, assembly, family privacy, religious worship. In this guaranteed oasis of freedom from law, what is the faith by which we

Americans live, and what the common characteristics arising from our practice of that faith?

Well, beginning in a wilderness and driven together by loneliness, we Americans have at length built here on this continent a way of life whose faith is that there is a common touch of nature that makes all men kin—all races, all religions, all cultures. Regardless of political party, we Americans believe, for instance, that all children of all the people are entitled equally to both health and education; or do we?—with about one-third of our children growing up in the South on but one-sixth of the Nation's school revenues. We believe that all life is equally sacred and must be equally secure under the law; or do we?—with gangsterdom now and then a-shooting in the cities of the North and barbarism then and now a-lynching in the counties of the South. We believe that all questions that cannot be settled otherwise must be settled by the ballot; or do we?—with half the citizens unencouraged to vote in the South and oftentimes a third of them unwilling to vote in the North.

Don't we or do we—believe, I mean, in these ideals of equal opportunity, equal protection, equal participation? We do; we do believe in all these ideals. They represent yet and ever our faith, our way of thought, if you will. But they do not fully represent our way of life. We have still to find out how to take up the slack between our way of thought and our way of life. This disturbing leeway between what we love and the way we live is the penance we pay for being at once more than human and less than human—for being both sky-born and earth-bound.

Forgetting its pathos, we may, with the poet, nail this our common shame to the crucifix of fun:

"There was a dachshund, once so long
He hadn't any notion
How long it took to notify
His tail of his emotion;
And so it happened, while his eyes
Were filling with woe and sadness,
His little tail went wagging on
Because of previous gladness."

But seriously now, midway between pathos and bathos, Americanism as a way of life is a large faith in and a smaller practice of what we of ourselves do so well know—friendliness, humility, humor.

Friendly everybody admits us Americans to be. We were a "folksy" people long before the Germans made a barbaric cult of the "Volk." The hardships of the frontier, as I have said, compelled us to be friendly. More than once we've had to hang together to keep from hanging separately. Intolerance is a vice which we Americans cannot afford. We came of different religions even while yet of the same race, and later we added vast differences of race to those of religion. We had to learn friendliness not only with friends, but, as it were, with enemies. We had to learn, and did learn, to stomach opposition without suppressing opponents. We Americans have learned, in a word, that men do not have to kiss in order to cooperate. We forget our Americanism when we forget that this, our preference for friendliness, is the secret of our success in subduing a continent to the life of man.

This friendliness it is that renders wholesome rather than morbid the humility of the American character. Our glad reliance on one another arises from the clear knowledge that we are not God. Humility is born of helplessness and exists to make us strong where we are weak.

That's what gentility of the ballot means, as contrasted with the coercion of bullies. Whoever knows for certain that he's not God is glad to welcome the aid of other men in determining what's politically right. Voting as such an aid reduces the risks of ignorance and doubles our joy in talk. It's a clever device, this balloting business—and profound. It helps us "to split the difference," as we used to say in Texas, and to achieve on a large national scale the golden mean of compromise. We Americans think it literally more important thus to settle issues between us than it is to settle them absolutely right.

This is so because we admit that God alone knows what's absolutely right. We men do know what's friendly and decent. So in decency to one another we've agreed to call right whatever nobody kicks over the traces about. How profoundly we differ from some others in this regard. Now come Fascists to share God's prerogative and Communists to monopolize it. This leaves many of us plain American citizens with only revolutionists and immigrants for ancestors, hardly knowing which way to turn. So we just turn back in all friendliness to one another, and we covenant once more to take stock with ourselves and to abide by whatever we can agree upon, whether any of us are fully satisfied with it or not. That's the democratic principle, and that's the decent thing to do.

But we don't do this with a long face. We've found out that it's really helpful to be humble and downright fun to be friendly. In a century we've turned out more than our share of fine humorists. The juice of their laughter has kept us "unlaxed." Moreover, we've all become humorists, knowing well that only he who tickles himself may laugh when he likes. When I see a diminutive Senator straining out a maximum snarl and see a towering executive contriving a minimum retort to the maximum snarl, I do not despair of my country or turn from Washington in disgust. The rather I hie me away to the privacy of my citizenship and lave myself luxuriously in the lethe of life with the cleansing soap of self-forgetful humor, crooning to myself the while these delicious lines from an unknown American poet:

"I sometimes think I'd rather crow
And be a rooster than to roost
And be a crow. But I dunno.

A rooster he can roost also,
Which don't seem fair when crows can't crow.
Which may help some. Still I dunno.

Crows should be glad of one thing, though;
Nobody thinks of eating crow.
While roosters they are good enough
For anyone unless they're tough.

There are lots of tough old roosters, though,
And anyway a crow can't crow,
So mebbe roosters stand more show.
It looks that way. But I dunno."

America is safe for Americanism as long as it retains its sense of humor; for humor keeps our humility from becoming sticky and makes our friendliness function fruitfully. It punctures pomp and purifies pretense. Give us, then, another Mark Twain, who could say, "Do right always; this will gratify some persons—and will astonish the rest." Give us another Clarence Darrow, who could so sagely admit that "Calvin Coolidge was the greatest man who ever came out of Plymouth Corner, Vt." Give us, especially us politicians, another Will Rogers, who like some gawky hillbilly from the heights of humor could toss us right and left tablets of sanity unwrapped in cellophane. Peace to the ashes of these ageless men. Wherever they, or such as they, lie fallen and silent, there is the glimmer of a smile and a fleck of mortal dust that is forever American.

One such humorist glorifies a nation more than a whole crop of dictators who are clowns and don't know it. I'd rather be an apostle of human merriment and go smilingly down to the "tongueless silence of the dreamless dust" than to be the most pompous pretender to power, or claimant of perfection, that ever dirtied with pretense his little day on earth.

While then, Germany thumbs her nose at the world, chewing to pieces her own tongue in a fit of epileptic frenzy; while Italy bedecks bravado with the smelly trappings of an Empire long deceased; while Russia trades tarnished tyranny for tyranny tarnishing before our very eyes—let us proud Americans pursue the tenor of our democratic ways, compromising conflicts and transforming factual realism into an idealism of hope through the friendly discipline of humility and humor. That's the American way of life under law, and of law for the sake of a larger and larger life.

St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS

OF

HON. JAMES H. FAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1939

Mr. FAY. Mr. Speaker, I ask unanimous consent to revise and extend my own remarks in the RECORD on the St. Lawrence seaway and power project and to include therein an address made February 23, 1939, by Mr. Fred J. Freestone, past master of the New York State Grange, before the consumers' public power conference in New York City, together with a brief outline designed to clarify the economic issues involved in the undertaking.

This is a matter that vitally concerns the people of the Sixteenth Congressional District, which I have the honor to represent here, as well as the interest of the farm population of the State for which Mr. Freestone speaks.

THE INTERESTS OF THE FARMER AND THE CITY DWELLER UNITE IN THIS VITAL PUBLIC WORK

Let me digress here to say that from time to time I hope to bring the pressing problems of my district to the attention of my colleagues in the House, having been sent to Washington for that purpose. I promised the voters back home I would do so and I have the feeling that the grave problems they face are fundamentally no different from those faced by the constituents of a majority of the Members of this distinguished body.

Gentlemen, I represent 2½ miles of the song-famed East Side of Manhattan Island and it is a district I know like the palm of my hand, for I was born there and have lived there all my life.

Like most New York City districts, my constituents represent all economic levels from the Park Avenue-Sutton Place

residents to those of the gas-house district. Needless to say, those of the gas-house economic level predominate.

Of the 30,000 families in the district, 95 percent regard a dollar as a significant item in the family income today. They are honest, God-fearing people, and hard-working when they can get work, but the present economic conditions have forced a great many on relief, or on the W. P. A., as in most other areas.

AFFECTS ECONOMIC WELFARE OF EVERY CITIZEN

I consider a matter fundamental when it affects both the economic welfare of the great majority of my constituents and the economic welfare of the majority of the farmers of New York State for whom Mr. Freestone speaks. Such a matter is the cost of electricity.

Something is surely wrong with a set-up that compels each family in my district consuming 50 kilowatt-hours of electricity a month to pay every year $16.20 more than the consumers of the T. V. A. region, $15.60 more than the people of Cincinnati, $19.80 more than the people of Ottawa, and $21.72 more than the people of Toronto. Let me emphasize that I am speaking about the same amount of electricity in all cases. Any arguments that the T. V. A. is a Government project is immaterial in the present case, because Cincinnati and Ottawa are supplied by private companies. The T. V. A. is merely demonstrating that the same thing can be done by private companies in this country as is being done in Canada.

LOW-COST ELECTRIC ENERGY FOR ALL

What is achieved for one area by a plentiful supply of low-cost electric energy should not be withheld from the public of another area, especially when the remedy is visible to those who are willing to see it.

In my district alone, were electricity supplied at the prices now prevailing in Toronto, on the other side of the Canadian border, and generated by the use of the same water, namely, the Niagara and St. Lawrence Rivers, the saving would amount to over $500,000 a year. That is a lot of money to expect the people of the lower East Side of New York City, in their present impoverished state, to contribute to the present method of supplying the lighting needs of my constitutents. Twenty-one dollars a year is equivalent to 7 pairs of shoes, or 200 quarts of milk, or 60 dozen eggs.

This in turn, of course, would be reflected in increased consumption of manufactured or farm products. Thirty thousand families would, on the above basis, use an additional 210,000 pairs of shoes, or 6,000,000 additional quarts of milk, or an additional 1,800,000 dozen eggs. I appreciate that there is nothing startlingly new in what I am saying. My excuse for saying it is that occasionally we are prone to forget the principle of economic interdependence illustrated by this simple example of the effect of lowering prices.

I think that the St. Lawrence seaway and power project is just another one of innumerable instances where the interests of the farmer and the city dweller are identical, both from the standpoint of cheap electricity and cheap transportation. I believe, therefore, that the address of Mr. Freestone will be enlightening to the membership. Hence, I ask unanimous consent to incorporate it in the RECORD. It is as follows:

ADDRESS BY FRED J. FREESTONE, TRUSTEE OF THE POWER AUTHORITY OF THE STATE OF NEW YORK AND FORMER MASTER OF THE NEW YORK STATE GRANGE, AT THE CONSUMERS PUBLIC POWER CONFERENCE, FEBRUARY 23, 1939

I have come down from central New York to attend this Consumers Public Power Conference not as a speaker but as a participant in your deliberations. I am convinced that such an organization is vitally necessary if the people of the State are ultimately to get the cheap and abundant electricity which is required today for a modern standard of living.

Our opponents, those with a vested interest in the high electric rates, which limit the use of electricity, are well organized. They have great resources. They wield great political influence. They will continue to exploit the people's power resources and the people's need for power unless the consumer interest is equally well organized for action on the political front.

You who are here tonight are not an ordinary audience. You represent organizations which have for years concerned themselves with the various problems of government which affect the well-being of consumers. You understand the power issue and have taken part many times in the various stages of the battle to hold on to the people's great water-power resources and to assure their development by the people and for the people. For that reason I do not have to discuss the 20-year struggle to defeat the attempt of private power interests to seize those resources or to tell you about the enactment of the Power Authority Act, which gave the State a new power policy.

I will therefore limit my part in the discussion to suggesting a few points which I feel should be emphasized in your campaign to keep the public alert to the issue. In a sense I will be speaking in a double role. I speak as a trustee of the Power Authority which, since 1931, has been the active agency of the people of New York in carrying on the fight for cheap electricity. But I am also speaking for one of the great consumer groups, the farmers of the State, who have consistently backed the St. Lawrence power project as their greatest hope for cheap electricity on the farm.

TO BRING DOWN COSTS OF ELECTRICITY

The farmers of the State have already profited by the fact that the Power Authority was specifically directed to provide for marketing St. Lawrence power in such a way as to assure the widest rural market at the lowest possible rates. When the Federal Rural Electrification Administration was set up in 1935 it was discovered that the private power companies serving New York had blocked a preliminary Federal survey designed to lay the ground work for rural line extension projects. They wanted to keep the situation in their own hands in order to avoid the pressure which would ultimately force them to reduce their almost prohibitive charges for farm electricity.

The State Grange, however, decided that New York farmers must take advantage of the Federal program and looked around for the technical help necessary to plan and set up rural electrification projects. They found such help in the Power Authority. County rural electrification committees were organized for the purpose, coordinated by a State-wide farm electric light and power committee.

The farmers of Seneca County, with the help of the Power Authority staff, developed a country-wide project as a test. This demonstrated that a rural electric cooperative could provide service for all the unelectrified farms in the county and cover all costs with a minimum required monthly bill only half that demanded by the local private company.

The announcement that application had been made to the Rural Electrification Administration for funds for this project brought quick results. Practically all of the companies serving the State offered new rural line extension plans representing a reduction from $6 to $3 in the typical monthly bill requirement.

In the 3 following years more than 10,000 miles of new rural lines were constructed, extending into the real farm areas and bringing electricity for the first time to more than 35,000 farms. Furthermore, the New York farmer knows that, largely because of the principle embodied in the Power Authority Act, he is today using an average of 1,009 kilowatt-hours a year for an annual electric bill about $9 less than he previously paid for only 650 kilowatt-hours.

I have spoken about rural electrification because, as chairman of the farm light and power committee, I have been constantly in touch with this aspect of the problem of consumers in New York State. But the benefits already obtained by the farmers are merely illustrative of the benefits which have come to all consumers of electricity in the State as a result of the new power policy embodied in the Power Authority Act.

Since the enactment of the Power Authority Act in 1931, there have been rate reductions which, on the 1938 sales of electricity throughout the State, mean annual savings in electric bills of considerably more than $50,000,000. But our electric rates are still too high.

Consider for a moment what you people in New York City pay for 100 kilowatt-hours a month, which would quickly become the average use if rates were low enough. Your bill for such service is $4.72. But the Power Authority distribution cost survey, completed in 1934, showed that private companies need not charge more than $2.70 to cover all reasonable costs for such service, including a fair return on all the capital required to render it. Actually, the private company serving Cincinnati, Ohio, and Covington, Ky., is today charging only $2.50, exactly equivalent to the T. V. A. rate, while in Madison, Wis., a private company is charging $2.60.

In other words, the overcharge in New York City in spite of all the rate reductions of the last 8 years, amounts to about $2 a month, or $24 a year on a monthly usage of 100 kilowatt-hours. The power policy of the State, embodied in the Power Authority Act, affords the surest way to eliminate that overcharge, offering the homes in the State an opportunity to use an average of 100 kilowatt-hours a month at a total annual saving of at least another $50,000,000.

This is the stake which consumers throughout New York State have in continuance of the Power Authority Act, which declares the people's ownership of their great water powers in the St. Lawrence and Niagara Rivers to be inalienable and provides for the public development of 1,000,000 horsepower in the international section of the St. Lawrence just as soon as we can get the necessary treaty with Canada ratified.

This leads me to say a few words about the nature of the opposition which has played an important part in delaying the treaty, and which the private power interests hope to take advantage of, either

to repeal the Power Authority Act or to reduce the effectiveness of the Power Authority.

New York's St. Lawrence power project is inextricably tied to a waterway development which will open the Great Lakes to ocean navigation. This has been so for 20 years. It was recognized by the legislature of the State, which directed the Power Authority to cooperate with the Federal Government in the development of the St. Lawrence River for commerce and navigation and for hydroelectric power.

The opposition to the public power project has capitalized on this fact by concentrating all the fire on the seaway project in order to evade the power issue. This strategy has been particularly successful in New York State, where it has enabled the opponents to stir up unwarranted fears as to the effect of the waterway project on certain localities. It has afforded many people an opportunity to assist in thwarting the power project while claiming that they were opposed only to the navigation undertaking.

CAMPAIGNS OF MISREPRESENTATION

The Power Authority has, therefore, faced one of the most deceptive campaigns of misrepresentation I have ever experienced—a campaign which has misled many people of the very best intentions.

There are convincing answers to the arguments against the St. Lawrence seaway which I cannot take the time to outline here tonight. You will find many of them summarized in a mimeographed memorandum which is available here for distribution to all who want it. The difficulty is that the consumer side of the question has not the resources for reiteration possessed by our opponents.

One aspect of the opposition, however, I feel it of the utmost importance to discuss here, because I believe it is not only completely at variance with all the ideals of human brotherhood, which we profess, but also destructive of the very economic interests which it claims to protect.

I refer to the constant efforts of the opposition to stimulate a selfish attitude in such localities as Buffalo, Albany, New York City, Montreal, and other places.

Buffalo, capital of the Niagara Falls Power Co. domain, is led to take the position: "We have grown industrially and commercially as a result of vast supplies of cheap power from Niagara, coupled with the transshipment business due to our position as a lake-head port. So for fear that we may lose some of our special advantage we are going to block any treaty which will open the entire Great Lakes area to ocean navigation and which will give northern New York counties an opportunity to develop a water-power resource comparable with Niagara."

New York City and Albany port interests are led to take a similar position, to deny areas representing a population of some 40,000,000 people access to ocean navigation; to deny the people of northern New York the opportunity for industrial development; to deny consumers of electricity throughout the State the opportunity to secure lower electric rates, in order to retain a privileged position as transshipment points for foreign trade.

In fact, tremendous efforts are made to persuade the people of New York State as a whole that they should insist on the development of the St. Lawrence for power alone, thus taking what this great water resource offers them, while denying the entire Middle West the advantage of cheap transportation which would be available through the building of a few canals and locks in connection with the power dams.

SELFISH ATTITUDE OF LOCALITIES

This selfish attitude is similarly being stimulated in Philadelphia, Baltimore, and in the Mississippi waterway area, extending as far south as New Orleans. It has been developed in particularly virulent form across the border in the Province of Quebec, where private power interests are very influential.

Quebec has millions of horsepower of developed and undeveloped water power, all in private hands. Its openly expressed position is to keep the United States from developing its share of St. Lawrence power until all the available power in Quebec has been developed and marketed. That would mean that industrial development which might take place in northern New York and the Province of Ontario would be forced to turn to Quebec in search of supplies of cheap power. In fact, the private power interests of Quebec and New York have actually been conspiring to render Ontario and New York partially dependent on imports of power from Quebec as a substitute for their own publicly developed St. Lawrence power.

Now, I have no quarrel with the effort of any region to use all its natural resources and advantages to promote its prosperity. But I am convinced that, when this natural interest is warped into a selfish effort to preserve a privileged position by blocking the opportunity of other regions to take full advantage of their share of such God-given resources, it becomes not only immoral but stupid.

In the long run I am convinced that we all advance, not at the expense of one another, but together. This has been preeminently the experience of our great country. We would never have attained our present stage of industrial and commercial wealth if each region had jealously opposed extensions of national policy which promoted the growth of rival trade areas.

Today, cooperation in promoting further economic growth is particularly necessary because, with all their present advantages, the most favored localities are suffering from the economic crisis which is afflicting the entire country. So I am going to venture a prediction as to the ultimate results which will flow from the Great Lakes-St. Lawrence seaway and power project. I predict that the economic growth in northern New York and the Buffalo area, resulting from the remarkable combination of cheap power and ocean navigation, and the economic growth in the Great Lakes area, as a result of the navigation project, will overflow to bring more prosperity to the entire country. Albany, New York City, the other Atlantic ports, the Mississippi Valley, and even the railroads will receive increased business.

I am convinced that the selfish attitude, embodied in much of the opposition, is not the natural attitude of the people in the areas which are being led to oppose the project. I am convinced that it is being stimulated by agents of vested interests which would as readily sacrifice the interests of Buffalo as Albany, as they now sacrifice those of northern New York and the great Middle West, to serve their appetite for monopoly profits.

These interests have for years reached out to control the enormous hydroelectric power resources of the St. Lawrence Basin, both in the United States and in Canada. They have succeeded in their purpose throughout the Province of Quebec and, to a limited extent, at Niagara. But the Power Authority Act, and the policy which it embodies, spells failure to their designs in the international section of the St. Lawrence River and an immediate threat to their grip on Niagara.

SEEK TO DELAY ST. LAWRENCE TREATY

That is why they have used their influence to delay the St. Lawrence treaty, in the hope that the people of New York would grow tired of waiting. That is why they used their lobby to combine reactionary forces in the last State constitutional convention to defeat Judge Poletti's waterpower amendment. That is why they are seeking to eliminate the Power Authority as an active agency on behalf of the people.

These interests have remained pretty successfully behind the scenes until recently they exposed their hand, first at the constitutional convention and then through the resolution of the New York State Chamber of Commerce, asking repeal of the Power Authority Act. Investigation revealed that two of the six members of the chamber's committee on internal trade and improvements, which proposed this resolution, represented the Carlisle-Machold power group which, through the Niagara-Hudson Power Corporation, controls the private claims to both the St. Lawrence and Niagara power resources.

The important fact is that the private power interests are using their influence to secure a reversal of the State's power policy, embodied in the Power Authority Act, to remove the Authority as an effective obstacle standing between them and the opportunity to exploit the great Niagara and St. Lawrence power resources for private profit, and thus to end the effort of the people to develop those resources on a public basis to assure lower electric rates.

Consumers must be organized to meet this critical situation. They must be able to make their influence felt as effectively as the private power interests. That is why I welcomed the cooperation of many important organizations, represented here tonight, in support of the water-power amendment at the Constitutional Convention last summer. That is why I welcomed the opportunity to participate tonight in this conference, which offers the possibility of continuing that cooperation until the people's control of their power resources is finally assured.

ST. LAWRENCE SEAWAY AND POWER PROJECT (DISCUSSION OF ECONOMIC ISSUES)

The following outline is designed to clarify the issues involved in the controversy over the St. Lawrence project and to summarize the answers to arguments advanced against the undertaking.

1. Power the main issue

The organized attack on the soundness of the St. Lawrence seaway and power project is due principally to the fact that the power issue is involved. The power interests are determined to block the State's purpose to use public development of St. Lawrence power to assure the lowest possible electric rates. Because the people overwhelmingly favor the project when the issue is clear, the opposition emphasizes the other issues and deals in wholesale misrepresentation. Such misrepresentation is characteristic of every fight against the effort to use public-power development to break the vicious circle of high rates and low consumption of electricity.

2. The project will mean low electric rates

The St. Lawrence project will bring the homes, farms, and small business enterprises of New York as low electric rates as those prevailing today in Cincinnati, Ohio, Washington, D. C., Covington, Ky., Madison, Wis., Kansas City, Kans., Los Angeles, Calif., Jamestown, N. Y., Springfield, Ill., Montreal, Quebec, or in the Tennessee Valley.

The residential rates in these areas, where actual or potential public competition has been an influential factor, closely approximate those which the Power Authority's distribution cost study showed to be reasonable for private companies

serving New York State. Typical monthly bills indicated by the Power Authority report were:

Monthly use:	*Monthly bill*
40 kilowatt-hours	$1.65
100 kilowatt-hours	2.70
250 kilowatt-hours	5.00

A survey of residential electric bills under typical rate schedules effective in New York State indicates that, on the anticipated average residential use of 100 kilowatt-hours a month, such rates would mean combined annual savings of approximately $50,000,000. Homes and farms throughout the greater part of the State would be able to get 100 kilowatt-hours a month for approximately the bill now paid for half that use. (See appendix A for typical monthly electric bills in various cities.)

3. T. V. A. affords an example

The standard residential rate schedule in municipalities distributing T. V. A. power is 3 cents for the first 50 kilowatt-hours, 2 cents for the next 150, 1 cent for the next 250, and 0.4 cent for the next 1,000 kilowatt-hours per month. This produces the following monthly bills: Forty kilowatt-hours, $1.20; 100 kilowatt-hours, $2.50; 250 kilowatt-hours, $5.

Fifteen municipalities distributing T. V. A. power in the year ended June 30, 1938, with these rates secured sufficient gross revenue to pay for wholesale power supply at an average rate in excess of that charged by the Alabama Power Co. on power sold to other companies for resale, to pay all necessary operating expenses and in addition to produce net return on investment in distribution properties more than sufficient to provide for private fixed charges, including fair return, depreciation, and taxes.

The private company serving Cincinnati, Ohio, and Covington, Ky., is charging precisely the T. V. A. rates for a residential use of 100 kilowatt-hours a month and less than T. V. A. rates for 250 kilowatt-hours a month.

4. Effect on private companies

Commonwealth & Southern subsidiaries directly affected by T. V. A. show increases in average residential use from 1933 to 1937 exceeding the country-wide increase from 600 to 792 kilowatt-hours, as follows: Alabama Power from 691 to 1,289; Georgia Power from 712 to 1,313; Tennessee Electric Power from 493 to 1,340 kilowatt-hours a year. With an average residential rate 32 percent under that for the country they collected an average annual bill of $39.10 per customer as compared with $34.80 for the country as a whole.

Financial reports of companies serving Ottawa, Montreal, and Washington, D. C., suggest that reductions in rates do not hurt investors but make their investments safer through promoting larger sales of electricity and more conservative financial and managerial policies. (See appendix B for an insurance executive's appraisal of the effect of public competition on the Ottawa company.) Securities of the North American Co., which for years reported a system residential rate average considerably below that of the country as a whole, have been recognized as among the safest investments in the utility holding-company field.

5. Effect on economic development of New York

The effect of large additional supplies of very cheap hydroelectric power in northern New York and in the western part of the State, coupled with ocean navigation to the ports of the same areas, will unquestionably result in very important expansion of industrial activity with a resulting stimulus to the entire economic life of the State. The State possesses mineral wealth, including vast deposits of high-grade iron ore, which can be fully utilized only through the availability of such cheap power. Industries requiring power of this order are today locating in the Tennessee Valley and the Province of Quebec instead of in New York.

6. Effect on the railroads and the Erie Canal

The economic development of the Middle West, as a result of the seaway, and of northern, central, and western New York, as a result of the seaway and the power development, will provide existing transportation agencies, including the railroads and the Erie Canal, with more rather than less traffic.

The opening of a much cheaper transportation route has the effect of removing a barrier to the exchange of goods which could not move on the basis of previous transportation costs. Such a route, therefore, does not so much divert existing traffic as produce new traffic. As a result, it creates more business activity in all regions between which increased interchange thereby becomes practicable.

The experience of the western transcontinental railroads during the period 1916 to 1930, when traffic on the Panama Canal was growing from 3,000,000 to 30,000,000 tons, demonstrates the soundness of this conclusion. In the 10 years 1920 to 1929 goods were transported between our east and west coasts via the Canal for $588,000,000, which would have paid $1,464,000,000 in freight charges if carried by rail. But in spite of this saving of $876,000,000 in transportation costs, the western railroads showed a gain in revenue and were among the country's most prosperous carriers because the new economic development resulting from the Canal brought them an increase in the more profitable classes of freight traffic.

The economic growth of the country will require all existing transportation facilities as well as the St. Lawrence Waterway to meet its requirements.

7. Effect on Buffalo, Albany, and New York City

Buffalo, Albany, and New York City will profit rather than lose as a result of the St. Lawrence seaway and power development. The small amount of existing traffic which may be lost will be more than made good by new business resulting from the industrial development created by the project.

Dr. Emory R. Johnson, transportation expert of the University of Pennsylvania, in a memorandum on the St. Lawrence development, prepared for the Merchants Association of the City of New York in the 1920's, stressed the point that Buffalo and Erie would continue to be large transfer ports and that the railroads connecting Lake Erie with North Atlantic ports would continue to handle the larger share of the traffic. He said:

> The St. Lawrence when enlarged will, in other words, be one of several busy highways of commerce between the Great Lakes and the seaboard. All will be needed and all will be used.

In regard to New York City, Dr. Johnson, after pointing out that some exports which now move through that port will be carried down the St. Lawrence, says:

> But the industries and trade of New York State and city are so large and their possible gains from having available cheap hydroelectric power will be so great as to make certain that the improvement of the St. Lawrence for navigation and power purposes will, on the whole, be beneficial rather than detrimental to the economic interests of New York City and to the Empire State.

He adds:

> As the United States as a whole moves forward, so does New York City progress.

8. Cost of the project

The new expenditure required to complete the United States' share of the project is estimated at $258,000,000. This country is already credited with expenditures totaling $14,000,000, making its total share $272,000,000. Canada's share of the total cost will be $271,000,000, of which it has already spent $128,000,000 on the New Welland Canal, connecting Lake Erie with Lake Ontario.

These estimates were jointly arrived at in great detail by the United States Corps of Engineers and the Canadian engineers. They have been subjected to critical analysis over a period of more than 10 years. They include full provision for a waterway of 27-foot depth from the ocean to Great Lakes ports and for the development of 2,200,000 horsepower in the International Rapids section of the river.

The New York Power Authority has agreed to assume $90,000,000 of the cost to the United States as the allocation to New York's St. Lawrence power development. This reduces the new expenditure required by the United States, on account of the seaway, to $168,000,000.

The United States Army engineers estimate the annual cost of the seaway, including 4-percent interest, amortization of the entire cost in 50 years, operation and maintenance, at

$9,300,000, or 23 cents per capita of the population which will be benefited.

9. False claims that cost will exceed estimates

Opponents to the St. Lawrence project have used two arguments to support the claim that the actual cost will be greatly in excess of the estimates. They have cited the 1919 estimate of Hugh Cooper, well-known consulting engineer, that the project would cost $1,300,000,000, and they have asserted that the Panama Canal cost three times the original estimate of the Army engineers.

The answer to the first argument is contained in a telegram from Hugh Cooper to Senator VANDENBERG during the 1934 treaty debate in the Senate in which he stated categorically that his estimate did not apply to the treaty project but to a much more comprehensive project, including power developments at Niagara and in the all-Canadian section of the river, neither of which is included in the present undertaking. He provided for about 6,000,000 horsepower as against 2,200,000 horsepower covered by present estimates.

The answer to the second argument is found in the statement of General Markham, Chief of the United States Engineer Corps, in 1934, that the actual cost of the Panama Canal was $3,000,000 less than the Army engineers had estimated for the project adopted.

10. False claim that two-thirds of the cost will be borne by the United States while 90 percent of the project is Canadian

The claim of opponents that the United States has agreed to assume two-thirds of the total cost of the St. Lawrence project is an effort to mislead people who do not know that Canada has already expended $128,000,000 of her share of the project cost in completing the New Welland Canal, as an essential link in the seaway. As already indicated, Canada and the United States assume equal shares of the total cost of the completed seaway and power project.

The claim that 90 percent of the project is in Canada is a deliberate misrepresentation. Actually, the entire seaway project from Duluth to Montreal is about 95 percent in international boundary waters, with works on either side of the line, according to engineering necessity.

12. Misleading claim that the United States gets 1,000,000, Canada 4,000,000 horsepower

This claim is deliberately designed to mislead the people of the United States. It is based on the fact that Canada possesses two power sites in the all-Canadian section of the river, capable of providing approximately 3,000,000 horsepower. These are not included in the treaty and Canada can provide for their development at any time without a treaty.

Actually, the most important one of these all-Canadian sites is already being developed. The private power interests engaged in this development are leading the Canadian opposition to the St. Lawrence treaty because they want to prevent public development by New York State and Ontario in the international section of the river so as to force new industrial development to come to Quebec in search of cheap power. Those opposing the St. Lawrence development are thus collaborating in a conspiracy which will have the effect of drawing industry away from New York State to power sites in Canada developed by private interests allied across the border.

Under the St. Lawrence treaty the United States will get exactly one-half of the power developed in the international section of the river, which is the only power development requiring a treaty.

13. False claim that the power development will cost $275 per horsepower

The claim of opponents that the power development in the international section of the St. Lawrence River will be uneconomical, because it will require an investment of $275 per horsepower of capacity, represents a ridiculous attempt to saddle the power project in the international section of the St. Lawrence River with the cost of the entire seaway development, extending from Montreal to Duluth. It would charge power developed in the stretch of the river bordering New York State with the navigation development between Lake Superior and Lake Huron; with the channel work between Lake Huron and Lake Erie; with the $128,000,000 which Canada has already expended on the New Welland Canal joining Lakes Erie and Ontario, and with all the investment for navigation in the St. Lawrence River, including the all-Canadian section.

The actual cost of the power development, on the basis of the $90,000,000 agreed on by the Power Authority and the United States Corps of Engineers as a reasonable allocation, will be about $82 per horsepower. This makes St. Lawrence power very economical, providing energy at less than 2 mills per kilowatt-hour.

16. False claim that the St. Lawrence power project will burden New York taxpayers

The claim that the $90,000,000 investment in New York's St. Lawrence power project will impose a burden on taxpayers throughout the State completely misrepresents the provisions of the Power Authority law governing the financing of the undertaking. The law provides specifically that bonds or other obligations issued by the Authority to finance the project shall be based solely on the revenue to be derived from the project under firm contracts for sale of the power and that none of such obligations shall represent a pledge of the State's credit. This method of financing has proved successful in providing funds for many self-liquidating projects like the Holland Tunnel and the George Washington Bridge.

St. Lawrence power will be so cheap that it can easily be sold for twice the cost of carrying the project, including all fixed charges and operating expenses. It will be marketed on a basis which will pay off, in 40 years, the entire indebtedness incurred by the Power Authority for its development. Thereafter, the people of New York State will have a continuous supply of approximately 1,000,000 horsepower for an annual cost limited to operation, maintenance, and depreciation—about $1.50 per horsepower-year.

The industrial development, which will result from the project, will increase the State's taxable wealth, thus lightening rather than increasing the tax burden.

17. False claim that there will be no market for St. Lawrence power

The claim of opponents of the project, that there is no market for St. Lawrence power and that there is consequently no economic justification for the undertaking, has arisen only since 1931 when the people of New York decided to develop the St. Lawrence resource on a public basis. The fact that the area immediately adjacent to the site is today importing a large block of hydroelectric power from the Province of Quebec, and that private power and industrial interests last year sought the right to greatly increase these imports, should be sufficient answer.

The Niagara Hudson Power Corporation in its annual report dated April 1930, discussing the 1,000,000 electrical horsepower capable of development on the American side of the St. Lawrence River, said:

> This development would be of great benefit to the State of New York and should be undertaken as soon as possible.

Power from the St. Lawrence project, which will not be available until from 5 to 7 years after initiation of construction, will not compete with present sources of supply for the existing power market, but will prove a most economical provision for meeting the natural growth in demand during that period. A thorough analysis of all factors, expected to influence the future market for power, indicates that within approximately 10 years the State of New York will require, in addition to present facilities, all of St. Lawrence power, an expansion of the Niagara development and approximately 1,000,000 horsepower of new steam capacity.

18. Mistaken claim that St. Lawrence power will cause unemployment among coal miners

Opponents of the project have developed an argument to the effect that the development of this important block of hydroelectric power will displace steam power and so cause unemployment among coal miners.

This argument disregards the fact, recognized by the General Electric Co. and by power experts, that the increase in

the demand for power resulting from the progress of the "power age" will require not only all economical hydro developments but also large additional steam-station capacity.

Considering the argument in relation to the entire governmental power program, which includes great hydroelectric developments on the Tennessee and Columbia Rivers as well as on the St. Lawrence, it may be pointed out that if the resulting lower rates should produce a per capita use of electricity throughout the country equal to that in Tupelo, Miss., the country's demand for electricity would be increased by about 100,000,000,000 kilowatt-hours.

Assuming that Government hydro projects would supply 25,000,000,000 kilowatt-hours of this additional energy, the increased demand would require approximately 75,000,000,000 kilowatt-hours of added steam generation. At 1 pound of coal per kilowatt-hour, this would mean an addition of approximately 37,500,000 tons of coal to the present use of 44,000,000 tons in the steam electric plants of the power industry.

The lower rate schedules, which will result from the State's program for marketing St. Lawrence power, may thus be expected to stimulate consumption of electricity to such an extent that large additional supplies of steam-generated energy will be required over and above the full output of the St. Lawrence project itself.

In general, it may be pointed out that, in appraising an undertaking like the Great Lakes seaway and power project, the country is dealing with a dynamic potentiality. Cheap energy and cheap transportation have always been forces tending to alter the economic situation which they find in the direction of expansion of industrial and business enterprise. This project, which combines the two, should prove no exception.

APPENDIX A

Monthly electric bills (Jan. 1, 1938)

Residential rates	Monthly bills		
	40 kilowatt-hours	100 kilowatt-hours	250 kilowatt-hours
T. V. A. municipalities	$1.20	$2.50	$5.00
Private companies:			
Cincinnati, Ohio	1.45	2.50	4.75
Covington, Ky	1.45	2.50	4.75
Madison, Wis	1.40	2.60	5.10
Washington, D. C	1.56	2.85	5.10
Springfield, Ill	1.90	3.02	5.22
Montreal, Quebec	1.30	2.60	4.95
Ottawa, Ontario	1.02	1.74	2.80
Public plants:			
Kansas City, Kans	1.60	2.80	4.95
Los Angeles, Calif	1.65	2.97	5.10
Jamestown, N. Y	1.25	2.55	4.80
Springfield, Ill	1.90	3.02	4.80
Tacoma, Wash	1.52	2.12	3.62
New York State:			
Albany	2.01	3.98	7.53
Auburn	2.50	4.90	8.90
Batavia	2.17	3.99	7.24
Binghamton	2.40	4.50	7.50
Cortland	2.68	4.48	8.48
Ithaca	3.10	5.50	9.50
New Rochelle	2.50	5.25	8.75
Middletown	3.04	6.14	10.39
Poughkeepsie	2.55	4.65	8.40
Rochester	2.26	4.56	7.81
Syracuse	2.09	3.89	7.89
Utica	2.63	4.43	8.43
Watertown	2.30	4.10	8.10
Yonkers	2.50	5.25	8.75
New York City	2.41	4.72	8.00
Buffalo	[1] 1.70	[1] 3.06	[1] 5.31

[1] Lowest rates in New York State in Buffalo-Niagara area, due in great part to the yardstick effect created by the proximity of the public Ontario hydro system.

APPENDIX B

AN EXAMPLE OF PUBLIC COMPETITION

In a Public Utility Fortnightly article dated October 14, 1937, entitled "An Institutional Investor Scans the Utility Horizon," Mr. Fergus J. McDiarmid, actuarial expert for the Lincoln National Life Insurance Co., of Fort Wayne, Ind., dealt especially with the possible effect of direct public competition on private utilities. He said in part:

"Probably the closest historical analogy to the situation now facing certain private utilities in the Tennessee Valley and elsewhere is that faced about 20 years ago by the private electric company serving Ottawa, Canada. This story is worth telling in some detail because it illustrates the ability of an electric utility to survive and prosper under conditions which might have been regarded as rather hopeless. At the time the Ontario Hydroelectric Commission was spreading its lines over Ontario, there was only one private utility which decided to stay and compete rather than sell out. This was the Ottawa Electric Co. Firmly entrenched in its territory and drawing the bulk of its power from the dark waters of the Ottawa River which surges through its old stone powerhouses, it was in a position to resist. As a preliminary it dropped its rates to rock bottom, to a level considerably below the much-publicized T. V. A. rates, and, of course, Hydro had to follow suit. The struggle was on."

Mr. McDiarmid gave the following comparison between T. V. A. residential rates and those in Ottawa:

	Monthly domestic bills		
	100 kilowatt-hours	250 kilowatt-hours	500 kilowatt-hours
Tennessee Valley Authority	$2.50	$5.00	$6.90
Ottawa	1.74	2.80	3.92

He continued:

"What has been the result after 20 years? At the end of 1935 Ottawa Electric had 22,585 domestic and 4,928 commercial customers. Hydro had 13,123 domestic and 1,567 commercial customers. In 1935 the private electric company produced earnings after depreciation of over 9 percent on the depreciated book value of its property. It is on the most friendly terms with its publicly owned competitor * * *."

Commemorative Postage Stamp in Honor of Capt. Jeremiah O'Brien

EXTENSION OF REMARKS

OF

HON. RALPH O. BREWSTER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1939

RESOLUTION OF THE LEGISLATURE OF THE STATE OF MAINE

Mr. BREWSTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution recently adopted by the Legislature of the State of Maine:

Whereas Capt. Jeremiah O'Brien, a native of the Commonwealth of Massachusetts, by his distinguished service, won from the British in Machias Bay, on June 12, 1775, the first naval engagement of the War of the Revolution and received from the Provincial Congress commendation for his victory and became the first regularly commissioned naval officer and commander of the Revolutionary Navy of Massachusetts; and

Whereas the Navy Department of the United States has recently approved the construction of a destroyer at the Boston Navy Yard, to be named in honor of Captain O'Brien: Therefore be it

Resolved, That the Eighty-ninth Legislature of Maine hereby respectfully requests the Postmaster General of the United States to provide for a special commemorative postage stamp to be issued in honor of the distinguished launching of the said named destroyer *O'Brien*, coincidentally with the launching of the said named destroyer *O'Brien*, or as near as may be; and be it further

Resolved, That a certified copy of this memorial be transmitted by the secretary of state to the Postmaster General of the United States and to each of the Representatives and Senators representing the State of Maine in Congress.

The Administration's Fiscal Policy

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1939

RADIO ADDRESS BY HON. L. L. MARSHALL, OF OHIO, MARCH 4, 1939

Mr. JENKINS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio

address recently delivered by my colleague from Ohio, Mr. MARSHALL:

In the short time at my disposal I shall attempt to give you my impression of the trends which seem to be developing in Washington since the present Congress convened on January 3.

This discussion must necessarily be an attempt to interpret the courses laid out by the administration because the New Deal majorities in both branches of Congress are still sufficient to make the Executive will effective, although the impression of the word "must" upon legislation demanded by the apostles of the New Deal no longer holds the terror it once had even for the most craven followers of the administration.

In one significant and all-important field the administration seems determined to continue on the path to which all its activities in the last 6 years have impelled it. I refer to the field of fiscal policy and the path of ever-increasing deficits and mounting public debt.

How far the President, the "high priest of the New Deal," has strayed from the convictions on fiscal policy, which he so clearly stated in the campaign of 1932, may be noted from quotations from his subsequent messages to Congress. After many campaign pronouncements of like tenor in 1932, Mr. Roosevelt, having been elected President, and still remembering his campaign pledges, sent a message to Congress on March 10, 1933, a part of which I quote:

"For 3 long years the Federal Government has been on the road toward bankruptcy.

"For the fiscal year 1931 the deficit was $462,000,000.

"For the fiscal year 1932 it was $2,472,000,000.

"For the fiscal year 1933 it will probably exceed $1,200,000,000.

"For the fiscal year 1934, based on the appropriation bills passed by the last Congress and the estimated revenues, the deficit will probably exceed $1,000,000,000 unless immediate action is taken.

"Thus we shall have piled up an accumulated deficit of $5,000,000,000.

"With the utmost seriousness I point out to the Congress the profound effect of this fact upon our national economy. It has contributed to the recent collapse of our banking structure. It has accentuated the stagnation of the economic life of our people. It has added to the ranks of the unemployed. Our Government's house is not in order, and for many reasons no effective action has been taken to restore it to order."

Still quoting:

"Upon the unimpaired credit of the United States Government rest the safety of deposits, the security of insurance policies, the activity of industrial enterprises, the value of our agricultural products, and the availability of employment. The credit of the United States Government definitely affects these fundamental human values. It therefore becomes our first concern to make secure the foundation. National recovery depends upon it.

"Too often in recent history liberal governments have been wrecked on rocks of loose fiscal policy. We must avoid this danger."

And then at the close of the same message the President said:

"I ask that this legislation go into effect at once without even waiting for the beginning of the next fiscal year. I give you assurance that if this is done there is reasonable prospect that within a year the income of the Government will be sufficient to cover the expenditures of the Government."

On January 4, 1934, the President submitted his Budget to the Congress in which he forecast a deficit for the fiscal year 1935 of $2,000,000,000, but made this statement with regard to the fiscal year 1936, I quote, "The Government during the balance of this calendar year should plan to bring its 1936 expenditures, including recovery and relief, within the revenues expected in the fiscal year 1936." Despite this pronouncement of a desire to keep expenditures balanced with income the deficit of 1935 was not $2,000,000,000 but $3,310,000,000, while the deficit in the year 1936, the year referred to in the statement just quoted, amounted to $4,550,000,000.

In his Budget message to the present Congress the President forecast a deficit for the fiscal year of 1939 of $3,967,000,000 and a deficit for the year 1940 of $3,326,000,000. When these estimated deficits are added to the present debt the gross public debt at the end of the fiscal year of 1940 will be the astounding figure of $44,458,000,000. This represents an increase of approximately $25,000,000,000 during the incumbency of Mr. Roosevelt, or a total of more than double the amount owing when he took office.

There is little wonder that in the Budget message to the present Congress the President no longer makes reference to a balanced Budget, except to give utterance to the pious hope that the country may somehow achieve an annual income of $90,000,000,000. At that figure it is hoped that the present tax laws will yield sufficient money to effect a balance between the in-come and out-go.

There is every reason to believe that the anticipated deficits for 1939 and 1940 are underestimated. Reliable information has come from administrative sources that Congress will be asked to raise the legal debt limitation from the present figure of forty-five billion to fifty billion or some higher figure. If there were expectations of keeping the debt at forty-four and a half billion dollars, there would be no need for this additional legislation.

There is every evidence that the administration is leaning toward the Mortimer-Eccles contention that public debt is a blessing and that no one should be disturbed about retiring it. I am convinced that in the realm of fiscal policy the administration has misinterpreted the mandate of the election of November 8 last. If we were on the road to bankruptcy in 1933, when the deficit which was viewed with such alarm was only $5,000,000,000, surely now with twenty-five billions added to the deficit during Mr. Roosevelt's term of office, we must be rapidly approaching our destination.

In other quarters, however, signs multiply which clearly indicate that the administration has taken belated notice of the protest expressed by the voters in the election of last November. Influential new dealers have abandoned the cocksure attitude which they have been wont to exhibit. Many of them privately express doubt that their candidate for President can win in 1940 regardless of whom he might be. They view with alarm the election of Republican Governors in 18 of our 27 States, outside of the solid South, 7 new Republican United States Senators, and 169 Republican Members of the lower House. The situation in Ohio is typical. Whereas, in 1938 the Democrats held the Governorship, both Senatorships, and 22 of the 24 memberships in the House, Republicans now hold the Governorship, one Senatorship, and 15 of the 24 memberships in the House of Representatives.

Viewing these Republican gains in Ohio and many other points of the country (with a versatility, in which they are strikingly proficient, the new dealers apparently have decided to change front. If word emanating from usually reliable sources is to be credited, emphasis upon economic reform is hereafter to be softened, further experimentation is to be modified or abandoned, business, large and small, is to be wooed, if not coddled. All roads marked reform are to be allowed to grow up in grass, but those marked recovery are to be heavily traveled.

In line with this program, Mr. Harry Hopkins only a few days ago journeyed out to Iowa, a State where he once lived, a State, by the way, still represented in the Senate by Senator GILLETTE, and there delivered an address which had all the earmarks of a Presidential acquiescence. The clear implication of his remarks on that occasion was that distressed businessmen are again to be given a breathing spell.

In my opinion, what the people resent is the lodgment of sufficient power in any individual to administer alternate choking or breathing spells to business or any other segment of the body politic.

Without doubt the position taken by Mr. Hopkins in his Iowa speech will soon be followed and amplified by the President when he returns from southern waters.

If recovery is to replace reform as the battle cry of the New Deal, it will represent a welcome about-face in administrative policy.

The dictionary defines recovery as meaning "to get again, win back or regain." If recovery in that sense is the revised aim of the New Deal, it must imply an admission that there were things about the era of the 1920's which are worth recapturing.

Only a little retrospection will serve to illustrate some of the advantages of that much-maligned period. If you will look through the newspaper files of the times you will find them bulging with advertisements imploring men to come to work at good wages in shop and factory.

The only way for an able-bodied man to escape employment in those days was by feigning illness or hiding from a prospective employer.

The farmer received adequate returns for his crops.

Labor was not divided into hostile camps.

No one feared the encroachment of foreign "isms" or the imminence of dictatorship of one stripe or another.

Only the halt, the lame, and the blind needed or received support from the public treasuries.

The national debt was going down.

It is pleasant to observe new dealers now striving to restore some of the good things which existed before they ushered in the millennium.

It is an inspiring sight to those who have kept faith to see these erring ones approach the mourners' bench with every outward manifestation of humility.

I am convinced that the measure of the President's repentance can be better gaged by his future course in the matter of appointment of Mr. Amlie to the Interstate Commerce Commission than by any pronouncements he may make in the Hopkins vein.

To the extent that the changed course of the administration is intended to bolster the prospects of the New Deal in 1940, I believe it will be a dud.

I am not a prophet nor the son of a prophet, but it is my feeling that while there will be much rejoicing among the voters in 1940 over one Hopkins or one Roosevelt who has repented, those same voters will put their trust in one of the 99 just men who need no repentance.

Justice and Humanity

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1939

Mr. BROOKS. Mr. Speaker, there lived in northwest Louisiana a Mr. Kermit Fuller, farmer, citizen, husband, and father, one of the so-called inarticulate millions of people

of the United States who have been appropriately termed the "forgotten men" of the Nation. This man became unemployed and fell into need and financial distress. He applied for Government assistance and was given W. P. A. relief work in Webster Parish, La. On April 21, 1938, Kermit Fuller was operating a tractor at the resettlement project in Webster Parish, La., over rough ground. The jolting and jarring of the tractor bruised his body and caused him serious internal injuries.

So serious were these injuries sustained by him that he was compelled to discontinue his work and make application to the United States Employees' Compensation Commission for his disabilities. This application was made promptly, but without success. The long, dull months of the summer dragged along, and then followed the fall and the winter months, as this man continued his efforts to obtain recognition of his claim for compensation due him for his disability in lieu of wages.

At the outset, in dire need of assistance and entitled to Government relief work, Fuller's condition grew steadily worse, both physically and financially, as he pursued diligently his claim before the United States Employees' Compensation Commission.

He became despondent and began to lose hope in obtaining action on the part of this Commission. As he lost hope in results his condition became more melancholy, and on the 8th day in February he took his life by shooting himself. Three days later the Commission decided that Fuller was entitled to compensation because of injuries and in lieu of his wages and offered to begin paying them.

Of course, the decision of the Compensation Commission, coming 11 months after the injury and several days after his death, could not help this man. The accrued portion of the payments survives his death and will probably go to his widow and children. The future payments may not be inherited.

In cases of compensation for injuries the payments made are supposed by law to stand in lieu of wages and to be paid as near as possible like wages are paid to the injured man. When a long period of time elapses following an injury before a decision of the Compensation Commission, the results upon the individual must always be most unfortunate physically and very embarrassing financially. There may not be many cases like that of Kermit Fuller in the books, but this does not relieve the necessity of the Commission making early decisions and prompt payments to men injured in Government service entitled to workmen's compensation payments. In fact, decisions of this character should be made within 30 days and payments should follow promptly in not more than 1 week. The 30-day period will give the Commission ample time in which to investigate all the facts regarding the injuries and ample time to the counsel for the Commission to pass upon any legal problems arising. If this cannot be done voluntarily by the Commission in the interest of justice, Congress might go into the subject of definitely requiring such cases to be disposed of in this limit of time.

I hope that the United States Compensation Commission, in the light of cases such as this, will voluntarily correct its procedure and give prompt and efficient handling to these cases where the urge of need and humanity cries so loudly for an earlier solution.

The Relief Problem

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1939

Mr. KEOGH. Mr. Speaker, I do not believe there is anyone present here today who believes that the Government spends money just for the fun of spending. There are those who believe that the spending has been extravagant and those who believe that the funds have not been administered wisely, but I do not know of a single soul who believes that the spending has been done just for pleasure.

Since the necessity for spending is generally conceded, it would appear that if we are to continue administering aid to the unemployed we must find a way to do so which will satisfy the investor-taxpayer and at the same time adequately meet the needs of those who are the Nation's dependents. Efforts to encourage private interests should be made, certainly, and if private capital can be persuaded to come out of hiding and replace the stimulus of Government spending, more power to it and to those who may be responsible in bringing this about.

I think our greatest danger now, however, lies in the tendency hastily to enact laws which will bring about a change in the present relief formula without actually affecting any constructive reform.

In this connection, gentlemen, I should like to call to your attention the so-called Byrnes bill. I have the greatest respect for the author of this legislation and sincere admiration for his recognition of the need for constructive legislation on the subject of relief. Yet I do not approve of his proposal.

This bill, if enacted into law, would consolidate existing agencies of the Government that have no connection whatsoever with the relief picture. I refer specifically to the public-works program. I believe the tendency to tie up public works with relief came about through the consolidation last year and in previous sessions of the P. W. A. extension bills with the relief appropriation measures. Actually, the two have no connection, except insofar as they are successful in bringing about recovery. While one provides actual relief assistance to the needy the other serves to assist industry to stimulate its own slow-moving economic machine.

It would be a grave mistake to unite two such unrelated agencies as the W. P. A. and P. W. A. as is proposed in the Byrnes bill. Let us first consider the purposes of the two organizations.

The Works Progress Administration was established to operate a program of work relief projects designed to give employment to certified relief cases. The Public Works Administration has as its chief purpose the reduction of unemployment and the restoration of purchasing power through the financing and construction of useful public-works projects which provide employment for men in their own trades at their own rates of pay.

The vital difference in these two agencies is that the former provides made work for men at security wages irrespective of their given trades while the latter provides employment for all those who are in need, regardless of their relief status, at wages which they have every right to expect and in work which they have been trained by education and experience to perform.

W. P. A. was designed primarily to serve only during a period of depression and no one wants to continue the work-relief program any longer than is necessary, least of all the relief recipients themselves. In the last analysis they are the important factors in this relief problem. They ask only for a chance to earn an honest living at decent wage rates. The vast majority of them do not want work relief for the balance of their employable days, even though they have found it to be a haven in the storm during the past trying days and are grateful for the opportunity it presented.

I suggest, then, that we create a public works department not as a relief agency but to provide employment in times of economic distress through constructive methods and long-range planning in public works. A department which can be ready to put men to work in all industries at their own trades as the need arises.

A permanent public works department is by no means a new or unique idea. The need for it was recognized in this country in the early part of the century. In 1919 discussion

on public works culminated in a meeting of representatives of 74 engineering and allied societies at Chicago, who concluded that a national department of public works should be instituted. A year later, at a referendum of members of the United States Chamber of Commerce, 827 voted in favor of such a national department of public works, and 549 voted against.

In 1921 the National Public Works Department Association urged the passage of the Jones-Reeves bills, which had for their object the combining of the engineering and public-works features of 9 Federal departments, 35 bureaus, and 4 commissions under single control. In 1923 the Institute for Government Research recommended a national department of public works. In January 1937 the President's Committee on Administrative Information, composed of Louis Brownlow, Charles E. Merriam, and Luther Gulick, submitted a report advising the organization of a department of public works to design, construct, and maintain large-scale public works; to administer Federal grants, if any, to State and local governments and to gather information with regard to public works throughout the Nation.

A department of public works has been found necessary in many States. The State of New York has a department of public works containing a bureau of canals, bureau of highways, and bureau of public buildings. A department of public works is even more necessary for a government of more than 130,000,000 people with an expenditure exceeding many times those of our largest States.

The movement for a department of public works is founded on solid ground. At the present time there are about 100 Federal agencies that carry on construction in various parts of the country. This necessarily entails overlapping of jurisdictions and duplication of work. One bureau or department does not know what may have been done by another department or bureau with respect to a particular project. Information and plans which may have cost considerable money to gather and draw up are sometimes consigned to oblivion when a new commission is organized to do some particular job of construction.

For many years public works have been recognized as a most important means for creating employment during a depression. A moment's thought, however, will demonstrate that a scheme of public works to create employment becomes ineffective unless there is a competent organization ready and prepared to administer the work. When many agencies carry on public works, it will often happen that one part of the country may have considerable construction while another part may have none. Thus, there may be feast for some and famine for their neighbors.

The urgent need in a time of severe depression is to create employment as speedily as possible. Without a permanent public-works organization the preliminary investigation of proposed projects for creating employment must be hurriedly made. Too much time spent on the preliminaries would nullify the very purpose of public works during a depression. Workers cannot be left to starve while time is taken to determine whether a particular community needs a certain project and whether the financial and engineering set-up is all that it should be. There is neither the time nor the means at hand to know whether the community would not be better served by some other type of construction.

For example, a community may have a dilapidated town hall and also a water and sewerage system dangerous to the health of the community. The town hall, however, is an eyesore to visitors and might result in the loss of tourist trade. It is a strain on the pride of the citizens. Therefore, they demand a new town hall. As there is no time during a depression to make a thorough survey, the health needs of this community are sacrificed.

It is obvious that only a permanent public-works department or administration is in a position to make long-range surveys and plans that will show the needs of the community. Such an organization can be prepared to function efficiently in time of need, particularly when it has available a "backlog" of desirable projects. Only such an organization can administer an equitable plan of employment and can spread the work effectively with a minimum of waste and maximum of efficiency to the benefit of labor, manufacturing, commerce, as well as the Nation generally.

An outstanding engineer said that a planned program of public works presented today's "new frontier" for the harnessing of American energy, ability, and capital and the betterment of the American way of life.

Government Reorganization

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

Mr. THILL. Mr. Speaker, a sound, equitable reorganization program which will produce economy, efficiency, and coordination in government meets with strong approval. During the past 6 years there have been so many departments, bureaus, and commissions created that today there are approximately 135 departments and independent agencies of the Government; and within those departments and agencies there are approximately 500 bureaus. The existence of such a great number of governmental bureaus alone indicates the crying need for reorganization, reduction, and simplification.

Year after year during this Democratic administration the national debt has increased. At the present time there is a movement on foot to raise the authorized national debt limitation by billions of dollars. So long as this administration cannot revive business it is imperative that we reduce governmental expenditures, increase efficiency, eliminate waste, promote economy, coordinate agencies, and eliminate duplication.

The reorganization bill now before the House (H. R. 4425) was brought in with utmost dispatch. It was introduced on February 23, 1939. The select committee held one meeting on March 2, and after 2½ hours of discussion the bill was reported. The minority attempted to secure hearings, but this was denied. A measure of such importance should be given more serious and studied consideration.

In section 5 of the bill we find a provision which permits Congress, by concurrent resolution of both Houses, to reject a proposed plan of reorganization within 60 days after the plan is transmitted to Congress. The customary procedure of affirmative action by both Houses of Congress is dispensed with. Why? Because it will permit measures of reorganization to become effective which cannot secure the approval of both Houses of Congress on their own merits.

Might we not detect a sinister purpose in this bill? Has not the President demonstrated gross inefficiency, gross extravagance, and waste during this administration?

Unless corrective amendments are introduced I shall be constrained to vote against this bill.

Our Foreign Born

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

RESOLUTIONS OF THE AMERICAN COMMITTEE FOR THE PROTECTION OF FOREIGN BORN

Mr. CELLER. Mr. Speaker, under leave to extend my remarks I herewith offer as my own resolutions adopted at the

third annual conference, held February 26, 1939, at the Hotel Pennsylvania in the city of New York, by the American Committee for the Protection of Foreign Born.

The resolutions are as follows:

ON CITIZENSHIP

Whereas there is a need for a better understanding of the place of the foreign born in the United States; certain un-American elements continue in their endeavors to spread hatred and antipathy to the foreign born and the noncitizen, while the noncitizen himself does not fully appreciate the fuller significance of the security and advantages of American citizenship as compared with noncitizenship; the immigration, naturalization, and deportation laws, in their present chaotic state, tend to confuse and degrade the foreign-born people;

Resolved, That we, representatives of 110 organizations assembled at a conference at the Hotel Pennsylvania on February 26, 1939, favor the initiating of a broad campaign to educate the noncitizen in the benefits to be derived from American citizenship and to educate the naturalized citizen and the native born in the history of the contributions of the immigrant alien to American society;

That we favor revision of the naturalization laws to enable all noncitizens who wish to do so to become American citizens;

That we commend the United States Department of the Interior and its Office of Education for its radio series, Americans All, Immigrants All, that served to promote better understanding for and among all cultural and racial groups through the dramatization of the contributions made by each group to American life;

That we endorse and support President Franklin D. Roosevelt's recommendation of June 1938, that the immigration, naturalization, and deportation laws be studied and codified, and request passage of House Joint Resolution 86, introduced by Representative WILLIAM SCHULTE, for that purpose.

That we urge passage of H. R. 214, introduced by Representative EMANUEL CELLER, to enable anyone who entered this country before July 1, 1924, to become an American citizen, with or without record of entry.

ON NATURALIZATION

Whereas existing naturalization laws prevent a great majority of the 3,800,000 noncitizens now in the United States from becoming American citizens; high fees, delays, red tape, and other restrictions prevent tens of thousands from becoming citizens; many noncitizens entered before the time of the literacy tests in the immigration law and never had the opportunity to secure sufficient education to pass the tests for citizenship; many applicants are being denied citizenship for having received relief;

Resolved, That we representatives of 110 organizations at a conference in the Hotel Pennsylvania on February 26, 1939, favor the revision of the naturalization laws by reducing the fees, moderating the educational requirements, and eliminating all discrimination on the ground of race, economic position, to permit all noncitizens, who wish to do so, to become citizens of the United States.

That we propose to the Department of Labor and its Immigration and Naturalization Service that steps be taken to eliminate all unnecessary red tape and delay by humanizing and simplifying the procedure of naturalization as much as possible, enlarging its personnel and staff, if that is found necessary, to achieve this goal.

That we support H. R. 210, introduced by Representative EMANUEL CELLER, to reduce naturalization fees to $2, and urge an immediate hearing on this bill in the House Committee on Immigration and Naturalization.

ON RIGHT OF ASYLUM

Whereas American traditions of asylum for political and religious refugees are being gravely endangered;

The United States has practically shut its doors to refugees seeking admission;

Many people now in the United States who fled the terror of Old World tyrannies are being threatened with deportation to face death or imprisonment in the countries from which they came.

Resolved, That we representatives of 110 organizations at a conference in the Hotel Pennsylvania on February 26, 1939, favor the amendment of the immigration laws to provide that no immigrant should be excluded or deported from the United States because of social, religious, or economic views or affiliations; nor should any refugee be excluded or deported who might be subjected to arrest, discrimination, or other arbitrary treatment because of his views or because of his race upon return to the country to which he might be sent.

That we support H. R. 221, the measure for right of asylum, introduced in the Seventy-sixth Congress by Representative EMANUEL CELLER.

That we support Senate Joint Resolution 64, introduced by Senator ROBERT WAGNER, to admit 10,000 child refugees, 14 years of age or younger, from Nazi Germany.

That we advocate that unused quotas of 1938 be used as a means to admit in the coming year approximately 100,000 refugees in addition to existing quotas, in accordance with the provisions of American immigration laws.

ON DISCRIMINATION

Whereas discrimination against the foreign-born, particularly noncitizens, in public and private employment is increasing, and there is also discrimination in unemployment relief, workmen's compensation, and old-age pensions in many States.

An amendment to the 1939 Emergency Relief Appropriation Act as passed by Congress denies relief to noncitizens.

The unity of native and foreign-born is essential in winning economic security for the American people:

Resolved, That we representatives of 110 organizations at a conference in the Hotel Pennsylvania on February 26, 1939, are unalterably opposed to all discriminatory measures and practices, and we urge upon the Members of Congress that this discriminatory amendment, denying relief and sustenance to noncitizens and their American-born dependents, be stricken from all future relief appropriations acts.

That we urge the passage of S. 1151, introduced by Senator LEWIS SCHWELLENBACH to prevent the denial of citizenship to applicants who have received relief.

That we support the program of the American Committee for Protection of Foreign Born for full economic, social, and political equality for the foreign-born in the United States.

ON STARNES-REYNOLDS BILLS

Whereas Representative JOE STARNES of Alabama, and Senator ROBERT REYNOLDS, of North Carolina, have introduced five bills inimical to the interests of the foreign and native born, bills that would serve to unleash oppression and hatred, in violation of the well-known American tradition of hospitality and equality:

Resolved, That we representatives of 110 organizations at a conference in the Hotel Pennsylvania on February 26, 1939, condemn without reservation the Starnes-Reynolds bills—H. R. 3030, H. R. 3031, H. R. 3032, H. R. 3033, S. 407, S. 408, S. 410, S. 411—because of their attack upon the rights of the foreign born and the threat contained in these bills to the welfare of the people of the United States and to American democracy.

That we urge upon the Members of Congress vigilance and awareness that these bills shall never become a part of the law of the United States.

What P. W. A. Has Meant to New York State

EXTENSION OF REMARKS

OF

HON. MATTHEW J. MERRITT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1939

Mr. MERRITT. Mr. Speaker, services rendered local authorities and municipalities of New York State by the Federal Emergency Administration of Public Works, over and above financial assistance, sharply illuminate the national need for a permanent public-works organization. Legal, financial, engineering, and other services furnished by the well-trained staff of P. W. A. have removed time- and energy-consuming burdens as well as pressure situations from many local authorities and smaller municipalities who were seeking the construction of worth-while projects effectively, efficiently, and on a low-cost basis.

A number of local authorities have not been in position to obtain these services by themselves. Boards of education in rural communities throughout New York and elsewhere are usually made up of public-spirited citizens who serve without remuneration, devoting as much of their time as they can to educational problems. A brief examination of the situations facing such a board when it has decided on the construction of a new school, a typical P. W. A. project, is the best illustration of what technical services the Federal Emergency Administration of Public Works, even while operating on a year-to-year basis, can and has offered local authorities and municipalities.

Having determined the necessity for a new school building, the board is confronted with the problems of deciding upon the size and cost of a building which will adequately serve the needs of the community, and the selection of a competent architect. It must decide upon the method of financing, the marketability of school-district bonds, the legal capacity to incur indebtedness, and it must observe strictly the procedural steps required by law to authorize the construction and financing of the project. A board of laymen, faced with problems of such complexity and requiring more time and attention than it can normally devote to such matters, has

a tendency to procrastinate in the conduct of necessary construction or to delegate the entire responsibility to an architect.

Assuming that the choice of an architect is a fortunate one, the standard method of compensating architects through a fixed percentage of the cost of the project indicates, on the basis of self-interest, that such a delegation of authority is not altogether to the best interest of the school district.

An unusually energetic and conscientious school board, on the other hand, is faced with the problems of internal dissensions and personal prejudices in the selection of men, means, designs, and equipment, and all local boards are subject to the pressure of local tradesmen, builders' supply and equipment dealers to the extent that a less sound project is often obtained at a greater cost, to the ultimate detriment of the taxpayers.

The situation is markedly different when a project is undertaken under the supervision of the Public Works Administration. Here is an organization whose fundamental purpose is the construction of the soundest projects possible at the least possible cost. It has the necessary personnel, trained over a period of more than 5 years in the construction of thousands of projects, to handle expeditiously and efficiently the problems presented in public construction. Because of its broad perspective, it is in a position to judge accurately the economic soundness and necessity of a particular project.

Having examined plans and specifications and supervised construction of a great number of projects, P. W. A. engineers are in a position to furnish expert advice on soundness of design and on the competence, ability, and responsibility of architects, engineers, contractors, and materialmen. The finance examiners of the Public Works Administration are available to furnish competent advice on the ability of a municipality to finance a project and as to the marketability of its securities. The legal staff is equipped to furnish information as to the legal procedure to authorize a project.

By strict adherence to the theory of free and open competition on P. W. A. projects, it has been possible to eliminate local favoritism and prejudices for particular products and to obtain the best results at least cost to the taxpayers. Close supervision of construction by impartial resident engineer inspectors and efforts made to insure the prompt payment of all just claims have extended credit ratings of contractors and materialmen, resulting in reduced construction costs. The knowledge that a good reputation in the construction of P. W. A. projects is of value has improved the quality of work in general.

It is possible to consider the construction programs of the Public Works Administration as the equivalent of a vast construction research laboratory, a clearing house for the best engineering designs and technique available. It is apparent that the knowledge and experience of this organization gained in its work throughout the country is a valuable national asset which should be preserved and made available to municipalities in the future.

Pending non-Federal P. W. A. projects for New York State total 429, and every one of these projects are important to the localities in which they originated. Unless Congress acts to make further appropriations available these communities will, in many cases, be forced to abandon their plans for civic improvements. Every type of public improvement is included in the list, including disposal plants, incinerators, libraries, elementary and high schools, municipal buildings, street repairs, bridges, filtration plants, sanitary sewers, waterworks, hospitals, infirmaries, tunnels, dock terminals and piers, and so forth.

The Starnes bill now before the Appropriations Committee provides an additional appropriation for loans and grants to communities throughout the country for pending P. W. A. projects and at the same time creates a permanent public-works agency to help local public bodies in long-range planning of public works. In other words, the bill establishes an agency of government which would be equipped to meet future economic emergencies like that of 1933 and help industry meet unemployment crises as soon as they arise.

If we are to avoid fiscal disaster and gradually reduce the relief rolls, the safest way is to return employable men to the regular channels of industry through the use of the Public Works Administration.

Federal Aid in Wildlife Restoration

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1939

RESOLUTION BY THE LEGISLATURE OF KANSAS

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following concurrent resolution recently adopted by the Legislature of the State of Kansas:

Senate Concurrent Resolution 6

Concurrent resolution memorializing the Congress of the United States to appropriate all of the funds collected under the terms of the Pittman-Robertson Act for Federal aid to the States in wildlife restoration

Whereas under the terms of the Pittman-Robertson Act passed by the Congress of the United States the 10-percent excise tax on sporting arms and ammunition is earmarked for appropriation by the Congress for Federal aid to the States in wildlife restoration; and

Whereas unofficial but usually reliable sources estimate the full amount of this tax at about three and one-quarter million dollars, and this year it was recommended that the full amount of the tax be made available to the States; and

Whereas this recommendation was cut to $1,000,000 before the Budget was presented to the Seventy-sixth Congress; and

Whereas if this recommendation to appropriation only $1,000,000 to the States is followed, the State of Kansas would receive only about $17,000, while if the entire amount collected was made available to the States Kansas would receive about $57,000: Now, therefore, be it

Resolved by the Senate of the State of Kansas (the house of representatives concurring therein), That we request and urge the Congress of the United States to make available to the States all of the funds collected under the Pittman-Robertson Act passed by the last Congress; and be it further

Resolved, That sufficient copies of this resolution shall be printed and the secretary of state is hereby directed to transmit a copy of the same to the President of the Senate of the United States, a copy to the Speaker of the House of Representatives of the United States, and a copy to each of the Kansas Senators and Members of the House of Representatives in the Congress of the United States.

Fortification of Guam

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, March 9, 1939

ARTICLE FROM THE WASHINGTON EVENING STAR OF FEBRUARY 12, 1939

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the RECORD an article appearing in the Washington Evening Star of February 12, 1939, entitled "Fortifying of Guam Held Vital In View of Japan's Ambitions."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of February 12, 1939]

FORTIFYING OF GUAM HELD VITAL IN VIEW OF JAPAN'S AMBITIONS—VAST IMPERIALISM SEEN HER AIM, AND UNITED STATES PROTECTION IS BELIEVED NECESSARY TO PRESERVE PEACE

(By Frank P. Ball)

(The writer of this article was for 10 years a businessman in China and Japan and a former president of the American Association of China. He was the first proprietor of the Shanghai Times.)

On a small island in the North Pacific the spotlight of publicity has lately been turned. A defense program is up for discussion, and the fortification of Guam figures prominently in the general scheme. Congress has a ticklish problem to deal with when the fortification of that island comes up.

Its strategic position is of great importance to the United States in the defense program, and its proximity to the populous cities of Japan—1,400 miles from Yokohama—makes a submarine and naval air base established there by an aggressive power a vital menace to that country.

To clearly comprehend the strategic position of Guam, I suggest that the reader locate the island on a good map so that its position relative to Japan, Manila, Hawaii, the Panama Canal, as well as the American mainland, can be clearly visualized and fixed in the memory.

The island of Guam lies in the North Pacific in 13°26′ N. latitude and 144°39′ E. longitude, 1,500 miles to the east of Manila, 1,400 miles to the south of Yokohama, and is 3,400 miles from Honolulu, and 5,100 miles from San Francisco. Guam belongs to the Marianna Islands group. The other 16 islands of this group, mandated to Japan by the League of Nations after the World War, lie close to Guam at the north.

Guam extends about 30 miles, with an average width of 6 miles and has an acreage of 220 square miles. The latest census, July 1938, gives the population as 22,314, including about 20,000 natives. The trade of the island is principally with the United States and Manila. In 1937 her exports to the United States were valued at $164,879 and imports from the United States $345,453.

Apra, on the middle west coast, is the only good harbor; it is about 3½ miles across and has a depth of 4 to 27 fathoms. Apra serves as a naval station and as a port of transit between America and the Philippines. Guam is governed by a naval commander, an officer of the United States Navy. The incumbent is Capt. James T. Alexander. The island is a stop-over station for the trans-Pacific air service and is an important relay station for the cable service between the American mainland and Asia. It is within 48 flying hours of the coast of California.

GUAM DISCOVERED IN 1521

Guam was discovered by Magellan in 1521 and was occupied by Spain in 1688 and remained in her possession until taken by the United States cruiser *Charleston* in June 1898.

By its victory over Spain in 1898 the United States came into possession of Guam, Puerto Rico, and the Philippines. Under the treaty of December 10, 1898, this country paid to Spain $20,000,000 for the relinquishment of all claims to these islands.

About the time Guam was taken over by the United States, Spain sold the rest of the Mariana Islands to Germany, which held them until the World War. Japan now controls them under mandate, as stated above.

The proposed fortification of Guam, with a naval air and submarine base established there, has aroused grave apprehension in Japan, where ultranationalist newspapers warn that it is a threat to the Nipponese Empire.

Admiral Shozaburo Kanazawa in a reported interview said: "Fortification of Guam would be like placing a gun at the gate of a neighbor." The admiral is well aware of our defense plan and should know that our foreign policy is not one of aggression. At the same time he appears worried and undoubtedly skeptical that our foreign policy will always remain nonaggressive. The present ruling class in Japan probably fears some incident may occur—justifiable from the Japanese viewpoint—that would arouse the American people to a warlike attitude.

Japanese statesmen have pledged to their people certain militant, immutable policies, and to retreat from them would arouse a dangerous storm of domestic criticism and cause China to believe Japan is weakening. The people of Japan have been promised by their overlords the complete domination of China in a reasonable time. This is merely a hors d'oeuvre. After China is thoroughly subjugated, the next victims will be the rich islands to the south, and then on and on will Japan force her way until she has dominated Asia.

This ambition, which may seem to us a fantastic dream, is more strongly fixed in the minds of the Japanese military class than any hope we may cherish that some day the peoples of the world will embrace our ideas of democracy.

Unless her progress is stopped, and stopped quickly, or financial bankruptcy overwhelms her, Japan's ambition is likely to become a reality.

Do not think for a moment that this ambition, this aggressive policy, and this—as they believe—manifest destiny to spread a new (Japanese) civilization over the regions of Asia have lately sprung up. Had I the space I could recount many enlightening talks I have had during 1894–1903 with high Japanese officials and prominent merchants who were building a modern empire to enable them to put their dreams in action.

Let us stop for a moment and study their military accomplishments and how they were attained.

In 1894 Japan made war on China over Korea. The King of Korea had a rebellion on his hands, and appealed to China for assistance. China responded to the Korean King's appeal for aid and notified Japan of her action. Japan revived some old claims to rights in Korea and sent an expeditionary force into the peninsula. Numerous charges and countercharges were made by both China and Japan, and after a lot of wrangling Japan declared war on China August 1, 1894, shortly before I arrived in Japan.

THE SINO-JAPANESE WAR

The Sino-Japanese War of 1894 resulted in an easy victory for Japan. She captured Port Arthur, in the Liaotung Peninsula, and Weihai-wei, and made short work of the Chinese Navy. The war was over in December 1894, and Lihung Chang was commissioned by China to negotiate for peace.

The treaty of peace was signed at Shimonoseki on April 17, 1895. By its terms China recognized the full independence of Korea, ceded to Japan the peninsula of Liaotung, the island of Formosa and the Pescadores, and agreed to pay an indemnity of 200,000,000 taels (about $150,000,000 at that time).

This treaty was a staggering blow to China, as it gave to Japan a foothold in Manchuria, her objective in starting the war.

Russia, Germany, and France later intervened and forced Japan to return Liaotung Peninsula and accept in compensation a further indemnity of 30,000,000 taels.

The Russian "lease" of Port Arthur, which Japan captured in 1894, rankled for years in Japanese memories, and a critical situation arose between Japan and Russia in 1903 that resulted in a declaration of war in March 1904. Japan achieved an overwhelming victory on both land and sea.

On August 23, 1910, Korea was annexed as Chosen and the old name abolished. The Emperor was deposed and shorn of all political power. Chosen, since its annexation, has been ruled by Japan with an iron hand, and foreign trade, except through the Japanese, has become a myth.

This short synopsis of Japan's military activities is given here to induce the reader to study for himself Japan's part in Far Eastern affairs during that period, so that he is well informed on the subject and can intelligently draw his own conclusions as to our future policy in Asia and the attitude we should assume toward Japan.

I believe Japan is rapidly drawing away from the sympathetic touch that once existed between our two countries and hopes that by an alliance with the two aggressive powers of Europe to rapidly, or more rapidly, achieve her own ambitions in Asia. She may be making a fatal mistake, and I doubt very much that we in this country can do anything to deter the present ruling class in Japan from the policies that are as strong as a religion with them.

It is not unreasonable to suppose that in the near future, no matter how willing we are to compromise and barter with them, an impasse will arise. We will not fight over it, but Japan might; and if our defenses are not the best modern science can produce, she might possibly, if she could, rely on European backing. From what I can learn, Guam is a vital link in the proposed defensive chain of bases, and with that island properly fortified no Asiatic power will ever dare launch an attack against Hawaii, or our western mainland, or the Panama Canal. And if an attack is made on us by Japan, a naval air and submarine base at Guam might start a counterattack against that country that would prove mighty effective.

Anniversary Address at Scene of the Declaration of Texas Independence

EXTENSION OF REMARKS

OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1939

ADDRESS BY HON. COKE R. STEVENSON, LIEUTENANT GOVERNOR OF TEXAS

Mr. KILDAY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by the Honorable Coke R. Stevenson, Lieutenant Governor of Texas, at Old Washington-on-the-Brazos, scene of the declaration of Texas independence, on March 2, 1939. This address was delivered on the occasion

of the observance of the one hundred and third anniversary of that memorable occasion:

Great events have always challenged the admiration of a people most favorably affected by them.

This is well, because when the beneficiaries of outstanding achievements cease to remember and respect the benefactors, then they become unworthy of the heritage bequeathed to them.

This eventful occasion is evidence that Texas people have not ceased to venerate the memory of those who trod the field of action here on this sacred spot 103 years ago today.

I have always admired the work of an artist, whether it be the product of a painter's brush or the skillful use of the camera's shutter. The most beautiful pictures are the product of a momentary flash of light. The problem of photography has been the development of some process by which that fleeting glimpse could be preserved. The image reflected on a sensitized plate by a ray of light must be made into a permanent picture.

Likewise some of the most notable incidents of history have been of short duration—a flash of genius, an impulse of patriotism, an exhibition of divine inspiration. The image reflected by that unusual action, however, has been preserved and the result is a beautiful picture which hangs in the gallery of memories. Many of these intensive periods of action have produced tremendous consequences. Some have changed the course of empire, some have affected the destiny of a whole people, some have profoundly influenced the lives of individuals.

Moses was not long in the burning bush, yet he gave to the world the Ten Commandments. Paul was not long on the road to Damascus, yet his experiences have inspired the hearts of men for 19 centuries. Christ stood before Pilate for only an hour, but all the Pilates of the world have stood before Christ ever since. Lincoln stood before the slave block in New Orleans for only a moment, but that moment burst the fetters from a million slaves and changed the fabric of a nation.

In like manner may we characterize the events of March 2, 1836. It was a period of short duration, like a flash of eternal light, but the occasion has become immortal. The image was impressed on the film of time and has become permanent as a picture of patriotism.

A convention of 58 delegates gave to posterity one of the liberty documents of the world. It is known as a declaration of independence. Its effect, however, was to wrest a colony of depressed people from the tyrannical rule of a dictator and transform them into stalwart citizens of a free republic.

The reason which impelled this action by the delegates assembled on this historic ground is found in the fact that the dictator had destroyed constitutional government. He had usurped the powers of the legislative and the judicial branches of the government. He had destroyed freedom of speech, freedom of the press, and the freedom of worshipping Almighty God. He had destroyed the right of trial by jury, declared by these 58 delegates to be "the palladium of civil liberty and the only safe guaranty for the life, liberty, and property of the citizen."

The love of life, liberty, and the right to own property is inherent in the blood of the Anglo-Saxon race and the suppression of these virtues by a dictator was a challenge to the liberty-loving instincts of our forefathers. They accepted the challenge and on this spot 103 years ago, laid down the political doctrine that the people of Texas would never be ground under the heel of a tyrant, no matter what the cost.

The 60 days which followed the declaration are the most colorful which adorn the pages of history.

The Alamo became the American synonym for heroic sacrifice on the altar of freedom. Goliad became the tragedy of broken covenants in the English-speaking world. San Jacinto became enshrined in the hearts of all Texans as the noblest example of bravery on the battlefield. It is the greatest triumph on American soil in the cause of freedom and it struck terror to the hearts of all dictators for an ensuing century.

All of these stirring events occurred within a period of 2 months following the declaration on March 2, 1836. They have been the theme of discussion in every home, school, church, city, town, and village in the land. They deserve this evidence of our reverence and respect.

Let me suggest as a thought worthy of remembrance, however, that when we deplore the massacre at Goliad and the violent waste of blood at the Alamo we should never forget that both were the result of a dictatorship. When any ruler usurps the powers of constitutional government and violates the rights and consciences of his people, then their lives are no longer safe at his hands. Any power which will voluntarily destroy conscience and character will have no horror at the destruction of life.

When the convention of 58 truthfully charged the Napoleon of the west with having broken his covenants with the colonists, is there any wonder that the terms of the treaty with Fannin were so murderously violated?

The progress of our State in the past 103 years has won the admiration of the world. It has in every respect justified the hopes and aspirations of our patriotic forefathers who declared it free and independent.

We are reminded, however, that with all our progress no new element in government has been discovered. The fundamentals remain the same. The best assurance we have of perpetuating the blessings which our independence secured for us is to continue to cherish the sacred principles and the ancient landmarks of constitutional government.

Tribute to the Late George R. Holmes

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, March 9, 1939

TRIBUTE BY RT. REV. MSGR. DAVID T. O'DWYER

Mr. CLARK of Missouri. Mr. President, I ask leave to have printed in the RECORD a tribute to the late George R. Holmes delivered at Fort Myer chapel on the 14th ultimo by Rt. Rev. Msgr. David T. O'Dwyer, director of the National Shrine of the Immaculate Conception, Catholic University.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

To collect one's thoughts for a tribute to George R. Holmes is like setting about repairing the devastation of some flood, whirlwind, or earthquake. With his passing has been swept away so much that brightened and strengthened the lives of his countless friends that the world in which they lived seems now dark and chaotic. But their bewilderment and dismay should find some relief in reflections on the character and career of a man who in all the emergencies of peace and war was never daunted or found inadequate.

Industry, intelligence, and sympathy ever guided by a sensitive conscience won him eminence in his profession. And genius is not too strong a word to apply to his gifts. The tributes paid to him by the President and so many of the other great leaders in the Nation only expressed on a higher plane what was felt by thousands all through the country who read his stories and who listened to his broadcasts which told them what was going on in the capital and which analyzed in the simplest of language the problems that were being discussed there.

However gratifying the plaudits of the general public might be, if he lacked the esteem and confidence of his brethren of the press his satisfaction would have been sadly diminished. He was devoted to the various press organizations to which he belonged—the National Press Club, the White House Correspondents' Association, and the Gridiron Club—and in his work he was inspired as much by what I shall call the honor of the family as he was by his personal standards.

But his friends knew a greater George Holmes—a man of strength and tenderness.

His dominant characteristic was a passionate sense of justice, and in living up to that he stuck to his principles with a tenacity that no intimidation could relax.

He hated cant; and complacency found in him an inveterate foe. He was generous with something more than the mere love of giving. His generosity was part of a magnanimity which took in all human needs, particularly those of the less fortunate, and it also found expression in all the gay graces of life.

Hospitality was one of his most sacred words, and nothing could abash him more than the fear of being lacking in it. I say the fear because his vigilant considerateness made transgression impossible. His tenderness was deep and sensitive, but he had a virile side that made him almost shame-faced in its display.

It was this conflict that accounted for a certain belligerency at times, which usually dissolved in an impish smile which betrayed the eternal boy in him. In the great human relations of son, husband, and father, he carried himself with the honor of a noble chivalry and the love of a mighty heart. And it was his happiness to have dealt with what the Scriptures call valiant women, in his mother and wife and with children who have the promise of carrying on the noblest traditions of his house.

"He lives, he wakes—'tis death is dead, not he;
Mourn not for Adonais—thou young dawn,
Turn all thy dew to splendor, for from thee
The spirit thou lamentest is not gone;
Ye caverns and ye forests, cease to moan:
He is made one with Nature; there is heard
His voice in all her music, from the moan
Of thunder, to the song of night's sweet bird;
He is a presence to be felt and known
In darkness and in light; from herb and stone,
Spreading itself where'er that power may move
Which has withdrawn his being to its own—
He is a portion of the loveliness
Which once he made lovely; he doth bear
His part."

Guam Harbor Improvement

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, March 9, 1939

EDITORIAL FROM THE WASHINGTON EVENING STAR OF MARCH 6, 1939

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial appearing in the Washington Evening Star of March 6, 1939, regarding harbor improvement at Guam.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of March 6, 1939]

GUAM IN THE SENATE

Hearings began today before the Senate Naval Affairs Committee on the proposition to undertake certain harbor-improvement work at Guam, at a cost of $5,000,000. Senator WALSH and his committee colleagues opened proceedings by having Admiral Leahy, Chief of Naval Operations, discuss the desirability of carrying out the project which was rejected by the House of Representatives last month.

The Star considers that the refusal of the lower branch of Congress to make the initial appropriation for harbor improvements at Guam was a blow at defense. The Senate now has opportunity to repair that blunder. With a view to supplementing public information on the Guam subject, it is useful to point out certain pertinently outstanding aspects of it.

1. Guam is a United States possession bound by no international treaty that in any way prohibits either the proposed harbor works or eventual fortification, if desired. The Washington treaty, which tied this country's hands respecting fortifications in mid-Pacific, expired on December 31, 1936.

2. The pending plan provides for no fortifications. It contemplates only harbor clearance and corelated improvements in order that patrol and commercial planes may land safely.

3. If fortified, Guam would neutralize the Japanese island mandates, the most eastward of which is 2,000 miles from Honolulu, and their most advanced operating base for submarines. It has not been fully realized in this country that, regardless of the Versailles Treaty governing mandates, Japan, on the islands she administers, has been clearing harbors, putting in oil tanks and shore facilities for patrol planes and submarine operations which could be directed against Hawaii and our Pacific coast.

4. The Navy knows no more than anybody else in the United States what will happen to the Philippines in 1946. What the Navy does know is that if an Asiatic fleet is maintained in the Far East, there must be an American-owned home port for it. That seems to be one more excellent reason for doing something about Guam.

5. Guam has one harbor, Apra, now full of coral heads. Some congressional opinion to the contrary, the island lends itself to fortification because of its high, rocky hills and dangerous open coast. Mountains average 1,000 to 1,400 feet. Guam is 3,300 miles from Honolulu, about 1,500 from Manila, and 1,500 from Japan.

6. Guam is declared by naval experts to be the most important strategic position in the western Pacific. No Asiatic fleet would ever move in our direction without capturing it. The island can be adequately fortified for $75,000,000—$25,000,000 less than the cost of a single 35,000-ton supermodern battleship. Any enemy fleet that tried to take Guam would then be in the open for decisive conflict with the United States fleet. Incidentally Guam protects our lines of communication for strategic war materials from the East Indies, notably oil.

7. Since the Guam proposal became current in Congress, the Japanese have occupied Hainan, thus cutting the Hong Kong-Singapore line 1,200 miles from Singapore, 300 miles from Hong Kong, and 640 miles from Manila.

8. The Hepburn naval base board, after profound study, urged Congress to convert Guam into a rampart in the western Pacific. Neither House nor Senate, in the Star's opinion, should be swerved from giving the fullest consideration to the recommendations of naval officers who are inspired by no motive except the sound dictates of American national defense. A properly protected Guam would be in no sense an aggressive gesture toward Japan or any other country.

Republican Prospects in 1940

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1939

Mr. MASON. Mr. Speaker, much authentic information reaches Capitol Hill by the "grapevine" or rumor route. In handing on this information a Congressman must necessarily say, "It is said"—"We understand"—"I am told that"—"Gossip hath it," and so forth. I prefer to hand on this information through the medium of the "old gray squirrel." If Bergen can put words into the mouth of Charlie McCarthy; if President Roosevelt finds it very convenient to use Ickes, Hopkins, Jackson, et al., as mouthpieces or stooges, why should not I use my friend Stuffy, the old gray squirrel of the White House lawn?

THE OLD GRAY SQUIRREL

My bushy-tailed little friend handed me a hard nut to crack this morning when he propounded the following question: "Congressman, is the Republican Party going to win in 1940?" I evaded a direct answer by saying, "I wish I knew the answer, Stuffy, because some 40,000,000 voters of this Nation are pondering the same question. Next to the possibility of war and the probability of our being mixed up in it, your question is the question of the day. You have had intimate contact with the last three Presidents, you ought to know something about the matter, what do you say?" My little friend grinned and replied: "Congressman, you have asked for it; you may not like it; but I have it doped out this way." Then Stuffy elucidated about as follows:

"From 1929 to 1932 the Republicans did nothing but fumble the ball. They could not seem to get going. Conditions changed from bad to worse. Republican leaders lost the confidence of the people and became discredited. Our people properly and naturally turned for help and guidance to the Democratic Party, whose leaders eagerly seized the opportunity provided them and offered the Nation 'the best platform ever submitted to the voters of this Nation by any political party.' They won in a landslide. Soon after taking over the Government, however, the Democratic leaders, under the advice of crackpot socialistic theorists, discarded their excellent platform and put into effect a social-reform program of experimentation, designed to bring about 'heaven on earth', but which after nearly 8 years of trial has produced little else than a great national headache. Recovery measures were entirely discarded and only just now have been brought back temporarily into the picture. The problem of farm prices, the number of unemployed, the relief mess, all stand about as they were in 1932, and we are now in debt to the tune of about $40,000,000,000. Do you wonder that the American people are growing tired of reform and beginning to insist upon recovery? Do you wonder after nearly 8 years of Government doles that people are clamoring for another change, demanding decent jobs in private industry at fair wages, and looking eagerly around for new leadership? Well, that is the situation today. It offers a real opportunity to you Republicans and should present a challenge to your party. Father Time, and the vicissitudes of political fortune, have kindly removed most of your old discredited leaders. New leaders have developed, eager, anxious, alert, progressive, to take over and manage the G. O. P. The elephant has fully recovered from his sleeping sickness and is now 'raring to go places.' All signs point to a landslide in 1940. The people want another change. You Republicans should win if you don't fumble the ball or call the wrong signals. I'm betting on you."

I threw my little friend an extra handful of peanuts and walked on to the office pondering over what Stuffy had told me. Do you think my bushy-tailed friend gave me the right dope?

Unemployed, Low Wages, and Business in Puerto Rico

EXTENSION OF REMARKS

OF

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1939

Mr. IGLESIAS. Mr. Speaker, as you all know, Puerto Rico stands literally at the crossroads of the world, at the entrance to the Caribbean region and on a direct line between east and west, north and south. San Juan, the capital and chief port, is but 1,000 miles away from the Panama Canal, 1,300 miles from New York or Philadelphia, less than 1,000 miles away from Habana, and under 4,000 miles away from the great European markets.

Puerto Rico is an American-organized Territory—a very beautiful island.

Puerto Rico has a population of about 1,800,000, according to last increases of population, or over 500 inhabitants to the square mile, as compared with 40 per square mile on the mainland.

With the great part of the working population dependent directly or indirectly on agriculture for livelihood, the problem of steady employment is a complicated one. When the major crops—sugar, tobacco, coffee, and fruits—are being harvested, a large percentage of the working population finds employment. But when the crop seasons end, employment in the rural districts ends also, and there are very few other industries to which the workers can look for employment.

Certainly one of our pressing and perplexing problems in Puerto Rico is unemployment. The increase of our population was more than twice in the last 38 years. The margin of subsistence is already dangerously narrow for the vast majority of the people. We want to intensify and diversify agriculture, promoting means of work and providing more practical education; we are, in the words of a distinguished American educator, "instilling the craving for better things and better days" to the people there.

That is why startling reports from San Juan printed in the New York Times inform us that "Puerto Rico plans crops to feed the idle," said program being an absolute necessity, and adding that—

> With more than 750,000 laborers and dependents now workless and without means of subsistence, Gov. Blanton Winship has received promises of more than 25,000 acres of land for quick food crops from large landowners. Much of this land has gone out of sugar cultivation to comply with the law.

That—

> Commissioner of Agriculture Lopez Dominguez, heading a committee to facilitate food plantings, said today that more land would be available and work would commence at once so as to have the first food crops ready, if possible, after the close of the sugar season at the end of May.
>
> Because of the sugar surplus and crop limitation 125,000 sugar workers this year will have 3 months' work instead of 6, and the unemployment situation is expected to be worse by summer, from all reports obtained by the government.
>
> Governor Winship said today that Puerto Rico's case for modification of the sugar-quota and wage-hour law to meet Puerto Rican conditions has been thoroughly presented to Washington, and the island goal remained the payment of the highest possible wages without destroying industries.
>
> Four years ago labor trouble was averted, Governor Winship said, by the passage of a law for minimum wages and an 8-hour day, applicable to agriculture as well as industry, and the Governor said he had assured William Green, president of the American Federation of Labor, that Puerto Rico had done more for labor in the way of enlightened legislation than any of the States.
>
> "We cannot look 750,000 hungry people in the face without making every effort to appease their hunger," he said. "We will require further relief, but we will not ask for more except as a last resort and after our own resources are exhausted."

The explanation of this situation was also quite simple. The introduction of modern machinery in the large centrals or sugar mills, in manufacturing enterprises, and wherever hand labor was used, I should say, has thrown and maintained quite a number of working people out of employment in Puerto Rico. Also, many of the articles that should be cultivated and manufactured in the island are imported by millions from the mainland.

A statement of the Governor of Puerto Rico at the public hearing before the Wages and Hours Division, Department of Labor, on January 4, 1939, with respect to hand-work home industry, had this to say:

> At its peak in 1936 Puerto Rico's needlework industry had become the second greatest industry in the island in point of shipments to the United States mainland. Its shipments in that year amounted to around $21,000,000. It has declined sharply since that time, due chiefly to the competition of China and Japan, which has been growing up under the protection of the application of the "most-favored-nation clause" to the trade agreement of 1935 with Switzerland, whereby the tariff on certain types of hand-ornamented handkerchiefs and other needlework products was sharply reduced.
>
> Women of the Orient are said to receive in many cases as little as 5 or 6 cents a day for their work. We cannot compete with them without adequate tariff protection. Very grave injury has resulted to our hand needlework industry in Puerto Rico. It has already been substantially cut in half, in the 2 years since 1936.
>
> With their families, these 90,000 women may represent as many as 400,000 to 500,000 mouths to feed. Taking that, together with our present unemployment situation, caused largely by the undue restrictions imposed on our sugar quota, and other trade-agreement restrictions on our industries, there may easily be as many as 750,000 or 800,000 people in the island left without means of support.

Now, to be frank and sincere to the great masses of producers of the island, especially to organized labor, I have to remind you that in the year 1934 the difficulties experienced by the industrialists due to the Code of Fair Competition for the Needlework Industry in Puerto Rico were almost of the same character.

At that time the wages at home were from $2 to $2.10 and $3 per week, showing an increase of 46.3 percent, and machine workers in the factories received $3.32 as an average a week of 48 hours; they have been increased to a minimum of $5 per 40 hours a week. The Administrator, Hugh S. Johnson, in authorizing the Code of Fair Competition for the Needlework Industry in Puerto Rico, stated:

> Much of the home work is done under conditions closely parallel to those of subsistence homestead.
>
> Hand home work in Puerto Rico represents a much greater portion of the total volume of production than it does in the United States.
>
> The code does not propose the elimination of home work but rather its control and regulation, with a view to bringing the hours and wages and working conditions of home workers up to a standard which will provide both fair competition with factory production and enable the home workers to enjoy a better standard of living. It is anticipated that a certain percentage of the work now done in homes may, within a reasonable time, be transferred to community workrooms. The approval of this code will make possible a beginning of work toward this end.

I think it is my duty at this time, in view of the situation that is being described exists in Puerto Rico, to discover what was in the mind of a very intelligent and influential lady that was working for the social welfare of the people of Puerto Rico.

Labor in Puerto Rico was willing to get by education and organization the best standards of living conditions that were possible under the law.

Many of the reports that came from interested persons from the island are not fair to the workers. They have the intention of keeping the laborers down.

This lady wrote a confidential memorandum on needlework in Puerto Rico, and it was sent to Washington at the time when the workers were engaged in an effort to obtain better conditions. This memorandum reads as follows:

> We mainlanders residing in Puerto Rico—

The lady says—

> are constantly appealed to for information about the needlework there; hence this memorandum.
>
> When an American citizen comes down to the island and remains year after year, he gradually becomes accustomed to the conditions

in this country. He may make heroic efforts to change the native and bring the average cleanliness, habits, and intelligence up to that of the mainland average. When our Government sent well-trained English-speaking teachers to Puerto Rico, it was ambitious to help the natives of the island.

The labor leaders say "Increase efficiency; stimulate the workers." But how can it be expected that one of the outstanding child-bearing races of Christendom can also be made so very efficient at handwork—especially in so young an industry, grown up in the last 20 years?

The needlewomen, consisting of, more or less, 70,000 home workers and between four and seven thousand factory workers, have been receiving wages approximating $12,000,000 a year. The individual earnings were always low (about 3 cents per hour at home and 5 or 8 cents per hour in factories, except the foremen). When times were good on the mainland wages were better in Puerto Rico; but when our country tobogganed downward during the last depression the wages of the island needleworker went down the same way. Their lowest point coincided with the inauguration of President Roosevelt, but within 3 months of the passage of the National Industrial Recovery Act there was a wage increase of 25 percent on all needlework done in the island, and that raise continued until the N. R. A. San Juan office was opened. Then factory workers had an average earning of $3.32 and the home worker—who knows? The guess was about a dollar a week. Then followed the increase of wages obtained under the code, which fluctuates from about 60 percent for factory work up to 100 percent on much of the home work and 400 percent in some of the home work, notably handkerchiefs and cotton garments. The market simply could not absorb some of these raises instantly.

The Puerto Rican home workers may be very badly off, according to the opinions of the casual mainland labor leaders who visit the island for short stays of 10 days or 2 weeks; but to those of us who have lived here and realize the tremendous improvement in conditions of the home worker during the last 10 years it is difficult to adopt the critical attitude which some of the labor leaders do.

We do not feel competent to decide whether the Puerto Rican who does hand sewing, hand embroidery, and drawnwork, is to be judged on a commercial basis of the work produced or on a humanitarian basis. In the former, then all or most of this work might properly go to countries where the workers have greater skill—China, Madeira, the Philippines, Belgium, Ireland, and other countries—the countries where this type of fancywork originated, where the worker has had more experience but where, incidentally, this type of product has always been compensated at what seems to us from a mainland viewpoint as ridiculously low wages.

The local contractor, who has grown up in the business, complains that no work comes from the United States during the last 90 days. The home workers, hundreds upon hundreds of them, trudge from their mountain homes into the towns begging work at any price. But the contractor cannot give them work because the mainland manufacturer does not send the goods to Puerto Rico to be processed. The contractor explains this, the home worker begs a few cents for something to eat, and trudges back home only to repeat the operation in a few weeks in order to ascertain whether any goods have come down meanwhile.

These pilgrimages have been keeping up for some weeks. Occasionally the home worker is rewarded in some slight fashion and goes home delighted with work on which she will gain a few pennies. Her need to earn is so pressing that it is difficult to cause her to reflect upon the fact that there is a code and that she should get more money if there was only work to be had, for she is now in a mental state to do any work for any money. Labor—whether mainland or insular—forced up the wages under a Government code and the work leaves Puerto Rico; so it becomes our Government's job to turn the flow of work back to Puerto Rico or to explain to the faltering but newly adopted citizen why she cannot have that work except at the new price and to educate her to an understanding of her opportunities. This process cannot be gone into until there is some character of stability about these new higher rates.

So many of the unfortunate home workers who for 10 or 15 years have been accustomed to a certain rate of compensation have far less interest in being able to earn more in the future than they have in being able to earn something in the present.

If one-half of the needlework, or, say, a volume of between five and six millions in handkerchiefs and cotton garments, has left the island during the last 60 to 90 days, then it becomes necessary to decide whether it is preferable, under the code, to continue to force this work out of the island or whether it is better to take steps to let some of it return.

RÉSUMÉ

Would it not be well to extend the piece rates indefinitely, the lady social worker said, then allow the handkerchiefs and cotton-garment work to go back to the island, say, for the year 1935, or, at least, until some gainful occupation not objectionable to labor can be devised?

The sugar restriction—quota—was one big blow, the needlework another, also the coffee crop. Might we not yield on needlework, pending other readjustment?

And now, after reading what the lady says in her résumé, you should know that since the wages and hour law was extended to Puerto Rico by Congress some representatives of the big industries are asking exceptions for sugar, needle industry, tobacco, and other enterprises to save the country by getting the unemployed back to work at the wages and hours that the business say they can afford.

BANKING BUSINESS

In connection with the general condition of business in recent years I quote from the last report of Governor Winship these items:

Deposits:	
June 30, 1934	$31,011,701.70
June 30, 1938	56,297,508.54
Loans and investments:	
June 30, 1934	34,814,325.22
June 30, 1938	33,541,397.92
Cash on hand:	
June 30, 1934	4,394,544.52
June 30, 1938	6,036,075.98

INSULAR GOVERNMENT

The total of all kinds of receipts covered into Government funds for the year of 1937–38 was $58,447,265.

Disbursements, 1937–38:	
General fund	$20,136,876.10
Trust funds	24,118,506.31

Sugar manufactured, in tons (2,000 pounds)

Sugar manufactured:	
1934	1,100,909.59
1938	1,073,243.357

Trade and commerce

Imports from United States, 1937–38	$84,987,994.00
Imports from foreign countries, 1937–38	8,326,789.00
Exports to the United States, 1937–38	79,808,113.00
Exports to foreign countries, 1937–38	2,269,065.00

The business report of the Governor demonstrates that the resources of the island can transform the conditions of the people for the best with the intelligent assistance of the Legislature of Puerto Rico, the national administration, and Congress of the United States.

The Reorganization Bill

EXTENSION OF REMARKS

OF

HON. CHESTER H. GROSS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1939

Mr. GROSS. Mr. Speaker, I have listened to able lawyers and politicians from both sides discussing this bill for many hours, and find no one in agreement on anything. I, like the rest of you, have not had an opportunity to study it. But this I do know: Anything under the caption of reorganization under this administration is nauseating to the country as a whole. The President has created many of these useless and overlapping departments of government when a subservient Congress voted him large lump sums of money. He has the same authority without additional legislation to eliminate them as he has had to create them. His record for spending money has been the same ever since he has entered public life. And so far as economy in this bill is concerned, the country will not accept it, because they do not believe that the President has had a change of heart. That the country has lost confidence in the administration was proven several days ago, when Hopkins made his midwestern speech. The speech was good, but no one believed him.

In all seriousness, let me say to you, those of you who vote for this bill will go back home and face the most wrathful people you have ever seen. This is striking the country below the belt. Yesterday two parties coming from Florida stopped off here just long enough to ask me to vote against this bill. Had the country known of this bill, every Congressman's desk would be piled full of telegrams in opposition.

A group of businessmen today informed me they would spend $500,000 to expand their business and purchase new equipment if it were not for the taxes. Many things could be done to economize and put people back at work without

granting more power to anyone, so I think this bill should be defeated, the President put on his honor, and see if he will continue to fool the country through the next campaign.

Impartial Observer Views Durant-Denison Dam

EXTENSION OF REMARKS
OF
HON. WILBURN CARTWRIGHT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1939

ARTICLE BY LORREN L. WILLIAMS IN THE OKLAHOMA NEWS

Mr. CARTWRIGHT. Mr. Speaker, the Oklahoma News, a Scripps-Howard newspaper, published until a few days ago at Oklahoma City, recently sent Mr. Lorren L. Williams, one of its best staff writers, to tour the area surrounding the proposed Durant-Denison Dam on Red River to learn the views of the people most greatly affected by this project.

He spent several days talking with engineers, county officials, landowners, sharecroppers, tenants, relief laborers, filling-station attendants, and others, and wrote a very interesting series of daily articles on the proposed project and the controversy over it.

"Somewhere there should be solid middle ground," Mr. Williams wrote, "upon which an unbiased observer can stand and survey the enterprise which is so vast in scope and has so many ramifications." In the concluding article of the series, published on February 5, 1939, this experienced observer, after carefully examining the advantages and disadvantages, attempted to find this neutral territory, summarized his findings, and gave his own views of the controversy.

Under the permission granted me I include his final article in full, as follows:

[From the Oklahoma News of February 5, 1939]

LABORERS IN AREA WOULD VOTE DENISON DAM, SURVEY INDICATES

(By Lorren L. Williams)

If construction of the $54,000,000 Denison Dam should be put up to a vote in the four counties most closely affected, it is probable the project would be approved by a considerable margin.

That seems a fair prediction after a survey of sentiment in the area in an attempt to arrive at a fair cross section of opinion.

It seems a fair inference, too, considering the outcome of the July primaries in which Denison Dam was a strong issue.

The four counties that would be partially submerged—Bryan, Love, Marshall, and Johnston—have a combined population of more than 75,000 persons.

LABORERS BACK DAM

Laborers and renters throughout the entire area appear strongly in favor of the big double reservoir because it would open up thousands of jobs for the next 5 years.

Landowners seem to favor the project where they are convinced a fair price would be paid for the soil. This excludes some who have sentimental ties and do not wish to leave the valley of the Red and Washita Rivers to make way for the 145,000-acre lake.

Businessmen in Madill and Tishomingo seem strongly opposed to the dam. But they would be outweighed by favorable sentiment in Durant and throughout Bryan County, which is the largest of the four in population and territory.

KEY WON IN DAM AREA

The Denison Dam was a factor in last summer's primary election in the Governorship race. Gen. W. S. Key campaigned in favor of Denison Dam and carried all four counties over his opponents, Governor Phillips and former Governor Murray, who opposed the dam. Mr. Key had a lead of nearly 5,000 votes in Bryan County over Governor Phillips.

Other factors entered into the race. It was charged that Mr. Key drew heavy support because of the relief groups since he formerly headed the Works Progress Administration.

It is quite certain that this same bloc of votes would be thrown in favor of the dam should a referendum be taken.

The landowners would have to be assured they would get a fair price. Opponents of the giant flood-control and hydroelectric project have claimed $23 would be the top price paid.

Lucius D. Clay, captain of engineers in the Denison district, says that as much as $100 an acre will be paid for some of the best land. Informed sources say this may go as high as $125 an acre.

The Government tentatively has set aside $8,000,000 for land purchases. Of this sum, $632,676 has been allotted to costs of survey and negotiation, leaving $7,467,324 for actual land buying.

In addition the Government has allocated $3,677,000 to relocation of utilities and roads.

Taking the assessed real-estate valuations as listed by the Oklahoma tax commission, the Government could purchase every foot of real estate in Marshall, Love, and Johnson Counties, and buy half of Bryan County.

Of course, the Government does not expect to buy land at figures given for tax purposes. Neither does it expect to buy all the counties.

MARSHALL TO DRAW HEAVILY

In Marshall County it will buy about 54,000 acres, approximately half of the 107,000 acres which will be flooded in Oklahoma. The county should draw, in land payments and utility relocations, at least half of the funds available, or roughly $5,800,000.

All real estate in Marshall County in 1938 is listed on the tax commission books at an assessed valuation of $2,495,315.

At that rate the Government will pay in land purchases about twice what the county values its entire territory for tax purposes.

The Government will not buy all of Marshall County—in fact less than a fifth of it.

Valuation of real estate in Bryan County is listed at $5,872,952. This county would lose 26,000 acres of land out of 593,920 acres. Love County's real estate is assessed at $2,534,093 and the county would lose 11,000 acres out of 328,960.

Johnson County's assessed valuation is $3,521,958. It would lose 18,000 acres out of 421,120.

It is true Madill and Tishomingo would be harmed to some extent because valuable bottom land would be covered up, leaving much worthless land for the farmers.

It is equally true that you can't build a reservoir on a hilltop and any time reservoirs are built in Oklahoma they will cover bottom land.

The land, black and mellow and seemingly a mint of value, also has its critics. Many claim the soil packs and burns in hot weather and is not as good as it looks.

Disastrous results of the State's experiment at the Aylesworth prison farm seem to lend weight to this claim. Other costly farm experiments in the vicinity add up to about the same answer.

The power issue is one of the hottest in the Denison fight. Everywhere throughout the two valleys you hear reports that representatives of the Oklahoma Gas & Electric Co. are attending meetings which are called to protest the dam.

O. G. & E. DENIES FIGHT

In Oklahoma City, George A. Davis, vice president of the O. G. & E., issued a statement asserting the company is not fighting the dam, but he cast doubt upon its economic feasibility.

Representative JOHN E. RANKIN, of Mississippi, charged in Washington that the Power Trust is attempting to make a "cat's-paw" of Governor Phillips, who started militant opposition to the dam in his message to the legislature.

A study of the facts indicate the power interests do not have much to fear.

Brig. Gen. Max C. Tyler, Assistant Chief of Engineers of the United States Army, in explaining the Denison plan before the House Committee on Flood Control April 11 last year, strongly indicated the Government plans to sell the power to the utilities.

SEEN AS PEAK-LOAD AID

The Federal Power Commission has made a study of the market in Oklahoma, Arkansas, Texas, and Louisiana, which indicates the utilities would absorb the Denison power for peak-load aid.

The Denison hydro plant would be capable of delivering up to 125,000 kilowatts for about 3 hours a day. This would be turned into the utility lines to bolster steam plants in times when they are under their heaviest load.

If operated on a continuous basis for 24 hours a day, the plant would turn out about 14,000 kilowatts, which would not be half enough for Oklahoma City. This would supply a city of about 25,000 to 40,000 persons.

POWER RADIUS LIMITED

Most economical distribution of power would be within a 200-mile radius of the dam, said General Tyler. He added:

"The estimate is that two major areas might immediately absorb the power—the Dallas-Fort Worth area and the Oklahoma City area.

"There are a number of public-utility companies there, and they are interconnected. It is pretty hard to say just how far power may be relayed from one to another."

J. F. Owens, president of the O. G. E., some time ago offered to purchase power from the Grand River hydroelectric project if it is made available at an attractive rate.

MAY NOT BE HARDSHIP

It is probably true that the utility companies would have trouble financing new power plants in this area with the hydroelectric plants being constructed.

If they could purchase power at Denison and Pensacola and sell it at a profit, it is difficult for an observer to see any considerable hardship on the utility companies.

Army engineers estimate a dam big enough to control both the Red and Washita Rivers would cost $38,250,000 without installations for power. This charges $16,750,000 to power development.

They estimate an annual income of $1,700,000 from power sale, which would be something over 10 percent on the investment annually.

Governor Phillips objects to the Denison Dam on the ground Oklahoma land would suffer and other States would reap major benefits.

STATE COULD HAVE POWER

It is reported most of the power would go to Texas, but this is not necessary if Oklahoma utilities want to share it.

It is true that more Oklahoma land will be flooded—109,000 acres in Oklahoma and 36,000 acres in Texas.

However, Oklahoma will get more than its share of the $11,600,000 set aside for land purchases and utility relocation. It also should get more than its share of benefits from the new jobs and expenditure of $54,000,000 in Government money.

It is true that Oklahoma will get only one-fifth of the flood-control benefits, with one-fifth going to Arkansas, one-fifth to Texas, and two-fifths to Louisiana, according to General Tyler's estimate.

However, there are 200 miles of Red River in Oklahoma below Denison Dam, and it is estimated 153,000 acres of the State will be protected from periodic flooding.

Only 109,000 acres in Oklahoma would be flooded, and that only in peak high-water years.

From a broad State-wide view, an acre below the dam should be worth as much as an acre above the barrier.

Governor Phillips' charge that the dam is being foisted upon Oklahoma without representation does not stand up well against the record.

The State planning and resources board was represented in Washington by Dr. Henry G. Bennett, chairman; G. W. Archibald Durant, vice chairman; F. L. Vaughan, director of water resources; W. C. Burhnam, water-resources engineer; and W. C. Austin, attorney and board member, of Altus.

Members of the Oklahoma congressional delegation also appeared at the flood-control hearing in April 1938.

CONGRESSMEN BACK DAM

Representative SAM C. MASSINGALE, of the Seventh District, said:

"I represent that part of Oklahoma through which the Washita River runs in Oklahoma. I appear here this morning in behalf of that project (the Denison Dam)."

Senator JOSH LEE said:

"Every time we can build a project that is self-liquidating, or even partly self-liquidating, * * * in the form of electricity generated, it should have our energetic support."

Representative WILBURN CARTWRIGHT, of the Third District, said:

"I am just returned from the location of the project area, and two-thirds to three-fourths of it is in my district. * * * I have been for this all the time, whole soul, heart and body, and mind."

SAYS STATE NEEDS WATER

Representative LYLE H. BOREN, of the Fourth District, said:

"I simply want to say a word in agreement with the discussion on this project, a word of support for the general project. It has been well spoken that Oklahoma needs this water, and States farther down the line need protection from our water."

Representative BOREN was the only member of the Washington delegation that sought a delay on the Denison work when William O. Coe, attorney, and two other representatives of Governor Phillips went to Washington.

Representative JED JOHNSON, of the Sixth District, said:

"The gentlemen from Oklahoma, Mr. CARTWRIGHT, myself, and other members, are unanimous in saying that the Oklahoma delegation is not only not against the Denison Dam but wholeheartedly for the dam and for any kind of flood control for the Washita River in Oklahoma."

It is hard to see where the impression got around that Oklahoma did not have a hearing on the Denison Dam.

Governor Phillips' fear that the rights of the State to the Red River water will be lost if the Denison Dam is built also pales beside the authorization bill, which gives Oklahoma the right to use any and all water above the reservoir for municipal purposes, irrigation, power generation, domestic or any other uses "as freely after the passage of this bill as may be done now."

One who treasures the aroma of black loam in the springtime will get a heart pang as he stands on a hilltop and looks back over the valleys of the Red and Washita Rivers and imagines them abandoned to the reservoir waters.

FLOODS NOT SO PLEASANT

It is hard to think that those homes and fields must be sacrificed.

But it is not pleasant, either, to stand on those hills and watch sullen, red flood tides sweep away homes, crops, livestock, and to see the faces of desperate men and frantic women and children as they fight for their lives in the treacherous flooded currents.

Floods on the Washita and Red Rivers are terrible things.

And the United States Army engineers have determined that for the benefit of the entire Red and Mississippi Valleys, those valleys should be flooded permanently that other lands might be saved.

Unemployment-Compensation Taxes

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1939

STATEMENT PRESENTED BY THE AMERICAN INSTITUTE OF LAUNDERING BEFORE HOUSE WAYS AND MEANS COMMITTEE

Mr. ANDERSON of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD I include therein the following statement made before the Committee on Ways and Means by Mr. E. M. Warren, vice president of the American Institute of Laundering. Mr. Warren's statement pertains to unemployment-compensation taxes, which is a subject of lively interest at the present time.

My name is E. M. Warren. I operate the Utility Laundry, Inc., located at Chatham, N. J. I speak for the entire power-laundry industry of the United States. I represent the American Institute of Laundering, which has its headquarters at Joliet, Ill., and am its vice president. It is one of the oldest trade associations of the United States, starting in 1883. Its 1939 membership totals 2,121 power laundries, representing an industry made up of many small business units. The 1938 sales volume of the industry approximated $420,000,000. Of this volume approximately 70 percent is handled by members of our institute.

The power-laundry industry ranks eighth in total number of workers. Of its more than 200,000 employees, 75 percent are women. Our industry's total pay roll approximates $231,000,000 annually. The purpose of the institute is educational and is definitely of a scientific research nature.

My comments will be directed solely to the unemployment-compensation provisions of the Social Security Act. We suggest no fundamental change. We believe, as an industry, that the act is sound and necessary. We seek only to remove a glaring discrimination against service industries—a discrimination which requires the laundry industry, for example, to pay a 250-percent greater tax than manufacturing industries.

The tax imposed by the statute is called a pay-roll tax. It is measured solely by total wages. The levy has no relation to revenue, sales volume, or profit. It fails to recognize the well-known distinction between a service industry and a manufacturing industry. A service industry is engaged in the business of buying and selling labor; wages are its raw materials. A manufacturing industry is engaged in buying and selling goods; commodities are its raw materials. Because of the nature of the service establishment's business, namely, buying and selling labor, a much larger percentage of its revenue dollar is consumed by the pay roll.

Laundering is a typical service industry. The average total pay roll for laundries reporting their costs to the American Institute of Laundering for the years 1928 to 1937, inclusive, was approximately 55 percent of revenue. For the year 1938 it will approximate 60 percent. In other words at least 60 cents of each dollar received is expended in wages.

The 1935 Census of Manufactures shows that the total pay roll for approximately 300 manufacturing industries was only 21.5 percent of the sales dollar. Thus, an average of less than 22 cents of each sales dollar was expended for pay roll, compared with 55 cents, the average for the laundry industry. This means that out of every $100 received the laundry industry pays a tax for unemployment of $1.65, while manufacturing industries pay a tax of only 66 cents. The service establishment's tax is 250 percent greater than the manufacturer's tax. This is the discrimination we want remedied.

The same discrimination exists with reference to service industries generally.

THE "VALUE ADDED BY MANUFACTURE"

The Social Security Board has advanced the theory that the pay-roll tax burden should be measured against the "value added by manufacture" rather than against the sales dollar. They define this "value added by manufacture" as the difference between what an industry pays out for materials and what it gets for its product. Upon this basis, says the Board, there is little discrimination, that "for manufacturing industries as a whole pay rolls were 51.4 percent of 'value added by manufacture'; for power laundries, on a comparable basis, 61.75 percent." The trouble with this proposition is that it does not recognize that labor (production workers) is the principal raw material of the service industry; it fails to include the cost of such labor when determining the "added value." In the manufacturing industries cost of materials equals about 58 cents of the sales dollar, while in the laundry industry the cost

of materials (leaving out labor) is only 17 cents of the sales dollar. If labor were added to the latter figure, as it must be, it would bring the cost of materials up to about the same figure, namely 58 cents. Thus, out of the 42 cents "added by manufacture," the laundry pays 55 cents, while the manufacturer pays only 22 cents. Laundries' pay rolls are, therefore, 130 percent (not 61.75 percent) of the "value added by manufacture."

A LOW PROFIT INDUSTRY

For the 10-year period of 1928–37 the average profit of the laundry industry was slightly over 1 percent of sales, 1.2 percent to be exact. When the total social-security taxes reach their maximum of 6 percent, it will amount to an increased cost of 3 percent of sales, or 1.8 percent more than the industry's average profit over a 10-year period. This demonstrates that the laundry industry is in no position to bear the 250-percent tax discrimination leveled at service establishments.

PRICES CANNOT BE INCREASED

Nor can this discrimination be passed on to the consumer by way of increased prices. Experience has taught us that increased prices result in drastically decreased volume. When prices reach too high a level laundering almost automatically stays in the home to be done by the housewife or her maid. The major competition is not other laundries but rather the home itself. Laundries cannot recover increased tax costs by increased prices.

UNEMPLOYMENT IS A GENERAL PROBLEM

The fact that service industries have a higher ratio of employees is no justification for the unequal tax levy. To hold otherwise is to penalize an employer merely because he chose to sell service rather than goods.

As far as the proceeds of the tax are concerned, there has been no attempt to earmark them for any special group. They go into a general fund to furnish compensation to the unemployed, whether he be a laundry worker or a steel worker. There is no theory behind the general law that each industry should be required to care for its own unemployed. If there were, then the Federal law would have to recognize many factors other than total wages or number of employees. In the laundry industry, for example, there would have to be a compulsory recognition of its remarkable record of stabilized employment. According to the 1935 census, employment by laundries for the peak month of August was only 2.8 percent above the average for the entire year, and employment for the low month of January was only 2.5 percent under the yearly average. Thus, the spread between the high and low employment months was only 5.3 percent. In the manufacturing industries, on the other hand, the spread is 11 percent, or more than twice as great.

As we have said, however, the law recognizes unemployment as a general problem. For this reason no one type of industry should be required to bear an unequal burden. The measurement of taxation should be such as to require each employer to contribute fairly equally to the general fund.

THE REMEDY

The remedy is, we believe, fairly obvious. The statute should reflect the universally recognized distinction between a manufacturing industry and a service industry. There is ample precedent for this distinction. The tax measurement should either be changed to recognize this distinction, or, if it is desirable to maintain total wages as the measurement, then the rate for service establishments should be reduced to a point where the 250-percent discrimination is wiped out. This latter proposal can be accomplished by amending paragraph (3) of section 901 of the act to read substantially as follows:

"With respect to employment after July 1, 1939, the rate shall be 3 percent, except that in the case of service establishments the rate shall be 1¼ percent."

UNEMPLOYMENT COMPENSATION AND ITS EFFECT ON THE POWER-LAUNDRY INDUSTRY

It is our considered opinion that the purposes to be accomplished by the Social Security Act are sound and should be provided for by legislation, but it is also a fact that we consider the present basis for collecting such taxes to be inequitable as far as the laundry industry and other high pay-roll industries are concerned. There is little question that our contention is correct. The 1935 census of manufactures, covering approximately 300 manufacturing industries, and the 1935 census of power laundries support this claim that the Social Security Act, in its present form, should be amended so as not to unduly penalize service industries whose total pay roll constitutes such a high percentage of revenue received. And important in this respect is the record of stable employment of the power-laundry industry.

STABILIZED EMPLOYMENT AN IMPORTANT FACTOR IN THE POWER-LAUNDRY INDUSTRY

The laundry industry is one of stable employment, as there is little seasonal fluctuation in laundry employment except in resort cities. This fact is proved by the data that follow, obtained from the 1935 report of the United States Bureau of the Census for power laundries. It will be noted that employment by laundries for the peak month of August was only 2.8 percent above the average for the entire year, and employment for the low month of January was only 2.5 percent under the yearly average. Thus the spread between the high and low employment months was only 5.3 percent.

Wage earners by months for 1935 as reported by the U. S. Bureau of the Census

Month	Laundry wage earners by months	Percentage to average for all months	Manufacturing wage earners by months (280 industries)	Percentage to average for all months
January	203,162	97.5	6,954,795	94.2
February	203,174	97.5	7,182,262	97.2
March	204,286	98.0	7,326,266	99.2
April	205,043	98.4	7,347,243	9915
May	207,071	99.4	7,280,289	99.4
June	210,206	100.9	7,171,767	97.1
July	213,745	102.6	7,185,660	97.4
August	214,162	102.8	7,451,154	101.9
September	212,188	101.8	7,676,155	103.9
October	209,870	100.7	7,771,614	105.2
November	208,594	100.1	7,693,214	104.2
December	208,751	100.2	7,585,677	102.7
Monthly average	208,354	100.0	7,385,508	100.0

It is interesting to compare these data with those for 280 manufacturing industries, also taken from a 1935 report of the United States Bureau of Census. During the peak month of October employment among manufacturing plants was 5.2 percent above the average for the year. For the low month of January employment was 5.8 percent below the annual average. Thus, while the commercial laundry industry showed a spread between high- and low-employment months of 5.3 percent, 280 manufacturing industries showed a spread of 11 percent, more than twice as great.

THE LAUNDRY INDUSTRY HAS AN UNUSUALLY HIGH PAY-ROLL PERCENTAGE IN RELATION TO TOTAL REVENUE

Commercial laundering differs from the majority of industries taxable under the Social Security Act in that it is a service industry where pay roll consumes a large portion of the revenue dollar. The average total pay roll for laundries reporting their costs to the American Institute of Laundering for the years 1928 to 1937, inclusive, was approximately 55 percent of revenue. In other words, 55 cents of each dollar received was expended for pay roll.

The 1935 census of manufacturers show that the total pay roll for the 39 largest manufacturing industries included in the survey was only 28 percent of the value of product sold. Thus, an average of only 28 cents of each sales dollar was expended for pay roll, compared with 55 cents the average for the laundry industry for a 10-year period. The laundry pay roll is therefore about twice as great in percentage of revenue as the average for the 39 largest manufacturing industries. If all manufacturing industries are included the average total pay roll is only 21.5 percent of the value of their product compared with 55 percent for commercial laundries.

A comparison of pay-roll percentage to revenue for the major manufacturing industries based on 1935 census reports, follows:

Number of wage earners by manufacturing industry and percentage of total pay roll to revenue (1935)

Industry	Wage earners	Total pay-roll percentage to revenue
Agricultural implements	52,866	27
Boots and shoes	202,113	31
Bread and bakery products	218,423	23
Canning (fruits and vegetables)	116,298	14
Chemicals (not classified elsewhere)	65,838	17
Cigars	56,019	26
Clay products	44,583	39
Confectionery	52,109	20
Cotton manufacture	383,002	27
Electrical machinery and supplies	179,641	30
Foundries	89,894	46
Furniture	130,781	33
Glass	67,138	30
Hardware	41,473	37
Knit goods	219,776	35
Leather	60 877	22
Lumber	255,230	38
Machinery (not classified elsewhere)	109,818	34
Meat packing (wholesale)	116,620	8
Men's cotton clothing	121,889	26
Men's, youth's, boys' clothing (not classified elsewhere)	154,583	28
Motor vehicles	147,044	10
Nonferrous metal alloys	62,935	24
Paper	103,344	20
Petroleum refining	77,402	8
Planing-mill products	48,297	30
Printing and publishing	245,376	35
Radio apparatus and phonographs	44,796	29
Railroad repair shops	135,800	53
Rayon manufacturers	70,318	30
Rubber tires and tubes	57,128	22
Rubber (other manufacturers)	40,307	29
Ship and boat building	44,830	45
Silk manufacture	55,590	31
Stamped- and pressed-metal products	50,014	32
Steel- and rolling-mill products	359,630	27
Stoves and ranges	41,739	30
Women's, misses', and children's wearing apparel	259,042	24
Wool and hair manufacture	166,604	25
Average pay-roll percentage for 39 largest manufacturing industries with 4,739,167 wage earners		28
Laundry industry (208,354 wage earners)		55.1

Since pay roll in the laundry industry is such a high percentage of revenue, and inasmuch as unemployment-compensation taxes are based on pay roll, it is a fact that the tax burden is greater for laundry owners than for the vast majority of other employers. For example, if the 1938 unemployment-compensation tax rate of 3 percent paid by the employer is applied to total pay rolls as shown by the 1935 census reports for manufacturing and laundering, it is found that while the average unemployment-compensation taxes paid by 280 manufacturing industries amounts to only sixty-four one-hundredths of 1 percent of revenue received, the taxes paid by the laundry industry amount to 1.65 percent of revenue—more than two and one-half times the average percentage paid by all manufacturers. It is for this reason that laundry owners consider the present basis for computing social-security taxes to be inequitable as applied to the laundry industry.

The present Social Security Act provides that taxes to employers will ultimately amount to 6 percent of pay roll, which is equivalent to more than 3 percent of sales for the laundry industry. A tax of such proportion will prevent many laundries from operating at a profit.

THE LAUNDRY INDUSTRY IS A LOW-PROFIT INDUSTRY

Even though the laundry industry ranks high in number of wage earners and annual sales volume when compared with other industries, it is made up essentially of numerous small local units individually owned. The average profit for these plants for a 10-year period of 1928–37 has been slightly over 1 percent of sales. It is quite doubtful whether an industry with such a narrow margin of profit will be able to absorb an approximate increase in costs of 3 percent of sales when the social-security taxes reach their maximum of 6 percent of pay roll. If the effect of such taxes will be to increase the number of nonprofitable laundries, the result will be to the detriment of the laundry industry as a whole, and less revenue will accrue to the Federal Government in the form of income taxes. Laundries forced out of business will add to the already serious unemployment problems.

A comparison of laundry profit or loss and total pay roll for the 10-year period 1928 to 1937, inclusive (in percentage to revenue), is as follows:

Year	Profit or loss, percent of sales	Total pay roll, percent of sales
1928	9.50	52.32
1929	8.07	51.84
1930	2.23	54.34
1931	[1] 1.17	55.77
1932	[1] 4.81	56.31
1933	[1] 4.77	56.19
1934	[1] 1.44	56.88
1935	.19	55.75
1936	1.90	54.84
1937	1.35	56.79
10-year average	1.20	55.10

[1] Loss.

PRICES CANNOT BE INCREASED SINCE THE LAUNDRY'S COMPETITORS ARE ITS OWN CUSTOMERS

The argument that increased costs due to social-security taxes can be offset by an increase in selling prices is not effective as far as laundry owners are concerned. They know that an increase in the prices of their services usually results in decreased sales. The reason for this is that laundering can be done in the home, either by the housewife or her maid, if the prices charged by the laundries are considered to be too high.

Competition in the laundry industry is unique. The major competition is not other laundries, but, rather, home washing machines and domestics. Whenever laundry customers believe that they cannot afford to send their clothes to a commercial laundry, they either buy home washing machines and do their own washing or have it done by a washwoman. Once these machines have been purchased, laundries lose the purchasers as customers until such a time as machines must be replaced or are discarded. In any event, laundries lose business as a result of price increases. For this reason it is not practical for them to attempt to recover increased costs due to social-security taxes by increasing their prices for the various laundry services.

THE LAUNDRY INDUSTRY IS A MAJOR INDUSTRY

The laundry industry is one of the major industries, although it is not generally thought of as such. For example, according to the Bureau of Census, the laundry industry in 1935 ranked eighth in total number of workers and thirty-first in sales volume when compared with 280 other industries included in the census survey.

SUGGESTED AMENDMENTS TO UNEMPLOYMENT-COMPENSATION PROVISIONS OF THE SOCIAL SECURITY ACT

We propose that:

(1) Paragraph 3 of section 901 of the act be amended to read as follows:

"With respect to employment after July 1, 1939, the rate shall be 3 percent except that in the case of service establishments the rate shall be 1¼ percent."

(2) The unemployment-compensation tax now paid by employers on total pay roll shall apply only against the first $3,000 of wages and salaries received by individual employees, if that amount is retained in the old-age-annuity tax provision.

(3) The reporting of Federal and State unemployment-compensation taxes and also the old-age benefit provisions of the Social Security Act be combined, thereby relieving employers from the necessity of preparing separate Federal and State tax returns.

Our National and International Problems

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 10, 1939

RADIO ADDRESS OF HON. JOHN G. ALEXANDER, OF MINNESOTA, MARCH 9, 1939

Mr. ALEXANDER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address I delivered over the radio yesterday, March 9:

Good afternoon, ladies and gentlemen, the Columbia Broadcasting System is rendering a great service to the public interest by giving time in this way for the creation of a forum where great public questions may be freely discussed in a Nation-wide hook-up. They are to be highly commended. * * * I hope many of you will do so at the end of this broadcast.

I think if I were to give a title to these remarks it would be something like this: Were the Revolutionary soldiers coworkers with the devil; or is democracy in Guam? From that you may suspect that I have chosen a warm subject and one which is highly controversial. You are correct in your assumption, but I do not intend to handle it with gloves on my hands nor a muzzle on my tongue.

We are undoubtedly at or nearing a crisis in international affairs; and we, as one of the potent nations in this complex, interdependent, internationalized world are unable to avoid the consequences of a serious break in peace, much as our soothsayers and sedative prescribers would have us believe otherwise. In view of such a situation, with its terrific and horrifying potentialities for destruction, for loss of life, and of all of those values which mankind holds dear, I feel that it is high time for some clear thinking and plain speaking.

As an indication of this need I wish to quote to you excerpts from an article inserted in the Appendix of the CONGRESSIONAL RECORD, page 880, by Senator CLARK of Missouri, entitled "Affirmation of Christian Pacifist Faith," taken from the magazine Fellowship for March 1939. After asking the very fine and appropriate question as to what direction can be found in the gospel for the Christian and for the church today, when faced once more with the prospects of imminent war, then the article goes on to make a statement which is termed the answer given thereto by Christian-pacifist faith. It is well that the qualifying adjective "pacifist" is used, for without it undoubtedly many Christians would object to the assumption of their inclusion in the philosophy thereafter expressed. There is no doubt that the 100 members of the clergy who signed the formula proposed were conscientious and high-minded in their aim, but there is a question as to the omniscience of their philosophy and logic.

For instance, we find this statement: "Therefore we proclaim to a world which is once again madly preparing for war that the gospel of God as revealed in Christ leaves us with no other choice but to refuse to sanction or to participate in war." "War, and preparations for war," they say (that is, preparedness), "constitute a denial of the way of the cross, for it attempts to overcome evil with more evil." Now the premise of the last sentence is good, but the conclusion seems hardly justified. True, as they say, war constitutes a denial of the way of the cross, but they add "and preparation for war also constitutes a denial," therefore and thereby raising this question, Do we not need to hold the lines and the advances already gained in the upward march of humanity to its ultimate goal, hold them by adequate and essential preparedness against the onslaught of war-mad dictators? Or, to put the question another way, have Ethiopia, Spain, and China, by their nonpreparation for modern war, made any greater contribution to the promotion of Christian idealism than those nations who have fostered necessary preparedness? And then let's consider the conclusion contained in the above quotation, viz, this (I quote) "For they attempt to overcome evil with more evil." Now there is no doubt that war is bad—that it is hell for the participants, as so forcefully suggested by General Sherman and as each of us agree who were in the last war; but if all war is evil and therefore justifies us in nonparticipation as these gentlemen tell us in this article, then the Revolutionary War was evil, and Lincoln and Grant were wrong in bringing the Civil War to its successful conclusion; then, too, those brave and loyal sons of freedom who carried on the Revolution from Bunker Hill to Yorktown were sinful coworkers of the devil; and those who suffered and died from Fort Sumter to Appomattox to preserve the Union were sons of darkness instead of preservers of liberty and democ-

racy; and so too George Washington and Benjamin Franklin and others were carrying on the works of the devil and the fruits of their victory were evil, because it overcame evil with a defense to oppression. No; I cannot subscribe to that theory. And I doubt if many true Americans and Christians will either, a theory which says we should not resist war with war if need be or if forced upon us.

If time permitted I would like to go on and read other paragraphs from this, if well meaning, then amazing pronouncement by this ministers' peace covenant. Boiled down they seem to be saying that we should lie down and let evil engulf us and let all that is fine, noble, just, and uplifting be destroyed by the military dictators. To my mind, the only day when we can do our reclining is when we have finally prepared the world for the blessings of Christianity and for enjoyment of the love symbolized by the cross. Until then, until that great day when all men shall be free, if I am not mistaken, the instruction and personal lesson shown by the Leader of their faith was to fight on for the right to the death, if need be. He did not teach that we should passively accept sin, evil, and oppression. Did He not dash into the temple in Jerusalem, tip over the tables of the money changers, and drive the operators out with epithets and a scourge? He did, and, by countless other incidents, indicated that the age-old battle between sin and goodness should be carried on even to death.

Of course, wars come—they come today because of our ignorance and indifference to the application of the first and foremost and the real principle of Christianity in our international affairs—that is, that you are your brother's keepers, and that all men everywhere are your brothers. Pacifism has not stopped war ever yet—will not stop it except as pointed out above—and war will continue to come until we can promote and extend these real principles of Christianity and democracy, which are synonymous, throughout the world.

That is the duty and it is the obligation of each and every one of us, and the way it applies in a given case is best explained by a quotation from my own remarks in the House of Representatives on Washington's Birthday, February 22, on the question of the appropriation of $5,000,000 for the dredging and building of a breakwater in Apra Harbor, on the northwest corner of the island of Guam. I said then, and repeat now, "Where is democracy? Is it limited to the 48 States of the Union and bounded by the shores of the Atlantic and Pacific, and the Mexican and Canadian borders, or does it extend to Alaska, to Hawaii, Puerto Rico, the Philippines, Guam, and our other Territorial possessions? Does it extend to our ships, our merchant marine, our commercial air lines, and the routes which they are traveling today? Or is it limited to the docks or the landing fields in this country from whence they start their journeys, or is it only found on the farms where the ships' cargoes come from, or at the oil wells in Texas or Oklahoma, or in the steel towns where the ships' framework was fabricated, or in the lumber camps that provided the lumber to make the ships? And if it is so limited and is to be found only in such primary places, then God forbid the building of the ships, the furnishing of farm products, the furnishing of 'oil for the lamps of China,' or the departure of our elements of trade and commerce to the seven seas of the world! If democracy is only to be found in so narrow an area as that which the isolationists would have us believe, then it would have been much better to have left off building democracy across this continent and to have kept it confined to the Original Thirteen Colonies of 1776. Suppose we had done that; had not pushed on to the west coast; had left Spain, France, Mexico, and England in control of the Middle West and the West. * * * I repeat, if democracy is to be found only in so narrow an area as that which the isolationists and pacifists would have us believe and recommend the defense of, then God forbid that the precious lives of our seamen and aviators be sent out to face the great risks to which they will be subjected by the fierce and never abating onslaught of those military dictators who are carrying on their wars of aggression and the destruction of our international law and order every day of these modern years and in every corner of the globe. In the terms of a saying of that great statesman and intellectual leader, Benjamin Franklin, if democracy is only a lamb to be defended and fought for here on United States soil, then we should not send it out among the wolves of international outlawry and brigandage.

But I am not so sure that we can so limit and circumscribe democracy, even if we did attempt it, nor am I willing to agree that democracy, great and idealistic as it is, can be preserved and promoted if we so seek to limit it and limit our defense of it. And I say that for this reason, that not only does water seek a level but also so does mankind, not only socially and materially but also politically seek a level, and if we do not protect and promote democracy in every single far corner of the earth, bringing it to the rest of the world intensively and aggressively, and protecting it even in Guam, then the rest of the world will bring their less desirable political philosophies to us. This old world is a great old evener, and if we do not take democracy to the rest of the world, lifting humanity and its nations and races up by it and to it, the lesson of history indicates that they will then drag us down to their less desirable level.

So the consideration of the development of Guam, this outpost 5,428 miles from the United States, becomes a matter not of antagonizing Japan and her allies but one of national defense and of our own protection and of democracy. For, as I have already pointed out, democracy is found wherever our trade and commerce goes, and it will go everywhere if America is to continue to exist, or to grow, so then we cannot limit our ideas and conception of national defense to the soil and to the cities of the 48 States. Our whole commercial, social, religious, and political future will depend upon the support which our Naval and Military Establishments can and will give against the forces at home and abroad which would drive us into a circumscribed area. And to those who are of that school which visualizes our danger of attack as only that here in America, I would say that to pursue that policy to its ultimate end and conclusion would mean that in the final analysis, after both England and France have been defeated and forced to completely capitulate and bow to an unconditional surrender to the war lords of Europe and Asia, and if you are anticommunistic, including Russia in that group, we of America would then face them alone. And what an allure our $14,300,000,000 in gold bullion and our $2,000,000,000 in silver bullion, and all our other great natural resources would have to those present-day Napoleons? And how little chance would there be that we could hold the line, withstand their combined onslaught, and save ourselves from destruction without a similar surrender?

Therefore, it seems very clear to me that the appropriation for the harbor at Guam is a very necessary and essential commencement and element of the protection which we all desire. I say this advisedly, first, because this is the best guarantee of peace which we can possibly create, and also the best guaranty of preparedness in terms of national defense, as is shown by the Hepburn committee report, a committee made up of outstanding experts on this subject. They say—and listen to this carefully, because it is very important—I quote: "A strong advance fleet base at Guam, developed to the practical limits which the natural resources invite, would assure the most favorable condition that could be brought about for the prosecution (should need arise) of naval operations in the western Pacific, arising from whatever necessity. It would reduce to its simplest possible terms the defense of Hawaii and the continental coast of the United States. It would also assure the ability of the fleet to operate with greater freedom in meeting emergency conditions that might arise in the Atlantic." In other words, if it were to reduce to its simplest possible terms, as they say, the defense of Hawaii and the continental coast of the United States, it would help to shorten the war and eliminate the possibility of danger and destruction and loss of lives in and to our own continental area, and, as they say, it would make it possible to release more of our fleet for the handling of any emergency condition which might arise in the Atlantic. Is it not very apparent that in terms of our own welfare and safety and in terms of the lives of our youth that we should promote this recommendation, rather than to take the blind, ostrichlike attitude which would leave us in the same unfortunate situation we found ourselves in in 1917–18, when we did not have a single piece of artillery, except a few coast artillery guns, which we could use at the front in France, and when it took us 15 long months before we could halfway train and equip an army for service at the front? I think it is, and I hope you will support us in this question.

Monopoly Investigation

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1939

STATEMENT OF WILLIS J. BALLINGER BEFORE TEMPORARY NATIONAL ECONOMIC COMMITTEE

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks, I present the following statement of Prof. Willis J. Ballinger, director of studies and economic adviser to the Federal Trade Commission, at the opening of hearings by the Federal Trade Commission before the Temporary National Economic Committee:

The Federal Trade Commission has been requested by the Temporary National Economic Committee to assist in the study of monopoly and monopolistic practices found in American industry. For the purpose of a preliminary survey, the Commission is presenting the following testimony.

The presentation is in three parts—a prologue, a general summary of Federal Trade Commission experience over the past 7 years, and an account of monopolistic conditions existing in 13 industries at the present time.

In the prologue the Commission offers its definition of the problem at hand, involving the sense in which it will use the terms "capitalism," "monopoly," and "competition." This section deals also with the relation of free capitalism to democracy as a background for the discussion of actual restrictions to freedom as found in business practices. Testimony will be introduced showing in addition the relation between monopoly and the failure of business to recover full prosperity.

Part 2 deals with the recent experience of the Commission in the enforcement of the antitrust laws. The testimony will indicate the kinds of monopolistic practices uncovered by the Commission in numerous cases and in its general investigations. Particular attention will be given to the investigations covering public utilities, farm machinery, chain stores, and agricultural income. The obstacles encountered in attempting to protect competition will be indicated, and the reasons for the failure of section 7 of the Clayton Act to accomplish its purpose. Section 7 was designed to prevent the concentration of the control of production in industry and to prohibit one of the principal methods by which monopolistic practices are greatly facilitated.

Part 3 presents a series of 13 examples of important industries, showing the existence of monopolistic practices at the present time. Our budget and the time available have not permitted us to give, at this time, as complete a picture of the extent of monopolistic conditions in American industry as exists.

In selecting these 13 examples we have tried first of all to obtain illustrations of different varieties of monopoly. We have also endeavored to select industries that are of immediate interest to large groups of people. Some of them directly affect the consumer, others provide materials to a multitude of small industries, and still others are of primary interest to the producers of raw materials who must sell in a market where monopolies are the only buyers. Cases of double monopoly occur, where the industry controls both the raw material prices which it pays and the prices at which it sells its product. These examples will also indicate the fact that at times a raw material may pass through several layers of monopoly before reaching the final consumer, who must pay the costs of all these interferences with competitive trade. Finally the Commission has selected examples of both large and small industries to illustrate the fact that bigness and monopoly, although often related, are not always found together.

In this investigation the Commission is not primarily interested in the legality or illegality of the practices or conditions described. In the Commission's opinion, one of the gravest problems before the Temporary National Economic Committee is one of recommending suitable changes in our present laws which will lead to an effective encouragement and protection to free initiative in business. Many of the present antitrust laws were aimed at the crude monopolistic practices of an earlier day, chiefly the acquisition of ownership of competitors, or collusion and conspiracy to refrain from competition. The proof of collusion and conspiracy has always been difficult. With the passing years the difficulties have increased enormously. Today there are more subtle ways of restraining trade, where the difficulties of proving any conspiracy or collusion are frequently baffling. In law a monopolistic practice is one that can be proved to be in violation of existing law. To economic science, however, a monopolistic practice is one that interferes with the flow of free and fair competition in industry, even though the practice or condition may be unreachable by existing law.

When the economist sees prices stubbornly resisting the influence of falling demand, holding steadily to a high level while production shrinks almost to nothing, he knows that competition has ceased to work at that point, though proof of any conspiracy to fix prices may be impossible or exceedingly precarious. When he sees technical improvements reducing costs in an industry, with no corresponding reduction in the price of the product, he knows that something is there that is not good for the health of the competitive system. When he finds the Government confronted with a number of bids, presumed to be secret, all identical to the last cent, it is clear to him that some obstruction is lodged in the arteries of trade. When he finds in industries excessive profits and inflexible prices, or excessive production and inflexible prices, or rising prices and falling costs of production over a long period of time, he knows that monopolistic conditions are present, even though the detection of any conspiracy to restrain the law of supply and demand may be hopeless or extremely difficult.

It is the Commission's opinion that the disease which it characterizes as restraints of trade in sundry form is equally fatal to American capitalism, where it originates in the overt act of an individual, in any encouragement offered by Government itself, or in a contagious virus that cannot be located by any existing microscope of the law.

The first fact that must be recognized as the basic cause of the present investigation is that the laws against monopoly, beginning in 1890, as generally construed by the courts, have proved ineffective in preventing the steady growth of monopolistic practices in American industry.

PROLOGUE

In the opinion of the Commission the chief obstacle to a clear analysis of the problems of monopoly will be found in the confusion of terms, the use of words such as capitalism, monopoly, and competition, with two or more incompatible meanings at the same time.

This difficulty cannot be easily and quickly overcome by setting down a list of standard definitions. The acceptance of practical definitions of the subject must be built up by detailed examination of many lines of industry, each with its own peculiarities of circumstance and behavior. In advance we can only suggest the objective toward which the Commission believes the discussion should be aimed.

Capitalism is often used to describe several different aspects of a business system, such as the fact that capital investment is employed in production, or that the means of production are privately owned. So far as the first of these definitions is concerned, it applied equally to Fascist, Communist, and monopolistic systems of industry, all of which use machinery and fixed capital. For the purposes of the present discussion such a definition leads nowhere. The Commission desires to make plain that the aspect of capitalism, which is here under examination, relates to the competitive relationship among producers and consumers operating for their own interest in the hope of economic gain.

Capitalism and democracy, to the man in the street, appear to have been developments of the last 150 years. Sometimes he remembers vaguely that the Greeks had a word for democracy, but only students are aware that for thousands of years capitalism and democracy have been partners in a long and indecisive struggle for human liberty. Our own experience in America has been only one instance of the vicissitudes of the partners, capitalism and democracy. To realize that capitalistic systems have risen, flourished, and perished many times before the coming of the modern capitalism, it is necessary to know that capitalism can exist without automobiles, radios, or giant corporations utilizing costly and complex machinery for the production of goods. We must not confuse technology or variety of production with the capitalistic system itself and think that modern capitalism is something brand new because it has introduced tremendous improvements in the production and distribution of goods. Stripped of its superior technological equipment, modern capitalism is essentially the same as capitalistic systems which appeared and disappeared thousands of years ago—theoretically a system of free markets where any man may sell his labor or his products according to the laws of supply and demand. Reasonable freedom of initiative and a fair chance to compete in the market are the essence of capitalism, and democracy is the traditional method by which people have tried to protect this freedom against the excessively predatory man.

There are many examples of free markets developing and democracy organizing itself to ward off robber bands and hostile neighbors. With organization came the opportunity for peaceful exploitation from within. Almost at once we see the beginning of interference with free trade by what we now call rackets, and soon by organized controls operated by powerful private interests. Sometimes interference with the free market was vested in a rich merchant or society of merchants, sometimes in a guild, sometimes in a feudal lord. In one way or another the system of free competition is broken down. Trade is limited and confined, sometimes for centuries, that later historians will call Dark Ages. For a time democracy prevailed and drove back predatory businessmen. In the end a few men found means of standing legally across the market and taking toll, democracy went under, and the victors fattened on the market until they destroyed it, and through the concentration of wealth established tyranny. Frequently the burden of economic parasitism became too great for the industry of the people to carry; a war or revolution broke down the ruling class, or the discovery of new lands offered an escape for the downtrodden; and capitalism, the system of free market, appeared again to begin a new cycle. The long battle between trade and the tribute taking has gone in cycles of victory and defeat. Through the centuries the struggle of capitalism and democracy against the ancient craft of toll taking has swung to and fro. Free enterprise has risen and perhaps for many generations has defended itself with the ballot box against the growth of concentrated economic power, which devours capitalism by seizing markets through the power of money, destroys free enterprise, and takes tribute at every corner. Then in a day of weakness democracy has been seduced or conquered, and wealth has taken control of industry and trade.

Sapped by the growth of plutocracy, civilization has burst into a feverish orgy of degeneracy and crime, and has then sunk into a long, dark age until there came a new birth of freedom and the beginning of a new struggle.

Modern capitalism was the revolt of producers and consumers against the highway robbery of the feudal lords. It was another flag of freedom appearing after a long night of concentrated economic power and political tyranny. Men would band together to work and trade with one another and to fight off the oppressor. But as capitalism developed the old barons came back in new forms. In the towns where modern capitalism began its struggle with the feudal order the new free market system eventually degenerated into a system of plutocratic and monopolistic guildsmen. Democracy and capitalism were trapped once more. Then capitalism escaped for a brief moment to the countryside, to country fairs and auctions where free enterprise began anew, and what a man made he could sell and put the profit in his pocket. But very quickly it was snuffed out by the king who embarked on the royal business of selling monopolies to favorites and insiders. Free trade vanished once more until the coming of the industrial revolution.

Here on American soil another stretch of free enterprise has precipitated the old historic struggle—the efforts of democracy to save its partner, capitalism, from its ancient foe—predatory business practices which destroy free enterprise.

Lest the people learn the lesson of history, the dark powers of concentrated wealth choose in each new struggle a new name for themselves, avoiding the old names that carry the historic smell of tyranny. Tyrant, satrap, pharaoh, khan, caesar, emperor, czar, and kaiser have left their sulphurous trail across the pages of history. Today in Europe they have new names. In America we call the lesser rulers business leaders and corporation lawyers, the great ones are simple kings—oil kings, match kings, soap kings—hundreds of them. The great overlord who will draw them all

together into a perfect plutocratic dictatorship has not yet appeared. But there are portents in the heavens which betoken his opportunity.

History seems to indicate that in the end democracy has always been destroyed as the free competitive markets of capitalism have been overcome by predatory business practices. Each new capitalistic system has been like a man passing through life among the invisible germs of fatal disease until at last one of the arrows of death gets him and he dies. Every time a democratic people succeeds in beating back the powers of high finance, protecting fair competition, and preventing the operation of special privilege, capitalism and freedom are saved for the moment. The next moment the danger appears again from some new quarter and must be once more escaped.

There is no evidence, however, that capitalism and democracy are limited to a certain length of life by natural law. When they die, their deathbed is always laid in the midst of palatines and slums and concentrated economic power. The natural law appears to be that the price of freedom is enternal vigilance against the growth of such concentrated economic power.

The question whether capitalism in the world at large has now reached another autumn, the beginning of a long winter of darkness and stagnation, is hardly an academic one. Some of the greatest industrial areas of the earth are already organized in Dark Age forms. Freedom has been not merely lost but repudiated and cast out. The future, abroad at least, so far as we can see, points toward destruction rather than toward new triumphs of progress and improvements in the standard of living.

Our country has slipped down from a precarious peak of prosperity into a long plateau of depression. The question is a vital one, whether we are at the end of our growth as a free democracy. If the answer is that our dream of freedom is over, it will not be on account of the conquering power of distant enemies, but because of the same internal disease that has destroyed capitalism in the past and in other parts of the world during the present century. Our duty here is to locate that aspect of capitalism that is vital to freedom and to find the means by which that vital element may be preserved and cultivated.

In examining the operation of our present system of trade, the Commission believes that competition must be regarded in the light of the effects that are desired. To avoid the degeneration into totalitarian controls, something that we know as free initiative must be permitted and encouraged. The details of business enterprise, of risk and adventure must in some substantial degree be the free action of individuals operating in a system of fair competition. To preserve a field of free action there must be safeguards that will prevent the growth of powers that are destructive of such freedom.

Whatever the details of the obstructions to trade that will be found by the economic committee, for the present the Commission lumps them together in this discussion as being varieties of monopoly.

The Commission believe that whatever may have been the immediate causes of the present depression, the effects have been aggravated by the lethargy of the capitalistic system, a lethargy due to a steady growth of monopolistic practices in American industry and trade. The failure of controlled prices to follow the falling market in 1930 was apparently a factor in prolonging and deepening the collapse of production and employment. Artificially high prices appear to have been a factor in the unwholesome lack of buying power that has so long interfered with recovery. In 1936 and 1937 it seems that artificial and excessive increases in prices were in part responsible for limiting the growth of prosperity and turning the curve of production downward.

The fact appears to be established that price and production controls, set up in the hope of obtaining larger profits at the expense of the business system as a whole, have succeeded in so poisoning the whole system as to defeat even their own purpose. A cancer may live successfully at the expense of the body of its victim only until it kills the body and dies with it. There appear to be symptoms indicating that monopoly has so far weakened the body of capitalism that both are in danger of dissolution to be followed, as in other nations, by some kind of authoritarian social order which would be highly distasteful to the American people.

The remarkable difficulty of economic recovery, and the ominous developments abroad, indicate the need for serious investigation and action to relieve capitalism of as much as possible of the deadening growth of trade restraints. Other measures may also be necessary, but no program of recovery will restore a healthy capitalism if it fails to include a restoration of healthy competition in industry.

The Commission desires to make clear its assumption that the resolution establishing the Temporary National Economic Committee directs the committee to seek for means of protecting free and fair competition, not for means of giving it a decent burial. The Federal Trade Commission, in the course of its work, has become familiar with the existence of a sentiment favoring a relaxation of the laws against monopoly. Proposals are constantly made, and no doubt will be made again, for the organization of price and production controls under public sanction, with the purpose of creating monopolies in industries where they do not now exist, or of sanctioning them where they exist by evasion of the law.

The Commission stands unalterably opposed to any general legislation permitting the organized control of prices and production by private business. It subscribes fully to the viewpoint of a distinguished American jurist and social philosopher, Justice Brandeis, when he said some years ago:

"You cannot have true American citizenship, you cannot preserve political liberty, you cannot secure American standards of living unless some degree of industrial liberty accompanies it. And the United States Steel Corporation and these other trusts have stabbed industrial liberty in the back. They have crushed it out among large groups of our people so completely that it will require years to restore our industries to a condition of health."

The Commission recognizes that in some industries technological necessity or national defense may require the establishment of monopoly; but this development should be kept, in the Commission's opinion, to as narrow limits as possible. Public utilities do not belong, theoretically, in a free capitalistic system; they necessarily land in Government regulation, and some of them already have landed in public ownership.

For the great bulk of American industry and business in which no technical necessity or other unusual circumstance for monopoly exists the Commission holds that free competition, protected against unfair practices, is essential. In order to preserve capitalism and democracy, we do not have to keep absolutely every business in a free form, but we have to keep enough free business to make this, in general, a free country.

If, in an effort to prevent unfair practices, free business is permitted to organize and establish its own rules of action, the result will inevitably be to cover all business into a monopoly system. This road leads directly to some form of authoritarian government. The abandonment of free capitalism here, as in other nations, will require the abandonment of democracy. The Commission suggests, therefore, that this committee will do well to oppose any attempt that may be made to obtain its sanction for laws looking to the organization of free industries for price and production control.

Finally the Commission feels it to be vital to the success of this investigation to recognize that recovery at any price will not satisfy the needs of the situation. We may be tempted to abandon all hope of restoring capitalism and to resort to a mere recovery of production and employment in the shelter of an authoritative governmental system of planned industry. The Commission does not regard such an outcome as one to be desired. On the contrary, the question is one of restoring a degree of flexibility and vitality to the capitalist system that will allow full prosperity with freedom. To kill the patient and substitute someone else is not a satisfactory cure. Indeed, it feels that such a cure would be fraught with the greatest peril to the real economic progress of the American people in the years to come. It is in competitive markets that mankind has made his greatest progress, and the words of Woodrow Wilson written many years ago are a sound admonition to all civilizations that seek to rise to higher levels of economic achievement.

"American industry has always thriven, when it has thriven at all, on freedom; it has never thriven on monopoly. Limit individual opportunity, restrict the field of originative achievement, and you have cut out the heart and root of all prosperity. You cannot use monopoly in order to serve a free people. We purpose to prevent private monopoly by law, to see to it that the methods by which monopoly are built up are legally made impossible. We design that private limitations on individual enterprise shall be removed so that the next generation of youngsters, as they come along, will not have to become protégés of trusts, but will be free to go about making their own lives what they will."

W. P. A. Appropriation

EXTENSION OF REMARKS

OF

HON. JOHN C. SCHAFER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 10, 1939

EDITORIAL FROM THE MILWAUKEE JOURNAL OF MARCH 7, 1939

Mr. SCHAFER of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of March 7:

[From the Milwaukee Journal of March 7, 1939]

SO IT WAS ONLY TALK?

President Roosevelt, returning from his cruise, hears economy talk around Washington and immediately serves notice he will ask again for the $150,000,000 Congress took from his W. P. A. appropriation. Otherwise, we hear again, one-third of those with W. P. A. jobs must be stricken from the rolls.

Why not try a little economy in the use of W. P. A. money? If a cut of 17.4 percent in the appropriation means a cut of 33⅓ percent in the number employed, it is obvious that a great part of the appropriation goes to overhead. Overhead means better-paid jobs than W. P. A. workers have—jobs held chiefly by political pets. We hear nothing about taking these pets off the rolls. All the pleading is done in the name of the poor unemployed who receive a very small wage, yet a big part of the spending is evidently going to those not so poor.

Mr. Roosevelt's $150,000,000 is not so very important. It can be given him at no loss to the Treasury if he will point out, or accept, a saving somewhere else. But he doesn't do this. Every estimate he offers is an increase—generally an increase over a previous estimate of his own.

Moreover, smack on the President's return, Chairman Eccles, of the Federal Reserve Board, issues a bulletin urging "greater public expenditures for construction or other purposes." After 6 years of failing to spend ourselves into steadier times, Mr. Eccles sings the same old tune.

So the Hopkins talk at Des Moines about restoring business confidence was just a mess of words, and as for doing anything to inspire confidence the administration is just where it was. The President will ask more money in behalf of the patient poor—hold out nothing before them except the pitiful wage for unproductive work. The administration's lieutenants will continue to advocate spending as a policy of recovery. Only the request for new taxes is given up and a raising of the debt limit asked instead.

Is it any wonder that people talk everywhere of a "return," meaning a return to days when our national economy at least looked forward to decent wages for decent jobs and an American standard of living for those willing and able to work?

Nobody knows whether the Republicans could effect such a return, but the Republican Party's hopes grow brighter as the administration sinks deeper into the bog and can only echo its old theme song, "Borrow, borrow, borrow, and spend, spend, spend."

Two Decades of Service—Twentieth Anniversary of the American Legion

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, March 10, 1939

Mr. SHANLEY. Mr. Speaker, on March 15 the American Legion will celebrate two decades of tremendous activity and service to the veterans of the World War. To my mind the Legion in its fullest sense has fulfilled the definition of religion given in the New Testament. "Religion before God and the Father pure and undefiled is visits to the fatherless and widows in their tribulation." Certainly the American Legion has fulfilled all the noble aspirations of this definition's implications.

It was 20 years ago that 1,000 men and officers of the A. E. F. gathered in the Cirque de Paris, in Paris, France, to consider what means should be taken to form an all-inclusive organization speaking for veterans of the World War. Out of that caucus there came a pretty definite idea of the aims of the soldiers, sailors, and marines, which has since shaped and formed much of contemporary history through the program of the American Legion.

In the search for a real demonstration of loyalty and patriotism I submit the preamble to our constitution exhibits a worthy illustration:

For God and country, we associate ourselves together for the following purposes: To uphold and defend the Constitution of the United States of America; to maintain law and order; to foster and perpetuate a 100-percent Americanism; to preserve the memories and incidents of our association in the Great War; to inculcate a sense of individual obligation to the community, State, and Nation; to combat the autocracy of both the classes and the masses; to make right the master of might; to promote peace and good will on earth; to safeguard and transmit to posterity the principles of justice, freedom, and democracy; to consecrate and sanctify our comradeship by our devotion to mutual helpfulness.

Reorganization Bill of 1939

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

Mr. WOLVERTON of New Jersey. Mr. Speaker, the reorganization of the executive departments of our Government has been a subject of discussion, both in and out of Congress, for many years. Every President, Republican and Democratic, since Theodore Roosevelt has sought power and authority to change or abolish departments that had become useless or overlapping in the performance of their duties. The need for reorganization is apparent and acknowledged by all. And yet, notwithstanding this unanimity of thought, little or nothing has been accomplished with respect to curing the existing evil.

Nothing could more clearly indicate the reason or necessity for reorganization than to realize that there are at the present time 190 principal bureaus and divisions in the 10 executive departments of the Government. There are 58 independent establishments, boards, authorities, commissions, and so forth, exclusive of at least a dozen interdepartmental committees and various Government corporations, making approximately a total of 270.

The need for reorganization has been clearly and tersely set forth by Senator BYRD, of Virginia, in the following language:

The fact is that we are paying for a gigantic, gangling Government of some 150 major agencies and an uncounted number of subdivisions. We are paying for a Government that has not had a thorough overhauling since it was established. It has been growing continually, but since the turn of the century the record shows marked increases in costs and complexity. Piled upon a previous accumulation of disjointed agencies, we now have half again as many agencies as we had before the depressions, when, to meet emergencies, we created by statute and Executive orders, agency after agency, virtually without regard to coordination in the Federal Government pattern.

Some of these agencies fill very definite needs. Others overlap. Some have outlived their usefulness or have been superseded. There are glaring cases of duplicated effort. Where the Government was complex before, it frequently is found to be confusing now. To point out 50 Federal agency legal divisions in Washington alone is enough to describe the Federal jungle.

There have been at least 29 agencies concerned with lending Government funds, according to reports taken from Government records.

There have been at least three agencies concerned with insuring deposits and loans.

There have been at least 34 agencies concerned with the acquisition of land.

There have been at least 16 agencies concerned with wildlife preservation.

There have been at least 10 agencies concerned with Government construction.

There have been at least nine agencies concerned with credit and finance.

There have been at least a dozen agencies concerned with home and community planning.

There have been at least 10 agencies concerned with materials of construction.

There are more than twoscore personnel officers for the Government listed in Washington offices alone.

There are more than 100 information and publication offices in Federal agencies at Washington.

There are more than 100 Federal agency libraries in Washington besides the Library of Congress.

The Federal Government operates an average of 1 motor vehicle for every 1,200 people in the United States, and they travel enough miles every year to traverse nearly every highway in the world.

The tendency under the present administration has been to extend and enlarge the number of bureaus, commissions, and authorities with a consequent increase in the number of Government employees upon the Federal pay roll. A study made by Brookings Institution reveals that between March 1933 and September 1938 the creation of new agencies was largely responsible for an increase of 53 percent in number of Government civilian employees. As a contrast to this condition, the same study shows that between July 1921 and February 1933 the number on the pay roll had increased little more than 1 percent.

It can be readily seen from the figures I have just quoted that the present tendency to enlarge and expand the departments and agencies of our Federal Government is of such serious proportions as to demand some check. While there has been need for a reorganization of departments over a long period of years, yet at no time has there been a condition that approached in seriousness that which now exists. The need for reorganization is greater than at any previous time. The passage of this reorganization bill cannot in itself cure the entire situation. It is, however, a step in the right direction.

Full relief can be attained only when the present administration is ready and willing to eliminate many of the activities that have outgrown their usefulness or proved ineffectual, so that there may be a policy of economy as well as the efficiency sought by the provisions of the bill now before the House. Mere structural reorganization of Federal administrative agencies without elimination and curtailment of unnecessary and useless activities cannot provide the beneficial results desired by the taxpaying public.

During my service in the House I have given my support to every effort that has been made to provide for a reorganization of executive departments that would promote economy and efficiency of administration. It was with real regret that at the last session of Congress I could not give my support to the so-called reorganization bill offered in this House. Unfortunately the authors of that bill sought, under the cloak of "reorganization," to destroy or abolish highly approved and necessary departments of our Government, such as the present nonpartisan Civil Service Commission, the General Accounting Office under the Comptroller General, that guards and protects the Federal funds against expenditures not authorized by Congress. It likewise brought within its scope independent quasi-judicial bodies, such as Interstate Commerce Commission, and numerous other boards and commissions of similar character that Congress never intended to come under the jurisdiction and authority of the Executive. Furthermore, there was the fundamental error of seeking to preclude Congress from having a full opportunity to express its disapproval of any or all acts of the President under the provisions of the bill. These and other equally important basic objections made it impossible for me in the fulfillment of my duty as I saw it to give my approval.

The present bill has, to a large extent, if not entirely, eliminated the objectionable features that were present in the reorganization bill of the last session. It is a broad departure from the basic policy of that bill. The fact that these highly objectionable features have been removed seems justification for the fight that was made 1 year ago against the bill then before this House. I am of the opinion, however, that the present bill should have given broader veto powers to the Congress; and, my support has and will continue to be given to any effort to enlarge such power, whether made by amendment or motion to recommit for the purpose of making such improvement. But, failure of any such effort does not constitute, in my opinion, sufficient reason to vote against the bill. I feel that the authors of the bill have made a sincere effort to draw a measure that would recognize the objections that precluded so many friends of reorganization from supporting the bill that was offered to the House last year. I am willing to recognize and acknowledge in them the same sincerity that they have recognized in those of us who last year voted against the bill. Consequently, although the bill now before the House does not provide for congressional approval before the plan of reorganization shall become effective, yet it does provide a means that will permit Congress to prevent such from becoming effective if the plan as offered is not in accord with congressional opinion. Thus Congress does retain power that may be utilized if and when it is deemed necessary. It is my sincere hope and desire that results may be obtained that will prove highly satisfactory in providing an economical and efficient administration of the governmental agencies and departments that come within the provisions of the bill.

The Reorganization Subterfuge

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1939

Mr. REED of New York. Mr. Speaker, I have no use for circumvention or any of the Machiavellian arts in business or professional dealings or in any transactions between man and man. Reprehensible as these practices may be in the relations which I have mentioned, it is even worse when political cunning is resorted to by either the executive or the legislature to deceive the people.

The reorganization bill, as introduced and finally defeated in a previous Congress, was vicious both in intent and purpose, but the reorganization bill which has just passed is a dastardly piece of deceit.

The Republican Members of the House, almost to a man, voted against this vicious legislation. The old rubber-stamp tactics prevailed on the majority side and the result has been an abject surrender of the rights of the people by destroying the independence of the Interstate Commerce Commission and the other independent agencies created by Congress.

I shall mention only one subsection of the bill, although there are many pieces of sharp practices in this legislation. I want the public to know the extent to which their rights have been surrendered to the will and whim of the Chief Executive, and I would have the public bear in mind the fact that the Republican minority did everything within its power to defeat this atrocious bill.

Mr. Speaker, now let me make myself perfectly clear on this point. As the law now stands the following agencies of the Government are independent: Civil Service Commission, Federal Communications Commission, Federal Power Commission, Federal Trade Commission, General Accounting Office, Interstate Commerce Commission, National Bituminous Coal Commission, National Labor Relations Board, Securities and Exchange Commission, United States Board of Tax Appeals, United States Employees' Compensation Commission, United States Maritime Commission, United States Tariff Commission, Veterans' Administration.

The President cannot, under existing law, remove the Commissioners of the Interstate Commerce Commission and give as his motive that their minds and his mind do not "go along together," as he attempted to do in the case of Judge Humphreys of the Federal Trade Commission. He cannot, at present, do this for the sole reason that the Interstate Commerce Commission is an independent agency, not an executive agency.

But what happens to these agencies under subsection (b) of section 3 of H. R. 4425, the reorganization bill? In the very first line Congress declares that these independent agencies which I have named are now "executive" agencies.

While the committee report interprets the bill as not permitting the heads of these agencies to be transferred or their offices abolished, any lawyer knows that the judicial rule of construction is that committee reports are considered only when there is some ambiguity in the terms of the statute. There is no ambiguity in this section of the reorganization bill. It specifically declares these agencies to be executive agencies.

Once these quasi-legislative agencies become executive agencies, each of their officers becomes a mere "unit in the executive department and hence inherently subject to the exclusive and illimitable power of removal by the Chief Executive, whose subordinate and aid he is." (See *Humphrey's Executor* v. *U. S.*, 295 U. S. 627, referring to *Myers* v. *U. S.*, 272 U. S. 52.)

Mr. Speaker, if our quasi-legislative agencies, such as the Interstate Commerce Commission, Federal Trade Commission, and the others which I have listed, are to remain free from political domination and control, not subject to the orders of the President, that one word, "executive", must be stricken from the first line of subsection (b), section 3 of the reorganization bill.

Referring to the Interstate Commerce and Federal Trade Commissions, in the Humphrey case, the Supreme Court said:

> We think it plain under the Constitution that illimitable power of removal is not possessed by the President in respect of officers of the character of those just named. The authority of Congress, in creating quasi-legislative or quasi-judicial agencies, to require them to act in discharge of their duties independently of executive control cannot well be doubted; and that authority includes,

as an appropriate incident, power to fix the period during which they shall continue in office, and to forbid their removal except for cause in the meantime.

Further the Court said:

For it is quite evident that one who holds his office only during the pleasure of another cannot be depended upon to maintain an attitude of independence against the latter's will.

The President's action in nominating Mr. Amlie to the Interstate Commerce Commission indicates what he expects from the men whom he hopes to appoint when vacancies on these agencies are "created."

Could it be that the minds of the present members of the Interstate Commerce Commission do not go along with the mind of the President? The Washington Post of March 8, 1939, quoted the President's son as calling the Interstate Commerce Commission "an aged, decaying, tortoiselike body."

In answer to that quotation let me quote a paragraph from a letter which I have received from Jamestown, N. Y.:

We believe that the Interstate Commerce Commission over a period of 50 years has justified the wisdom of Congress beyond all question in delegating to the Commission the power of rate making, and we urge that that power be left to a fact-finding body possessing the necessary qualifications and experience and free from political pressure as exemplified by the Interstate Commerce Commission.

Respect for the Interstate Commerce Commission has been expressed to me by hundreds of my constituents since the first reorganization bill was proposed.

Mr. Speaker, there is a very important rate question now before the Interstate Commerce Commission and many other important cases pending before it which vitally affect the business interests of this country. Is it possible that through the Executive power granted under this bill the independence of this quasi-legislative body is to be destroyed and be prostituted to selfish and political ends? Is this a case of "packing" the Commission?

Mr. Speaker, it is about time that the public, and particularly the businessmen of this country, should realize that the assurances emanating from the President and Secretary of Commerce Hopkins must not be taken too seriously.

Before it is too late I hope that the business interests of the country will become sufficiently interested and aroused to cause them to urge another branch of Congress to protect these independent agencies from domination by the Executive by striking the word "Executive" from the section to which I have referred.

Summing up, if the word "executive" is permitted to remain in subsection (b) of section 3, the case of Myers against United States will apply. If the word "executive" is stricken out, as it certainly should be, the case of Humphrey's Executor against United States will apply, and these independent officers will remain free to administer the laws enacted by Congress, without Executive leave and free from Executive control and coercive influence.

The National Labor Relations Board in Reference to Swift & Co. Strike

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, March 10, 1939

Mr. LEAVY. Mr. Speaker, I think a good precedent was set the other day by my colleague the gentleman from Washington [Mr. COFFEE] when he went directly to the records of the National Labor Relations Board for factual answers to certain criticisms of that Board made on the floor of this House. Criticism is healthy, and I think it especially important in the case of an agency acting in such a field of controversy as the Labor Board is forced to do. I think that Board's handling of its affairs should be open to constant scrutiny, but I also think that my colleague from Washington, by refusing to accept hasty conclusions about the Board's handling of a case, has set us an example in these matters.

Following that precedent, after the comments of the gentleman from Iowa [Mr. HARRINGTON] in relation to the Board's handling of its case against the Sioux City plant of Swift & Co., I have undertaken to examine the facts set forth in the report of the Board's trial examiner in that case.

It was the very substance of the gentleman's criticism that the Board gave recognition to the C. I. O. without that union having claim to a majority of the employees. If such were the case, this would indeed be high-handed action. But when public records, available to all, show that 275 of these workers out of 444 designated the union as its bargaining representative, the criticism against the Board seems to dissolve into nothing. I do not stand as a proponent for the C. I. O. or the Board, nor would I justify a sit-down strike. The N. L. R. B. has the duty of examining whether or not a majority of workers wish a certain organization to represent them. In this instance the signed membership cards were checked against the company's own pay roll. It is a simple matter of fact. An examination of the report convinces me that the gentleman's criticism in this instance has no validity.

There are other points which the gentleman makes in undertaking to show that the Board has been unwise in its handling of this case. They do not, however, involve sets of facts which can easily be shown to be either entirely correct or entirely incorrect. These issues are now before the National Labor Relations Board itself. The trial examiner's report is not a final order but merely a recommendation. The Swift Co. has filed exceptions to it. It has the opportunity to argue orally before the Board on these matters. The Board itself, if and when it makes its final decision, must submit that decision to possible review in a circuit court of appeals. The employer in this instance, as in all other instances, is under no obligation whatsoever until a circuit court of appeals shall finally have drawn its own conclusions on the basis of findings on the record. I think we can safely leave these controversial matters to that orderly procedure. My only interest in the case is to point out that that part of the criticism of the Board susceptible to factual proof has not in this case been sustained.

Stabilization of Prices of Dairy Products

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 10, 1939

CONCURRENT RESOLUTION OF THE LEGISLATURE OF THE STATE OF MINNESOTA

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution of the Legislature of Minnesota:

Concurrent resolution memorializing the Congress of the United States to enact legislation to stabilize prices on dairy products

Whereas the dairy farmers of the Nation are becoming impoverished because the prices received on the public markets for the commodities produced by them are less than the cost of producing such commodities; and

Whereas the impoverishment of the farmers of the Nation will ultimately impoverish all the people of the Nation; and

Whereas it is imperative that legislation be enacted by Congress to secure fair prices for dairy products to the producers thereof; and

Whereas dairy products constitute a very substantial portion of the total products produced by the farmers of the Nation; and

Whereas the causes of the depression in prices are the importation of dairy products from foreign countries, dairy substitutes, and overproduction engendered by the use of lands taken out of production of grains for increased dairy production: Now, therefore, be it

Resolved by the Legislature of the State of Minnesota, in regular session assembled, That the Congress of the United States be, and

it hereby is, urgently petitioned to speedily enact legislation which will—

1. Levy a tax of not less than 5 cents per pound on uncolored oleomargarine.

2. Bring about the prevention of the importation of foreign oils and fats used in the manufacture of foodstuffs and of dairy products.

3. Provide for the immediate removal of enough butter and cheese from the public markets so as to absorb the present surplus and distribute this surplus for relief use.

4. Provide an effective plan to prevent lands withdrawn from cotton, wheat, tobacco, corn, and other crop production under the Federal Government's plan of acreage reduction from being utilized for the increase of dairy production; be it further

Resolved, That a duly authenticated copy of this resolution be presented to the President of the United States, to the presiding officers of the Senate and House of Representatives of the Congress of the United States, and to each of the Senators and Representatives from the State of Minnesota in the Congress of the United States.

The Reorganization Bill

EXTENSION OF REMARKS

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

Mr. SIMPSON. Mr. Speaker, to save face for the President so that it might be said in the future that he had his way 100 percent on all major legislative proposals with the House of Representatives, his administration has forced passage in the House of a "reorganization" bill.

No matter that the American people last November unmistakedly indicated their opposition to a further centralization of power in the hands of the President.

No matter that the American people last November showed their desire for an independent Congress; for one that would do its duty and refuse to delegate further powers to the President.

No matter that the American people last November proved that above everything else they wanted constitutional government, and in retaining this they did not want the corners cut.

But the face had to be saved; therefore, the administration brushed aside, as usual, the expressed wishes of the voters last November; they tossed aside as inconsequential the people's objection to further delegation of congressional powers to the Executive; they cut constitutional corners in assuming it constitutional to delegate to the President the power to make laws without affirmative action by Congress; in short they tell the American people that in their judgment the President can be trusted to do, in addition to his regular duties, those delegated to Congress by the Constitution.

Technically the face may be saved—certainly it is lifted—once again in its true light and its real aims made visible.

The superficial justification for this action on the part of the Congress—the excuse, if you please, is that the President can in his wisdom perform a better job of reorganization than the Congress; that he will now be able to make changes in the executive department for efficiency, among the very agencies and commissions created chiefly during his administration, he now brands as inefficient. The physician would doctor himself.

They argue, too, that the Congress will not pass a bill making changes in the interest of efficiency; that they could not get the votes to pass laws in the interest of efficiency, thus implying that Congress would run from its duties. The argument is foolish. Certainly a Congress the majority party of which is so well controlled by the administration as is the Seventy-sixth Congress, so that it will pass a reorganization bill which delegates its constitutional powers, could be forced into line if necessary, to pass directly proper recommendations for reorganization requested by the President. Particularly is this true, as every Republican Member would support with joy a recommendation from the Executive aiming at efficiency and economy, thus giving the majority party 169 sure votes out of the 218 necessary.

But rather than make his changes in a certain constitutional method, the President secures power in a questionable constitutional manner to make recommendations which become laws unless both Houses of Congress take negative action.

That is, when the reorganization bill becomes a law, any number of new laws may take effect changing the executive department to the will of the President without the Congress doing a single thing.

This is not the American way of making laws—our people want Congress to make their laws as provided by our Constitution.

The Republican Valley of Nebraska

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 10, 1939

ADDRESS BY MRS. GEORGE A. CARTER, FEBRUARY 17, 1939

Mr. CURTIS. Mr. Speaker, in order that the country and this Congress might know the needs of the Republican Valley of Nebraska, I wish to insert a very able address made by Mrs. George A. Carter, of Superior, Nebr., on February 17, 1939.

The address is as follows:

Mr. Chairman, ladies, and gentlemen, I feel especially honored to be here and deem it a privilege to be on your program this morning.

Although this is my first time to be here in person, I can assure you that I've been here in spirit at each of your meetings. I've followed your progress with the deepest interest and hope. And I wish to pay tribute to those who have worked so unceasingly for this project.

They have given so generously of their time and money and of themselves. They know not the meaning of the word "defeat"; though discouraged, they press on.

One we know so well spent weeks when I knew he felt the urgent call of his own interests. This project will be a lasting monument to his efforts. Do I hear someone say, "Oh, they are working for their own good"? Don't tell me that. Men of that type look out over their own fields and see a valley beyond where crops are growing and people are prosperous and happy. May God bless their efforts and give them more power.

In treating this subject, The Need for Irrigation in Our District, I'm not going to give you a lot of figures that you are all familiar with. I'm not planning to cover ground that has been gone over so many times, but with your permission I hope to tell you in a very personal way just why we need irrigation in our district.

Some of the facts cut so deeply that they hurt, but if the telling will in any way advance the cause, I'll stand the hurt.

It will be 54 years the 28th of this month since my husband's family moved on this farm and Mr. Carter has lived there continuously ever since. He has seen the Missouri Pacific Railroad built. I've heard him tell how he got up at 3 o'clock in the morning to do his chores so that he could work with a team in building the road south of our place. He has seen the town of Superior grow from a village of a few buildings to the size that it is today, and has witnessed all the changes that have taken place.

Our farm is about 3 miles east of Superior on second bottomland and in former years produced so well.

I've heard Mr. Carter tell of stepping off an acre of corn just to see what the yield really was and found that 80 bushels had grown there.

I needn't tell you of the alfalfa that used to be raised, the splendid garden, the cattle, including a herd of Angus bred up from the beginning of two purebred cows and a purebred sire, of the herd of hogs that were being cared for, and the systematic planting from 1 year to the next.

The reason I'm telling you this in our own family is because I know it so well. It could truthfully be said of any number of farmers all around us. But I want you to have this picture in your mind of those industrious citizens, early pioneers, working, planing, living so happily.

Then came the change; crops began to fail; our subsoil moisture was going down; the herds were reduced. We shipped the Angus herd to a pasture, then found that we couldn't feed them at home through the winter, so had to leave them up there. Then on through the next summer and, well, you know the end of the story. The pasture bill finally ate up the cows. The hogs were reduced and reduced until the last 3 years we haven't even had a hog to butcher for our own use.

Most of you are familiar with the fact that expenses continue on a farm, whether there are crops or not, and that interest and taxes keep piling up, and when a loan owner dies and the loan goes into the estate that places a time limit to the situation that makes it tragic.

Maybe I shouldn't take the time to recall past horrors but we have a happy facility of forgetting so I'll just draw this picture briefly. Remember the bright sunny day that suddenly became hazy, that big, brown cloud that came belching up over the horizon and faster and faster it came, then settled down on us. Oh, the dust, we ate it. We breathed it. There was dust, dust everywhere. And how many times this was repeated until we wondered if it would never end.

Another incident I'm sure will never be erased from the minds and hearts of many of you. That terrible flood. We have one of the citizens from Alma to thank for really telling us what was coming. Of course, there had been the warnings but people are inclined to minimize those warnings. And one coming and really telling what was on the way helped prepare us for the worst. But who can be prepared in that way? My husband said, "Oh, it won't be like it was in '15 because the new channel will carry the water all right."

He was just recovering from an illness and really not able to be out but said he should go down on the bottom and move a few pieces of machinery. When he arrived there he was able to get one machine that he had been using that belonged to a neighbor, up on higher ground, but when he returned the horses began to sink in the already softening ground. Then we heard the reports all day, nearer and nearer. Finally we went to bed and I guess it was past midnight when I heard that sickening crash. That was just what it sounded like when it struck down south of us. I felt frozen with horror. I couldn't think of you folks out West here, some who had lost one loved one, other families nearly all gone. Oh, the suffering and grief that follows a flood. The next day we went down to the bottom and there the water was boiling and surging, reaching out its hungry fingers, taking everything within its grasp.

That water that was going rampant carrying destruction everywhere was the one thing that we needed so much, going to waste, worse than waste.

We tried to console ourselves by thinking ours was only property loss, but the fields of grain that had looked so promising only a few days before would never lift their heads again. The money that had paid for the seed was borrowed, too. One mother who lived down there and had to move out, but went back later, told me she had a terrible ordeal putting the children to bed nights for months after. They were afraid of another flood.

And the sears that a flood leaves, the deepest sear on our hearts, the ones that will always remain and the marks on the land. I used to enjoy going down to the river because it reminded me of my old home in New York, but now I see the side of a house wedged against a tree, the remains of a mattress a few feet away, pieces of furniture that have that water-bleached appearance that sends a chill through one. Then I wonder as I gaze out over the sand how many unmarked graves are hidden therein.

Oh, the tragedy of floods! May God hasten the time that wherever floods may be prevented that the work shall be done quickly.

Of course, the natural sequence followed. People began to move away. They had lost their property through a gradual sifting process or by a terrific blow until it looked better farther on. The question was whether to take what little was left and gamble on a chance or stay.

Many must have gambled, for I read in the Lincoln State Journal on February 7 that the Federal relief officials in Washington were confronted with a report from Walter A. Duffy, regional director at Portland, Oreg., stating that thousands of families—20,000 was the number given—in Oregon, Washington, and Idaho were searching for a place to locate. He said their condition is serious, as they are living in tents, shacks, and abandoned buildings under the most deplorable conditions.

What a pity. Families separated, hopeless, adrift. What a class of people; such a change in that short time. How can they be rehabilitated? I dislike that word so much.

Let's use all our influence that no more shall join the numbers of that already too large class.

We can't help but mention the condition of the families who have tried to face it out; the precious eyes that just couldn't have the help of glasses because there wasn't money to buy them. I know of children in school right now from families that you would be surprised to know who can't afford glasses for their children, dental treatment, and proper medical care; those families who are too proud to ask aid or would be barred by some rule or regulation.

I could tell you of an instance of a 26-year-old wife who had to have all her teeth extracted because she couldn't have them cared for and they passed the "helping stage" of the dentist who sat in the chair, white and shaken when it was over, and said he just couldn't endure it much longer seeing those suffer when they might have been spared. He did stop practicing dentistry soon after and moved to another State.

This is such a true picture, taken from a real family living in our district. I shall call the family Jones. They lived on a small acreage close to a town and owned the land. They had a few cows and chickens and a big productive garden. Mrs. Jones worked the garden every p. m. while the baby took its nap in a carriage close by. From this garden vegetables were canned for future use. The family of children had well-balanced meals of butter, eggs, and vegetables.

These last 5 years that same garden has produced only a few radishes, onions, and lettuce in the spring, and the $10 worth of seed was a loss.

Mr. Jones farmed rented land for his big undertaking, but as time went on the upkeep of the machinery and tractor fuel mounted until a mortgage was placed on his little tract. He still owned the land, so couldn't get aid. Even though the children were living on navy beans, oleo, and part of the time bread from flour that had been saved from wheat of the former years, those children standing crying while commodities of pears, oranges, apples were being handed out to reliefers; ill-clothed, ill-nourished to the extent that the eldest dropped out of school, their lives blighted. What can they think of our Government? How can they be made into good American citizens?

This is just another illustration of how far short these measures are.

With ourselves we applied to the Federal land bank. They told us that they didn't care to make loans in this territory. Another place they advised us to "let everything go" and then we would be in a position where they could help us. Imagine the United States Government giving such advice to its people.

We who hold that something that we can't describe, that something within ourselves that is so precious that we would do anything in our power to keep it untarnished to teach our children to love and honor it as we do. And to tell us to "stop trying" and go on relief.

We have four dairy cows. I've built up a little cream route in town and that with the help of our relatives who have clothed us and very generously donated to us has kept us going.

We read of the desire of the Government to help restrict the farms, so we went to Nelson to investigate it. A little lady received us in the office and relayed the questions that she couldn't answer to an inner office until we came to a point where she asked Mr. Carter's age. She lifted a line that used to be an eyebrow and very haughtily said, "Oh, we don't help anyone over 60." Will you look closely now. See that representative of our Government telling that citizen who stood there crowned with the dignity of years, years that showed visibly how he had labored with the soil and had payed taxes to support our Government, and now to keep such representatives as she to stand there and say, "We don't help men over 60."

He took it like all the other crushing blows, straight in the face, but his shoulders drooped a little more and lest he be hurt still more I said, "Let's go!" As a parting she said, "I would advise you to seek help across the hall." But we passed that door with my head up. Never as long as I have a mind that will function and two hands that can work will I permit my family to come under that label.

May I explain that I'm not saying this in a spirit of criticism. I feel this deeply, and I'm perplexed, but I'm trying to show you what the conditions are and that the existing agencies are inadequate. As I have studied and lived through it, there seems one solution, one bright hope, and that is this irrigation project.

All of us want it. If you could have seen the farmers flocking in the day we signed up the contracts I'm sure there wouldn't be a doubt in your minds. We want it to raise alfalfa, corn, and gardens so we can go ahead and plan in the years ahead, so we can restock our own farms.

We want to raise our children on our farms. We don't want them to be forced to go away to seek employment.

New school buildings: If something isn't done soon we won't have any children here to attend them.

Auditoriums: They are a mockery when families are destitute. And how much labor do they furnish for those who are in need? Give us irrigation and we will put lots more to work right in our own localities.

Employ scientific minds to curb those angry, unruly waters. Make them run in smooth, quiet, little channels that will give life to our parched land.

Use it? I should say we will use it—150 miles on either side of the river.

There isn't a year but what we have a dry spell in July or August. Many years one irrigation would mean a crop for us.

When the folks heard that I was to be here today one after another of the women said, "Speak for me." So, in the name of those wives, mothers, and home makers, and in the voice of those I represent, I do appeal to you to use your influence. We are asking for "Water!" "Water!" "Water!"

Remembering—"We the people"—"For these people"—"That they shall not perish from the earth."

Employees Protest Delay in Hearings on Wagner Act and Refusal of N. L. R. B. to Issue Certificate of Representation

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1939

STATEMENT OF EMPLOYEES PROTESTING DELAY IN HEARINGS ON WAGNER ACT AND REFUSAL OF N. L. R. B. TO ISSUE CERTIFICATE OF REPRESENTATION

Mr. HOFFMAN. Mr. Speaker, a union, which even the Labor Board cannot show is company dominated, and which for months has been refused a certificate of representation as the agent for collective bargaining, sent representatives to Washington to protest this delay.

Organized under the New Jersey law and with a signed and dues-paying membership of over 1,000 out of a total of 1,750 employees on July 13, 1937, this union has been, by the Board, deprived of its right to a certificate of representation.

Appearing here this week before the Board and again demanding a certificate of representation it was told, in substance, to go home and make another application.

The fight of this labor organization for recognition, for the privilege of bargaining collectively through representatives of its own choosing, has been carried on before the Board's examiner, before the Board, and before the circuit court of appeals, before the United States Supreme Court, and today, because the circuit court of appeals and the Supreme Court decided—and no doubt rightfully—that it could not appeal, for the reason that the Board has refused so far to make a "final order," and it is only from a "final order" that an appeal can be taken, the employees who are members of this union organization are denied the right of collective bargaining which the Wagner Act says they shall have.

When will we amend the Wagner Act? How much longer will Congress permit the N. L. R. B. to defeat the purpose of the act? When will that Board begin to act promptly and, toward rivals of the C. I. O., impartially, fairly?

The following is the protest received from representatives of this organization and from two other organizations who came to Washington to appear before Mr. Andrews in connection with the administration of the wage-hour bill, who appeared before the N. L. R. B., and who desired to appear before Senator THOMAS' committee on hearings having to do with the amendment of the Wagner Act:

PROTEST AGAINST POSTPONEMENT OF HEARINGS BEFORE SENATE COMMITTEE ON LABOR AND EDUCATION TO CONSIDER PROPOSED AMENDMENTS TO NATIONAL LABOR RELATIONS ACT

Names of independent labor unions and of their delegates who called on Senator EDWARD R. BURKE yesterday to protest against postponement, ready to testify and show why the act is a hoax so far as the great mass of American workers are concerned who wish self-association and the right to bargain collectively through representatives of their own choice, and not through representatives chosen for them by either the A. F. of L. or the C. I. O.: the Aircraft, of Buffalo, N. Y.; the Cablecraft, of Buffalo, N. Y.; the Calcocraft, of Bound Brook, N. J.; all represented by their organizer and attorney, Edward W. Hamilton, of Buffalo, N. Y., and the following members: Sam Matthews, president, the Aircraft: J. E. Alderman, secretary, the Aircraft; Leonard Lee, past president, the Aircraft; Jim Knudson, member of the council, the Aircraft; Robert C. Colgrove, president, the Calcocraft; Ed. J. Mikeshock, secretary, the Calcocraft.

The Aircraft: Plant union of workers at Buffalo of Curtiss Aeroplane Division of Curtiss-Wright Corporation, with a membership of over 3,000; organized May 31, 1934, under old National Industrial Recovery Act (N. I. R. A., S. 7), after a fight with Aeronautical Workers' Federal Labor Union, A. F. of L. Most successful and strongest independent union in United States of America, with income from dues alone far in excess of $20,000. Relations with management ideal.

The Cablecraft: Plant union of workers of General Cable Corporation in Buffalo with membership of five-hundred-and-odd men; organized April 15, 1937; defeated C. I. O. at election June 22, 1937. Smaller than the Aircraft, but equally successful, with perfect understanding and cooperation with management to extent this is possible in face of coercion of outside labor leaders supported and backed up by Board. Like Aircraft, has signed contract agreeing to principle of profit sharing after just return on invested capital, arbitration, etc.

The Calcocraft: Plant union of workers of the Calco Chemical Co., Inc., at Bound Brook, N. J., a subsidiary of American Cyanamid Co. Organized June 12, 1937, with certificate of association under New Jersey law signed by over 1,000 employees out of a total of 1,750 on July 13, 1937, with same membership to date. Trying to do for Calco workers what the Aircraft and the Cablecraft have accomplished, but have been prevented thus far by a "shotgun agreement" the Board forced the company to make with the A. F. of L. whereby company agreed to recognize the A. F. of L. and to withdraw recognition from the Calcocraft.

The Calcocraft appealed to the Circuit Court of Appeals, Second Circuit, from final order of Board April 28, 1938, based on this shotgun agreement, and attacked the act under the fifth amendment to the Constitution of the United States. Board claimed absolute right to set aside its final order and so prevent the circuit court of appeals from taking jurisdiction of petition and declaring the act unconstitutional as to workers. Circuit court of appeals held the Board had the absolute right it claimed under section 10 (d) of the act and dismissed petition of the Calcocraft November 5, 1938. On appeal from this decision to the Supreme Court, latter affirmed February 27, 1939. Result thus far:

The Board has used its power in representation proceedings, which is absolute and subject to no judicial review whatever, to kill the Calcocraft union of Calco workers.

The circuit court of appeals and the Supreme Court have held the power of the Board to prevent a judicial review of its acts on an appeal by workers from a final order of the Board in a complaint proceeding is absolute; so workers have no rights they can enforce or protect in either representation or complaint proceedings. They are helpless in both kinds of proceedings.

The Calcocraft intends to petition Supreme Court for a rehearing of its decision of February 27, 1939, affirming decision of the Circuit Court of Appeals of November 5, 1938. The Calcocraft has up to March 24, 1939, to file its petition for rehearing.

The Calcocraft has invited the American Federation of Labor, the Congress for Industrial Organizations, and the National Manufacturers Association to join with it in petition for rehearing. Congress for Industrial Organizations has refused; others are considering matter.

Not the Board but the act these unions are attacking—its absolute power in representation proceedings over workers, with no judicial review possible for them under the act. See *American Federation of Labor* v. *National Labor Relations Board*, decided February 27, 1939, by Circuit Court of Appeals, District of Columbia. Only way out for them is independent proceeding denying the constitutionality of act, beginning in district court and taking matter up in regular way to Supreme Court.

Not the Board but the act these unions are attacking as construed by the Circuit Court of Appeals for the Second Circuit, and the Supreme Court in the case of the Calcocraft, holding the Board has absolute right to do what it pleases over workers, not only in representative proceedings but also in complaint proceedings. We are protesting the absolute right exercised by the Board to vacate its final orders in complaint proceedings and make them moot, to prevent workers getting a judicial review of its illegal acts, and a judicial determination that the act is unconstitutional as to workers.

SAM MATTHEWS,
President of the Aircraft.
J. E. ALDERMAN,
Secretary of the Aircraft.
ROBERT C. COLGROVE,
President of the Calcocraft.
ED. J. MICKESHOCK,
Secretary of the Calcocraft.
LEONARD LEE.
JAMES F. KNUDSON.

Churches and Social Security

EXTENSION OF REMARKS
OF
HON. CHARLES HAWKS, JR.
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1939

LETTER FROM A. SUTHERLAND

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

HORICON, WIS., *March 8, 1939.*

At a joint meeting of the Committee on Social Education and Action of Wisconsin Synod with the subordinate committee of the

same name in Milwaukee Presbytery, of both of which I happen to be chairman this year, convened last night in Milwaukee. I assumed responsibility for communicating to you the unanimous opinion of the group relative to a bill now in the House of Representatives to cancel amendments to the Social Security Act excluding persons employed by nonprofit organizations, among whom church workers are classed.

Actuarial study of the financial implications of church inclusion under the Government act demonstrates the fact that it would be impossible to operate the existing service-pension plan of the Presbyterian Church, United States of America, and provide its promised benefits to future pensioners, while at the same time meeting the obligations which the Government act would place upon the churches and their ministers.

Through its board of pensions and its program of protection, our church provides the service pension, the disability pension, the pensions for widows, and the generous educational allowance for minor orphans, thus affording a wider coverage with a larger scale of benefits than the social-security program provides. This protection is now available for all full-time workers in the service of the church, and is held as a moral responsibility upon hundreds of thousands of our members, as it has been so accepted by those now enjoying the protection.

Because we believe the proposed inclusion would very greatly disrupt the anticipated social security of multitudes of our brethren who have been building for old age upon the service pension program of the church, and because we believe that our existing program of protection for dependents is much superior to what the Social Security Act can offer, and because we believe that we should keep faith with our people who have contributed most generously to our existing plan, we desire to communicate to our honorable Senators and Representatives in Washington our belief that the proposed inclusion should be defeated.

Yours very truly,

A. SUTHERLAND,
Chairman, Committee of Wisconsin Synod, Committee of Milwaukee Presbytery Social Education and Action.

Prices of Farm Products

EXTENSION OF REMARKS
OF
HON. JOHN G. ALEXANDER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1939

CONCURRENT RESOLUTION OF THE LEGISLATURE OF THE STATE OF MINNESOTA

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution of the Legislature of Minnesota:

Concurrent resolution memorializing Congress to stabilize prices on farm products

Whereas widespread dissatisfaction exists among the producers of farm commodities in Minnesota and neighboring States relative to the losses incurred in ordinary farm operations; and

Whereas the American farmer is forced to sell the major portion of what he produces on a world market and purchase all of his necessities on a highly protected stabilized domestic market; and

Whereas the spread between the values of the commodities the farmer sells and those he buys places him at a serious disadvantage in the market places; and

Whereas this price disparity has existed for over 5 years and promises to continue indefinitely and create disaster among agriculturists; and

Whereas the prices of agricultural commodities are not on a parity with prices of other products and especially with the prices of those commodities which the farmer must buy; and

Whereas the financial returns from the farming industry have been such that the people engaged in that industry are practically bankrupt, demanding immediate drastic action; and

Whereas the farmers are the largest buyers of commercial products in the Nation, and a return of their purchasing power is essential before we can have any general and lasting return of prosperity; and

Whereas in view of the price-fixing opportunities given by national legislation to industry, and in view of the curtailment of farm production; and

Whereas to encourage, create, develop, and maintain a stable, prosperous, and permanent system of agriculture in the United States, it becomes necessary that agriculture should enjoy the same protection in price stabilization which is enjoyed by industry; and

Whereas our present economic system does not operate to protect the farmer when there is an exportable surplus of agricultural products, thereby resulting in the world price being paid on not only the exportable surplus of such agricultural products but on that consumed domestically as well; and

Whereas the existence of an exportable surplus of a vitally important food crop is a national necessity and from the consumer's standpoint nothing could be more dangerous than to create a deficiency in our stable food commodities through curtailment of production; and

Whereas to remove the disparity in prices and to guarantee equality to agriculture with industry and labor, it is wholly essential and absolutely necessary that the American farmer should receive a price for commodities which he produces which will assure him cost of production and in addition thereto an amount sufficient to pay taxes, interest, debts, and living expenses: Now, therefore, be it

Resolved by the State Senate of the State of Minnesota (the house of representatives concurring), That the Congress of the United States, at its present sitting, be, and the same is, urgently petitioned and requested to enact such legislation as will meet our agricultural crisis; that will insure cost of production plus an amount sufficient to pay taxes, interest, debt service, and living expenses; that will place agriculture on a parity with those engaged in industry; that will retain the American market for the American farmer; and that will fix an adequate minimum price on farmers' products; be it further

Resolved, That a duly authenticated copy of this resolution be presented to the President of the United States, to the presiding officers of the Senate and House of Representatives of the Congress of the United States, and to each of the Senators and Representatives from the State of Minnesota in the Congress of the United States.

The Super-Shanties of Fort Wayne

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1939

EDITORIAL AND ARTICLE FROM THE BALTIMORE SUN OF JANUARY 24, 1939

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an editorial and a newspaper article, The Super-Shanties of Fort Wayne, which appeared in the Baltimore Evening Sun on January 24, 1939.

A great deal has been written and said about the Fort Wayne housing plan, which offers a revolutionary development in American low-cost housing. Many of my colleagues saw a moving picture last week which presented this unusual plan in detail.

On Wednesday last Senator MILLARD TYDINGS, of Maryland, made a commendable speech on the housing problem in which he mentioned the Fort Wayne plan in very favorable terms.

As the Representative from the Fort Wayne district, I wish to recommend to Members of Congress this remarkable plan, which could well be adopted in other American cities.

The following articles present the Fort Wayne plan in a fair light. I urge you to read them thoroughly.

[From the Baltimore Evening Sun of January 24, 1939]

MODESTLY REVOLUTIONARY

We print today the first of two articles describing a low-rent housing project in Fort Wayne.

These houses in Fort Wayne have three unusual characteristics: They rent for a figure which is within reach of all but paupers. They conform to minimum standards of health and decency. They were built with private capital and actually pay a return on their investment.

How was this quasi miracle accomplished? In the second article the methods by which the houses were financed and construction costs were held down will be discussed in some detail. But fully as important as these details is the fact that the designers of these houses took a modest view of their task. They conceded, before they ever went to work, the practical impossibility in the United States today of building dwellings for rent to the very poor which shall compare in comfort, convenience, and attractiveness with the dwellings of middle-class America. They assumed, in fact, that such superior housing would actually be harmful to the poverty-stricken population for whom they were designing. For superior housing is more expensive not only to construct but to maintain. And they had the benefit of some of England's housing experiences, in which the very poor were forced to put out so much of their income for their improved housing accommodations that they had to deny themselves food. They had also the benefit of Swedish experience, where, by limiting their objectives and concentrating on dwellings

which satisfy minimum standards, the housing people have at least had the comfort of seeing minimum standards attained.

In the United States we have not been content with minima. Our housing projects have tended to be grandiose. The result is that, so far, our efforts in public housing have failed miserably. We have here and there some sumptuous developments. But toward the solution of the actual problem—which is the elimination of urban and rural slums, of that housing which doesn't even come up to minimum standards—practically no progress has been made.

The Fort Wayne project suggests a method of approach to the problem which is entirely new to this country.

[From the Baltimore Evening Sun of January 24, 1939]

THE SUPER-SHANTIES OF FORT WAYNE

(By Philip Wagner)

Please read the caption under the photograph. This house (no palace, to be sure, but a lot better than the living quarters for which thousands of Baltimore families are paying two, three, and even four times as much) is in Fort Wayne, Ind. In Fort Wayne there are 50 others like it. They rent for $2.50 a week, or $10 a month—a rental so low that even the specialists in low-cost housing are still rubbing their eyes over it, a rental so low that it actually brings decent housing within the reach of those poor who have so far been untouched by the Federal Government's home-building ventures. And the houses have been built not with Federal appropriations but with private capital lent on mortgages bearing 4½-percent interest.

The trouble with all American low-cost housing so far, with the exception of this enterprise in Fort Wayne, is that it has not turned out to be low-cost. It hasn't touched the real slum dwellers who have served as the pretext for it. This has turned out to be true of every one of Mr. Ickes' original P. W. A. housing ventures. Built on expensive land, built for the ages, built according to standards not only of comfort but of luxury, they cannot be maintained at rents which the great mass of the slum-dwelling public can afford—not even when a large proportion of their construction cost has been written off as subsidy. This has likewise turned out to be true of the Federal Government's garden suburbs, the several Greenbelts of which the most celebrated lies between Baltimore and Washington. Everyone who has seen one of these suburbs knows that they are delightful. They consist of charming dwellings set in attractive natural surroundings which have been rendered still more attractive with the help of skillful landscaping. The Greenbelts offer all sort of amenities. But amenities come high. Hence, though the rental charged for living in them represents only a fraction of the economic rent (that is, the rent which would be necessary to make them pay for themselves) they are still not available to the great mass of poor people whose miserable living conditions are supposed to provide their excuse for being.

The efforts of the Federal Government to build real low-cost housing have been so uniformly discouraging that most housing experts will now tell you that it is impossible to build any kind of decent housing for the poor without pouring huge subsidies into it. Some even go so far as to say that it isn't possible to build housing for the lowest-income groups—polite name for the poorest people—even with enormous subsidies. These will tell you that the very poorest slum dwellers get only one gain out of all these housing enterprises—they inherit the slightly superior dwellings of the slum dwellers who inherit the slightly superior dwellings of the fortunate people who are carefully selected to, and can actually afford to, live in the Government's subsidized housing.

Baltimore has now a housing authority whose activities since its establishment have been clothed in a deep blanket of mystery. We know that it was established primarily in order that Baltimore might qualify for a slice of the current Federal low-cost housing appropriation. We know also that it has received a grant of $16,000,000, much of which will be written off in one way or another as subsidy. We know that the money is to be spent on five separate housing projects located in five of Baltimore's worst slum areas. We even know where the sites are, thanks to a leak of information from Washington. More than that, we in Baltimore know nothing. We do not know what sort of dwellings will be put on these five slum sites, how much of the rent will be paid by the taxpayer rather than the tenant, or what the actual rate of rental to tenants will be. We do not know when construction is going to begin, when it will be finished, how the present slum dwellers of these areas will be cared for when they are evicted, or how tenants for the new dwellings will be chosen. Secret as a mole and shunning light, the Baltimore Housing Authority labors and labors and labors, with, so far, no tangible results. To verbal inquiries it returns the demand that all questions be put in writing, and when the questions are written down it disregards them.

Well, while our Baltimore Housing Authority holds to this uncommunicative mood, it will do no harm to examine the housing achievement in Fort Wayne, for this is the one venture that actually offers some basis for believing that real low-cost housing is economically practicable.

To begin with, these houses were designed on the basis of a wholly different conception of what America's worse housing need really is. The idea that the best in housing is none too good for every free-born American was junked at the beginning: In other words, housing was brought down out of the clouds and stated in terms of a practical contemporary problem, which is housing for the poverty-stricken. The designers began with the basic fact that 4,935 families in Fort Wayne had never had any bathing facilities, that 2,642 had never had anything better than outdoor privies, and that 890 of them had never enjoyed running water. Starting from these facts, they undertook to design a house which would be infinitely better than the wretched shanties in which these families lived, but would not necessarily measure up to conventional American middle-class standards. The designers went on the assumption that, for people who have never had anything but a privy and who have never been in a bathtub, there is no need for sunken tubs, silent-flushing seats, and heliotrope toilet paper, that indirect lighting is not necessary for people who have had no lighting but a kerosene lamp, that hot-and-cold running water are in themselves sufficiently sensational for people who have had to haul their water in buckets from a communal pump, that a concrete floor is a lot better than a dirt floor, that pipes which are exposed instead of running between the walls are no hardship to people who have never had the benefit of any kind of piping.

In short, the designers went to work on what ought probably to be called a super-shack rather than a house—a weather-proof dwelling insulated against the cold of winter and the heat of summer, built not to outlast the ages but only to outlast a 20-year mortgage, sanitary, cheap to maintain, sensibly planned as to space, reasonably agreeable to look at, and provided with those rudimentary conveniences of lighting, heating, and watering which are as strange to a large segment of the American population as they are to the natives of Dahomey—all this to be built for as low a figure as ingenuity could arrive at.

The result: The photograph shows the exterior; the plan shows the interior. Two bedrooms, enough to get rid of the barbarous practice of dumping all ages and sexes together, even though it might still violate middle-class notions of privacy. Combined living room and kitchen, yielding a room larger than the average middle-class living room, a room that is easier to keep and generally more satisfactory than two tiny ones. A bathroom, undreamed-of luxury, for every tenant.

The house is prefabricated, of course. The method finally decided upon as being the most suitable for the purpose was based on a phenol-resin bonded plywood panel unit, which had been developed at the Forest Products Laboratory of the University of Wisconsin. The wall panels are 8 feet high, 4 feet wide, and 5 inches thick. Inside and outside are plywood, nailed and glued to 2 by 4 framing members. They are filled at the time of construction with rock-wool bats. They can be, and at Fort Wayne were, made by unskilled labor working in a converted barn. Some of the wall panels are plain; others have windows already mounted in them; others have doors already mounted in them. The roof panels are the same type of construction, except that the units are longer (24 by 4 feet and 16 by 4 feet).

These panels are set up on a concrete-slab floor and bolted together with long rod bolts running through the length of the wall. When the walls and partitions have been bolted in place, the roof panels are swung into position and also bolted. Asphalt roofing material of the kind used on business and industrial buildings is then applied; the plumbing (of the simplest and cheapest design) is fitted; the house is painted, and it is then ready to be occupied. This type of construction is so efficiently insulated that no furnace is necessary—the stove serves.

These houses were put up at the rate of one a day in Fort Wayne, starting in November. Half of them are already being lived in, and the rest will be within the next week or so. More than 600 applications are on file. They can be taken down and put up again as easily as they were assembled originally. Their over-all cost is less than $900.

These are hardly to be described as dream houses. They offer comparatively little scope for gracious living. They look cheap. They tend to get smelly when all the doors and windows are kept closed in bad weather (thanks to the high efficiency of their insulation). They will outrage the perfectionists who are content with nothing less than the best. They emphasize an ugly fact, which is that for great masses of Americans such humble homes as these represent a huge stride upward in their standard of living. This is an appalling indictment.

But these houses have this one great virtue over the dream houses of perfectionists: they exist. Given all the conditions, economic and social, of the United States of January 1939, they are practical. They represent a concrete achievement in the provision of housing for those who need it most.

Development of Farm Woodlands

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 10, 1939

CONCURRENT RESOLUTION OF THE LEGISLATURE OF THE STATE OF MINNESOTA

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution of the Legislature of Minnesota:

Concurrent resolution memorializing the Congress of the United States and the Secretary of Agriculture on the need to establish a more stable program of subsidies to farmers for development and maintenance of farm woodlands and shelterbelts

Whereas the farm woodlands make up more than 5,000,000 acres of the 19,000,000 acres of forest land in the State of Minnesota; and

Whereas forests are a soil-building and soil-conserving crop; and

Whereas the practice of good conservation on these lands can be encouraged by special inducements, such as those given under the agricultural conservation program; and

Whereas this program now includes benefits for maintaining land in pasture and orchards: Now, therefore, be it

Resolved by the Senate of the State of Minnesota (the House of Representatives concurring), That the agricultural conservation program should also include a stable and comprehensive program of benefits for forestry practices on farm woodlands, including the protection of such woodlands from grazing, fire, and destructive logging; and be it further

Resolved, That addtional technical forestry aid, as authorized by the Norris-Doxey Farm Forestry Act, should be provided to instruct the farmers and woodland owners in this phase of the agricultural conservation program; and be it further

Resolved, That the secretary of state be instructed to send copies of this resolution to the President of the Senate of the United States and to the Speaker of the House of Representatives of the United States and to the Secretary of Agriculture, Hon. Henry A. Wallace, and to each of the Senators and Representatives of the State of Minnesota in the Congress of the United States.

Federal Reserve Report on Price Control

EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 13, 1939

ARTICLE FROM THE NEW YORK HERALD TRIBUNE OF MARCH 13, 1939

Mr. BAILEY. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a most important and timely statement from the Federal Reserve Board on the subject of Price Control.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of March 13, 1939]

PROPOSALS TO MAINTAIN PRICES AT FIXED LEVELS

From time to time the Board of Governors of the Federal Reserve System is asked to give its opinion about proposals to require some agency of the Government to raise the general level of prices and then to keep it constant. Some would make it the duty of the Board to do this and some would create a new agency for purpose. All would require that prices be controlled by regulating the amount and cost of money.

Those who favor such proposals believe that prices can be raised by increasing the supply of money, that prices can be lowered by reducing the supply of money, and that prices can be kept fairly steady by changing the supply of money in the right direction at the right time. They believe that if prices were kept fairly steady we would not have booms, depressions, and panics; business would run along on an even keel; and much suffering and hardship would be prevented.

The Board of Governors is in complete sympathy with the desire to prevent booms and depressions, and has always considered it its duty to do what it could to help accomplish these results.

CANNOT CONTROL PRICES

Experience has shown, however, that (1) prices cannot be controlled by changes in the amount and cost of money; (2) the Board's control of the amount of money is not complete and cannot be made complete; (3) a steady average of prices does not necessarily result in lasting prosperity; and (4) a steady level of average prices is not nearly as important to the people as a fair relationship between the prices of the commodities which they produce and those which they must buy.

Steady prices and lasting prosperity cannot be brought about by action of the Federal Reserve System alone, because they are affected by many factors beyond the control of the Federal Reserve System.

1. Prices do not depend on money alone. Experience in recent years has shown that prices are not controlled by the amount or cost of money.

If currency alone is considered as money, the facts are clear and simple. There was $3,600,000,000 of currency in the hands of the public, outside the banks, in the middle of 1926 and about the same amount in the middle of 1929, while at the end of 1938 the amount of currency had increased to $5,700,000,000. If prices were governed by the amount of currency, prices would have been about the same in 1929 as in 1926 and would have increased sharply by the end of 1938. The facts are that the average of wholesale prices, expressed in an index number, was 100 in 1926, 95 in 1929, and 77 in 1938. From 1926 to 1929 there was no change in the amount of currency but there was a drop of 5 percent in prices. From 1929 through 1938 there was an increase of 60 percent in currency, while there was a decrease of 20 percent in prices. Evidently cash and prices do not move together.

It is easy to understand why the amount of currency does not control prices. Currency is not the principal means used by people in paying for what they buy. In fact, it is the small change of business. Most people keep only as much money in their pockets as they require for their day-to-day needs, such as carfare, lunches, gasoline, and other items, and what they do not need they deposit at the banks. Business firms require currency to meet pay rolls, stores to make change. Banks keep on hand only a reasonable supply to meet the demands of their customers and send the rest to the Federal Reserve banks.

Because of the way we have come to use our currency, chiefly for small payments, we cannot expect to raise prices or increase prosperity by the issuance of more currency either by the Treasury or by the Federal Reserve banks. Any surplus above the amount needed would only come back to the Reserve banks. People can always get all the currency they need so long as they have deposits to draw on.

But more than nine-tenths of the bills in this country are paid by checks drawn on bank deposits. Therefore the deposits that the public holds in banks and can use as a means of paying for what it buys, as well as the currency outside of banks, needs to be considered as money. Again, the facts show clearly that the volume of money does not control the price level.

The amount of demand deposits was $22,000,000,000 in June 1926, $23,000,000,000 in June 1929, and $26,000,000,000 at the end of 1938. As already stated, currency outside of banks was $3,600,000,000 in 1926 and in 1929, and $5,700,000,000 in 1938. The amount of money, therefore, was larger in 1929 than in 1926 and larger in 1938 than in 1929. But what happened to prices? In 1929 they were 5 percent lower than in 1926, and in 1938 they were 23 percent lower than in 1926. This proves that factors quite apart from the volume of money—i. e., of currency and deposits together—were influencing the price level.

There have been times when the amount of money and prices have changed together; but usually they have not. When they have moved together this may have been due to the fact that it takes more money to do the same amount of business when prices are high than when they are low.

Whether prices and the volume of money do or do not move together depends on many other conditions, such as weather and the size of harvests, inventions, foreign trade, Government spending, taxes, wages, and the general attitude of business. When people are venturesome and expect good times they lay in supplies, and this tends to raise prices. When people are discouraged and expect things to go badly, they tighten their belts and buy as little as possible. The demand for goods declines and prices fall. Usually other things have a greater influence on prices than has the amount of money.

Neither do prices depend on the cost of money. This also has been shown by the experience of the last 10 years. The cost of money is lower than it has ever been at any time for which we have a record. This is true not only of the rate at which the Government can borrow, and of the rate at which large corporations can get money in the money market, but also of the rate charged by banks to their regular customers. The average rate charged by banks in 36 cities on their business loans was around 5 percent in 1926; it rose to over 6 percent in 1929 and fell to 3¼ percent in 1938. Federal Reserve discount rates in 1926 were 3½ to 4 percent; in 1929, 4½ to 6 percent. In 1938 rates were 1 to 1½ percent. During this period when the cost of money was so drastically cut, prices went down by about one-fourth.

In view of these facts the board finds it impossible to believe that prices can be controlled by changes in the volume and cost of money.

2. Federal Reserve cannot completely control the amount of money: The Federal Reserve System, furthermore, does not and cannot have complete control of the amount of money and its use. It has an influence of the amount, and when other things are favorable this influence can become effective, but there are many occasions when the System's powers are limited.

CURRENCY NOT MAIN ITEM

As already explained, currency is not the most important item in our business life, and the Federal Reserve System supplies at all times the currency that the public demands. If the Reserve System should engage in so-called open-market operations, that is, if it should buy Government bonds, and if it should pay out Federal Reserve notes for them, as has been proposed in some of the bills before Congress, this currency would come right back to the Reserve banks and would serve no useful purpose.

The Federal Reserve System has more influence on the amount of deposits than it has on the amount of currency, but there are limits to the System's influence. The System has power to give the banks more reserves by buying Government bonds. The sellers would receive checks which they would deposit in their banks. The banks in turn would deposit these checks in the Federal Reserve

banks, thus increasing their balances which under the law are the members banks' legal reserves.

At a time when things are going well and there is a demand for as much bank credit as the banks can supply, increasing the reserves of the banks will usually increase the amount that they are willing and able to lend or invest. As the banks lend or invest the money they can pass on to the public not only the amount of unused reserves that they have, but all the banks together can pass on several times the amount of these reserves. This is because the banks are required to keep as reserves only a portion of their deposits. The proportions are different for different classes of banks; but, at the present time, all the banks together can lend or invest about six times as much as their reserves. (A detailed explanation of the way this works was given in the Board's annual report for 1936.)

When conditions are such that banks lend or invest all the money they can, the Reserve banks by buying $1,000,000 of Government securities can enable the banks to increase deposits held by the public by $6,000,000. Conditions, however, are not always such as to bring this about. They have not been so for a number of years. The Federal Reserve banks have bought more than $2,500,000,000 of Government securities. There has been a large inflow of gold from abroad, and the reserves of our banks have increased from about $2,700,000,000 in December 1933 to $9,000,000,000 in January 1939. Deposits of banks, however, have not increased in anything like the same proportion, because the banks have not found it possible to use all the reserves they held. At this time they have about $3,500,000,000 more reserves than the law requires and are not finding any way to use these reserves.

The Federal Reserve System can see to it that banks have enough reserves to make money available to commerce, industry, and agriculture at low rates; but it cannot make the commercial banks use these reserves, it cannot make the people borrow, and it cannot make the public spend the deposits that result when the banks do make loans and investments.

3. Steady prices do not assure prosperity, even if the amount of money did determine prices; and even if the Federal Reserve System could determine the amount of money, experience shows that steady prices would not necessarily mean prosperity.

It is true that violent changes in prices are harmful. A very rapid rise in prices results in speculation, in accumulation of inventories, and in unsound undertakings which later result in a collapse with falling prices, failing business, and general distress.

But that does not mean that lasting prosperity is assured when prices are steady. We had fairly steady prices from 1921 to 1929, but during that period there was developing a speculative situation which led to the collapse in 1929. It was during this period that billions of unsound foreign loans were made; that expensive and unsoundly financed apartment houses and office buildings were erected far beyond the needs of the people; that stock prices rose to fantastic levels. It was during this period that the ground was prepared for the depression which began in 1929 and from which we have not yet completely emerged. An unchanged average of wholesale prices alone, therefore, does not assure the people of lasting prosperity. While prices are stable, destructive forces may be at work that lead to panic and disaster. To require the Board to be guided in its policies entirely or principally by changes in the level of prices would prevent it at times from doing its best to serve the public interest.

RELATION OF PRICES

4. Relations of prices more important than average prices: One reason why steady average prices do not assure prosperity is that the average can be steady while prices of some of the commodities that make it up change violently. People are more interested in the relation between the prices of what they produce and sell and the prices of what they buy and use than in the general price level. A farmer is interested not only in what he can get for his products over and above the cost of production but also in what he has to pay for the things that he needs to buy—how many bushels of wheat or pounds of cotton it takes to get a suit of clothes or a new plow. For the industrial producer the cost of his raw materials and labor, compared with the prices that his products will fetch, is what counts. To a wage earner or salaried man the important thing is the relation between his income and the cost of living. Even the ability of people to pay their debts does not depend so much on the average level of prices as upon the amount by which their net income exceeds their living expenses.

A steady average of prices, furthermore, may cover up sharp movements in prices of important commodities upon which large sections of the country depend. For example, from March to September 1937, while the average of wholesale prices was steady, grains declined by 19 percent and cotton by 38 percent. Many people are misled by averages. At the present time, with the average of all wholesale prices at 77 percent of the 1926 level, prices of farm products are at only 67 percent, while industrial commodities are at 80 percent. Even prices of different farm products differ widely. Cotton and grain prices are 50 percent of the 1926 level, while livestock prices are 80 percent.

An attempt to maintain a steady average of prices would run into serious difficulty in years when prices of some commodities were forced up by drought, armament demand, or other things beyond the control of the monetary authority. When prices of industrial materials advanced in 1936–37, a steady average of prices could have been maintained only if prices of finished products had declined, and if that had occurred, it would have made it unprofitable to buy materials on a rising market with the prospect of selling finished products on a falling market. This would have resulted in a slowing down of industrial and building activity. Differences between price movements of raw materials and finished products were, in fact, an important reason of the turn-down in business in 1937.

SYMPATHIZES WITH AIMS

Summary:

To summarize, the Board of Governors is in complete sympathy with the real purpose of the price-stabilizing bills, which is to prevent booms and depressions and have business always on an even keel. But experience has shown that prices do not depend primarily on the volume or the cost of money; that the Board's control over the volume of money is not and cannot be made complete, and that steady average prices, even if obtainable by official action, would not assure lasting prosperity. The Board exerts all its powers to provide a constant and ample flow of money at reasonable rates to meet the needs of commerce, industry, and agriculture. In order to maintain a lasting prosperity many other agencies of the Government, as well as many groups in the general public, must cooperate, since policies in respect to taxation, expenditures, lending, foreign trade, agriculture, and labor all influence business conditions.

The Board believes that an order by Congress to the Board or to any other agency of Congress to bring about and maintain a given average of prices would not assist, but would hinder, efforts to stabilize business conditions. It would hinder, because the price average frequently would indicate a policy that would work against rather than for stability. Such an order would also raise in the public mind hopes and expectations that could not be realized.

Conclusion: In view of all these considerations the Board does not favor the enactment of any bill based on the assumption that the Federal Reserve System, or any other agency of the Government, can control the volume of money and credit and thereby raise the price level to a prescribed point and maintain it there.

Bernarr Macfadden

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 13, 1939

STATEMENT, EDITORIALS, AND ARTICLE ON BERNARR MACFADDEN

Mr. REYNOLDS. Mr. President, several days ago I introduced a private bill for the relief of Hon. Bernarr Macfadden, eminent publisher and physical-culture exponent. This bill interests itself, in a sense, with a bill introduced by my distinguished colleague Hon. ROBERT WAGNER, of the State of New York, and I ask that there be published in the Appendix of the CONGRESSIONAL RECORD a statement by Mr. Macfadden as printed in the editorial columns of the Gazette, of Stillwater, Minn.; an editorial from the Virginia (Minn.) Enterprise; one from the Union Sun Journal, of Lockport, N. Y.; and a brief article from the pen of Mr. A. K. Meck, which was printed in the Dayton (Ohio) News.

There being no objection, the statement and editorials were ordered to be printed in the RECORD, as follows:

[From the Stillwater (Minn.) Gazette of February 18, 1939]

AN UNPARALLELED TRAGEDY—FAILURE TO PROTECT OUR YOUTH

For generations the English-speaking countries suffered beyond the power of tongue or pen to fittingly describe, because of the then prevailing prudery.

The prurient conception of our bodily functions gave us an obscene outlook upon life generally.

The body was vile and unholy, and we were introduced to the mysteries of life with an unclean attitude toward everything associated with our physiological functions.

Yet the Good Book tells us to "glorify God in your body"; that "Unto the pure all things are pure; but unto them that are defiled and unbelieving is nothing pure."

It is plain, therefore, that we are out of harmony with theological teachings in assuming such an attitude toward our bodily structure.

And what has been the disastrous result of this mystery with which we have allowed our youth to grow up to adult life? They learn little or nothing of the physiological laws of sex * * * the information they acquire is usually of a filthy nature, from companions who have an unclean idea of what should be the most divine relations of human life.

The very source of life itself is made contemptible and abominable.

Until recently even our literature could never speak of pregnancy, and a newborn babe in a family was brought by the stork or found under a raspberry bush. Think of the vile results of such an attitude.

And it is only recently that our youth has had the faintest opportunity to learn anything about the most deadly of all diseases * * * the venereal scourge. He had to acquire the devastating disease before he could learn anything about it.

And until very recent years the treatment for this disease was worse than the disease itself. The treatment of the disease brought on paresis, locomotor ataxia, and many other complaints that made life but little more than a satanic inferno.

And when I look back at my publishing career during the period when I was solely a propagandist with one idea only—and that to help the youth of the land build up a fine physique—and recall the experience that I had in trying to warn them against syphilis and other allied complaints * * *. I remember poignantly the thousands of letters that came to me—human tragedies—hundreds of them.

A number came as a last sacrament, damning the environments in which they grew to manhood, with the statement to the effect that they expected to get out of it all through suicide.

And with all this evidence before me a story was written by a well-known author for the one purpose of warning youth against these degenerating diseases. I was 35 years ahead of my time.

But my efforts at that time were rewarded with a 2-year sentence in the penitentiary and a $2,000 fine.

President Taft canceled the sentence, and I am still hoping that the Congress of these United States will apologize to me and return the $2,000 fine I had to pay on that occasion.

I bow in revent thankfulness to President Roosevelt for taking the lid off this sewer that has desecrated human life to such a tragic extent.

Although throughout the entire country there is publicity which is accomplishing untold good, there is entirely too much commercialism about it. Many people are being driven into unnecessary medical examinations; they are made unnecessarily fearful; and there is by no means the educational procedure necessary to protect our young people against this disease through antiseptic measures.

Let us hope, now that this subject has opened up, that an educational procedure will be carried on which will give every youth the information essential to guarantee protection against this fearful scourge.—Bernarr Macfadden.

[From the Virginia (Minn.) Enterprise of February 16, 1939]

Some years ago, Bernarr Macfadden caused a book to be published which warned the youth of the Nation against the vicious social diseases. Up to that time and until very recently, there was a good deal of hush-hush about these scourges which have ruined the lives of so many, and because he warned too plainly and too starkly the volume was considered unfit for circulation, and Mr. Macfadden was compelled to face trial. He drew a 2-year sentence and a fine of $2,000. Fortunately for him, President William Howard Taft suspended the sentence, but the fine he had to pay. Considering the change in the present public attitude toward dissemination of health literature, it would seem that the Federal Government owes Mr. Macfadden at least the amount of the fine exacted these many years ago. Youth is the hope of America, as it is the hope of any nation. It is only as youth is kept clean and wholesome, free from bodily disease and free from immoral thoughts and actions that this civilization can progress.

[From the Lockport (N. Y.) Union Sun Journal of February 20, 1939]

LETTING IN THE LIGHT

The scathing pen of Bernarr Mcfadden, publisher of Liberty, has exposed in a bad light what was up to very recently the attitude toward education in matters pertaining to the health and care of the human body, at least in some of its aspects. Mr. MacFadden referred specifically to education relative to and treatment of syphilis.

"It is only recently," writes the publisher, "that our youth has had the faintest opportunity to learn anything about the most deadly of all diseases * * * the venereal scourge. He had to acquire the devastating disease before he could learn anything about it.'

Every right-thinking person joins with Mr. Macfadden in these words: "Let us hope, now that this subject has opened up, that an educational procedure will be carried on which will give every youth the information essential to guarantee protection against this fearful scourge."

[From the Dayton (Ohio) News of February 26, 1939]

SAFETY VALVE FOR THE LEGAL SYSTEM—SOME CASES SHOWING THE NEED OF BETTER PROTECTION AGAINST INJUSTICE

(By A. K. Meck)

The criminal part of our legal system needs a better safety valve. Bernarr Macfadden, publisher of Liberty, complains in a recent issue because of his conviction in a Federal court 35 years ago. He can't forget it. He was convicted because he was a publisher of a magazine that contained an article on health.

He was sentenced to 2 years in prison and fined $2,000. President Taft relieved him of the prison sentence, but he had to pay the fine. He says that the article he then published would now be considered educational and very proper. That undoubtedly is correct. The conviction still burns in his heart. He wants Congress to pay back the $2,000 and apologize to him on behalf of Uncle Sam.

Tom Mooney got caught in the trap and then refused to accept freedom for his body unless his name could also be freed from the stain of conviction. His hair got grey while he waited. A better safety valve would have prevented that injustice.

An innocent man whom I represented in Montgomery County, Ohio, was indicted by the grand jury on the charges of burglary and grand larceny. We thought we had sufficient evidence to prove his innocence. But suppose a jury had said guilty? He could have been imprisoned for as long as 12 years. Under the circumstances he pleaded guilty to petit larceny and was only fined $25. Was the man wise or foolish? I don't know.

You say that if you had been that man you would have fought it out in the courts, and, if convicted, you would have appealed to the parole board and gained your freedom. Do you think that board would give you freedom simply because you were innocent? If you do, you are wrong.

If you are once snared, you are like a rat in a trap. This should not be so. We need an extra board of justice as much as we do a board of mercy.

The parole board does not have jurisdiction to let out innocent men until they have served a minimum sentence. Appeal to the Governor is not satisfactory. He is sometimes more concerned about his political future and how a pardon would affect it than he is concerning an innocent man's freedom. Sad, but true.

After you have served your minimum sentence, the parole board will not let you out simply because you are innocent. In fact, your innocence would probably work against you, unless you would lie and say, "Yes; I am guilty; I committed that dastardly crime; I am ashamed of myself and have shed many crocodile tears because of the fact that I stooped so low as to commit such a crime."

Under the present system a guilty, despicable sob sister probably stands more of a chance of gaining his liberty than does an innocent man who forever proclaims his innocence.

United States Attorney General Murphy knows what is going on. He knows who is killing our G-men. He knows that the killers are men who have pleased parole boards by sob-sister methods.

The present parole system is against the best interests of the public. It tends to encourage innocent men to seek revenge and to allow hoodlums to run loose and prey upon the public. The parole board ought to constitute a safety valve.

Progress of the Colored Race

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, March 13, 1939

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO, MARCH 2, 1939

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the RECORD an impressive address by the able junior Senator from Ohio [Mr. TAFT] on the subject Progress of the Colored Race, at Howard University, in this city, at its seventy-second charter-day dinner on Thursday, March 2, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

President Johnson and alumni of Howard University: I consider it a pleasure and a privilege to deliver the annual charter-day address to the alumni of Howard University on the seventy-second anniversary of its founding. It is a peculiar pleasure to find that the class of 1909 is one of the sponsors of this year's dinner, because my father delivered the fortieth annual commencement address when that class graduated in 1909. I have welcomed the opportunity to see for the first time this time-honored institution, one of the great universities of the United States, and the center of Negro education. I have been familiar for many years with Wilberforce University in the State of Ohio, and know the tremendous effect it has had on the progress of the people which it serves, but in Howard University I see even greater accomplishment.

Seventy-two years ago today it was established by act of Congress, under the urgent insistence of Gen. O. O. Howard, and General Howard became its president. He realized, as did many others, that not only did the United States owe to those who had long been held as slaves the duty of providing an education, but that only through such education could the country meet the problems created by the presence of so many million colored people scattered among the rest of the population which had

had such superior advantages. For years General Howard and his board of trustees struggled to keep the university alive, but today we can well realize how effective and important was their work. In this great university, over 2,000 students are enrolled in 9 undergraduate and professional schools and colleges. Ten thousand two hundred and sixty-six graduates have been sent out throughout the United States, more than half of them teachers, who have extended the influence of this university to thousands of Negro boys and girls, and directed the course of Negro education in hundreds of other schools and universities throughout the country.

In the field of medicine and law the university has played an especially important part. Forty-six percent of all Negro physicians and surgeons now practicing in the United States are Howard graduates; 40 percent of all Negro dentists. Nearly half of the colored lawyers actively practicing law in the United States are graduates of Howard University Law School, and a large portion of Negro leaders in the field of religion, of teaching, of pharmacy, of engineering, and architecture receive their education here. So that it may well be said that no institution in the world has had more to do with the progress of the colored people than has Howard University.

And it may be said, further, that the progress of the colored people in America in those 72 years is probably greater than the progress of any race in a similar period in the history of the world. They started literally from nothing. The great majority had been slaves, and among the few freedmen were a very limited number who had education; but in 72 years they have risen until there are able colored leaders in every field of activity. In education, in medicine, in law, in art, in music, in athletics, in science, in industry, the colored people have proved their inherent ability and have rapidly developed leaders of outstanding quality. They have naturally paid peculiar attention to the development of the South. A colored scientist has developed many industrial products from cotton and peanuts which have given an increased market to those products and added thousands of jobs to the pay roll of private industry.

I wish to refer especially to one man who died about a year ago, who was certainly one of the most versatile of American leaders, James Weldon Johnson. He was a university graduate, a lawyer, an author, a magazine editor, a poet, and a musician. He was consul in Venezuela and Nicaragua, appointed by my father, and not only spoke Spanish, but wrote poetry in Spanish. He wrote a notable autobiography, a book of American Negro poetry, two books of American Negro spirituals. What is accepted as the Negro national anthem was his work. His was a life of service. There are many others, and I pay a special tribute to him only as an example of the kind of leader which the Negro race has produced.

In the political field you have also developed leaders, particularly in our cities. The character of colored political leadership in Ohio has commanded my attention and interest during the past year. In my own city of Cincinnati Dr. R. P. McClain has been elected president pro tempore of the Cincinnati City Council under our charter form of government.

To what has this great progress been due? You have had the assistance of men like General Howard and many others. Howard University has had the assistance of the United States Government, but not to any extraordinary extent. The money appropriated, for instance, is hardly more than the money appropriated by the city of Cincinnati for its municipal university, serving both white and black citizens of Cincinnati; much less than most of the State universities. The progress has been due to the colored people themselves and to the inherent qualities which they possess. Today it has become fashionable to look to the Government to solve our problems and rely on Government action and laws to advance the welfare of the people, both white and colored. We are too much inclined to lean on the Government, which, in fact, amounts to leaning on other people; but very little real progress has ever been made except through the earnest and sincere effort of those who make that progress. The Government must assure the opportunity for progress. It must create conditions in which every man who has the ability to be a leader of other men can forge his way ahead, regardless how humble his origin, and furnish the inspiration on which all progress is based.

The foundation for the progress of the colored people is found in the Constitution and the Bill of Rights, and particularly in the thirteenth, fourteenth, and fifteenth amendments. They ask nothing more than every other citizen is entitled to, the right to life, liberty, and property, the right to vote, the right to a fair trial, and all the other rights which are guaranteed to every citizen. It is to guarantee these rights that the colored people are asking for and are entitled to an anti-lynching bill to protect those Federal constitutional rights which they now have in theory but which in some places they do not have in fact.

So, also, no one is more interested than the colored people in maintaining the independence of the courts, in order that no matter what the majority in any community may be, no matter who elects the legislative body or the executive, the colored man may receive from independent judges a fair trial in the protection of his constitutional rights. Nothing is more characteristic of the American form of government than this protection given to individual rights. Those who wrote the Declaration of Independence and the Constitution created a government to be directed by a majority of the people, and of course our Government today must reflect the will of that majority. But they said that there were certain inalienable rights belonging to every individual, and that no matter how great the majority, and no matter how strongly the majority felt, they could not destroy the rights of a minority, no matter how small and weak that minority might be. We have seen what happens in countries where there are no constitutions and no independent courts. We have seen what the Germans have done to a minority, and we have seen what the Russians have done to a minority. It is not enough to have constitutional rights, unless we have independent courts to enforce them, because Congress has frequently shown that doubts of the constitutionality of a law, no matter how reasonable, do not restrain it. No one can be more concerned to maintain the Constitution and the division of powers provided by it than the colored race.

But I say again that the function of government in this respect is largely negative and defensive. If we are seeking progress toward a higher civilization, then the colored people, like the white people, must look much more to their own initiative and their own efforts, assisted, but not controlled, by the Government.

True progress must be based at least in part on improvement in material welfare, and as a result the progress of the colored race has been badly checked by the depression which began in 1929. No one else has suffered so much from the scourge of unemployment. Unfortunately, employers in general have not followed the example of men like Mr. Harvey Firestone, in Akron, Ohio. Mr. Firestone undertook to see that colored people were employed in nearly every department of his great rubber company, and that when the time for lay-offs came, no greater proportion of colored people were laid off than of white people. But it has been generally true that colored people are more likely to lose their jobs when employment declines, and find it harder to get them back when employment increases. In other words, there is still an economic discrimination which we must do our utmost to reduce.

Abraham Lincoln said in the famous Lincoln-Douglas debates: "In the right to eat the bread which his own hand earns the Negro is my equal and the equal of Judge Douglas and the equal of every living man." But we must see also that he is also the equal of every living man in the right to earn that bread.

Apparently, however, the solution is not Government assistance or the passing of laws. No government has ever poured out so generously money for relief and money for work relief like W. P. A. as the present Government. And yet today, after many years, millions of men are unemployed, and an undue proportion of colored people are unemployed. We must be grateful for the Government action, tiding many men and women over the emergency of the depression, but it is not much of a substitute for real jobs, and it does not provide an economic basis on which progress can be actively continued.

In fact, should the present conditions become permanent there is a real danger to the colored people. Government relief cannot do much more than provide a wage basis, very little, if at all, above the needs for a bare existence, and if more and more of the colored people drift onto this W. P. A. scale it will leave them ultimately in a kind of economic servitude akin to serfdom. The man on W. P. A. has no opportunity to go forward. He receives only enough to provide a bare existence and cannot be of the slightest assistance in bringing real progress to the race.

As a matter of fact, the whole movement toward Government regulation and regimentation is more of a threat to the colored race than it is to the rest of the Nation. If the Government ultimately comes to the point of fixing all wages, hours, prices, and practices; if it comes to the point of telling every man in what industry he shall work and what type of job he shall enjoy, there is a real danger that the colored people will get the worst jobs in the worst industries. Under anything resembling regimentation minorities are not likely to do the regimenting or have much to say about where they shall be fitted into the social picture.

And so the colored people, even more than anyone else, are interested in Government policies which will stimulate private industry, and stimulate the creation of more jobs and more prosperity. If those are provided, then the education provided by Howard University and many other institutions will show to colored leaders the means by which they can go forward. They will always have to fight against certain narrow prejudices, such as that which seems to have excluded Marian Anderson from a proper auditorium in the city of Washington, and has excluded them from employment in various industries. But in that fight they will have the support of the great majority of the white people, and all of the intelligent white leaders. Your goal is equal opportunity, the same goal as that of every other American.

Nothing is so important to the colored people as education. Some institutions are engaged in teaching vocations to boys and girls so that they may be able to give employers a reason why they should be employed and earn a fair wage when they are employed. Some times I think the education given by our public schools is so general that the boy and girl graduates, while they have a good background, are not able to do any particular job better than they could before going to school. Colored people have not taken their proportionate place as businessmen and they may well devote their attention to operating more of the stores which serve their own people.

Lord Brougham said once in the House of Commons, "Education makes a people easy to lead, but difficult to drive; easy to govern, but impossible to enslave." Howard University has still its big task to perform in training teachers from many schools, in training those able to enter the professions, and in training men who may become the leaders and prophets of the race. In that task you deserve the support of all Americans—black and white. I hope, as a Member of the Senate, I can help carry through after the 10-year plan is completed.

You must always preserve inviolate the Constitution of the United States, and the thirteenth, fourteenth, and fifteenth amendments. On a firm foundation of constitutional freedom you can build an economic security, and on such economic security you can build a higher civilization, but you can only do it by your own efforts, and the efforts of the members of your group, without leaning on the white people or on the Government, but with their willing assistance.

America will not overlook the great part played by the colored race in the development of this great Nation.

Neutrality

EXTENSION OF REMARKS

OF

HON. GEORGE L. RADCLIFFE

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, March 13, 1939

ADDRESS BY HON. ELBERT D. THOMAS, OF UTAH, MARCH 9, 1939

Mr. RADCLIFFE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by the junior Senator from Utah [Mr. THOMAS] before the Maryland Committee for Concerted Peace Efforts in Baltimore on March 9, 1939, on amendments to the Neutrality Act commonly known as the Thomas amendments.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, after 4 years of neutrality legislation I am convinced that the American people want two things, first they desire to reduce as much as possible the danger of profits which might involve them in a war, and second they wish to see the economic and moral force of our country in a position to be able to be used in such a way that the war maker among nations may be curbed and restrained and not encouraged. The motives which brought forth the neutrality acts therefore were good.

Consequently, I have introduced two amendments to the present neutrality law: One to provide that the President might extend his embargo of implements of war to include essential raw materials for war purposes; and the other that when the President finds that one or more parties to the dispute has gone to war in violation of a treaty with the United States, he could, with the consent of both Houses of Congress, so modify any embargo he might have invoked to apply only against the treaty breaker.

While we have been generally disillusioned over our neutrality legislation the acts themselves should be no more condemned as a whole than we would condemn the motives behind them for they are not wholly bad. First of all, during the discussions of these acts sentiment in the United States against a resort to war reached a pitch it had never before reached in our country. In the discussion of the 1935 Neutrality Act we heard the sentiment: "We want no war and we want no profits from war." That was very different from the whole idea of the old neutrality where we stressed neutral rights to the extent that it was necessary to fight for them. All three of the neutrality acts refer only to the United States. Our acts which condemn war as such condemn trading in war materials in theory. But first of all they emphasize the duty of a neutral. In review, it is, therefore, proper for us to point out that by these acts the United States has declared that even if it does not take part in wars that it has some obligations as a neutral as well as rights. This stressing of the duty of a neutral is America's contribution to the development of the neutrality idea and it is a good contribution.

But the neutrality acts were acts of retreat. They came as a response to the urge of those who thought we were going to be dragged into war and the enactments were in reply to the desire on the part of the American people to have nothing to do with war. In other words, the neutrality law was a means of finding escape from obligations to help prevent war. From 1914 to the present time, there has been an effort on the part of some to convince the American people that they should return to a fictitious isolation which they really never enjoyed, rather than to avoid war by vigorous policies to prevent it.

We stand disappointed and disillusioned. The neutrality law has not increased our sense of security. In the threat of hostilities in the Far East and central Europe, the neutrality law is not regarded by many of our people as a policy to protect American security. Our arms expenditures have grown; the danger of war to us increases; and I doubt if there are many people who would today say that the neutrality law has lessened the danger of war to this country.

The neutrality acts too have contributed toward a revival of a rearmament race. While the acts are not by any means the only contributing factors America has been a rather easy source of supply in times of necessity for war materials for certain countries.

In the second place, the law has not been neutral in the sense that it means impartial. Indeed, as a result, the first Neutrality Act was interpreted by Italians as a friendly act toward Italy. Japan also felt secure as a result of it and interpreted it as a friendly act toward Japan. No one, especially the sponsors of the law, expected those interpretations. The irony of our neutrality policy was that in the administration of the third act the United States actually reversed itself and turned away from previous engagements and treaties, which prohibited the sale of munitions to Germany. Public opinion has been overwhelmingly opposed to the application of the neutrality law in the far eastern crisis because it felt that the law would work contrary to our interests and definitely to the advantage of but one of the countries at war—in other words our Neutrality Act in practice was discovered to be unneutral and therefore could not, without doing great damage, be invoked.

It was folly to believe that a country with the economic power and influence of the United States could adopt an embargo policy which would affect all countries alike. This country supplies about one-third of the known raw materials of the world; it accounts for more than one-third of the known economic and industrial life of the globe. Any embargo must affect one side more than the other and unfortunately it has been demonstrated that the application of the law favors the side that is the stronger and penalizes the side which is fighting against the greater odds.

There are those who wish that all neutrality legislation be repealed. But I bow to public opinion which seems to wish some legislation. There are those who say let us repeal everything in the law but the cash and carry feature whereby we would supply arms or raw materials to any purchaser just so long as he can pay cash and transport the material in other than American boats. Such a policy by which this country would make all of the profits out of war and hard-pressed friends of ours would take all of the risks, would reduce the whole question to the lowest moral level possible.

To repeal the entire Neutrality Act, as has been suggested since the beginning of the session by my colleague, Senator KING, and as was suggested the other day by the introduction of a resolution by Senator LEWIS, of Illinois, is impractical. A repeal of the act would mean the abolition of the Munitions Control Board. This Board performs an extremely useful function, and the Board's life should be continued.

Any neutrality law that does not contain the symbol of distinction between the nation that respects its treaties and the nation that violates them is essentially an immoral and war-encouraging act, because it ignores and defies the principles of international morality which the nations of the world have been building through the years. We must encourage the substitutes for war. They are law, understanding and appreciation of each others' objectives, a cooperative endeavor which emphasizes interdependence rather than contest and antagonisms. Our neutrality acts have caused us to throw our whole moral influences and support to the less worthy of national forces now being exerted in the world.

How can this symbol of distinction between right and wrong be established in ways most acceptable to the American people? How can we define the aggressor? I reply there is a very simple definition, one easy to apply, and that can be applied by the American Government alone. For our purposes the aggressor is the nation that resorts to war in violation of treaties with this country pledging itself not to go to war.

In the second place, how should this application be made? There are those who would let the modification of the embargo be entirely in the hands of the President. I believe that the present law reflects a distrust of our Executive and ties the hands of our President in dealing effectively in international matters when there is war in the world. That is simply bad government. It hinders America's effectiveness for good in the world, and it causes the advantage taker among the nations to be doubly reassured.

There are those, however, who feel that discrimination between sides through applying the embargo against one side is too great a power to be placed in the hands of one man. Wishing to produce a formula that would meet all such objections and satisfy the greatest number of our people, my resolution provides that when the President shall find that a nation has gone to war in violation of a treaty with the United States, something entirely within the constitutional prerogatives of the President, he may, with the consent of a majority of both Houses of Congress, a step entirely within the constitutional prerogatives of Congress, modify the embargoes so as to apply them against the treaty breaker only and not against the victim.

The second point to my resolution would authorize the President to extend his embargo on arms to include essential raw materials used for war purposes. I presume there would be almost unanimous support on this point. A nation that plans an act of aggression over a period of years will be fairly well prepared with armaments before undertaking such a venture. What that nation may need immediately is the power-producing fuel to run its war machines, and in time, as its reserve stock of armaments lessen, it will need raw materials for the manufacture of armaments. Consequently, the present bill is practically useless in stopping the treaty breaker unless the embargo can include raw materials for war purposes.

I believe, ladies and gentlemen, that these two amendments preserve that legislation which grew out of a very deep-seated desire on America's part to lessen the danger of involvement in war through profits. They would, at the same time, provide that distinction

between the aggressor and the victim which will relieve this country of the possibility of being an accomplice of an aggressor, something about which I am sure the American people are very much ashamed.

The amendments, too, when the very serious step is taken, in deciding between the aggressor and the victim, place the responsibility in a partnership between the President and Congress, in accordance with a definition of aggressor that is simple, a definition based solely upon a violation of treaties with the United States.

Which Way Recovery?

EXTENSION OF REMARKS

OF

HON. W. WARREN BARBOUR

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, March 13, 1939

RADIO ADDRESS BY HON. WARREN R. AUSTIN, OF VERMONT, MARCH 12, 1939

Mr. BARBOUR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the very able and excellent address delivered last night by the distinguished Senator from Vermont [Mr. AUSTIN] over the Mutual Broadcasting Coast to Coast Forum of the Air. The Senator's address is entitled "Which Way Recovery?"

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, take the road to the right. After following it 2 miles, inquire again.

A stranger traveling in Vermont inquired, "Do you know the way to Highgate?" The Vermonter answered, "No." The stranger then asked, "Do you know the way to Bakersfield?" The Vermonter replied, "No." Whereupon the visitor said, "You don't know much, do you?" And the Vermonter replied, "No; but I ain't lost."

"Which way recovery?" should again be asked at the end of the 2-mile stretch. There exists no oracle to definitely answer the question. However, there are some things to guide us: We know that we are on the wrong road so long as we continue the easy way downhill to the left. Six years of experience has proved that.

On the other hand, we perceive, at the top of the rugged uphill road to 1940, an opportunity to remove some of the causes and some of the authors of our distress.

The depression of 1930 to 1936 excited reform legislation as well as recovery legislation. Both types of legislation failed. The reform legislation did not remove the causes of the depression. Some of it was void because of unconstitutionality. Witness the N. R. A. and the A. A. A. The recovery legislation was only temporarily effective and exhausted itself as soon as Government stimulus to consumption ran out.

The Government reversed its policy in 1937 and practically wiped out the basic stimulus to consumption. Notwithstanding the spending of billions of dollars, a collapse occured, a collapse of the whole Nation's business. Unemployment again increased.

This shock was more effective than it would otherwise have been because of another folly of the New Deal—surpluses had been driven out of the accounts of big business by penalties in the form of taxes.

In April 1937 the President declared that prices were too high. This resulted in a psychological blow to business, in the abrupt termination of inflation confidence. Forward buying was stopped. A nation of defeated and discouraged would-be investors reacted to the ominous threat of direct Government competition and to the attacks by important officials of Government on business solely because of its bigness. "Oh, what's the use?" was a common expression in the offices of private enterprise.

Another shock which was extensive in its effect was the abrupt contraction of the credit base. The Federal Reserve Board announced that henceforth banks must carry double the resources formerly required against deposits. Thereupon only $5, instead of $10, of credit could be extended to business on every one dollar of reserves. This move was so deflationary that investments stopped and prices fell. Whereupon everyone quit buying.

Former recoveries, of relatively sound characteristics, invariably depended upon new investment. In the feverish upward turn of 1936 new investment was entirely absent. In its place the New Deal factor of public spending was the only support for consumption stimulus. No net addition to national purchasing power was made. Therefore when Government spending was reduced, consumption stimulus was removed. Consumption dropped; therefore production decreased; therefore, also, unemployment increased.

Lack of confidence in Government spread over the continent, caused by the breach of extravagant promises of jobs for everybody, security, and a sound economic adjustment. Public opinion became confused by the attempt of the administration, through radio broadcasts and newspaper publicity, to account for the collapse by charging it to business and by accusing business of being on a sit-down strike. This expressed hostility of Government to business engendered timidity in efforts toward recovery and discouraged investment capital.

When the 1936 recovery collapsed we were left with the reforms of government made by the New Deal. They implied a totalitarian state. The promotion of legislation centralizing in Washington control of the Nation's business arrested those who, in former recoveries, had made the daring investments and initiated the advances in production which called out an enlarged purchasing power. Nearly all of these captains of industry retreated from the shower of bricks hurled at them by a desperate New Deal.

After 1936 the President's conception of the election as a mandate resulted in still more radical encroachment on State rights and on the limitations of Federal power. The elections of 1936 and 1938 disclosed another characteristic of the New Deal which was most destructive of the guaranties of freedom, namely, the use of the spending power to influence votes and political conduct. Efforts to protect the independence of the voter and to preserve the sanctity of the ballot were squelched by the New Deal.

Meantime the age-old method of aggrandizement of an autocratic power was attempted, namely, reorganization of the Government in a manner to abolish current control of spending of the taxpayers' money and to place it in the hands of the Chief Executive.

The New Deal grasp for the purse strings represented by this proposal to eliminate the Office of the Comptroller General raised an issue in this country which has yet to be determined.

The necessity for rulers to find new sources of revenue, and the conflict of the burden bearers therewith, have constituted the chief events of constitutional history. Again civilization is confronted by this vital issue.

Meantime, there has also been spawned the extremely radical notion of amendment of the Constitution through court packing. This alarming departure from the right of the people to control changes in their fundamental law aroused John Citizen to immediate action, and his voice was heard in the election of 1938. He will answer your question, "Which way recovery?" in 1940.

The events I have spoken of, and others of similar character not mentioned, dictate a change of route. The road to the right is unattractive and difficult, but Republicans are convinced that it is the only road to recovery.

If, in 1940, this country should be blessed with an administration that is fair and just toward business, an administration that promotes the development of a capitalistic system fair to labor, and with the profit incentive as fuel for the fire of genius, an administration that does not excite class prejudice, and develop hatred for investors and employers, confidence would be restored and recovery would be at hand. However, we should not wait for 1940. We ought to take this way to the right at once.

European tension has lessened. Alarm has diminished in France and England. The well-informed sentiment of American citizens has permitted the continuance of our ancient foreign policy of independence, though not isolation, an expression to the world of positive opposition to breakers of the peace; and our Government has proceeded with celerity toward a suitable military establishment for national defense. All debaters of these subjects are agreed on the objective of peace.

The President and some of his Cabinet officers have reversed themselves in their utterances regarding business. We are now informed that the President favors the removal of impediments to private enterprise. The Secretary of the Treasury and the Secretary of Commerce propagandize scrutiny of the tax laws to see if there are any deterrents to business.

The distinguished chairman of the Special Committee Investigating Monopolies, Senator O'MAHONEY, to whose learned address we have listened tonight, is reassuring the Nation's business by the fair and just method of his investigations and by the declaration of his constructive purpose. It is probably not a mere coincidence that we are together on this program. We are protagonists on the committee which considered the O'Mahoney-Borah licensing bill. The way to the right would leave such bills in committee or in some other cold storage until after the completion of the research of Senator O'MAHONEY'S committee.

Reform measures hastily conceived and enacted without due deliberation destroy confidence, because their tendency is to destroy the Republic. Therefore, no new Government controls over business should be established until after thorough investigation. The proposed control involved in the wool products labeling bill has been under consideration for 20 years, but there is so much doubt of such control giving any real help to sheep raisers, and so much certainty of increase of unemployment and increased cost of living, that this bill, in which Senator O'MAHONEY and his distinguished colleague, Senator SCHWARTZ, are interested, ought to have further study.

The Labor Relations Act ought to be amended to restore the sanity of the relations between Government and citizens. Government ought to be impartial and just as between labor, consumer, and capital. The American safeguards of such relations must be maintained. The Social Security Act should be amended to broaden its scope and to advance the time of payment of benefits.

The purity of elections ought to be promoted by the adoption of legislation now pending. This would remove one of the most fearsome causes of uncertainty and apprehension in the minds of American citizens. Also, this would stop some unnecessary expenditures. Government monopoly, Government competition, Government gifts of silver profits to foreign countries should be termi-

nated. The tax system should be readjusted to reduce burdens on industry. The undivided-profits and capital-gains taxes should be abolished. The monetary and governmental props of agriculture will have to be maintained for a time, and a happier relation be established between the purchasing power of the dollar and the farmers' and other basic producers' income.

I believe that government, for the present, should narrow its activities to fiscal measures, like reduction and regulation of spending, reduction of taxing, and opposition to increase of our national debt. Also, to monetary measures affecting interest rates, reserve requirements, etc.

Government should not intervene directly in industry beyond that minimum degree of regulation which tends to secure the maximum of competition. Clarification of antitrust laws now existing is a duty to be performed. I believe it should await the results of the O'Mahoney committee's study, which, I am happy to say, appears to be conducted in a judicial rather than in a partisan or prosecuting manner.

These are some of the things that government could do immediately to manifest a turn toward recovery. But along with efforts of government, there must be cooperation by citizens. The way to the right involves reduction of spending, but not with the violence of 1937 and not with the contraction of the credit base or the raising of interest rates or other deflationary monetary measures.

Reduction of spending cannot go into effect forthwith. Pump priming is sure to continue for a time. In fact, it has not yet reached its maximum. From experience we are convinced that however great the pump priming, it will not create any permanent recovery unless there is a restoration of private enterprise. If every businessman in this country should face that fact, without partisanship and the class antipathies that have been excited, he would find it in his selfish interest, as well as in accord with his patriotism, to assume confidence and to make contributions to recovery.

This means risk. Perhaps it means sacrifice. But if upon recovery depends the Republic, we see clearly that political responsibility is founded on the spiritual basis of willingness to sacrifice.

The Republic does depend upon recovery. Our institutions, which are designed to preserve freedom of speech, protection of life and property, and all the other acknowledged human rights, would be taken from us in the efforts of government to maintain order if we should fail to follow the way to recovery. We are already at the crossroads. We must depart from the New Deal way as soon as practicable. Thereafter, in 1940, an event may occur which will relieve this country of great apprehension and revive its faith in the solvency and security of our economic and political system. Then will there be cause for an increase of national income and an uplifted national spirit.

Take the way to the right, Mr. President. In that direction awaits recovery.

Functioning of the Civil Service

EXTENSION OF REMARKS

OF

HON. JOHN E. MILLER

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, March 13, 1939

RADIO ADDRESS BY HON. ALLEN J. ELLENDER, OF LOUISIANA, MARCH 11, 1939

Mr. MILLER. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by the distinguished Senator from Louisiana [Mr. ELLENDER] on Saturday, March 11, 1939, over the National Broadcasting Co. red network system in a program entitled "Youth Meets Government," sponsored by the Brooklyn Institute of Arts and Sciences, Brooklyn, N. Y.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, Does civil service function effectively, is the question under discussion.

As civil service is operated under our own Federal system, it is my personal opinion that in most departments of our Government, it does not function effectively. I became interested in the subject soon after I was sworn in, a little over 2 years ago, as a member of the United States Senate. It appears that as freshmen Senators are inducted, new hope is born in the hearts of oppressed Government employees, and they renew their appeals for help. Individual complaints began to pour in upon my arrival in Washington, and I decided to investigate a few of the cases that were submitted to me. I soon concluded that the so-called merit system as applied in Government departments is, in many instances, based not on "what one knows" but on "who one knows." I offered a resolution for the appointment of a Senate committee to investigate civil-service administration. It was unanimously adopted and I was appointed chairman of the committee of five Senators thereby created.

In addition to my other duties, I have been laboring for over a year gathering data that will form the basis of the proposed investigation. The task that I have undertaken is a huge one, but I propose to stay with it and do all in my power to help establish a real merit system in the Federal Government. I need the cooperation of all those now in the service.

Time will not permit me to go into detail, but I shall attempt to briefly discuss three of the major sources of complaint, as submitted to me by Government employees:

First, as to the method of awarding efficiency ratings to employees: Under the present system, an employee each year, or sometimes twice during the year, is given a rating by the person immediately above him. This rating is supposed to be a summary of his ability and efficiency and work productivity during that period. Based on that efficiency rating, the employee must stand his chance for promotion, or demotion, or even dismissal from the service, because when an employee's efficiency rating drops below a certain point, he is subject to dismissal; and, likewise, when promotions are made in the service, they are given, as a general rule, to those with the highest efficiency ratings.

Some of you might ask: "Is not that fair enough?" Before reaching your conclusion let me outline to you just exactly what takes place after the immediate superior grades the employee under him. I am informed, and this information has been borne out by the testimony of hundreds of Government employees, that after the immediate superior rates the employees under him, these ratings are then sent to the party next in authority, and so on until they reach the head of the bureau. After the ratings leave the hands of the immediate superior they are subject to juggling, either up or down, at the whim of the party next in command. And in the final analysis the rating that a Government worker gets, which is supposed to reflect his ability and efficiency for a given period, in many cases has been changed by someone who is not in the least familiar with his work or ability or competency. Under this system of grading the worker may be discriminated against in two ways: First, his immediate superior may take a personal dislike to him or have some grievance against him, and can without fear of reprimand lower his efficiency rating; second, a worker may receive an "excellent" or "very good" efficiency rating from his immediate superior, yet the person next in rank above can mark that employee's rating downward without assigning any reason whatsoever, and without being in the least familiar with the employee's work and without having to answer to anybody for his actions. I am informed that under the above procedure ratings of Government employees are lowered for personal reasons, due to personal antagonisms and dislikes, or for the purpose of minimizing the number of employees who would be eligible for promotions, thereby placing their favorites in line and giving them preference for any promotions or salary increases that are available. And, mind you, once an employee is given such a lowered efficiency rating he does not have one iota to say about the matter and he has to take it whether he likes it or not. He cannot appeal that efficiency rating. He is, however, permitted to discuss the situation with his immediate superior, and in most cases it is like asking favors of your executioner—it has the same effect.

Second, as to the method used in awarding promotions: Under the present system recommendations for promotions must come from the bureau chiefs, through the immediate superior of the employee, and therefore unless an employee can get the "ear" of his superiors he stands little chance of ever securing a promotion. True, most of the department heads claim that promotions are based on efficiency ratings, and those with the highest efficiency ratings are promoted ahead of those with lower ratings. But as I have just pointed out, note how grossly unfair these ratings can be to employees when handled by persons with too little conscience. Bureau chiefs and subordinates build up their favorites by giving them high efficiency ratings or assigning them more important work that will lead to promotion by reclassification, and hold down those they have no personal interest in or against whom there is some grievance, by giving them low efficiency ratings or by never giving them a chance to perform a higher class of work.

Third, as to the method employed in administering reprimands, demotions, or transfers: In these cases the accused are usually charged with some misdemeanor or minor offense, and are instructed to submit to the bureau chief in writing the reasons why they should not be reprimanded or disciplined. Then the party who accused them is called before the chief of the bureau, and he presents his side of the case. He usually has the opportunity, so I am told, of passing on the defense plea submitted by the accused; and it is rather definitely apparent that in most cases the accuser passes final judgment because the chief is not familiar with the facts and permits his lieutenant in effect to decide the case. The accused never gets a fair chance to refute the charges that are lodged against him. He has no appeal, once he has been reprimanded or disciplined. Workers who object to disciplinary measures, or who try to appeal the decision, or who complain against the treatment received from their superiors are usually "blackballed" and never stand a chance of promotion in Government service. It is stated that these "blackballing" tactics are handed from one department to another and follow the victim as long as he remains in the Government service. An employee never gets a chance to see his employment record, and I am informed that adverse notations about employees are made in their respective files which the unfortunate worker never gets a chance to see, or

refute, or in any way examine in order to protect his own interests. Yet these same charges are held against the employees, year in and year out, and it is easy to imagine what happens to this poor individual if he ever applies for a promotion or transfer, or runs afoul of his chiefs in any way.

Our committee has ample proof in support of the charges of abuses now prevailing under our present system, and it is our desire to explore every phase of the problem. As I stated a few moments ago, we desire the cooperation of all employees, and, in fact, all those interested in establishing a near-perfect merit system in our Government departments.

I may state that quite a great number of employees refuse to testify because they fear reprisals. Think of a system that creates such fear! In order to protect each and every employee from reprisals, our committee has obtained from each departmental head of our Government a letter guaranteeing them immunity should they desire to testify, and I, for one, will leave nothing undone in order to mete out punishment to any bureaucrat who would use the power of his office to punish one who testifies before our committee.

Proposed Change of the National Labor Relations Act

EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, March 13, 1939

ARTICLES FROM LIBERTY MAGAZINE OF MARCH 18, 1939, AND WASHINGTON POST OF MARCH 10, 1939

Mr. BURKE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article appearing in last week's issue of Liberty Magazine, written by William Green, president of the American Federation of Labor, entitled "How and Why We Want to Change the Wagner Act."

I also ask unanimous consent to have printed in the RECORD the result of the Gallup Poll of Public Opinion as printed last week showing that approximately 66 percent of the people desire that something be done to the act either by way of repeal or amendment.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

[From Liberty Magazine of March 18, 1939]

HOW AND WHY WE WANT TO CHANGE THE WAGNER ACT

(By William Green, president of the American Federation of Labor)

I wish to emphasize, first, that the American Federation of Labor is for the Wagner Labor Act. We helped write it. We will defend it against any who may attempt to destroy it. But we demand its amendment, in order to restore it to what it was intended to be. In simplest terms, the aims were:

Workers should be given a stronger bargaining status, comparable to that of employers. "Rules of fair play" in labor relations should be outlined. Government—through the National Labor Relations Board—then would become merely an umpire; an impartial one, we assumed.

We saw in this measure a new "bill of rights" for labor; it has been used to nullify the rights of unions established during half a century. Under this act, workers were to be safeguarded in organizing, free from employer interference. Instead, labor has found itself coerced by a new and powerful bureaucracy.

There was guaranty also of the workers' right to bargain collectively through agencies of their own choice. This freedom has been curtailed or denied in arbitrary, dictatorial ways.

We had every reason to expect that the intended clarification of labor relations would lessen strife, help build industrial peace, aid recovery. We have been amazed at finding the actual results to be heightened uncertainty and an increase in confusion and conflict.

From a measure which we thought of as "our baby" we had expected peace and progress. As a quite opposite record mounted, we were reluctant to believe that a Federal agency could so brazenly pervert the spirit and intent of this law.

For better understanding, consider some facts about its origin. It was designed to carry on the principles of article 7 of the N. R. A. When the advice of labor leaders, including Mr. Lewis, was sought in writing this measure, there was no C. I. O. We therefore could not foresee some complications which were to arise.

But, curiously, we actually did seek safeguards against some of the evils which later developed through C. I. O.-N. L. R. B. action. We wanted to be sure that the Wagner Act could not disturb a principle deeply embedded in the American labor movement. Samuel Gompers had termed this "voluntarism." He had preached, and we believed, that our success must depend upon voluntary action: In organizing, in collective effort, in bargaining with employers, for agreements which must be kept.

The guiding American idea was democratically organized unions, managing their own affairs along proved lines, and wholly free from outside interference, even from government, however well-intended.

This basic idea we tried to protect in the wording of the act. More than that, when the text was completed, questions were put to Senator WAGNER. He gave assurance, first, that there was nothing in the measure "which places the stamp of governmental favor on any type of union"; second, that the status of long-established craft unions was protected; and, third, that "under no circumstances can any board enter into jurisdictional disputes."

We wanted to be doubly sure of the "umpire status" of the proposed board—that it was not empowered to interfere in any managerial way in the labor movement, then united, or to intervene in the internal affairs of unions. Nobody even thought of asking whether it could nullify employment agreements already signed.

Administration of the Wagner Act was reasonably in line with its intent until the Supreme Court decision sustaining it. Since then the change has been staggering.

The National Labor Relations Board has usurped power. It has virtually made its own law. It has advanced its own philosophical views in defiance of American tradition. It has entered into an unholy alliance with the C. I. O., the clear result being an attempt to weaken and destroy A. F. of L. unions.

The evidence on this point, incredible in the beginning, has grown until the entire federation membership has united in protest. State federations in Massachusetts, Pennsylvania, and North Carolina—important industrial areas—adopted boycott resolutions against utilizing in any way the services of this Board. Several other affiliates have wanted to take similar action, but we have urged them not to, though their wish is easily understandable.

Very few A. F. of L.-employer cases have come before the Board because of our success in direct, voluntary negotiations. However, at our recent convention, Vice President Tobin estimated that 85 percent of the cases before the Board were on A. F. of L.-C. I. O. conflicts. This in spite of Senator WAGNER'S conviction that his measure gave no authority to decide between different types of unions or intervene in jurisdictional disputes.

Here is an agency which was to have had only the limited duties of an impartial umpire. After study, our executive council declared, "It possesses more power than does any other governmental board now in existence." As for "wholesale" use of this power, the Board and subsidiaries in 3 years have passed on 16,500 cases, involving almost 4,000,000 workers. It has taken jurisdiction over a great portion of the vast industries of America.

Congress gave the N. L. R. B. no such mandate. I do not believe the people of America want any board to have such powers. They were seized. Public and labor interests alike demand correction of this situation.

Reports on flagrant bias against the A. F. of L. and its subsidiaries arrive more rapidly than our legal department can study and codify them. A few examples:

The International Brotherhood of Electrical Workers, 28,000 strong, and far in the majority, had signed an agreement with the Consolidated Edison Co. of New York. The C. I. O. attacked the contract. The N. L. R. B. annulled it. The pretext was that the company, through "favoritism," had "imposed" our union upon its employees. It was ordered to post notices that workers were free to quit the A. F. of L. and join the C. I. O. The electrical workers, long organized, didn't consider that they were in any favored company union category. This case was taken to the circuit court, where they won their right to restore that contract. That should have been decisive, but it was necessary to fight that case to the Supreme Court, where the contract again was sustained.

The highest Court in the land sharply criticized the Labor Board. In the majority opinion, Chief Justice Hughes rebuked it for reaching extravagant conclusions and held that it exceeded its powers by assuming the right to abrogate contracts of independent labor unions.

Then there was the National Electric Products case. A contract signed; a C. I. O. complaint, and the Board set the contract aside, ordering an election. The employer took that issue into court and the contract was upheld. There was the law; every citizen should respect it. But it was not enough for the N. L. R. B., which refused to recognize the court decision until the election was decided. The brotherhood won overwhelmingly; but here we have a strong union harassed and driven for months by an agency supposed to be judicial.

Certain minor supervisory employees, having no right to hire or fire, are eligible to union membership, A. F. of L. or C. I. O. Now, suppose such a man has belonged to one of our unions; he believes in it; he says so. That is natural—and his right of free speech. But the C. I. O. files protest: This is "unfair practice" by the employer! Repeatedly, on that silly pretext, A. F. of L. elections or contracts have been set aside.

Note the solicitude over flimsily alleged employer "influence"; then turn to Harlan County, Ky. There the N. L. R. B. approved a "deal" whereby employers dictated which union workers must join! They were not consulted; they had no choice. Coal operators faced both criminal and civil prosecution for antiunion methods. But the N. L. R. B., John L. Lewis, and the operators made a trade.

Arbitrarily the C. I. O. United Mine Workers, which had not organized the miners, was designated as the exclusive bargaining agent—and prosecutions were to be dropped. There has been no more brazen example of Lewis' use of governmental machinery to recruit C. I. O. membership, though examples are many.

Lawyers and other personnel of regional labor boards frequently have guided C. I. O. officials in controversy with A. F. of L. unions. Close teamwork is glaringly evident during many "impartial" hearings.

Again, this Board ruled that all Pacific coast ports should constitute a single unit for bargaining, the Harry Bridges C. I. O. unit being the agent. Result, in localities where A. F. of L. men are in the majority, their unions are virtually disestablished.

Following that theory, this Board can arbitrarily designate "appropriate" bargaining areas, either geographic or industrial, in such a way as to throttle and destroy A. F. of L. unions long established. This was not the intent of the law nor of Congress, and I am confident that public opinion condemns such tactics.

The C. I. O. can get a quick order for an election, whereas the Board and C. I. O. have conspired to delay or prevent elections sought by the A. F. of L. But enough. There are probably a dozen types of anti-A. F. of L. action, each proved by several cases, which I have not mentioned.

I am asked how these incredible things can be possible. First, because men of little or no labor experience were appointed to the National Board. Two in particular, Edwin Smith and Donald Wakefield Smith, have shown in their actions and declarations a determination to "make over" the whole labor movement—as they see fit. They have been guilty of distortion of the act they are sworn to administer impartially.

Second, there was a flood not only of inexperience but of radicalism into the country-wide set-up of this agency. Since this paralleled infiltration of Communists into the C. I. O., there was a working basis for advancing "imported" ideas. Also for inquisitorial opposition to the long tried American way of handling labor problems. Never once, for instance, has this agency condemned the imported and revolutionary sit-down technique. On the contrary, it has condoned and defended violence.

What is the cure for all this? First, placing administration of the Wagner Act in competent, impartial hands. Then a clean-up all down the line, throughout the subordinate personnel. Finally, not essential change in the act itself, but "rectification" of it—by amendments.

I have mentioned the anti-A. F. of L. bias of this Board; so I should make it clear that we are not seeking a pro-A. F. of L. labor act. What we want is a pro-America type of measure. Fair rules and freedom for voluntary cooperation between employees and employers. That is the straight road, we believe, toward industrial peace and prosperity.

[From the Washington Post of March 10, 1939]

THE GALLUP POLL—REVISION OF WAGNER ACT FAVORED BY PUBLIC, WITH ONLY ONE VOTER IN THREE CONTENT WITH LAW

(By Dr. George Gallup, director, American Institute of Public Opinion)

A substantial majority of American voters with opinions on the Wagner Labor Act think the law should be revised or repealed at this time.

With agitation stirring in Congress to amend this controversial legislation, an American Institute of Public Opinion survey finds that approximately one-third of the voters with an opinion on the act think it should be left unchanged, while two-thirds want it amended or repealed outright. Although opposition has increased somewhat as compared to a year ago, there has been a slight trend in favor of the act in the last 4 months.

The institute has taken three surveys of voting sentiment on the labor law, each time asking the same question:

"Do you think the Wagner Labor Act should be revised, repealed, or left unchanged?"

The trend of sentiment has been as follows:

	Revised	Repealed	Left unchanged
	Percent	*Percent*	*Percent*
May 1938	43	19	38
November 1938	52	18	30
Today	48	18	34

If the votes for revision and repeal are combined, it appears that 66 percent of persons with opinions on the act are dissatisfied with it today, against 34 percent who want it left unchanged. Why has this dissatisfaction arisen?

The principal reason, judging by an analysis of voters' comments, is a belief that the act discriminates against the employer. When those voters who favor revision were asked how the act should be revised, the majority wanted it to be made "fairer to the employer" and to place more responsibility on labor unions.

The group of voters who, on the other hand, favor outright repeal of the act give two main reasons for their opinion: First, that the act "stirs up labor trouble," and, second, that it is not the Government's function to take a hand in labor squabbles.

Finally, those voters who want the act left unchanged say that if the labor unions like the law it should remain as it is. Many also argue that the present act should be tried out for a longer period before any changes are made.

Sentiment for repealing the act, the survey shows, is strongest among voters in the upper income levels, while sentiment for leaving it unchanged is most pronounced in the lower levels.

Less than one-fifth of the upper income voters, for example, want the act to remain unchanged, whereas a majority of 53 percent in the lower-income group think it is satisfactory now. A relatively small percentage of voters in the middle-income group favor repeal; the preponderant sentiment of the group is for revision.

	Revised	Repealed	Left Unchanged
	Percent	*Percent*	*Percent*
Upper-income group	58	25	17
Middle-income group	51	18	31
Lower-income group	34	13	53

The survey finds that the Wagner Act is unpopular with many Democratic as well as Republican voters. More than 8 out of every 10 Republicans want it revised or repealed, and well over half of the Democrats express the same sentiment.

	Revised	Repealed	Left unchanged
	Percent	*Percent*	*Percent*
Democrats	45	12	43
Republicans	56	29	15

Wage-Hour Law

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, March 13, 1939

ARTICLE FROM GEORGETOWN LAW JOURNAL

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on the wage-hour law, written by Walter D. Murphy, and published in the February issue of the Georgetown Law Journal.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEDERAL LEGISLATION—THE FAIR LABOR STANDARDS ACT OF 1938

More popularly known as the "wage and hour law," the Fair Labor Standards Act of 1938[1] is probably the most controversial and far-reaching legislative enactment to emerge from the Seventy-fifth Congress.

After the decision of the United States Supreme Court in *West Coast Hotel Co.* v. *Parrish*,[2] which upheld the power of a State to legislate minimum-wage requirements for women and overruled *Adkins* v. *Children's Hospital*,[3] the Federal Government evidently felt that the time was at hand to attempt Federal control of minimum wages and maximum hours of those subject to such control. Originally proposed by the President in his message to Congress on May 24, 1937,[4] this legislation had a career that bears mute testimony to the storm of debate it aroused and reveals its turbulent progress through Congress.

On the same day that the President proposed the legislation, bills were introduced into the Senate and the House.[5] After hearings conducted by a joint committee of the House and Senate, the Senate Committee on Education and Labor reported to the Senate a somewhat modified bill,[6] which was passed with amendments on July 31, 1937. Two days later the Senate bill was referred to the House Committee on Labor, and after further amendment it was reported to the House on August 7, 1937.[7] On December 17, 1937, the bill was recommitted to the Committee on Labor, and on April 21, 1938, it was again reported to the House.[8] It passed the House with amendments on May 24, 1938. After the Senate had requested and obtained a conference on the bill,

[1] 52 Stat. 1060–1069, 29 U. S. C. secs. 201–219 (Supp. 1938).
[2] 300 U. S. 379 (1937).
[3] 261 U. S. 525 (1923).
[4] This proposal was reiterated by the President in a subsequent message to Congress delivered on January 3, 1938.
[5] S. 2475 and H. R. 7200, 75th Cong., 1st sess. (1937).
[6] S. Rept. 884, 75th Cong., 1st sess. (1937).
[7] H. Rept. 1452, 75th Cong., 1st sess. (1937).
[8] H. Rept. 2182, 75th Cong., 3d sess. (1938).

the Senate and the House both agreed to the conference report on June 14, 1938. On June 25, 1938, the bill was signed by the President and became a law.

It is the purpose of this article to treat of the provisions relating to wages, hours, and child labor, to indicate in general what classes of employers are covered by the act, and to consider briefly some constitutional questions occasioned by its enactment.

The basis of the act, and the policy underlying it, are probably best stated in the language of Congress. Section 2,[9] headed "Finding and Declaration of Policy," provides as follows:

"(a) The Congress hereby finds that the existence, in industries engaged in commerce or in the production of goods for commerce, of labor conditions detrimental to health, efficiency, and the general well-being of workers (1) causes commerce and the channels and instrumentalities of commerce to be used to spread and perpetuate such labor conditions among the workers of the several States; (2) burdens commerce and the free flow of goods in commerce; (3) constitutes an unfair method of competition in commerce; (4) leads to labor disputes burdening and obstructing commerce and the free flow of goods in commerce; and (5) interferes with the orderly and fair marketing of goods in commerce.

"(b) It is hereby declared to be the policy of this act, through the exercise by Congress of its power to regulate commerce among the several States, to correct and as rapidly as practicable to eliminate the conditions above referred to in such industries without substantially curtailing employment or earning power."

The intention of Congress to balance the speed desired in attaining the desired objective against possible economic dislocations and to proceed cautiously where an overenthusiastic application might cause an undesirable economic condition is evidenced by subsequent sections of the act, particularly section 8,[10] relating to wage orders by the Administrator.

MINIMUM WAGES

The provisions as to minimum wages are contained in sections 6[11] and 8.[12] Section 6 provides for a minimum wage to be paid by every employer to "each of his employees who is engaged in commerce or in the production of goods for commerce." An ultimate minimum wage of 40 cents an hour is the goal, but a period of 7 years from the effective date (October 24, 1938) is contemplated before it will become mandatory by the terms of the act. A minimum wage of 25 cents an hour is set for the first year, and 30 cents for the next 6 years, at the termination of which the 40-cents-an-hour minimum takes effect. However, it must be realized that this is only the foundation set for the administration of the act. It is the rock-bottom minimum, and the Administrator has authority under section 8[13] to act upon the recommendation of the industry committee and raise the minimum wage for any industry or any reasonable classification within an industry, but not higher than 40 cents an hour. After the expiration of 7 years from the effective date the 40-cents-an-hour minimum wage is flatly fixed by the terms of the statute and cannot be altered unless the industry committee, "by a preponderance of the evidence before it recommends, and the Administrator by a preponderance of the evidence adduced at the hearing finds, that the continued effectiveness, or the issuance of the order, as the case may be, is necessary in order to prevent substantial curtailment of employment in the industry."

Worthy of note is the provision as to industry committees. The Administrator is charged with the duty of appointing an industry committee for each industry engaged in commerce or in the production of goods for commerce. Three classes are represented in an industry committee; viz, the public, the employees in the industry, and the employers in the industry; and the committee is to consist of an equal number from each group. The Administrator has no authority to make a wage order unless it has been recommended by the committee, which is to "recommend to the Administrator the highest minimum wage rates for the industry which it determines, having due regard to economic and competitive conditions, will not substantially curtail employment in the industry." This device was provided in order to protect employers and the public from arbitrary action by administrative officials and to remove any possibility of such action.

MAXIMUM HOURS

The maximum-hours provisions (sec. 7a)[14] apply to the same groups of employees as do the minimum-wage provisions, except for certain exemptions, and likewise provide for a gradual decrease in the permissible length of the workweek. However, the 40-hour-maximum week is to become realized at the expiration of 2 years from the effective date, and there is no power in the Administrator to vary the schedule set by Congress. A maximum workweek of 44 hours is set for the first year from the effective date, 42 hours for the second year, and 40 hours after the expiration of the second year. If any employer employs a person in excess of the hours specified, he must compensate such employee for the overtime at the rate of one and one-half times the regular rate. It would be more correct to speak of a "standard workweek" than maximum hours, for the act does not prohibit employment in excess of the hours specified. It merely provides that the employee must be compensated for the extra time over the limit at the increased rate.

These hour requirements, however, do not affect employers who employ in accordance with contracts that are the result of collective bargaining.[15] For, except as qualified below, employment in excess of the number of hours specified is not a violation if (1) the agreement provides that no employee shall be employed more than 1,000 hours during any period of 26 consecutive weeks; or (2) the employee is employed on an annual basis under an agreement which provides that the employee shall not be employed more than 2,000 hours during any period of 52 consecutive weeks. In each case the agreement must be the result of collective bargaining, and the representatives of the employees must be certified as bona fide by the National Labor Relations Board. The obvious policy behind these provisions is to remove a possible conflict with agreements made between employers and employees under the National Labor Relations Act. If such a contract had been made by a bona fide employees' group, there would not be a violation of the act though the employees should be required to work in excess of 44 hours in certain weeks without overtime compensation. The terms of such an agreement would necessitate proportionately shorter workweeks during the remainder of the period, of course, so that the average workweek for the period would not exceed approximately 38½ hours. However, this privilege is limited to a workday of 12 hours and a workweek of 56 hours, any employment in excess of this requiring "time and a half" overtime compensation.

Seasonal industries: The hours provisions are relaxed also in regard to seasonal industries.[16] The Administrator is given the authority to find what industries are of a "seasonal" nature. In such industries the maximum-hours provisions are inapplicable, but only for a period not exceeding 14 workweeks in the aggregate in any calendar year. The limitation requiring "time and a half" overtime compensation for a workday in excess of 12 hours or a workweek in excess of 56 hours is also applicable to such an industry.

Specific exemptions: Entirely exempted from hours requirements[17] are certain classes of employees, such as those engaged in the first processing of milk into dairy products, the ginning and compressing of cotton, or processing certain materials into sugar.

An exemption is also granted to employees engaged in the first processing, canning, or packing of seasonal or perishable fresh fruits or vegetables; or in the first processing within the "area of production" (as defined by the Administrator), of any agricultural or horticultural commodity during seasonal operations; or in the handling, slaughtering, or dressing of poultry or livestock. But this exemption is granted for a period of only 14 weeks in the aggregate in any calendar year. Also exempted are employees subject to maximum-hour regulations by the Interstate Commerce Commission and employees of an employer subject to the provisions of part I of the Interstate Commerce Act.[18]

CHILD-LABOR PROVISIONS

The act excludes from interstate commerce the products of child labor. This is accomplished by section 12,[19] which provides that "No producer, manufacturer, or dealer, shall ship or deliver for shipment in commerce any goods produced in an establishment situated in the United States in or about which within 30 days prior to the removal of such goods therefrom any oppressive child labor has been employed." "Oppressive child labor" is defined by section 3 (l)[20] as (1) the employment of any employee under 16 years of age, or (2) the employment of an employee between 16 and 18 years of age in any occupation which the Chief of the Children's Bureau in the Department of Labor shall find, and by order declare, to be particularly hazardous for the employment of children between such ages or detrimental to their health and well-being.

The employment of children between the ages of 14 and 16 is allowed in occupations other than mining and manufacturing, if the Chief of the Children's Bureau concludes that such employment will not interfere with the schooling of the children and their health and well-being.

The child-labor provisions do not apply to any employee in agriculture while not legally required to attend school, or to child actors.[21]

EXEMPTIONS

Besides the exemptions described above, there are other exemptions from both minimum-wage and maximum-hours requirements which have not been mentioned, for the reason that they can more advantageously be treated separately.

Section 13a[22] provides, in this connection, that neither the minimum-wage nor the maximum-hours provisions apply to the following groups:

(1) Any employee employed in a bona fide executive, administrative, professional, or local retailing capacity, or in the capacity of outside salesman (as such terms are defined and delimited by regulations of the Administrator);

(2) Any employee of a retail or service establishment the greater part of whose selling or servicing is in intrastate commerce;

(3) Seamen;

(4) Employees of an airway carrier subject to the provisions of title II of the Railway Labor Act;[23]

(5) Certain employees engaged in catching, packing, distributing, or cultivating fish or other forms of aquatic life;

(6) Any employee engaged in agriculture;

(7) Any employee to the extent that he is exempted by the order of the Administrator under section 14 (relating to learners, apprentices, and handicapped workers);

(8) Employees connected with the publication of a weekly or semiweekly newspaper having a circulation of less than 3,000, if the major part of the circulation is within the county in which published;

(9) Employees of street, suburban, or interurban electric railways or motorbus carriers.

(10) Any individual employed within the "area of production" (as defined by the Administrator) of the handling, packing, storing, ginning, compressing, pasteurizing, drying, preparing in the raw or natural state, or canning of agricultural or horticultural commodities for the market, or in the making of butter or cheese or other dairy products.

ENFORCEMENT

An interesting aspect of the act is the threefold method of enforcement provided. In addition to the authority given the Administrator to enjoin violations of the act,[24] and the Department of Justice to institute criminal prosecution,[25] the employee is given the right[26] of suing his employer if the latter violates the maximum-hours[27] or minimum-wage[28] provisions. If the suit is successful, the employee is entitled to his unpaid minimum-wage or overtime compensation, an equal amount in addition as liquidated damages, and also his costs of suit and a reasonable allowance for attorney's fees. Such an action may be brought by any employee or by more than one employee in behalf of himself or themselves and of others similarly situated, or by a representative designated by the employees affected. This provision is expected to prove a strong deterrent to an employer otherwise inclined to violate the act, and it is also expected to aid in enforcement by removing some of the burden from the administrative agency, thus making the act to some degree self-enforcing.

Section 15 (a)[29] makes it unlawful for any person:

(1) To transport, offer for transportation, ship, deliver, or sell in commerce, or to ship, deliver, or sell with knowledge that shipment or delivery or sale thereof in commerce is intended, any goods in the production of which any employee was employed in violation of section 6 (minimum wages) or section 7 (maximum hours), or in violation of any regulation of the administration under section 14 (relating to learners, apprentices, and handicapped workers);

(2) To violate any of the provisions of section 6 or 7, or any order of the administration under section 14;

(3) To discharge or discriminate against an employee because of his activity in filing a complaint or testifying in a matter related to the act;

(4) To violate the child-labor provisions;

(5) To violate any provisions of section 11 (c) (relating to records to be kept by employers) or knowingly to make a false statement or report under section 11.

COVERAGE OF THE ACT

An important and distinctive feature of the act is its self-executing nature. It applies automatically to certain employees who come within its purview, not by any order or finding of the Administrator, but by the terms of the act itself. The Administrator, i. e., has no power to enlarge or restrict the scope of the act or to determine who shall be subject to it.

Of course, the act, or certain parts of it, have no application to those occupations which are exempted, as outlined above. Aside from these, however, the hours and wages provisions apply to employees engaged in commerce or in the production of goods for commerce.[30] Commerce is defined as "trade, commerce, transportation, transmission, or communication among the several States or from any State to any place outside thereof",[31] or, roughly, as interstate commerce. Hence, whether the statute is applicable in a given situation depends on the nature of the employment of the particular employee. It is not sufficient for the employer to test the application of the act by the inclusion of his business among those engaged in interstate commerce or the production of goods of commerce; he must look to the employment of each of his employees to ascertain which ones, if any, come within its purview.

Although the administrator has no power to decide whether an employer is or is not subject to the general terms of the act, he has conceived it to be his duty to issue interpretative bulletins setting forth the tests which he will follow in determining whether specific industries are covered by the act, so that employers may have some means of knowing whether it applies to them. Two interpretative bulletins (numbers 1 and 5) have been issued concerning the general coverage of the act. It was announced that a policy of broad interpretation would be followed inasmuch as the declaration of policy in the law itself evidenced that the widest possible coverage was intended by Congress.

Bulletin No. 1 reached the conclusion set forth above as to the general test of the coverage and enumerated two groups of workers included within the act, viz (1) those "engaged in interstate commerce," a group that includes, among others, employees in the telegraph, telephone, radio, transportation, and similar industries, and also employees who are an essential part of the "stream of commerce," such as employees of a warehouse whose storage facilities are used in the interstate distribution of goods; (2) those engaged in "the production of goods for (interstate) commerce," which applies typically to employees engaged in manufacturing, processing, or distributing plants that put forth any goods in commerce out of the State in which the plant is located. The foregoing provisions are held to include maintenance workers, watchmen, clerks, stenographers, and messengers, such conclusion being based largely on the definition of "employee" in section 3 (j).[32] It was concluded that "except for special categories of employees within the exemptions of section 13, all the employees in a place of employment where goods shipped or sold in interstate commerce were produced, are included in the coverage, unless the employer maintains the burden of establishing, as to the particular employees, that their functions are so definitely segregated that they do not contribute to the production of goods for interstate commerce as these terms are broadly defined in the act."

It was further indicated that the act is not limited to employees working on an hourly wage, and that salaried and piece workers are entitled to the benefits of the act. Their remuneration must be converted into terms of an hourly rate.

It was conceded that the act had no application to plants whose employees work on raw materials derived from within the State if none of the product of the plant moves in interstate commerce, even though the product so manufactured comes into competition with products manufactured elsewhere which move in interstate commerce.

Interpretative bulletin No. 5 contains further opinions of the Administrator as to the scope of the act. In the determination of the question whether the employees are engaged in the "production of goods for commerce" the test is said to be the intention of the employer at the time of the production of the goods. If the employer intends, hopes, or has reason to believe at the time the goods are produced that they will move in interstate commerce he will come within this classification, though later events prevent such a course and the goods are sold entirely within the State. On the other hand, if the employer, at the time of the production of the goods intends them entirely for intrastate consumption, he is not held to be within the act, though he later does ship them in interstate commerce.

The employees may be engaged in the "production of goods for commerce" even though the employer does not himself ship the goods across State lines; the fact that he passed title to the purchaser within the State of production is immaterial.

The term "production of goods for commerce" is also held to embrace an employer who produces goods and sells them to a further processor within the State, who in turn sells the goods in interstate commerce, if the first producer's goods are a part or ingredient of the second producer's goods. This is held to be true, in some cases, even though the first producer's goods are not technically "ingredients" of those of the second producer, as where the second producer is not the "ultimate consumer." An example of this is the case of an employer who manufactures containers, sells them to another manufacturer within the State, who in turn uses them to hold his product, and some of the finished product is sent outside of the State for sale in the container. In such a case it is held that the manufacturer of the containers is engaged in "the production of goods for commerce" inasmuch as the "ultimate consumer" is not the second producer but the out-of-State purchaser.

The term "production of goods for commerce" is also held to include an independent contractor who receives goods from the producer, works on them, and returns them to the manufacturer, who later ships them in interstate commerce.

[32] 52 Stat. 1060, 29 U. S. C., sec. 203 (j) (Supp. 1938).

Employees engaged in the collection and dissemination of information which is transmitted to other States in the form of publications or pamphlets are also held to be within the scope of the act.

The percentage of goods that an employee works on and that move in interstate commerce is held to be immaterial in the determination of the applicability of the act. If any goods upon which the employee works move in interstate commerce he is held subject to the act.

The statute is held to have no application to employees who work on goods intended for local consumption, even though the raw materials are brought in from outside the State. However, it is indicated that other employees in the same plant who are engaged in interstate activities, such as officials or employees purchasing the raw materials from other States or receiving them from other States, may be within the statute.

Likewise, the act is held to have no application to a producer of goods that are to be consumed locally by a producer of goods for commerce if the first producer's goods are not a part or an ingredient of some commodity that the second producer is producing for commerce; e. g., a small mine which sells all its coal to a local manufacturer of goods for commerce, the manufacturer using the coal to heat his plant or drive its machinery.

Employees of builders and contractors are held to be generally engaged in local construction and, hence, outside of the act. But when they are engaged in maintaining or constructing essential instrumentalities of interstate commerce, it is indicated that they will be included. Wholesalers purchasing their goods from outside of the State are advised by the Administrator that they should comply with the act, even though shipment is made directly to the wholesaler's vendee. While the courts may hold that employees engaged in the local sale of goods removed from the original package are not subject to the act, there is belief that they are more likely to be held subject to it.

The child-labor provisions have a somewhat different application from those relating to wages and hours, since the child-labor provisions are not limited to employees engaged in commerce or in the production of goods for commerce. The act merely prohibits shipment in interstate commerce, or the deliverance for shipment, of any goods in the production of which any "oppressive child labor" has been employed.[32] This applies to goods produced "in an establishment situated in the United States." Since there is nothing in the definition of "oppressive child labor"[34] to limit applicability to employers engaged in the production of goods for commerce, these provisions are evidently applicable to every employer in the United States, whether he is engaged in intrastate or interstate activity. Of course, an employer engaged in intrastate commerce would not be subject to penalties unless he attempted to ship some of such goods in interstate commerce. But as soon as he did so, he would come within the purview of the act, and would be subject to the specified penalties, which include denying interstate commerce to his goods, and rendering him liable for a fine of $10,000 and imprisonment for 6 months[35] if he attempts such shipment. These penalties for violation may well cause an employer to observe the child-labor provisions even though he is engaged in purely intrastate production.

CONSTITUTIONAL CONSIDERATIONS

Delegation of power: The outstanding instance of delegation of power to the Administrator in the act relates to wage orders. He is given authority by section 8[36] to issue orders establishing the minimum wage, for any industry subject to the act, above the absolute minimum set by the act itself, but not above 40 cents an hour. In order so to decree, however, he must first cause to be presented before an industry committee the evidence needed to justify such a wage order. The committee must then recommend the highest minimum-wage rates that, on the basis of economic and competitive conditions, it determines will not substantially curtail employment in the industry. Upon the filing of such report the Administrator must give notice to interested persons and an opportunity to be heard; moreover, he is required to approve the recommendations "if he finds the recommendations are made in accordance with the law, are supported by the evidence adduced at the hearing, and taking into consideration the same factors as are required to be considered by the industry committee, will carry out the purposes of the section."

Subsection (a) declares the policy of the act to be to reach, as rapidly as is economically feasible without substantially curtailing employment, the objective of a universal minimum wage of 40 cents an hour. We have, then, as the intelligible principle for the guidance of administrative action the direction that the minimum-wage rate should be set at the highest figure, not exceeding 40 cents an hour, which will not substantially curtail employment in the industry. The Administrator is not given any discretionary power to set a different rate than that recommended by the industry committee; he must either affirm the recommendation or disapprove it and refer the matter back to the committee.

In only three cases has the Supreme Court found an unlawful delegation of power in an act of Congress. In the first of these, *Panama Refining Company* v. *Ryan*,[37] the delegation was unlawful because there was no legislative pronouncement as to when, or in what circumstances, the President was to prohibit the shipment of oil produced in excess of that allowed by the laws of a State. In *Schechter Poultry Corp.* v. *United States*[38] it was held that the "rehabilitation of industry and conservation of natural resources" was not a sufficiently intelligible principle to guide the President in approving and promulgating codes of fair competition, and that such vague and indefinite standard would leave the President free to make law "virtually unfettered." In *Carter* v. *Carter Coal Company*[39] the objection was that the power to prescribe minimum wages and maximum hours for a group was vested in a majority of the very group to be affected and that this was clearly arbitrary delegation.

The type of delegation involved in the act would not seem to be open to any of these objections. It is somewhat analogous to that upheld in *Hampton* v. *United States*,[40] by which the President was authorized to ascertain the differences between the costs of production of domestic and foreign articles and to vary customs rates so as to equalize such differences. The following language in the *Ryan case*[41] would seem to be apropos: "Moreover, the Congress may not only give such authorizations to determine specific facts, but may establish primary standards, devolving upon others the duty to carry out the declared legislative policy." There would seem to be no room for the objection that the power given the Administrator is an unconstitutional delegation of legislative power in view of the fact that the subject matter is clearly defined, the administrative action is strictly limited to cases where it will not substantially curtail employment, and the range of action is definitely restricted between limits of twenty-five and forty cents an hour.

The authority conferred on the Administrator to make reasonable classifications within an industry for the purpose of fixing minimum-wage rates[42] stands upon substantially the same footing as the power to make wage orders and is governed by like considerations. Not only must the conclusion be found that the wage rate for each classification will not substantially curtail employment, but also that it will not give a competitive advantage to any group in the industry; and in determining whether such classifications should be made, the industry committee and the Administrator must consider the competitive conditions as affected by transportation, living, and productive costs, the wages established for similar work by collective bargaining contracts, and wages paid for like work by employers who voluntarily maintain minimum-wage standards. These factors, together with the policy of the act, would seem to furnish a reasonably definite standard to guide the Administrator.

THE ACT AS A REGULATION OF COMMERCE

The most important constitutional question raised by the act, and the one which goes to the very heart of the matter, is whether the act can be held to be a valid regulation of interstate commerce.[43] The answer depends on whether the act is a reasonably appropriate means of regulating interstate commerce. The findings and declaration of policy in section 2 announce the effect on interstate commerce attributed by commerce to unduly low wages, long hours, and employment of child labor. While these findings will not preclude the Supreme Court from investigating for itself the relationship of cause and effect,[44] they serve as a guide in determining the purpose of the legislation.

Although it has not been directly decided, there seems to be little room for doubt that the wage and hour provisions can validly be applied to employees engaged in interstate commerce. In 1917 it was held that Congress could regulate the hours of employees of an interstate carrier and could "freeze" wages at the current level pending settlement of a labor dispute.[45] It has also been held that Congress, under the power to regulate commerce, can prohibit employers from interfering with the self-organization of employees[46] and can provide that an interstate rail carrier must deal with employee representatives certified by a mediation board set up by Congress.[47] If these are reasonably appropriate means of regulating interstate commerce because of the inhibition of labor disputes, the imposition of a minimum wage and of maximum hours would seem to be fully as relevant. Even as applied to

those engaged in interstate commerce who are not employees of carriers, the enactment would seem to be appropriate to the protection of that commerce.

However, the application of the wage and hour provisions to employees engaged in the "production of goods for commerce" is on more dangerous constitutional ground. In an approach toward this aspect of the act, the decisions in *Hammer* v. *Dagenhart* [48] and *Carter* v. *Carter Coal Co.*[49] arise as seeming barriers to its validity. If the employment of child labor in production does not have such a close and substantial relation to interstate commerce as to render control of it by Congress an appropriate means of regulating commerce, there is difficulty in perceiving wherein the wages and hours of employees engaged in production occupy a more favorable position.

In the Carter case [50] the court condemned the labor provisions (including wage and hour provisions) of the Bituminous Coal Conservation Act,[51] and the distinction between local production and interstate shipment was emphatically reiterated, the conclusion being reached that Congress had no regulatory power over the mining of coal although the coal was intended for interstate shipment.

However, the authority of these cases has apparently been weakened by subsequent decisions of the Court involving application of the National Labor Relations Act [52] to certain employers. Although there has been no explicit overruling in this connection, the Court, nevertheless has demonstrated a different approach and a broader concept of the Federal power under the commerce clause. Notwithstanding this, there is doubt whether the doctrine of the Jones and Laughlin case [53] can be relied upon to uphold the act. For although in that case the Court limited the statute to an interpretation which would sustain its constitutionality, that technique would seem to be difficult to apply in construing the present act. In the Jones and Laughlin case [54] the Court was careful to observe that the National Labor Relations Board was given jurisdiction only over labor practices "affecting interstate commerce." [55] But the Fair Labor Standards Act is not confined to cases "affecting commerce"; it is applied to any employee engaged in the production of goods for commerce. While the act does tend to lessen the likelihood of labor disputes, the Court, in order to uphold it on that basis, would have to find that a labor dispute in every such case had a direct effect on commerce. A prominent attorney, in criticizing the constitutionality of the act, has said: "Whether the power to regulate commerce includes the power to regulate production intended for commerce is not irrevocably settled. The National Labor Relations Board and antitrust cases do not settle this: There the Government must in each case show the directness of the burden or interference. Here the statute assumes it." [56]

From the foregoing, however, it does not follow that the act is unconstitutional. The Supreme Court has repeatedly emphasized the distinction between production and commerce, and the fact that articles are not in interstate commerce until they have passed the production stage and are transmitted in commerce is an axiom. Nevertheless, it has been recognized that certain conditions concerning the production of goods may have a direct relation to interstate commerce and thereby be subject to the regulation of Congress by appropriate legislation.

That the Federal power extends to the regulation of methods of competition in interstate commerce is undeniable. The Sherman Act,[57] the Clayton Act,[58] and the Federal Trade Commission Act [59] are all founded upon this power. The power of the Federal Government to regulate local conduct having a real and substantial relation to interstate commerce and tending to violate the congressional policy of free competition [60] and fair trade practices [61] in interstate commerce has been upheld by the courts. Since Congress can prohibit "unfair methods of competition" and empower a commission to define and prohibit such practices, even though they may relate to action before or after the actual interstate commerce, no extension of that power seems necessary to hold that the use of sweatshop methods, the underpayment of labor, and the employment of child labor are unfair methods of competition in interstate commerce, and that these methods of competition can be prohibited by Congress as to employers engaged in the production of goods for commerce. This legislation, even as applied to a producer who ships only a small percentage of his product in interstate commerce, would seem to have a real and substantial relation to the protection of the majority of employers, who maintain decent labor standards from the competition of those making use of such unfair practices, and thus prevent the spread of such conditions among employers engaged in the use of interstate commerce.

What has been said concerning the wage and hour provisions applies as well to those concerning the employment of child labor, though in order to sustain the latter the Court will need directly to overrule or distinguish *Hammer* v. *Dagenhart*.[62] This fact was recognized during the committee hearings and it was there stated that one reason for the inclusion of the child-labor provisions in the same bill with the wage and hour provisions was to bolster the former against constitutional attack.[63] The theory behind this thought is that a distinction might be afforded from the *Hammer case* [64] inasmuch as the child-labor provisions in this act are apparently part of one comprehensive plan to protect interstate commerce, and not an isolated measure having no direct relation to interstate commerce. This distinction may very well be drawn. Another ground for distinction is the fact that, unlike the situation in the *Hammer case*,[65] the provisions of the act show an attempt to regulate competition in interstate commerce. Indeed, the

[59] Id., at 717, U. S. C. at secs. 41–45 (1934); 48 Stat. 31 (1933); 7 U. S. C., sec. 610 (1934).

[60] *Loewe* v. *Lawlor* (208 U. S. 274 (1908)), in which it was held that a combination of labor organizations to boycott an employer and prevent the sale of his goods unless he employed union labor was a violation of the Sherman Act, though the members of the combination were not themselves engaged in interstate commerce.

Coronado Coal Co. v. *United Mine Workers* (268 U. S. 295 (1925)), which held that a strike of mine workers within a State and the damaging of the mine there located, with intent to diminish the supply of nonunion coal in other States and thus prevent competition with "union coal," was a violation of the Sherman Act.

United States v. *Brims* (272 U. S. 549 (1926)), which held that a conspiracy of mill owners, contractors, and carpenters to employ only union carpenters, who would refuse to work upon millwork coming from nonunion mills outside of the State, was a violation of the Sherman Act.

Bedford Cut Stone Co. v. *Journeymen Stone Cutters Association* (274 U. S. 37 (1927)), which held that a union boycott of stone worked upon by nonunion labor, the intent being to curtail the demand for such stone in interstate commerce, was a violation of the Sherman Act, though the members of the union were not engaged in interstate commerce and the stone had come to rest within the State.

Brotherhood of Teamsters v. *United States* (291 U. S. 293 (1934)), which held that an association of wholesale poultry dealers in New York City conspiring to increase the price of poultry was a violation of the Sherman Act, though the object was effected by acts committed entirely within the State and after the poultry had come to rest within the State.

[61] While the application of the Federal Trade Commission Act to acts occurring entirely within a State has been somewhat more limited than has the Sherman Act, the cause seems to be the terms of the statute rather than a lack of power by Congress to reach such practices. The Federal Trade Commission Act prohibits "unfair methods of competition in commerce," and the courts have interpreted this to exclude such methods pursued within a single State prior to the movement of the goods in interstate commerce. Nevertheless, the application of the Sherman Act to intrastate activity having a direct effect on interstate commerce would seem to indicate that Congress could give the Federal Trade Commission a broader jurisdiction. The jurisdiction of the Commission over persons engaged in intrastate business has been upheld in cases in which the practice condemned had a direct effect on interstate commerce. See *Federal Trade Commission* v. *Pacific States Paper Trade Association*, 273 U. S. 52 (1927) (contract of sale between a purchaser and seller within the State, the goods having been shipped from a mill outside the State at the instance of the seller); *Federal Trade Commission* v. *Wallace*, 75 F. (2d) 733 (C. C. A. 8th, 1935) (an attempt by local retail coal dealers to coerce wholesalers from selling to local competitors of members of the association); *Federal Trade Commission* v. *Smith*, 1 F. Supp. 247 (S. D. N. Y., 1932)) (practice of a utility holding company which, though not engaged in interstate commerce, owned shares of subsidiary companies that in turn controlled operating companies of whose goods one-fourth moved in interstate commerce). The Supreme Court, speaking of a method of inducing the sale of "penny variety" candy by use of a scheme which made the price thereof depend upon a number found on the inside of the wrapper, used language which may be prophetic. It was said: "But here the competitive method is shown to exploit consumers, children who are unable to protect themselves. * * * For these reasons a large share of the industry holds out against the device, despite ensuing loss in trade, or bows reluctantly to what it brands unscrupulous. It would seem a gross perversion of the normal meaning of the word, which is the first criterion of statutory construction, to hold that the method is not 'unfair.'" (*Federal Trade Commission* v. *Keppel & Bro.*, 291 U. S. 304, 313 (1934)).

[62] See note 14, *supra*.

[63] Joint hearings before the Senate Committee on Education and Labor and the House Committee on Labor on S. 2475 and H. R. 7200, 75th Cong., 1st sess. (1937), pt. 1, pp. 15, 16.

[64] See note 48, *supra*.

[65] Ibid.

Hammer case [68] has been said to have been overruled by the decision in *National Labor Relations Board* v. *Consolidated Edison Co.*,[67] which held that an electric utility engaged in purely intrastate activity was subject to the jurisdiction of the National Labor Relations Board because of the disruptive effect a strike among its employees would have on interstate commerce. While there is doubt whether that decision can truly be said to overrule the *Hammer case*, [69] it at least serves as a signpost illustrating the extent to which the Federal power to regulate interstate commerce may be validly applied.

DUE PROCESS OF LAW

Even if the act is found to be a valid exercise of the power to regulate commerce, its defenders will have to face the contention that it deprives certain employers of property or liberty without due process of law.

The nature and limitations of the requirements of due process have been lucidly enunciated by Justice Roberts. "The fifth amendment," he stated, "in the field of Federal activity, and the fourteenth, as respects State action, do not prohibit governmental regulation for the public welfare. They merely condition the exertion of an admitted power by securing that the end shall be accomplished by methods consistent with due process; and the guaranty of due process, as has often been held, demands only that the law shall not be unreasonable, arbitrary, or capricious, and that the means selected shall have a real and substantial relation in the object sought to be "attained." [70] It was partly to meet the objection of lack of due process that the act was drawn so as to give the Administrator the power to raise minimum wages up to a limit of 40 cents an hour in any industry, and to make reasonable classifications in any industry for that purpose rather than to impose a flat 40-cent rate for all industries.[70] Likewise, the modifications of the hours' requirements as to seasonal and certain other industries and the relaxation of the minimum-wage requirements as to learners, apprentices, and handicapped workers indicate an attempt to avoid the arbitrary effect which rigid minimum-wage and maximum-hours stipulation would occasion. In view of the modest minimum requirements and the considerations which are to guide the Administrator in making a wage order, there appears to be no room for the contention that the act is arbitrary as to any employer.

Nor would the contention that there is lack of due process because of the impairment of freedom of contract seem to be tenable. For while freedom of contract is included within the "liberty" guaranteed in the fifth amendment, the latter term does not designate an absolute right and is subject to restriction by a governmental regulation which is reasonable in relation to its subject and which is adopted in the interest of the community.[71] This power of restriction in the public interest extends, moreover, to contracts between employer and employee.[72] The appropriate nature of the wage, hour, and child-labor provisions as a means of protecting interstate commerce may be open to some debate, though the factual record constructed by the committee hearings tends to substantiate the reasonable relevancy of them. However, if they are found to be so directly related to the protection of interstate commerce that they support the act as a regulation of interstate commerce, their substantial relation to the protection of inerstate commerce is determined,[73] and the only due-process question which can arise is whether they are arbitrary as to some employers.

The fact that the legislative language is somewhat indefinite concerning the raising of wages would not appear to be violative of due process. The Administrator, upon the recommendation of the industry committee, is to fix the maximum minimum wage for an industry or a classification within an industry "which will not substantially curtail employment in the industry." While this language might be too indefinite if the provisions were self-operating, it would seem to be sufficiently definite for the guidance of an administrative body where a hearing is required before any order can be made.[74]

Public Works Administration

EXTENSION OF REMARKS

OF

HON. ALBERT THOMAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1939

Mr. THOMAS of Texas. Mr. Speaker, last summer the Congress, through a substantial appropriation, made possible a widespread program of public works. The act placed upon the Public Works Administration the task of assembling sufficient applications for financial aid on projects to create a vast amount of public construction. P. W. A. was given approximately 3 months in which to obtain and examine these applications. More than 12,000 were received.

The act also placed upon the Public Works Administration the obligation of allotting some $965,000,000 of public funds to projects which could be gotten under way—that is, in the actual building stage—by January 1, 1939. Approximately 7,000 projects had been placed under construction as of that date.

Today the program of public works inaugurated last summer is less than 8 months old, but it is already possible to take stock of what this amount of construction is meaning to American industry.

First, it has meant wholesale reemployment of workers in the construction industry. In the Southwest, construction made possible by P. W. A. has done much to wipe out unemployment in the building trades. You will find this to be true in community after community, large and small, in agricultural as well as urban areas.

Of similar importance, so far as numbers are concerned, is the effect that this construction has had on the great supply industries. A typical example is what has happened to the cast-iron pipe industry.

Waterworks systems have always been high on the list of the P. W. A. projects in the Southwest, because of the tremendous growth of the communities in that section, and, in some instances, because of the relative difficulty in obtaining adequate water supplies. The result of new waterworks construction in the area has been to provide the manufacturers of cast-iron pipe with so many orders that, I am told, contractors are having difficulty in obtaining deliveries. The effect of these orders on employment as well as profits in this industry is obvious.

The same population growth I have referred to has also created a demand for new sanitary sewage systems or the extension of present facilities. The result has been enough orders for clay and cement pipe and tile to keep factories working night and day. I recently had the pleasure of talking to a representative of a clay-products manufacturer in the Southwest area. He told me that his plant had more orders than at any period in its history and was functioning on a full 24-hour schedule.

The Southwest has many manufacturers of cement; it has a great number of stone quarries, sand and gravel producers; it has an active lumber industry; it produces or processes many materials that go into building operations. In every one of these fields the improvement of conditions this year over last year, when there was no active new P. W. A. program, has been marked.

For the first week in February site employment on P. W A. projects in the group of 7 Southewestern States which make up the P. W. A.'s fifth region had reached 25,568. These men were carpenters, bricklayers, steel workers, plasterers, painters, representatives of every skilled classification, along with men working as common laborers. They were employed by contractors on the various jobs, and they performed full-time work for full-time pay.

This is an impressive figure in itself, but it is only part of the story.

According to methods worked out by the Bureau of Labor Statistics it is estimated that the indirect employment created by material purchases made jobs for more than 44,000 men in private industry—in the forests, in the mines, in mills and factories, and in the transportation industry.

It is important to remember, in estimating the effect of this amount of employment, that these men have been paid, in most instances, standard wages. These pay rolls have had a decided effect on the demand for consumer goods. They have meant increasingly better business for our merchants and in turn for the manufacturers who supply them with the things they sell.

It is impossible to completely ascertain the full effects of such a program of construction. Certain things we do know: We have made possible widespread reemployment in the building trades; we have made possible an even greater amount of employment in the supply industries and on transportation facilities; we have made possible the release of large pay rolls for the benefit of our workers, merchants, and manufacturers.

To do these things was the primary purpose of the Public Works Administration program, but it has done even more.

It has aided in the creation of thousands of needed, useful, and permanent projects. These projects, schools, courthouses, libraries, hospitals, roads, bridges, and dozens of other types of improvements could not have been built without the aid of P. W. A. When the present program is concluded the United States will be dotted with 25,000 such useful projects built under the various P. W. A. programs.

These projects, I would like to point out, since it is important, are worth every cent of their cost.

I would like to stress that phrase "worth every cent of their cost," since it is one of the most appealing aspects of the P. W. A. system.

All of us know that P. W. A. projects are well built. We are aware of the close supervision that is given in order to see that the projects follow approved plans and specifications. Some of us, however, may not be aware of the fact that P. W. A. construction costs no more than ordinary private construction.

On this point I have some very interesting figures before me. A few months ago advertisements were placed for bids on a hospital project costing more than $250,000. Since there was some doubt as to whether a P. W. A. allotment could be obtained for the project, contractors were asked to bid on the project as a P. W. A. job and also as a project without P. W. A. aid and supervision. The results were surprising.

Three contractors submitted bids on the project. One of these contractors submitted the same figure for construction of the hospital both as a P. W. A. and non-P. W. A. job. The second added fifty-nine one-hundredths of 1 percent to his bid if the job was to be built under the P. W. A., and the third added sixty-eight one-hundredths of 1 percent.

These minor additions were for the purpose of covering the cost of records required by P. W. A., records which many contractors keep on all jobs as a matter of good business. These slight additions in most cases, however, would be more than offset by the strict P. W. A. requirement that material contracts go to the lowest responsible bidder, a provision which has probably saved millions of dollars in the history of P. W. A.

Generally speaking, P. W. A. projects are substantial, and the benefits are of lasting value. Every good project completed adds to the total wealth of the community as well as the country as a whole.

This method of transferring men from relief to pay rolls appears to be a sound way to solve the unemployment problem and at the same time to safeguard private enterprise by protecting the interests of the investors. I think it might be wise for Congress to consider seriously placing P. W. A. on a permanent, although perhaps modified, basis.

Recognition of Spanish Nationalist Government

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, March 13, 1939

Mr. WALSH. Mr. President, I ask unanimous consent to have inserted in the CONGRESSIONAL RECORD a scholarly analysis by Dr. Joseph B. Code, professor of history of the Catholic University of America, on the subject of the recognition of the Spanish Nationalist Government.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the magazine Spain of March 1, 1939]

THE RECOGNITION OF FRANCO—AN OFFICE OF FRIENSHIP

(By Joseph B. Code, S. T. D., Sc. Hist. D. (Louvain), F. R. Hist. S., of the faculty of the Catholic University of America, Washington D. C.)

Intelligent observers of international affairs are more than ever realizing that in the critical times which many believe the world to be facing the friendship of the Spanish people will constitute a valuable asset for the Government and people of the United States of America. Unfortunately, this is a rather tardy recognition of what should have been an accepted fact by those responsible for America's policy in the field of international relations. For scarcely could certain officials and a large section of the American press have done more to alienate the affections of the Spanish people; more than 2 years saw the pursuance of a policy sympathetic toward those who would have destroyed the last vestige of Spanish culture. Where the blame should be placed is not the problem in this instance. It is whether the damage which has been done is irreparable. This consideration is causing concern to those who believe that justice and friendship should characterize the dealings of this country with the peoples of all nations. They are convinced that an immediate recognition of the Government of Nationalist Spain would do much to wipe out the mistakes of the past and would insure for this country the sympathetic understanding of the Spanish nation.

Undoubtedly there will be those who will demand reasons in support of this motive for nationalist recognition. They need only to recall and apply here the reasons alleged for the recognition of Soviet Russia. When Senators like WILLIAM E. BORAH, of Idaho; ROBERT M. LA FOLLETTE, Jr., of Wisconsin; and BURTON K. WHEELER, of Montana, were interested in the matter of Soviet recognition, they frequently cited the friendship of 165,000,000 Russian people as a powerful argument for the establishment of full diplomatic relations between Washington and Moscow. They argued the advantages of this action in spite of their own frank admission that the Soviet Government represented a political, social, and economic theory in direct antagonism to that of the United States of America. As Senator BORAH expressed it, the fact that the Moscow administration held "views completely at variance with our own with respect to the institutions of religion, the home, and private property" did not invalidate the claim of the Russian people to a right on our formal offices of friendship. "The citizens of Soviet Russia are our friends," it was asserted, "even though the ruling clique that misrepresents them works in open violation of American principles of free speech, free assembly, personal wealth, and liberty of conscience." In the case of Nationalist Spain, however, every one of these rights is given free expression. Hence they are so many additional reasons why the United States should accord the people of that country treatment comparable to the broadmindedness often invoked by American liberals on behalf of Communist Russia.

From the standpoint of international law the case for the recognition of Nationalist Spain is clearly manifest. Whether the Marxist sympathizers in this country like it or not, the Spain of Generalissimo Franco is a moral person enjoying de facto membership in the family of nations. In other words, 16,000,000 Spaniards are living peacefully, even joyfully, under the red and gold banners of the Nationalists. Within the past 2 weeks more than 75,000 ex-Loyalist soldiers who had been coerced into the ranks by anarchists, syndicalists, Communists, and political commissars have opted for membership in the Nationalist Army. As a matter of fact, the authority of Generalissimo Franco's Cabinet is recognized throughout 80 percent of Spanish territory on the peninsula.

It should not be necessary to state that every student of international law is aware that the conditions under which recognition of independence may be granted are, as in the case of belligerency, factual conditions. Has the contest between the insurgent community and the parent state reached a point where the latter has apparently abandoned all efforts, or proved the inadequacy of its efforts, to reduce the insurgent community to submission? Up to

that point, it may be properly contended, the group in revolt or counterrevolt may be left to fight its way into existence in its own manner.

Once the new administration has established its ability to survive it is ready for recognition by such powers as find it to their interest to begin official relations with it. It should be remembered that when the United States in September 1918 recognized the national council of the Czechoslovak people, this group, which received the acts of recognition, was nothing more or less than an absentee projected government, with headquarters in Washington, representing the Czechoslovak legions which were fighting in the allied army against an empire to which many of their fellow citizens still owed formal allegiance. In this case there was no prior recognition of belligerency.

The right of self-determination works both ways. The people of Spain have a right to their own form of government; and the people of the United States expect that the consideration which has repeatedly been accorded to the new status of other foreign governments will be shown to the friendly citizens of a nation which has repudiated Marxism.

"International law," states Prof. Charles G. Fenwick, of Bryn Mawr College, "knows at present no right of rebellion belonging to oppressed peoples; it merely registers the fact that as a result of certain rebellions a point has been reached where the community in revolt has made good its claim to independence and is ready for admission as a de jure member of the international community." These conditions have already been verified in the case of the Spain of Generalissimo Franco. Vincent Sheean has been denounced as a defeatist and a renegade because in a piece for the New York Times and N. A. N. A. of January 28, 1939, he announced that the "disaster" in Catalonia was "irreparable"; that the Foreign Minister, Alvarez del Vayo, seemed "dazed by the extent of the catastrophe" which "he had not expected," and that Dr. Juan Negrin, who alone "seemed as cheerful and robust as ever, declared that 'things are being organized.'" How well organized things were was found out by the battered remnants of Negrin's battalions when they reached Perpignan, France, where, despite the ton of gold still in the possession of Leftist officials, the republican 100-peseta notes, presumably a small fortune for hapless refugees, were exchanged at the munificent rate of less than 1 franc for 100 pesetas. The collapse of values—moral, political, and monetary—was never more strikingly illustrated than by this act of cruel deception for which the irrepressible Dr. Negrin and his bitter-enders are responsible.

Another pillar of leftist sympathy, the Washington Post, of January 27, 1939, stated editorially: "No informed observer can any longer doubt the certainty of Franco's eventual victory." And an even more emphatic judgment was pronounced by Jules Sauerwein, foreign editor of the Paris-Soir, in the New York Times of February 15, 1939: "In a few more days the Spanish civil war may be expected to end in complete victory for Generalissimo Francisco Franco. This morning President Manuel Azaña of the Spanish Republic declared to a French official that peace was inevitable and further resistance impossible Anyway, as far as he was concerned, he added, he did not think that his ministers, deliberating in Madrid while their chief executive was in Paris, could really contemplate engaging in a new fight with any chance of success." The same article revealed that a group of French officials who visited the Pyrenees district "found neither air fields nor artillery emplacements nor any other preparation for a hostile enterprise against France." M. Sauerwein added that Germany "would prefer to contribute the labors of her technicians to the reconstruction of Spain in full cooperation with French capital."

In this connection it should also be noted that the decision of the British Cabinet of February 15, 1936, to grant de facto recognition to the Nationalist Government in Spain was unanimous. The Cabinet members also agreed in principle to grant Generalissimo Franco de jure recognition at the earliest possible opportunity. This means that the British realize that the Nationalist leader is the effective master of Spain and that as a few legal technicalities shall be adjusted the British Cabinet will accept the Nationalist regime as the legal Spanish Government. It is expected that France, in spite of the clamor of Communists and Socialists, will follow in the footsteps of England. The Swiss Federation and several other European States have recognized Franco for like reasons. In other words, the principal European powers are prepared to face realities. No one is guileless enough to imagine that altruistic motives prevail in the chancelleries. The move is one predicated upon self-interest, upon diplomatic and trade advantages.

What reasons exist why the United States Government should delay any longer in indicating its friendly attitude toward the Spanish people? Are there no national interests that will be served by prompt recognition of the facts in the situation? What are the advantages, if any, of delay and postponement?

At this writing final capitulation of the Madrid-Valencia regime is expected momentarily. In fact, the expected resignation of the Leftist Premier, Dr. Juan Negrin, is reported as a preliminary step in this proccdure. The absent President of the so-called Republic, Señor Manuel Azaña, is known to favor immediate negotiations for peace without compromise.

Like every other well-informed student of the Spanish question, he knew last February, when the leftist offensive collapsed at Teruel, that a fight to the bitter end only meant useless slaughter, sustained hatreds, and an eventually weakened nation. Although one of the "founders" of the leftist regime, he has retained sufficient sense of reality to know when defeat is inevitable.

Since humanitarians in the United States, therefore, can cooperate with the peace group of the Franco Government, it is interesting to record that the first voice raised by an American citizen in favor of the formal recognition of Franco's Spain was that of Dr. Joseph F. Thorning, professor of sociology and social history at Mount St. Mary's College, Emmitsburg, Md., who proposed recognition as a step toward world peace and prosperity. Speaking at Fordham University, April 1, 1938, he declared that the Nationalist Government "believes in liberty of conscience for Protestant, Catholic, or Jew; it guarantees the right of trial by jury; it is thoroughly competent and socially progressive, liberal and representative of the best elements of the nation. * * * The British, great realists that they are, as well as farsighted businessmen, understand this situation. Furthermore, they have acted upon the basis of expert knowledge. Consequently, Great Britain is already gaining rich trade advantages in Spain which our own policy of nonrecognition is apt to lose." These were true and prophetic words, for each day which has elapsed in the last 11 months has confirmed the justness of these observations.

Another motive for prompt decision on the part of the State Department is the express intention of Argentina and Brazil, the leading South American Republics, to accord de jure recognition to the Spanish Nationalist Government. Hemispherical solidarity means little unless there will be community or cultural and political interest. Certainly there are no Spanish or Portuguese nations in a better position to judge the merits or requirements of the new situation in Spain than Brazil and Argentina. Peru is also on record, and it is expected that other Latin-American republics will take similar action. Indeed, it would be a compliment to all of them were the United States to abandon an attitude of apparent reluctance to abide by the accepted principles of international law in the premises. The "good neighbor" policy must lead, sooner or later, to de jure recognition of Franco.

If the United States is concerned over the possible influence of Germany and Italy in Latin America, certainly it cannot afford to ignore the probable influence of Spain in the same area. A friendly Spain would do much toward insuring South American cooperation in New World matters. Conferences, missions, and other propaganda devices could easily be replaced, at the saving of much time and expense, if a policy of realism regarding Latin America were to be adopted by the United States State Department.

The role of Spain in Latin America should not be ignored by the diplomats, for its influence on this side of the Atlantic will impress itself more and more as it emerges from the present crisis. Much will depend upon our own efforts whether it will be a Spain friendly to American interests in the countries south of the Rio Grande that will have to be reckoned with.

Finally, it should be remarked that there is no evidence at hand to lend color to the belief that the Spanish people will fail to live up to international obligations on a more enlightened, generous scale than has been observable in the case of Soviet Russia or leftist Mexico.

It is to be hoped, therefore, that those responsible for our foreign relations will recognize, in this instance at least, the expediency of realism and that they will safeguard American interests by adopting a practical common-sense outlook toward the deepest implications of friendship with the Spanish Christian people, both in Europe and America.

Security

EXTENSION OF REMARKS

OF

HON. FOREST A. HARNESS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1939

ARTICLE BY ROGER W. BABSON

Mr. HARNESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Roger W. Babson, which appeared in today's Washington Post:

[From the Washington Post of March 13, 1939]

INSURANCE AND PENSIONS LATEST UNITED STATES FAD, BABSON SAYS—PIONEERING DAYS ARE OVER, HE DECLARES—PEOPLE NOW SEEK STABILITY AND SECURITY—SAYS PRESENT PROGRAM MUST BE CHANGED

(By Roger W. Babson)

Insurance and "guaranties" are the latest American fad. The demand for old-age pensions, for a "guaranteed" wage, for unemployment insurance, for fixed prices, and the like means that America has come of age. Our pioneering days are over. Instead of pushing on to new frontiers, our people are clamoring for stability and security. No matter how much we endorse and underwrite our own futures, however, we will find that the only real security is character.

To want security is the most natural of human desires. To believe, however, that security can be accomplished by simply "insuring" every phase of human activity is tragic. A security program is only as strong as the character of its administrators and the adequacy of its reserves. Moreover, history teaches that government insurance is not worth the paper it is written on when based on a flat rate from which everyone benefits equally, irrespective of character.

CONSUMER PAYS

Take the social-security program, for example. Under its provisions employers are now taxed 1 percent of their pay rolls and employees are contributing a like amount. In addition, employers are paying 3 percent for unemployment insurance. These taxes are scheduled to increase until 1949, when employers will be paying 6 percent and employees 3 percent or more. This will represent a 6-percent excise tax on employers' pay rolls and a 3-percent income tax on every gainfully employed worker.

Naturally this 9-percent tax must be added to the cost of goods. Therefore it will eventually be paid—as all taxes are—by the consumer. The current 5-percent tax is already a big factor in living costs. It is handicapping thrifty people in saving something for themselves. Now a movement is on foot to put across a national health-insurance program, which would take another 3-percent pay-roll tax. It will also be added to the cost of goods. If enacted, it will boost the total tax on wages to 12 percent.

These social-security taxes alone are now giving the Government about $1,000,000,000 a year of new spending money. This is the annual contribution of millions of individuals to the trust fund which is supposed to provide them with a monthly income in their old age. The funds, however, are being used for current public expenses. Is one cent being set aside for the future?

If the social-security system is not changed, I doubt very much if the young people of 20 to 30 years of age will ever receive any benefit from it. When their time arrives to get their $40, $50, or $60 monthly Government check it may not even buy a pair of shoes or a roast of beef. The Townsend plan on some reasonable basis is far safer. It at least "pays as it goes," even though it, too, may increase prices tremendously.

482 NEW TAXES

Despite the swiftly running stream of revenues pouring into Washington, all eyes are focused on new tax possibilities. Never before in our history has the Government collected as much money as it is now doing. Moreover, it is spending every cent of it, including the money collected for the social-security trust fund, and it is still paying only half its bills. Meanwhile, largely to pay for new "social" programs, State governments are considering 482 new licenses and taxes. If the security trend continues the taxes necessary to pay for our "security" and "insurance" programs may amount to a practical confiscation of every individual's wages

Fundamentally, the only real security is high spiritual and intellectual character. Industry, honesty, thrift, ability, courage, and kindness are those vital factors which make any security program click. Eliminate these qualities and insurance of any kind is useless. The Government is simply the organization of the people. The moral fiber of the Government reflects the moral fiber of the people. If the people do not have strong character their Government insurance and security is useless.

SECURITY VERSUS LIBERTY

I believe that the worthy aged should be taken care of liberally. I believe in a national health program and insurance against the cost of emergency surgical operations which now are robbing good people of their savings. I, however, believe these benefits should be used for deserving citizens and not passed out by politicians to get votes from "Tom, Dick, and Harry."

In summing up this whole subject Father Feeley, of the University of San Francisco, recently said: "I am convinced that we cannot have complete economic security without destroying personal liberty." In this connection I ask readers the following question: Where would you rather live? In the America of today, where there is liberty for all but not security for all, or in the Germany of today, where there is alleged security for all but liberty for none?

Freight Rates Affecting Western and Southern States

EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1939

STATEMENT BY LAWRENCE WOOD ROBERT, JR., SECRETARY, DEMOCRATIC NATIONAL COMMITTEE, MARCH 10, 1939, IN ANSWER TO HON. MARTIN J. KENNEDY, OF NEW YORK

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following statement by Mr. Lawrence Wood Robert, Jr., secretary of the Democratic National Committee:

After 23 years of activity in the interest of equitable freight rates affecting the Western and Southern States, I understand that my good friend, Congressman MARTIN J. KENNEDY, of New York, has just learned of this. He has written to the President of the United States complaining about my interest and activity and also has written to Governor Lehman, of New York, that he is surprised at what he described as my "lobbying" on behalf of the adjustment of these rates, which he states "would be so manifestly unfair to the State of New York." I am just wondering if when Mr. KENNEDY's constituents in New York learn the truth about the cost of their foodstuffs, clothing, etc., which are increased by virtue of this present unfair and discriminatory rate structure, that they will not recall he has been in Congress for some 9 years without doing anything about it? Probably this "lobbying" he has been hearing about and now complains about is the "lobbying" to maintain these unfair rates and protect some of the vested interests principally located around the city of New York.

It is quite true that I am secretary of the Democratic National Committee, and also executive director of the Southeastern Governors' Conference, both nonpaying, honorary jobs in which I am greatly interested and on which I spent a great deal of my own time, energy, and resources. I have been active with reference to these unfair rates in the West and South long before I hardly knew there was a Democratic National Committee, although I was born and bred a Georgia Democrat. I am interested in the Southeastern Governors' Conference and helped organize same. This conference acts as the spearhead of the South's campaign to secure a reasonable and proper adjustment of these freight-rate differentials, not only for the Southeastern States but for the Southwestern and Western States, who are adversely affected, and to do other constructive work as well. In my profession I am now doing building in St. Louis, Salt Lake City, Seattle, San Francisco, Los Angeles, Denver, and Dallas, and I find that these discriminatory rates are just as much a problem at these points as at New Orleans, Birmingham, Atlanta, Nashville, and Charlotte.

If my friend, Mr. KENNEDY, would like some further information on this subject, it would be highly enlightening for him to read the recent report of Commissioner Lee, of the Interstate Commerce Commission. Mr. Lee was delegated to take testimony on this important subject and has recently filed his report with the Interstate Commerce Commission, in effect saying he found a most unreasonable and unfair rate structure as it now stands and advising an early readjustment. Yes; I have talked freight rates constantly since 1915 with everyone who would listen. I talked to Mr. Roosevelt before he was Governor of New York, when he was Governor of New York, and many times since he has been President of the United States. He is probably much more conversant with this highly important national subject than Mr. KENNEDY, and he has several times strongly advocated a fair and equitable freight-rate structure for all sections of the country, and has particularly pointed this out as a matter to be corrected in helping to alleviate some of the problems of the South.

This whole freight-rate matter is decidedly one of economics entirely and certainly should not be made a matter of politics. It is in no way a political question and I have never considered it one involving any particular section of the country. It is and should entirely be treated as a national economic problem.

Purchase of Silver and Issuance of Silver Certificates

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1939

JOINT MEMORIAL OF THE LEGISLATURE OF IDAHO

Mr. DWORSHAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint memorial of the Legislature of the State of Idaho:

Senate Joint Memorial 7

Joint memorial memorializing Congress and requesting the Senators and Representatives in Congress from the State of Idaho, and the Honorable KEY PITTMAN, Senator from Nevada, to support an act to authorize the Secretary of the Treasury to purchase silver, issue silver certificates, and for other purposes, now pending in the Congress of the United States Senate and known as act S. 800

Whereas there is pending in the Congress of the United States Senate a certain act (S. 800) to amend the act entitled "An act to authorize the Secretary of the Treasury to purchase silver, issue silver certificates, and for other purposes," approved June 19, 1934,

9 p. m., known as the Silver Purchase Act of 1934, introduced by Senator PITTMAN, of Nevada, and is now pending before the Agricultural Committee, which directs permanent purchasing of United States produced silver at $1.29 an ounce and the purchase of foreign silver under the existing law; that is, until one-fourth of the gold and silver stocks is in silver, or until silver has reached $1.29 an ounce; which authorizes the purchase of agricultural exports solely from this country with the certificates issued in payment therefor; and

Whereas the mining and farming industries are the two basic industries of the State of Idaho and both will receive direct benefits from the enactment of such legislation, as well as the entire population of the State of Idaho; and

Whereas immediate action is necessary on the part of the Congress of the United States to provide a market for domestically produced silver and a foreign market for agricultural products: Now, therefore, be it

Resolved by the Senate of the Twenty-fifth Session of the Legislature of the State of Idaho (the house of representatives concurring therein), That it respectfully petitions and memorializes the Congress of the United States to pass the above-referred-to act to enable mining operations within the State of Idaho to go forward with renewed vigor, and employ persons now listed on unemployment rolls, and to enable the farmers of this section to export goods to foreign countries in competition with producers in foreign lands; be it further

Resolved, That the secretary of state is hereby directed to forward a copy of this memorial to each of the Senators and Representatives in Congress from the State of Idaho, and to the Honorable KEY PITTMAN, Senator from Nevada, the author of the bill.

The Public Works Program

EXTENSION OF REMARKS
OF
HON. ARTHUR D. HEALEY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1939

Mr. HEALEY. Mr. Speaker, as finally enacted by Congress, the Public Works Administration Act of 1938 stipulated that only such applications for Federal aid under its terms as were submitted to the regional P. W. A. offices prior to October 1, 1938, could be accepted. Within the 3 months elapsing between the operative date of the act and the last day for filing applications there were submitted by State, county, and city and town authorities in the Commonwealth of Massachusetts 232 applications for Federal P. W. A. grants, representing a total building cost of $76,000,000 and including proposals for the construction of schools, hospitals, municipal buildings, bridges, sewers, highways, and other types of heavy construction deemed essential in the public interest.

Bearing in mind the fact that no organized attempt was made by the P. W. A. authorities to incite or stimulate interest by publicity, except such as was necessarily incident to the enactment and administration of this legislation, it would appear that these figures demonstrate both the need for the Federal assistance provided by the Public Works program and the faith and confidence that the people of my home State of Massachusetts feel toward the Public Works Administration.

In view of the fact that the State or subdivisions of States proposing these projects must bear 55 percent of the cost of such projects, the Federal Government contributing not more than 45 percent, this widespread and spontaneous demand for grants on behalf of the people of Massachusetts indicates the pressing need for this program as well as the approval of my State of its administration by the Public Works Administration.

As far as I know, the only serious criticism raised against the public-works program has been its alleged inability to put men speedily to work due to the delay and cumbersome process necessary in developing heavy construction projects to the point where the work is actually begun.

When we consider that the effective date of operation of the act—the day the President signed it—was October 1, 1938; the last day for receiving applications was September 30, 1938; and the last day for starting construction on any project authorized under its terms was January 1, 1939, 6,000 non-Federal projects actually under construction by January 1, 1939, should offer tangible refutation of that contention.

At the present time applications from Massachusetts, for which no allotments could be made due to depletion of available funds, are on file with the Public Works Administration totaling $6,000,000. These applications represent projects ready to go into immediate construction and badly needed public improvements that cannot be undertaken without the financial aid of the Federal Government. If the regional offices had the authority to accede to requests constantly being received from communities throughout the State for permission to file new applications, this figure would be greatly augmented.

Under these circumstances, and assuming that a like condition exists in virtually every State of this Nation, it seems to me that the Public Works Administration has amply proven its merit and the justification for its continued existence with an additional appropriation of funds.

I feel that the Public Works Administration furnishes the best means, under normal conditions as well as under emergency conditions, of stabilizing employment in the building industries and affording to communities the opportunity to erect permanent public improvements which have become vitally necessary under present conditions.

Whether we consider the Public Works Administration as an instrumentality to be employed only in times of emergency or as a potentially permanent means of stabilizing building activity and consequent employment, it seems to me that we must all admit that it has done an honest, efficient, and effective job. From experience it has developed a system capable of going into high speed with brief notice whenever necessary. It has organized and effectively coordinated a staff of highly skilled specialists that could not be speedily duplicated in time of sudden need. It has handled with honesty and efficiency the vast sums of money entrusted to it for the promotion of reemployment and the erection of permanent public improvements.

I believe that the moneys spent on this program are sound investments in the future of America and that it has contributed vastly to the social and economic development of the community, State, and Nation.

H. R. 2

EXTENSION OF REMARKS
OF
HON. HENRY C. DWORSHAK
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1939

JOINT MEMORIAL OF THE LEGISLATURE OF IDAHO

Mr. DWORSHAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint memorial of the Legislature of the State of Idaho:

Senate Joint Memorial 10

Joint memorial to the Speaker of the House of Representatives of the Congress of the United States, and the chairman of the Ways and Means Committee of the House of Representatives of the Congress of the United States

We, your memorialists, the Senate and House of Representatives of the State of Idaho, in legislative session, duly and regularly assembled, most respectfully present the following preamble and resolution, to wit:

Whereas it is manifest that the care of the aged is a governmental function and duty of the highest order, to the end that those who have labored faithfully for their families and to support their Government, may, in their declining years, be saved the pinch of poverty, and may enjoy a sense of security, in the knowledge that a grateful Government, in recognition of the citizenship, will adequately provide for their wants: Now, therefore, be it

Resolved by the Senate of the State of Idaho (the house of representatives concurring), That we most respectfully urge upon

the Congress of the United States that House bill No. 2, pending in the present Congress, be brought out onto the floor for open discussion to the end that the merits of the bill may be considered in open debate; be it further

Resolved, That the secretary of state of Idaho be authorized, and is hereby directed, to forward copies of this memorial to the Speaker of the House of Representatives and the chairman of the Ways and Means Committee of the House of Representatives at Washington, D. C., and the Senators and Representatives from the State of Idaho.

This senate joint memorial passed the senate on the 28th day of February 1939.

Amendment of the Revenue Act

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1939

Mr. JENKINS of Ohio. Mr. Speaker, the Democratic leadership in both branches of Congress has finally realized what nearly everybody else knew for years, namely, that the Federal income-tax laws, as they apply to business, have contributed materially to the continuation of the terrible depression which our country has felt for the past 6 years. The nearly frantic efforts of these leaders now to convince the President that the tax laws should be amended may result in getting some concessions from him, but nothing that they or the administration can do now will change the mental attitude of the average American businessman. It is too late. In view of the past record of the administration he questions the sincerity and reliability of its present program of appeasement. He knows that the President and the administration officials are against him at heart and have been determined to do everything possible to burden him and to make it difficult for him to do business.

The President has repeatedly, either willfully or by reason of bad advice from his "brain trusters," gone out of his way to seek the enactment of punitive tax measures aimed at the American businessman. He has gloated over his successes in that respect. The proof of this is the tenacity with which he hung on to the principle of the discredited undistributed-profits tax, which most of the leaders of his party rejected but which still remains in the statutes. Every tax concession that has come from this administration to the businessman has come grudgingly as a result of aggressive opposition by the Republican membership of the Ways and Means Committee of the House of Representatives.

Personally I want to compliment the Democratic leaders in the House and Senate for their efforts, belated though they be. I have a private notion that they would have abandoned these repressive taxes long ago except for the adamant position of the President. What they are proposing to do now is exactly what the Republican membership on the Ways and Means Committee were demanding 4 years ago and ever since. The Republican membership naturally will go along with any program that will encourage business. But the businessman has been punished too long to accept any sugar-coated promises at this time. He is waiting for 1940, when he expects to take advantage of the opportunity to change the situation. The leaders in practically every productive activity in the Nation are waiting for the same opportunity. The wise program to follow now would include the repeal from the present law of every vestige of the iniquitous undistributed-profits tax which, although the effect of it has been minimized to a great extent, still contains the destructive germ which may spread out at any time. Until this destructive germ is destroyed, root and branch, businessmen will always be scary.

Secondly, there is an unfavorable psychology arising from the presence in the law of the capital-gains tax. While this is not in itself destructive of business activities, it has had a depressing effect upon expansion and reemployment. I would also repeal every vestige of this law.

In the third place, the capital-stock tax should be repealed because it is not based on earnings or ability to pay. It is just simply a tax.

I would substitute for all of these taxes a straight corporate income tax based on net earnings. I would provide a small exemption to small corporations by way of encouragement. I would also give tax concessions to corporations which would make special efforts to restore employment by capital expenditures and business expansion.

The initial urge in corporate financing, of course, is profit, but with that must go responsibility to share reasonably with those who produce the wealth and a desire to provide a wholesome atmosphere toward their employees. When we offer encouragement to legitimate corporate expansion we are in effect giving encouragement to the employment of labor. The most progressive thought among labor leaders now appreciates the situation and they are to be complimented for their attitude. There never has been a finer opportunity for employment and labor to work together than at this time. The interest of labor in tax revision is evidenced by the resolutions adopted by the American Federation of Labor at its recent meeting in Miami.

The resolution is in line with what the Republicans in the House have been trying to do for years. The country is ready to march again to prosperity but the principal impediment has been the attitude of the administration toward business. Statements by Hopkins, Morgenthau, and the President would be encouraging if sincere. It is a case of the voice of Jacob and the hand of Esau.

Hunters Point, San Francisco Bay

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1939

TELEGRAM FROM SAN FRANCISCO CHAMBER OF COMMERCE AND REPLY THERETO

Mr. WELCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram from the San Francisco Chamber of Commerce and my reply thereto:

MARCH 12, 1939.

HON. RICHARD J. WELCH,
House Office Building, Washington, D. C.:

With full realization of your tireless efforts in behalf of west-coast shipbuilding and national-defense measures and the large personal contribution which you have made to recent progress in these matters, we must register our opposition to your present position concerning Bethlehem Co. and your advocacy of Government acquisition of the company's properties at Hunters Point. We believe it is grave error to encourage tax-free enterprises in competition with private industry, especially in face of present efficient operation by the Bethlehem. Present owners advise the property is not for sale; and, furthermore, that should national emergency occur, all facilities will be turned over to Government which adequately meets all requirements. We also wish strongly to reaffirm our recommendation for immediate allocation of necessary funds for construction of Oakland naval supply depot, and respectfully request your cooperation.

WILLIAM W. MONAHAN,
Executive Vice President, San Francisco Chamber of Commerce.

MARCH 13, 1939.

MR. WILLIAM W. MONAHAN,
Executive Vice President,
San Francisco Chamber of Commerce,
San Francisco, Calif.:

Your telegram relative to Hunters Point received. This naval national-defense necessity was referred to in following statement made by Admiral W. D. Leahy, Chief of Naval Operations, on March 9, during hearings before House Naval Affairs Committee on the

naval public-works authorization bill: "The program does not provide for a naval drydock in the San Francisco Bay area capable of taking a major capital ship. The privately owned drydocks at Hunters Point lacking in the equipment necessary for repairs to our large war vessels are not a satisfactory solution to the Navy's problem in time of war. In my opinion, the Navy should acquire the Hunters Point drydocks and should provide weight-handling facilities, power connections, galley latrines, storehouse, and an assembly plant to permit the overhaul of our largest vessels in conjunction with the Mare Island Navy Yard." The highest naval authorities for the past 20 years, as records will show, have referred to the strategic importance of San Francisco Bay and Hunters Point. To my personal knowledge, the Bethlehem Steel has made no improvements at Hunters Point in 20 years. Evidently it is as indifferent to the national-defense requirements of this Government at Hunters Point, particularly at this time, as it is to building ships in its San Francisco plant, where thousands of men should now be employed. If it is the opinion of the chamber of commerce that the private interests of the Bethlehem Steel Corporation transcends the national-defense requirements of our Government, that is your privilege, but I am not of the same opinion and will continue to base my naval national-defense policies on the requirements of the Navy as expressed by Admiral Leahy and other high naval officials.

Re Oakland supply depot: My action relative to this matter will be consistent with the fight I have led for years to return shipbuilding and provide drydock facilities on the west coast in the interest of national defense.

RICHARD J. WELCH, M. C.

The Organized Reserves

EXTENSION OF REMARKS
OF
HON. LEWIS D. THILL
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1939

ARTICLE BY STEPHEN A. PARK

Mr. THILL. Mr. Speaker, under leave to extend my remarks in the RECORD I include therein an article written by Stephen A. Park on the status and needs of the Organized Reserves, as follows:

THE STATUS AND NEEDS OF THE ORGANIZED RESERVES AS PRESENTED TO THE BUREAU OF THE BUDGET AND COMMITTEES OF THE CONGRESS

(By Col. Stephen A. Park, Infantry Reserve, national president, Reserve Officers' Association of the United States)

GENERAL MISSION OF THE ORGANIZED RESERVES

As there are only 12,760 officers in the Regular Army and about 13,000 officers in the National Guard, it is estimated that the Officers' Reserve Corps must furnish at least 80 percent of the officer personnel for the National Army required for the first phase of a major national emergency.

A large percentage of this Officers' Reserve Corps would be needed immediately for Regular Army active and inactive units, for the corps area service commands, and for the M-day duties.

It would have to furnish the great bulk of the officer personnel for the Organized Reserve divisions, which would be organized, trained, and equipped and be made available for service in the theater of operations in accordance with the demands of the emergency.

To quote from the annual report of the Secretary of War, 1938: "Continuous progress in individual and organizational proficiency has characterized the activities of the Organized Reserves. In the event of a grave national emergency, upon the officers of this component of the Army of the United States eventually will fall the brunt of our military effort."

STRENGTH AND COMPOSITION OF THE ORGANIZED RESERVES

There are at present on the active list of the Officers' Reserve Corps (i. e., eligible for assignment, active duty, and promotion) a total of 100,116 officers, of whom 65,552 belong to the arms or combatant branches and 34,564 belong to the services or noncombatant branches. There is, therefore, a shortage of at least 20,000 Reserve officers required for the first phase of a major national emergency.

Whereas immediately following the World War the Officers' Reserve Corps was made up practically exclusively of officers (66,000 in 1922) who had had war experience, at the present time less than 15,000, or 14.8 percent of those on the active list, belong to this category.

The much larger group of 85,000, or 85 percent of the total active strength, is composed, according to sources and previous training, in round numbers, as follows:

1. Reserve Officers' Training Corps, 50,000, or 50 percent.
2. Retired Regular Army officers and enlisted men, 2,600, or 2.6 percent.
3. Citizens' military training camps, 3,000, or 3.8 percent.
4. Direct from civilian occupations, with little or no military training, 27,700, or 27.7 percent.
5. Flying cadets, 900, or nine-tenths of 1 percent.

PROBLEM OF LOSSES IN THE OFFICERS' RESERVE CORPS—NEED FOR ALLOWANCES FOR UNIFORMS AND INACTIVE STATUS TRAINING

The heavy losses in the Officers' Reserve Corps have caused our association grave concern because they indicate a lack of interest and incentive on the part of these officers to remain active in the corps.

The losses in the group having World War experience, while particularly great (77 percent in 16 years), are more readily understandable than those in the groups of younger officers. Death, physical disability, and pressure of civilian occupations have naturally exacted a terrific toll among the older officers.

In the R. O. T. C. group, while over 92,000 have been commissioned since 1920, as shown above, only 50,000 of these are now on the active list of the Officers' Reserve Corps. This represents a loss of 46 percent.

In the C. M. T. C. group, over 6,600 have been commissioned since 1920, and we find only 3,800 of these still active. This represents a loss of approximately 43 percent.

While the total losses in the R. O. T. C. and C. M. T. C. groups since 1920 have been somewhat less than 50 percent, in late years they have been much greater, e. g., the number of R. O. T. C. graduates commissioned in the O. R. C. increased from 47,343, on June 30, 1936, to 48,373, on June 30, 1937, a gain of only 1,030, although 5,704 R. O. T. C. graduates were commissioned in 1937. Thus, in this particular year, the losses among officers secured from the R. O. T. C. in former years amounted to 80 percent of the number of newly commissioned R. O. T. C. graduates.

During the same year the number of C. M. T. C. graduates commissioned in the corps increased from 3,678 to 3,718, a gain of only 40, although 547 C. M. T. C. graduates were commissioned during the fiscal year 1937.

Attempting to alleviate these losses, the War Department has recently canceled the requirement of physical examination as a condition for the first reappointment and has provided for automatic promotion to the grade of first lieutenant in the case of graduates of senior R. O. T. C. units.

While these liberal provisions may have been responsible for the slight improvement shown in the figures as of June 30, 1938, they are hardly calculated to cure the real cause of the losses.

After many years of careful study and investigation, our association has become convinced that the basic cause of these heavy losses of Reserve officers, particularly those of junior grades, is economic.

It is an indisputable fact that most Reserve officers on the active list, especially those of the junior grades, actually spend more money in providing themselves with the necessary uniforms and equipment and maintaining their military proficiency through various forms of inactive-status training than they receive in the form of active-duty pay.

That so many have been willing to make such financial sacrifice during a long period of general economic distress speaks volumes for the loyalty and patriotism of the Officers' Reserve Corps. While the older officers, more firmly established economically, can more readily afford such a hobby or avocation, most of the officers of junior grades, experiencing real difficulty in making a bare livelihood, naturally cannot stand this additional financial burden—hence the majority are resigning or allowing their Reserve commissions to lapse at the end of 5 years or 10 years.

Naturally these losses in Reserve officer personnel are not only serious from the national-defense standpoint, but they also indicate that the Government is losing a large percentage of the money invested in the R. O. T. C. as a means of securing trained leaders for a national emergency. It is estimated that the average cost of producing an R. O. T. C. graduate is $1,100. The loss of 42,000 such graduates from the O. R. C. since 1920 thus means a total loss of over $46,000,000 for the 18-year period. And if we are now losing 3,000 to 4,000 of such graduates each year, it is safe to assume that this represents an annual monetary loss of about $4,000,000.

With the sole desire to develop the esprit, morale, and efficiency of the Organized Reserves and to make it a truly strong and reliable component of the Army of the United States, our association submits and urges adoption of its plan, which we are convinced is the only logical and effective solution for this problem.

This plan is in two parts, the first calling for allowance for uniforms of $50 per year for the first 3 years of commissioned service of each Reserve officer, under such regulations as the War Department may prescribe; the second for an allowance of $1 to all Reserve officers on the active list for each hour of credits earned in Army extension courses and other forms of inactive status training approved by the War Department, provided that such allowance shall apply only to inactive status credits earned in excess of the 20 hours required for maintaining active status, and shall not exceed $75 in any one year; and further, that such inactive status credits shall not be cumulative from one year to succeeding years.

Under this plan the uniform allowance is limited to newly commissioned Reserve officers and for a period of only 3 years. It is contemplated that evidence of interest and activity as Reserve officers, and proof of actual purchase of some articles of uniform or equipment would be required for qualifying for this allowance.

On the basis of this year's number of original appointments (less than 8,000), the maximum cost of this proposed uniform allowance would be 24,000 (three annual groups) times $50, or $1,200,000.

Theoretically, all Reserve officers on the active list would be eligible for the maximum inactive status training allowance. Practically, however, the three accompanying restrictions, viz, the initial requirement of the 20 hours for which officers would receive no reimbursement, the maximum number of credit hours for which officers could receive reimbursement, and the noncumulative feature, would serve as effective limitations on the total amount of money needed for this part of the plan.

Considering the large number of Reserve officers whose professions and businesses do not permit them to devote more than the minimum amount of time required to remain on the active list, 75,000 is probably a liberal estimate of the number of eligible officers who would qualify for any such allowance. Also, $40 would doubtless be a liberal estimate of the average amount payable to the 75,000 qualifying officers. The product of these two figures is $3,000,000.

Thus the total cost of putting this plan into effect should not exceed $4,200,000, or practically the same amount as the Government's present annual monetary loss suffered as the result of the excessive numbers of R. O. T. C. graduates separating from the Officers' Reserve Corps.

Certainly, adoption of the proposed plan would be sound financial economy and serve as a tremendous stimulus to the strength and morale of the Reserves.

TRAINING OF THE OFFICERS' RESERVE CORPS

The $12,235,783 appropriated for the Organized Reserves for the current fiscal year 1939, including the $313,443 reappropriated, was estimated to provide active duty training for the following:

(a) Thirty thousand for 14 days;

(b) Six hundred and fifty for 1 year with the Regular Army, with 10 percent to receive permanent commissions in the Regular Army;

(c) Two hundred and fourteen at the special service schools;

(d) Twenty-four at the Command and General Staff School;

(e) Eight hundred and fifty-seven Air Corps officers on extended duty with the Regular Army; and

(f) Ten on extended duty with the War Department General Staff.

Upon the basis of this year's number of active duty trainees, officers of the arms would receive training on the average of once in every 2.5 years and officers of the services once in every 6 years.

It should be borne in mind that in the event of a major emergency these officers will have to perform the same command and staff functions as their brother officers in the Regular Army and National Guard.

Three reasons have been advanced in attempting to justify the infrequency of the Reserves' training:

(a) Economy;

(b) Lack of Regular Army personnel and facilities; and

(c) Time available after the beginning of the emergency during which the training of the necessary Reserve officers could be completed.

In view of the present state of world affairs and possible developments, no time should be lost in training the Reserves in a manner comparable with the other components of the Army.

To economize longer at the expense of the training and efficiency of the Reserves would be short-sighted and dangerous; furthermore, the Government gets more for the money it appropriates for training the Reserves than for the same amount devoted to any other defense purposes. In this connection, the annual report of the Secretary of War makes the following significant statement:

"The comparatively small sums expended for betterment of our Organized Reserves will pay manifold dividends if this reserve element of the national defense is ever summoned to the colors for war duty." If more Regular Army personnel is required it should be provided, but it is believed that the present strength is sufficient to train a much larger number of Reserve officers on active duty than have been provided for up to the present time.

Likewise the necessary facilities for such training should be provided.

Finally, the history of the last few years with its undeclared wars should prove that it is no longer safe to assume that the necessary number of Reserve officers can be procured and trained as needed after the start of an emergency.

Again quoting from the current annual report of the Secretary of War:

"Not since the War of 1812 has a foreign invader set foot upon our soil. We are therefore too prone, I believe, to visualize preparation for a future war in the light of our preparation for war in 1917. We must not be deluded by recollection of huge cantonments where divisions had opportunity to undergo training for several months before engaging in combat. We cannot have any assurance that the military situation will permit the establishment of training centers where potential commissioned personnel may undergo instruction for comparatively long periods."

The Chief of Staff, in his recent annual report, issues a similar warning:

"The rapidity with which modern wars are launched shows clearly that the time available for training after the outbreak of any emergency will be brief in comparison with our past experience. For this reason thorough training of our Organized Reserves in time of peace is imperative."

It should be self-evident that when appropriations limit active duty to less than 32,000 out of the 100,000 Reserve officers on the active list, thorough training of the Organized Reserves is not being provided.

Hence, for the reasons which I have outlined, our association urgently advocates provision for annual active status training for 14-day periods of all active and eligible Reserve officers.

Furthermore, to provide the Organized Reserves with a reasonable nucleus of officers with special instruction and training which can be utilized in developing the efficiency of the Reserves in both peacetime and time of emergency, we also urge:

(a) That the number of Reserve officers to attend the Command and General Staff and special service schools be increased from 214 to 300;

(b) That the number of Reserve officers on duty with the General Staff be continued at five as at present;

(c) That the number of Air Reserve officers on extended active duty with the Regular Army Air Corps be increased from 857 to the authorized 1,350, and that the annual active duty for other Air Reserve officers be established at 36 days, 14 days at one time and 2 days a month throughout the balance of the year;

(d) That the number of Reserve second lieutenants given active duty for 1 year with the Regular Army, under provisions of the Thomason Act, be increased from 650 to the original authorization of 1,000, and that 10 percent of these be permanently commissioned in the Regular Army at the expiration of the year's duty.

Due to the inadequate provision for active duty, increasing reliance has been placed in inactive status training as a means of preparing Reserve officers for their possible wartime duties.

Here, again, we find the instructional personnel and facilities for training inadequate for the purpose.

The number of Regular Army officers and enlisted men detailed to duty with the Organized Reserves and the provisions for the travel of such personnel in the performance of their duties are insufficient to cover the territory assigned and conduct the inactive status training of the Reserves in the manner required for the proper development of this component.

Attention should also be given to the necessity of improved training facilities, including drill halls, classrooms, ordnance material, textbooks, extension-course material, and administrative supplies.

ENLISTED RESERVE CORPS

Upon the War Department's recommendation, the Congress has seen fit to provide for a Regular Army Enlisted Reserve consisting of 75,000 discharged Regular Army enlisted men to be paid $2 per month merely for reporting by mail, at an annual cost of nearly $2,000,000, to say nothing of the $500 bonus each such Reservist will receive when called to active duty.

The Reserve Officers' Association heartily approves of this provision, but it calls the Budget Bureau's attention to the fact that the Enlisted Reserve Corps, provided for as a part of the Organized Reserves under the National Defense Act, exists practically in name only and continues to be an inoperative and ineffectual element in the framework of our national defense, due to lack of appropriations for its development.

Our association does not seek a large Enlisted Reserve Corps comparable to the enlisted strength of the Regular Army or National Guard, but, recalling the chaotic days of 1917 when precious time was lost in seeking and training potentially qualified enlisted men for key positions in the companies, battalions, regiments, and higher units being organized, trained, and equipped as rapidly as possible for service overseas, we urge that provision be made for enlisting and training enlisted cadres for the Organized Reserve units.

It is not difficult to visualize the tremendous benefits to be derived from such financial provision. Thousands of young men who have been unable to complete their R. O. T. C. or C. M. T. C. courses and others who may not be qualified for commissions are eager to have such an outlet for their interest and enthusiasm in military affairs. And incidentally, the active duty pay, at $1 per day for 14 days, and rations, at 70 cents per day, would cost less than the annual reporting fee of $24 now being paid Regular Army enlisted reservists. If such enlisted reservists are needed for the Regular Army inactive units they are likewise needed for the Organized Reserve units.

RESERVE OFFICERS' TRAINING CORPS

The importance of the R. O. T. C. as a vital element in our national defense structure is generally understood and appreciated. As previously noted, R. O. T. C. graduates now constitute 50 percent of the Officers' Reserve Corps; others have been commissioned in the Air Corps and other branches of the Regular Army, and quite a number are commissioned in the National Guard.

In view of the fact that the R. O. T. C. is the chief source of replacements for the Officers' Reserve Corps, and that, due to the heavy losses among its graduates, the O. R. C. is 20,000 short of the desired minimum strength, it should be obvious (1) that the product of the R. O. T. C. must be increased and (2) that such graduates must be retained after being commissioned.

To increase the product, our association urges both the establishment of additional units, in all qualified colleges and universities, and provision for larger enrollment in the advanced course to the end that a minimum of 8,000 students will be graduated annually from the senior units and become eligible for commissions in the Officers' Reserve Corps.

If the Regular Army personnel needed for this purpose is at present inadequate, then we earnestly urge that the necessary officers and enlisted men of proper grades be provided.

Provision should also be made to supply the crying needs of our R. O. T. C. units with respect to armories and modern military equipment. With the present inadequate facilities the students of these units cannot be trained properly for their potential duties as military leaders.

The problem of retaining the interest and activity of R. O. T. C. graduates has already been discussed.

In addition to the uniform and inactive status training allowances which would apply to all members of the corps, we urge that a minimum of 1,000 R. O. T. C. graduates and other newly commissioned second lieutenants be trained for 1 year with the Regular Army (Thomason Act) and that from this group 10 percent be selected for permanent commissions in the Regular Army.

CITIZENS' MILITARY TRAINING CAMPS

The number of young men desiring the opportunity of C. M. T. C. training continues to be two to three times the number provided for by the appropriations.

This is the most democratic and economical element in the entire national-defense structure. Last summer about 35,000 young men were trained in these camps at an average cost of only $65 per trainee.

In addition to creating a great reservoir of earnest, enthusiastic young American citizens possessing the potential qualifications as officers or noncommissioned officers in a national emergency, the C. M. T. C. serves as a great indoctrinator of Americanism and the duties and responsibilities of American citizenship.

For these reasons our association earnestly advocates the expansion of the C. M. T. C. to provide training for at least 50,000 youths annually.

REGULAR ARMY

Appreciating the many and varied responsibilities of the Regular Army, the most important of which perhaps is that of training the civilian components, we heartily support the proposed increase in the strength of this component to 14,659 officers and 180,000 enlisted men with appropriate grades and ratings.

We also seek fair and adequate treatment of Regular Army enlisted men on duty with the Organized Reserves and other civilian components, including grades of higher rating, increased allowances for quarters and rations, restoration of the reenlistment bonus, and the elimination of discrepancies in allowances now existing.

NATIONAL GUARD

With due appreciation, also, of the important role which the National Guard would have to play in a national emergency, we advocate an increase in the strength of this component to 210,000 enlisted men and a proportionate number of officers, with provision for 48 armory drills and 15 days of field training each year.

NATIONAL BOARD FOR THE PROMOTION OF RIFLE PRACTICE

The association requests continuance of the current provision for the annual rifle and pistol matches, including adequate assistance to all civilian rifle and pistol clubs.

RESPONSIBILITY OF THE CITIZENRY AND THE GOVERNMENT

In concluding this presentation it should be pointed out that, while we have primarily stressed the status and needs of the Organized Reserves and its principal replacement institutions, the R. O. T. C. and C. M. T. C., the Reserve Officers' Association continues to stand foursquare on its broad objective as enunciated in the second article of its constitution; namely, "to support and assist in the development and execution of a military policy for the United States which will provide adequate national defense."

In this Republic adequate national defense depends upon a loyal, patriotic citizenry "trained and accustomed to arms." That citizenry must be given the opportunity to demonstrate its appreciation and support of adeqaute national-defense measures; it must be given the opportunity to prove to all foreign countries and their rulers that it is prepared to defend this Nation by force of arms if necessary; it must be given the opportunity to secure the maximum amount of training and experience for possible wartime duties.

Trading in Futures on Idaho Potatoes

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1939

JOINT MEMORIAL OF THE LEGISLATURE OF IDAHO

Mr. DWORSHAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint memorial of the Legislature of the State of Idaho:

Senate Joint Memorial 9

Joint memorial to the honorable Senate and the House of Representatives of the United States of America in Congress assembled:

We, your memorialists, the Legislature of the State of Idaho, respectfully represent that:

Whereas in recent years the Chicago Mercantile Exchange and other similar exchanges in the United States have included the white potato as one of the commodities in which their members may deal in future trading during certain months of the year; and

Whereas Idaho potatoes are the only potatoes produced in the United States in which there is any trading to any great extent, and that trading is limited to the Chicago Mercantile Exchange; and

Whereas this form of trading in futures on Idaho potatoes has resulted in greatly depressed prices for Idaho potatoes on the Chicago market and other principal terminal markets of the United States; and

Whereas the Chicago terminal market on potatoes is the principal terminal market for potatoes of the United States and any depressed prices thereon affect all other markets on which Idaho potatoes might be sold; and

Whereas this form of trading and dealing in potato futures, particularly as they apply only to the State of Idaho, are beyond any control or regulation by this body; and

Whereas the matter of regulating all forms of exchange trading in all commodities is subject only to the laws passed by the Congress of the United States: Now, therefore,

We, the Legislature of the State of Idaho, do hereby most respectfully urge of your honorable body, the Congress of the United States, that your honorable body pass such legislation empowering the honorable Secretary of Agriculture to prohibit the sale of potatoes and other vegetables of like character for future delivery on any and all exchanges in the United States: Be it

Resolved, That the secretary of state of Idaho be authorized, and is hereby directed, to immediately forward certified copies of this joint memorial to the Secretary of Agriculture, the Senate, and the House of Representatives of the United States, to the Senators and Representatives in Congress from the State of Idaho, and to the President, Franklin D. Roosevelt.

Tax-Exempt Securities

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1939

CONCURRENT RESOLUTION OF THE LEGISLATURE OF THE STATE OF MINNESOTA

Mr. H. CARL ANDERSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution of the Legislature of the State of Minnesota:

Concurrent resolution memorializing the Congress of the United States to propose an amendment to the Constitution of the United States preventing the issuance of tax-exempt securities

Whereas the United States, the several States, and subdivisions thereof, issue from time to time tax-exempt securities; and

Whereas such securities being tax exempt the purchasers thereof are avoiding payment of their fair share of taxes; and

Whereas such tax-exempt securities, for the most part, are purchased by those best able to pay taxes; and

Whereas the result is that an intolerable burden of taxation is placed upon those least able to pay; and

Whereas further result is that money has been diverted from the pay rolls of business and industry and invested in tax-exempt securities, thereby retarding and preventing the progress of business and industry and creating unemployment; and

Whereas the Legislature of the State of Minnesota believes that the situation of the taxpayers has assumed proportions bordering on national calamity, imperatively requiring action by the United States with a view of a speedy and permanent relief and solution: Therefore be it

Resolved by the Senate of the State of Minnesota (the house of representatives concurring), That the State of Minnesota does hereby memorialize the Congress of the United States to propose to the States an amendment to the Constitution of the United States in the manner and form as follows:

"No evidences of indebtedness hereafter issued by the United States, or by any Territory or dependency thereof, or by any State, or by any municipality or any other subdivision thereof, or by any private person, corporation, or other organization, shall be exempt

from taxation by the United States or by any State, Territory, or dependency or subdivision thereof"; and be it further

Resolved, That the secretary of state be, and he hereby is, instructed to forward exemplified copies of this resolution to the Honorable Franklin D. Roosevelt, President of the United States; the Honorable John N. Garner, Vice President of the United States; the Honorable William B. Bankhead, Speaker of the House of Representatives of the United States; and to each of the Senators and Representatives from the State of Minnesota to the Congress of the United States.

The Newark Airport

EXTENSION OF REMARKS
OF
HON. ROBERT W. KEAN
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1939

Mr. KEAN. Mr. Speaker, it is a well-established fact that, owing to its fortunate geographic location and other features of its terrain, the Newark Airport renders unsurpassed service to the metropolitan New York area. The municipal authorities in New York seem to have finally realized this, as well as the fact that no other new airport could possibly fill the needs of these great communities to anywhere near the same extent, for having found that it was impossible to persuade honest and reputable people that any other air fields could match Newark, they have in desperation stooped to methods which are, to say the least, unethical.

Bearing upon this, I include in these remarks an article which appeared in the New York Times of March 10, and various editorial comment from the Newark newspapers, as follows:

[From the New York Times of March 10, 1939]

CITY RESCINDS BID IN ROW WITH SLOAN—CANCELS ORDER FOR 109 POLICE CARS—REBUKE FOR BACKING NEWARK AIRPORT IS SEEN—4-YEAR-OLD LETTER SHOWN—GENERAL MOTORS HEAD WROTE TO WHALEN OPPOSING BENNETT FIELD AS A TERMINUS

The board of estimate took a contract for 109 police cars away from General Motors Corporation yesterday and gave it to a higher bidder after Deputy Mayor Curran had produced a 4-year-old letter written by Alfred P. Sloan, president of General Motors, in which he had said he was not concerned with New York City's interest in developing Floyd Bennett Airport in Brooklyn.

Last week the board voted the contract to General Motors, although Police Commissioner Valentine had asked that it go to the Fargo Motor Corporation so his automotive equipment might remain standardized. Mr. Curran, who sits for Mayor LaGuardia on the board of estimate, gave photostatic copies of Mr. Sloan's letter to each board member yesterday.

When the board reversed its earlier action, Controller Joseph D. McGoldrick and Borough President Stanley M. Isaacs, of Manhattan, said they were acting only upon the police commissioner's request.

Mr. Sloan's letter, dated September 3, 1935, was addressed to Grover A. Whalen, who had asked him to serve on a committee to promote Floyd Bennett Airport as the eastern terminus of the air mail, now Newark Airport.

CONCERNED WITH "MAJORITY"

Mr. Sloan wrote: "In my position, and I think it is a sound one, I am concerned primarily with the best service at the lowest price, or speaking more broadly, perhaps I should say the best service or the best merchandise at the lowest price that modern efficiency makes possible. I cannot be concerned with sacrificing this principle for the sake of any particular interest. I am concerned with the interests of the majority, rather than the interests of the minority.

"Applying this principle to the case at hand, frankly, I believe that the Newark Airport is a far more effective place to serve the interests of the community—metropolitan New York and the surrounding territory—than the Floyd Bennett Airport ever could be, and I say this because, as you know, I have rather a direct interest in aviation operations, and I personally have an interest because I use air transport to a considerable degree.

"Naturally, I appreciate that it is probably to the interest of New York City, if we are to consider that by itself, to have Floyd Bennett designated, but I am not concerned with that," he continued. "As I said before, I am concerned in this case with the best service at the lowest price, and according to my belief, the Newark Airport meets that issue better than Floyd Bennett does.

"I am sorry, but as we often say, it is the difference of opinion that makes horse-racing possible."

Borough President Raymond V. Ingersoll, of Brooklyn, voted against changing the bidder. Borough President James J. Lyons, of the Bronx, said he had agreed to cooperate with the mayor and voted for the change because "the mayor feels that in this case it might teach Mr. Sloan a lesson."

[From the Newark Evening News of March 10, 1939]

SMALL TOWN STUFF

Mayor LaGuardia is an apostle of tolerance. His views on civil rights, including freedom of speech and opinion, are well known. But—

Alfred P. Sloan, head of General Motors, dared, as of September 3, 1935, to write a letter in which he said Newark Airport was "a far more effective place to serve the interests of the community—metropolitan New York and surrounding territory—than the Floyd Bennett Airport ever could be."

Floyd Bennett, in the days before North Beach, was Mayor LaGuardia's darling. So as of March 9, 1939, Mayor LaGuardia takes a contract for 109 police cars away from General Motors, low bidder.

Need more be said?

[From the Newark Evening News of March 11, 1939]

LAGUARDIA VERSUS LAGUARDIA

"Our Government provides for free speech, and in this city that right will be respected. It would be a strange kind of free speech which permits free speech for those we agree with. That's the kind of free speech they have in Fascist countries, but it isn't free speech.

"It would be a strange thing, if because I do not agree with the sponsors of this meeting and because they abuse me, that I should move to prevent this meeting. I would then be doing exactly as Hitler is doing in carrying on his abhorrent form of government."

These were the words of Mayor LaGuardia on February 17 in authorizing the now memorable German-American Bund meeting of 3 days later in Madison Square Garden. They are fine words. But how about the broad application of the excellent principles thus expounded? Less than 3 weeks later the mayor had the board of estimate repeal the award to the General Motors Corporation, lowest bidder, for 109 Chevrolet police cars and give the contract to the Fargo Motor Corporation for as many Plymouths.

Mr. LaGuardia, his spokesman said, was punishing Alfred P. Sloan, chairman of the board of General Motors, for a letter written in 1935 praising Newark Airport in comparison with Floyd Bennett Field. It is, in the mayor's words, "a strange thing" for him to so resent Mr. Sloan's expression of an honestly held conviction. It is "a strange thing" for the executive of the Nation's greatest city to have an important award of contract rescinded because Mr. Sloan ventured to disagree with him 4 years ago in an altogether different connection. What's this about Herr Hitler?

[From the Newark Ledger of March 10, 1939]

FIORELLO THE TEACHER

Mayor LaGuardia, of New York, is out to persuade the Nation that Newark Airport can't possibly be as good as the airport he is currently promoting for New York. And the mayor is a powerful persuader! Straight to the point go his arguments.

Take the case of Alfred P. Sloan, of General Motors. He was asked 4 years ago to serve on a committee to back Floyd Bennett Field in Brooklyn as a competitor to Newark Airport. He declined to serve, stating that Newark Airport was obviously the better of the two from the standpoint of the public.

The mayor evidently took mental note of the fact that Sloan needed persuading. The other day the mayor saw his opportunity.

General Motors had been the lowest bidder on 109 cars for the use of the New York police department. The mayor called in the members of the board of estimate, showed them Sloan's letter and persuaded them to award the contract to another company.

Thus Sloan has learned about airports. And automobiles!

[From the Newark Ledger of March 11, 1939]

SALESMAN'S ERROR

Much has been said about the complex nature of modern industrial society. If anything were needed to illustrate the subtle interplay of forces affecting each other, a striking illustration is furnished by the recent minor calamity suffered by General Motors in New York City.

This corporation, apparently guided by a simple but obsolete belief that selling its products was a matter of price, quality, and service, submitted a bid to New York City for 109 police cars. Learning that its bid was considered the most satisfactory of those submitted, the company confidently expected to make the sale.

The company was mistaken, because it did not reckon with all the innumerable considerations affecting business today. The order is go to another company which may be higher in price but more satisfactory in its views on the comparative virtues of different airports.

One may ask what relationship there can possibly be between the desirability of a car for police purposes and the maker's views on airports. But asking would be displaying ignorance. There is a difference. At least in New York under Mayor LaGuardia there is a difference.

Any airport sponsored by LaGuardia in New York is the world's greatest airport, certainly better than Newark Airport. Alfred P. Sloan, of General Motors, once wrote a letter praising Newark

Airport. This proves that he is not qualified to sell cars to New York. All those in favor of LaGuardia's airports say "aye" and receive the privilege of doing business with New York City.

LaGuardia reasons, apparently, that any man who doesn't agree with him on airports can't be right about anything.

[From the Newark Sunday Call of March 12, 1939]

PUNISHING DISSENT

Alfred P. Sloan, chairman of the board of General Motors, believed Newark Airport could offer better service at a lower price than Floyd Bennett Field. For that reason he refused, 3 years ago, to go on a committee to promote the transfer of the air mail from Newark to the New York airport.

Because of that New York's Board of Estimate now decides not to buy police cars manufactured by General Motors and accepts a higher bid from another company. It may be all right with New York's taxpayers to be penalized to satisfy a spiteful city government, but such actions make the big town look pretty silly.

Punishing a man for his opinions somehow doesn't seem to square with Mayor LaGuardia's stalwart defense of democracy and civil liberties.

Savage River Dam

EXTENSION OF REMARKS

OF

HON. WILLIAM D. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1939

RADIO ADDRESS BY HON. WILLIAM D. BYRON, OF MARYLAND, FEBRUARY 26, 1939

Mr. BYRON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address broadcast by me on February 26, 1939:

I want to say at the beginning of my remarks that I have not come to Cumberland to speak in behalf of any organization or group having any connection with the Savage River Dam project. During my campaign for Congress I was told by practically everyone I met that there was a real interest in this project and that everyone was in favor of seeing it go through in one way or another. Consequently, I feel that it is, besides being a great privilege, my duty to acquaint the people of this section with the information I have gathered on the subject since I have been in Washington. Most of this information is already well known to you, but some of it, I am sure, is in the nature of recent developments. In order to more properly present these recent developments, I will give a short history of what I have learned has happened so far.

The Upper Potomac Board was organized in 1929 primarily to adjust conditions along the Potomac River as regards the quality of water. Each separate community and industry discharged waste material into the stream, which made the conditions downstream objectionable.

The Maryland State Department of Health and representatives of the largest industries were brought together to discuss matters.

The scope of the board did not extend downstream of Cumberland. The deliberations of this Board were predicated upon the understanding that towns and manufacturing interests would agree that any materials accumulated would not be used in litigation so far as pollution was concerned. This agreement helped to maintain harmony between the towns and industries involved.

The river board started to function and, through the arrangements with the various interested parties, weekly tests were made to determine the progress being made in the cleaning of the stream; that is, the reduction of pollution. After about 3 years of study with the cooperation of these various people, it was decided that the stream was as clean as it was economically possible to get it, with the present small low-water flow.

The next thing necessary to be done would be to get more water into the stream during the dry season, beginning around July and extending in some years up to November. There was insufficient water to supply the needs of the various interests and the cities during this period of the year. The city of Cumberland is interested because sanitary sewage is now being emptied into the North Branch of the Potomac River. Unless there is proper dilution, a nuisance occurs. A supplementation of low flow may reduce the amount of treatment which the city of Cumberland will be required to provide.

There were several plans studied for the provision of more water at low-flow periods. One of these was advanced by Mr. C. H. Lance, who suggested putting storage dams on Stony River, and the subject became so prominent that it was decided to hire some engineers to study the area and make recommendations for the building of these dams, and to select the best possible locations. In 1933, the board hired the engineering firm of Gannett, Seely & Fleming to study the tributaries of the Potomac River and to determine where dams could best be located.

Their conclusions were that the Savage River offered the best type of water, the purest quality, and the best location for building a dam. The Savage River site was therefore selected, and the possible construction of a reservoir in this locality was presented to the Mississippi Valley Committee. The Upper Potomac River Board submitted the proper data and organized a locally constituted commission to secure the necessary easements and rights-of-way for construction.

Following this presentation of the matter to the Mississippi Valley Committee, the Upper Potomac Board turned over part of its activities to the Upper Potomac River Commission, which had been created by the Maryland State Legislature by chapter 409, which was approved April 29, 1935.

One of the members of this commission asked me, when I first went to Washington, to really attempt to find out just what the attitude of the Federal Government would be in supplying funds for the construction of this dam. After frequent meetings with engineers and department heads, I am convinced that there is only one source of Government help for it. I say this because it was suggested to me that the dam might be built by a 100-percent Federal grant. I am positive this cannot be done by any agency now set up in Washington. Also, the P. W. A., which might have given a 45-percent grant, has allocated all of its funds, and there is no present indication that this agency will continue. Consequently, the best advice I can get is that the only Federal agency that can help in the project is the W. P. A.

Figuring the dam will cost two and one-half or three million dollars, the Government is offering to whatever agencies are willing to sponsor this project a dollar for every 40 cents contributed by them.

However, the offer is conditioned on the assumption that Congress will appropriate sufficient funds for the operation of W. P. A. subsequent to June 30, 1939, and that there will be no different restrictions placed on the use of this money. This brings me to the point which I want to make to authorities and the people of this section of the State, namely, that if you want and desire Government help on this project it is highly desirable that prompt action be taken. I am sure you all know as well as I that there is a tendency—rightly or wrongly—in both Houses of Congress to cut down on appropriations of funds for public works. In other words, it is my humble opinion that you will have no more favorable time than the present to apply for Government aid on this project. As I said in the beginning, I am not here to advocate any special plan or even advocate the building of the dam. But I do feel very strongly that if it is going to be built that now is the time to act. I know that I need not mention, besides other benefits, the amount of work it would give the laboring men of this community, and this at a time when it is difficult to find proper W. P. A. projects. It is my understanding the county commissioners have agreed to ask the State legislature for a million dollar bond issue, part, at least, of the proceeds to go toward the construction of this dam. I think the commissioners should be congratulated on this action, as undoubtedly it will bring matters to some conclusion. I want to close by saying again, as I said at the flood-control dinner on February 13, that I am at your service to aid in any way possible to work out these problems.

Loan to Dawes Bank in Chicago Denounced By United States Circuit Court of Appeals

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1939

ARTICLE FROM RECENT ISSUE OF LABOR

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a brief article from a recent issue of Labor, the official journalistic organ of the railroad brotherhoods. It has been contended on the House floor that the loan to the Central Republic Bank & Trust Co. by the R. F. C. was in every way justified and that the Dawes-controlled bank merited the loan.

I commend the reading of the following article for the benefit of those who may entertain such views. It will be found that the United States circuit court of appeals condemned the loan in no uncertain terms, so that expressions from the gentleman from Michigan [Mr. WOLCOTT] that the loan under the same conditions would be remade today by the R. F. C., would seem not to be supported by the learned

court which had made an intensive study of the whole problem and was in possession of all the facts.

The article is as follows:

[From Labor]

DAWES LOAN FROM R. F. C. HIT AS GIFT

CHICAGO, February 23.—The Reconstruction Finance Corporation this week won another round in its fight to collect $14,000,000 from the stockholders of the Central Republic Bank & Trust Co., which faded out of the financial picture in October 1932.

The United States circuit court of appeals upheld a Federal district court decision that stockholders of the defunct bank were liable for its debts to the value of their stock.

The suit is an outgrowth of $90,000,000 in loans made by the Federal Government to save the bank from collapsing during the dark days that preceded the 1933 bank moratorium.

Former Vice President Charles G. Dawes, a dominant force in the bank, had been brought to Washington by President Hoover to head the R. F. C. When his bank got into trouble in 1932, Dawes resigned his Government job and a short time later got the R. F. C. to agree to pour $90,000,000 into the tottering institution. The loan, it turned out, was just a shot in the arm. The bank finally was taken over by another Dawes institution.

In fighting the Government's suit, the stockholders contended the R. F. C. loan was illegal because they held, Dawes really arranged it before he left the R. F. C.

The circuit court was unsparing in its condemnation of the loan.

"As to the hasty and ill-advised action of the R. F. C. in lending such large sums of money without adequate security and without full investigation," the court said, "we find no excuse or justification. The loan was made within a few hours and apparently without approval of members of the Board.

"The only party who was a loser in this transaction was the Government. Half of what is here called the $90,000,000 loan might more properly have been called a gift."

The Fort Wayne Housing Plan

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1939

ARTICLE FROM BALTIMORE EVENING SUN OF WEDNESDAY, JANUARY 25, 1939

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the second of a series of two newspaper articles on the Fort Wayne housing plan which appeared in the Baltimore Evening Sun of Wednesday, January 25, 1939. The first article was included in the RECORD last Friday. The concluding story follows:

[From the Baltimore Evening Sun of January 25, 1939]

THE FORT WAYNE PLAN

(By Philip Wagner)

Something was said on this page yesterday about the supershanties—small, snug houses built to rent for $2.50 a week—which are Fort Wayne's contribution to the problem of low-cost housing.

Fort Wayne now has 50 of these houses, scattered here and there about the city. They were built this winter at the rate of 1 a day, and there is some talk of building 150 more of them. They represent the Fort Wayne Housing Authority's idea of the irreducible minimum of decency and comfort. They naturally lack the approval of those warm-hearted reformers who consider that the poorest elements of the population must all be equipped with dwellings which measure up to conventional middle-class notions of comfort, pulchritude, and efficiency.

Though the Fort Wayne supershanties fall far short of this beautiful ideal, the fact is that they are much better than anything which their tenants have ever known before, that there is already a waiting list of 600 would-be tenants (Fort Wayne's population is about 122,000), that the rental is within the means of all save paupers, and that the rental thriftily covers both maintenance and mortgage.

Thus, in a field where failure has been the rule, a field notable more for wishful thinking and misrepresentation than for practical achievement, the Fort Wayne scheme seems singularly direct and effective. It is an answer to an everyday problem—that of the slums—stated not in utopian terms but in terms of everyday American life. No one is likely to suppose that the Fort Wayne answer can be translated literally to every other town and city. The slums of Fort Wayne tend more to shanty architecture, for example, than do the slums of Baltimore. The shape and history of Baltimore have produced slum areas which, except for some of the slatternly outskirts, are compact and vertical. Our building lots in some of the small-house districts are actually only 12 feet wide. Obviously, a supershanty which is all on one floor and which provides the answer to conditions in the shanty towns of Fort Wayne will not fit into the urban pattern of Baltimore. A Fort Wayne supershanty wouldn't even fit sideways into a typical slum lot in Baltimore. But the guiding principles behind the Fort Wayne scheme—cheap land, cheap and temporary but substantial construction, and adherence to minimum standards—ought to be capable of some variation to fit local circumstances.

The Fort Wayne project rose out of a blend of governmental authority and private enterprise. Fort Wayne had some banks and insurance companies which were willing to lend money on F. H. A. insured mortgages. Fort Wayne also had a housing authority (established about the same time as the Baltimore housing authority) which wanted to build some low-rent dwellings but had no wish to go in for the heavily subsidized projects which are provided for by the current Federal Housing Act and no wish to commit the city to a larger obligation than it could handle. It also proposed to concentrate its efforts directly on those who needed it most, the poorest and worst housed families of the city, the dregs of the population.

The Authority quickly determined that rentals for these people would have to be no more than $10 a month, or $2.50 a week, if they were to be collected regularly. The Authority also determined that a three-room dwelling, consisting of two bedrooms and a combination kitchen-living room plus a bathroom, would be the most suitable size. Anything smaller would be too small; anything larger would tempt such families as these to double up and thus defeat the object of the enterprise. The Authority also determined that a rent of $2.50 a week would support a 20-year mortgage of $900 and leave enough left over to pay for maintenance.

How, then, to build such a house for $900 cash?

First, the cost of the land would have to be brought down to nearly nothing. The Authority promptly abandoned the conventional method, which is to buy, with the help of condemnation, a big tract and develop it as a unit. No such piece of land was available anyway. The Authority instead fixed its eye on the many vacant lots scattered through the poor and run-down parts of town—none of them yielding revenue, most of them delinquent as to taxes, and most of them having no prospect of profitable use in the visible future. The Authority decided to try to borrow these lots, offering the owners tax exemption in return.

Actually what the Authority succeeded in doing was to buy the lots for $1 apiece, giving the owner an option to repurchase for the same price. In this way the owner could avoid his tax burden yet hang onto any chance, unlikely though it might be, of turning the property to profit later. In case any owner exercises his repurchase option within 5 years he stands the cost of having the supershanty knocked down and put up on another site.

Thus land for the 50 houses cost practically nothing.

Next, labor costs. The Authority reasoned that since many of those who would eventually live in these houses were W. P. A. workers anyway, it was not unreasonable to use them in the building of their own future dwelling places. This was done. The local building-trades people raised a howl when they heard about this aspect of the plan, contending that the W. P. A. was being used to take the bread out of their mouths. The Authority replied that work on low-cost housing of this sort was not in the least competitive with the normal work of the building trades, since, without the help of W. P. A. labor, the whole project would have to be abandoned. Eventually the Housing Authority won its point and the building-trades people backed down. W. P. A. labor has been used entirely in the work of prefabrication as well as the actual job of construction. The difference between W. P. A. wages and prevailing wages is, of course, subsidy. It is one of the things that keep the Fort Wayne enterprise from looking like a 100-percent prefabricated miracle.

Next, the design of the house and its actual construction. All the technical details are not yet available. Much of the basic work in such matters as the testing of materials and the design of prefabricated units had been done previously at Purdue University. The Authority made lavish use of this assembled wisdom and has no doubt as to the sufficient durability and all-around efficiency of its design. The Authority admits quite freely that these houses are built not for the ages but only to outlast their mortgages. It questions the wisdom of designing low-cost housing for long life. It expects that the coming years will see such improvements in construction methods as will presently render the houses obsolete anyway. Furthermore, houses such as these have the virtue of being as easy to dismantle as to build, so that the land on which they rest is not permanently committed to any one use.

In working out the details of design and construction the technical advisers to the Fort Wayne Authority cut corners wherever they could find corners to cut and eliminated the abracadabra of the building trades wherever they could. The object was to hold down the cost of materials to a minimum and to make every step in actual construction so simple that even W. P. A. workers could do it without botching things. This is not pleasing to such necromancers and miracle men as plumbers, plasterers, and paperhangers. The current issue of the Master Plumber contains a long and heavily sarcastic article which is supposed to show what dreadful things these Fort Wayne houses are from the point of view of a master plumber.

But, however displeasing the result may be to master plumbers, the Authority has actually succeeded in building these houses within their $900 limit.

The financing of the plan was not difficult. The Housing Authority needed $900 per house, or $45,000. This sum was advanced by one life-insurance company and two banks, the loan being secured by the houses. The mortgages bear 4½-percent interest, are tax-exempt, and are for 20 years. The financial set-up is as follows:

Gross annual income (rent at $2.50 per week)	$6,500
Loss from tenant movement (4 percent)	260
Net income	6,240
Capital charges (interest, amortization, insurance)	3,600
Upkeep ($32 per house)	1,600
Repainting (every 4 years)	500
Reroofing (10 years)	270
Equipment replacement	150
Hazard insurance	80
Management, etc	600
Annual surplus	1,040

The loans seemed good to the lending institutions, first, because rentals are placed so low that there is unlikely ever to be a shortage of tenants; and, second, because the mortgages carry F. H. A. insurance (premium included under "capital charges" in the table above).

That, briefly, is the Fort Wayne plan. Its virtues are these: That it goes straight at the problem of providing low-rent housing for the poorest elements of the population; that it is the cheapest effort yet made to solve the problem; that it is based on standards of shelter which are adequate but not high; that it is financed not by taxpayers but by private investors.

On the other hand, it does carry a measure of subsidy, as has every other low-rent housing project so far devised. The subsidy consists partly of the W. P. A. labor and partly of the tax exemption of the properties and of the mortgages. The reply is, of course, that the W. P. A. workers would have been paid wages anyway, so that the taxpayers have been put to no extra expense by the employment of them; that the properties were contributing nothing in the way of taxes before the houses were put up, and were unlikely to in the immediate future, so that the city is not actually out of pocket; and that by providing decent housing for those people who are already the greatest expense to the community, the community will actually reap dividends in the form of savings on public health and relief costs. This latter argument remains to be proved. These are, perhaps, valid arguments; nevertheless, the subsidies, moderate as they are, rule out the possibility that the Fort Wayne plan can be adopted by private industry. Furthermore, there is an ugly sound to the argument of the building-trades people that, under the Fort Wayne plan, W. P. A. workers are actually being used in order that two banks and an insurance company shall get their tax-free 4½ percent.

Thus the Fort Wayne plan turns out to be no miracle. It has both its virtues and its defects, which will doubtless be debated at length and heatedly in the months to come. But while the ideologists are tearing it apart and putting it together again, defending and abusing it, there is this satisfaction to be had—the 50 houses are being lived in.

Everything Is Free to a Congressman in the City of Washington

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1939

Mr. BURDICK. Mr. Speaker, it is generally believed throughout the country that everything is free to a Congressman in the city of Washington, and that the taxpayers pay for all of the necessary and imaginary wants which they may wish to satisfy. I submit herewith a list of expenses which the public believes are furnished to Congressmen gratis, and paid out of the taxpayer's money.

First. Barber shops.—Free shaves and free hair cuts. I have been here 4 years and more and usually get shaved when my whiskers get long enough to get in my soup, and I get shaved, usually, in the House Office Building, but I have always been asked to and do pay for the work. I have my work done in the barber shop at the Capitol and the rates for work there are the same as those charged in private shops downtown. Occasionally I have to have my hair cut—usually before it is long enough to braid—and I pay in a Government barber shop the same price I pay in private shops in North Dakota and elsewhere.

Second. Meals and lunches—The public believes that meals and lunches are free to Congressmen, and it is as false as the barber-shop story. Meals are served to House Members in the House dining room and you can order any combination you desire, but the prices are listed in a bill of fare and when you finish your meal you pay for it. The prices are much higher than the same service at downtown restaurants, and for the information of the public I include herewith a regular menu card for the House restaurant of this date:

HOUSE OF REPRESENTATIVES RESTAURANT—UNITED STATES CAPITOL

(Jack Midyette, manager)

MENU

LUNCHEON SELECTIONS

Relishes—sea food—cocktails: Lynnhaven 30, cocktail 35; blue points 25, cocktail 30; cherrystone clams 25, cocktail 30; little neck clams 25, cocktail 30; clam juice 20; fresh lobster cocktail 60; combination sea-food cocktail 60; green shrimp cocktail 50; lump crab-flake cocktail 50; fruit cup 25; tomato juice 20; hearts of celery 20; olives, queen, ripe 20.

Soups: Cold jellied tomato broth 15; English beef broth with barley 15; white navy bean 15; chicken consomme 15; oyster stew with milk 35, with cream 50.

Sixty-cent plate: Spring lamb stew en casserole, fresh vegetables, new parsley potatoes, fried hominy grits, choice of pie or pudding; coffee, tea, or milk.

Seventy-five-cent plate: Roast prime rib of New York beef au jus, baked stuffed Idaho potato, buttered fresh string beans, yorkshire pudding; choice of pie, pudding, or ice cream; coffee, tea, or milk.

Forty-five-cent plate: Spareribs and skinless frankfurter with sauerkraut, new boiled potatoes, bread and butter; coffee, tea, or milk.

Sixty-five-cent dietary platter: Fresh green jumbo shrimp salad, mayonnaise; rye bread, cottage cheese, boiled egg, apple sauce, milk, buttermilk, tea, café au lait.

Third. Congressmen do not pay income tax.—This is another one. Every Congressman pays an income tax and his salary is taxed just the same as all other incomes. I have no income except my salary, and the average tax will be approximately $450 per year. If I had any other income, it would be taxed the same as any other citizen.

Look at that salary of $10,000 per year. The public, our constituents, who elect us and who themselves, many of them, are living on relief, believe this sum is unreasonably large. If every Congressman could keep his salary, I would agree that the salary was large—too large for the service most of us render; but the fact is we do not get $10,000 for ourselves—if we try to serve our constituents. I am elected at large in North Dakota and receive as much mail as a Senator, but under the House regulations I am entitled to only one stenographer. There is no stenographer living who can handle this work. I handle it, but pay for my extra stenographer. People in my State are poor as they are in most States. They are in distress as they are in most States; they want to wire me and let me know their desperate situation. They send wires collect, as they should do; I pay for it and the more distress cases there are the more I pay.

Fourth. Congressmen have free franking privilege.—That is true on public business, but on all private letters we pay the same postage as anyone else. I adhere strictly to the law and I believe every other Congressman does. We send out speeches free of charge. The public believes this. Nothing could be farther from the truth. If we desire to send out a speech, we have to have it reprinted at the Government Printing Office, and every request must be covered by a check in advance. We pay for every speech.

I have introduced a resolution to investigate the grain exchanges of the country because I believe the evidence shows that the gambling places keep down the price of agricultural products. I want to advise the farmers of the Nation of these facts. The Government will print as many speeches as I want, providing I pay for it. It is not unusual for a Congressman to have to put up $250 to $500 for one speech. If he is active, if he is fighting for the people, he will naturally get out his speeches. The result is that if he is actually carrying on a fight to better conditions, and doing it single-handed and alone, as most of the fights are made, he will publish speeches and send them out. When the session ends such a Congressman is lucky if he does not have to borrow money to pay his expenses home.

Fifth. Traveling expenses.—Every time a session is called I get a check for mileage for $733. This is a terrible graft, the public thinks. Let us see. When Congress adjourns I immediately go home to North Dakota, and I travel around until there is another Congress—not campaigning, for in my own case I have spent much of my time traveling in other States to gather facts on the needs of the people living in the Dust Bowl and checking up alleged abuses in the administration of Indian affairs. I pay my own expenses, and at the end of the year anyone who has ever traveled by car will see that a lump sum of $733 is not nearly the equal of 4 cents per mile if we were paid that much in the proper discharge of our public business. I live 2,000 miles from Washington, and my travel check is large. Congressmen who live near Washington get less, much less; some of them not over $35.

There is no Congressman, especially those living in the Dust Bowl, who cannot make good use of his salary and mileage checks. We do a pretty good job of distributing relief, as many of our constituents will testify. We have to carry on relief right here in Washington—that is, if we have any milk of human kindness in our systems, but that is beside the point. What I want to say is that there is nothing furnished free to a Congressman with the one and only exception—on public business he does not stamp his letters. On private letters he sends them at the same cost as do every other citizen.

Election expenses.—Of course, no Congressman or Senator is elected without some expense, and whatever that expense is it is the personal expense of the individual Senator or Congressman. Personally I have never spent much money on campaigns. I do not get out pictures and advertise, but I presume, if I persist in spending so little on campaigns, the day will come when I will be left at home to think matters over more carefully on campaign expenses.

My conclusion is that Members of Congress are paid enough, but not too much if they make a fight for the elimination of the defects of government. The more we think of this Government, and the more arduous we are to perfect it and keep it, the more we will be compelled to expend. It is no place to make money and attempt to save it. It cannot be done.

Participation by Marine Band in Opening Day of the Elks National Convention at St. Louis

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1939

EDITORIAL FROM THE ST. LOUIS POST-DISPATCH OF MARCH 10, 1939

Mr. ANDERSON of Missouri. Mr. Speaker, several days ago I introduced a bill to bring the Marine Band to St. Louis for a concert on the opening day of the Elks' national convention. This is to be a 1-day stand and all expenses are to be paid by the Elks. Had there been any expense to the Government I would not have offered the bill.

As soon as an article appeared in the St. Louis papers that this proposal was introduced a loud cry of protest arose from the musicians' union in that city. The union has the colossal effrontery to allege that the Marine Band would be in competition with the local bands when in truth the union well knows that arrangements have been made by the Elks to employ any number of local bands during the convention.

I am not angered at the union because it is opposed to a measure I introduced. But I am grieved to think that a union has set itself up to deprive the people of St. Louis, if it can, of a chance to see and hear one of the greatest musical organizations in the world. The taxes of the people make the Marine Band and other Service bands possible, and certainly a union cannot be tolerated to deprive the people of an occasional and infrequent glimpse of this fine organization.

Let me call your further attention to another intolerable phase of the musicians' union in St. Louis. This union has recently gone so far as to object effectively to the use of collegiate bands at hockey games played between college teams in our city. It has objected to the use of school and organizational bands on public occasions, and, in short, has set itself up to deprive the people of St. Louis of something to which they are entitled as free American citizens.

Anyone who has the interests of organized labor at heart can see what will be the outcome of such a policy. Public resentment is bound to be crystallized to a point when unionism will suffer severe penalties for its own folly. Nothing is more apropos of this occasion than a splendid editorial from the St. Louis Post-Dispatch of March 10. I commend it to each and every Member of this House as being expressive of the feelings of every right-thinking citizen.

Mr. Speaker, at this point I ask unanimous consent to conclude my remarks on this subject by including herein the editorial to which I have just referred. I hope every Member of this House will read it.

[From the St. Louis Post-Dispatch of March 10, 1939]

MUSICIANS' UNION DICTATORSHIP

A bill was introduced in Congress yesterday to authorize the United States Marine Band to play in St. Louis, July 10, at the opening of the Elks' national convention. But a formidable power that has risen in this city, and has assumed dictatorship over activities whose freedom had previously been beyond question, has the effrontery to object. The musicians' union wants to keep the Marine Band out, because, says its president, Sam P. Meyers, "it is direct competition with union musicians."

Could grasping short-sightedness go further? The taxpayers, who maintain the Marine Band, rarely have a chance to hear it since the union's national office has succeeded in stopping its radio concerts, along with those of the Army and Navy Bands. The Elks' committee plans to hire union bands for the convention. But "no" says President Meyer; pressure will be brought on Congress at once to prevent the Marine Band's visit.

This outrageous demand is fully in keeping with other recent actions of the musicians' union. It has given orders—and made them stick—to St. Louis and Washington Universities, McKinley High School, the Elks Lodge, the Boy Scouts, the city firemen, the Sixth Infantry at Jefferson Barracks. Now it is trying to order Congress around!

The recent hockey games were a strictly intercollegiate event. They were not a commercial venture, as is shown by the fact that 13,600 tickets were given free to school children. Receipts fell so far short of expenses that one of the sponsors had to pay $85 from his own pocket to return the University of Illinois team to Urbana. Despite all this, the musicians' union had the brazen insolence to insist that no student bands participate in the event, but that 20 union musicians be hired at a cost of $152.75.

Student band music is a traditional part of any collegiate sports event. It offers no possible competition with professional musicians since they would not be hired for such affairs anyhow.

The musicians' union got no jobs for its men by its demand. Instead, the event was marred by the fact that brassy and discordant "canned" music from a phonograph had to be used to accompany the exhibition skaters. And students of four institutions of higher education—St. Louis, Washington, and Illinois universities and Concordia Seminary—got a decidedly unsavory impression of labor union tactics.

The case of the Elks' Americanism week parade was an even more sickening demonstration. The Elks planned to have the McKinley High School Band and those of the Sixth Infantry and the firemen to march with 1,000 Boy Scouts in its patriotic celebration. (The 55 boys and girls of the McKinley Band had practiced 2 weeks for the parade.) But the union said "No"—unless three paid bands also took part. The American Legion was brave enough to defy the union's power; it sent three drum and bugle corps to supply the music.

Which brings up the question, What happens if an organization does not submit to the union bosses' dictates? Would the musicians have had the gall to picket the United States Army if the Sixth Infantry Band had participated in the Boy Scout parade? Would they have tried to call a strike among employees of St. Louis and Washington universities if their bands had played at the hockey games? Will they now denounce the United States Marine Corps as "scab labor"?

The president of the musicians' union justifies the hockey game veto by the fact that his organization has an agreement with the arena that only union musicians may play there. Such a contract is surely contrary to public policy when it keeps a voluntary and amateur student band from appearing at a school function.

Unions are justified in seeking work by honorable methods for their members. But their activities are a boomerang to their own

cause in rousing public antipathy when they resort to such fantastic demands as those of the musicians' union.

Why should anyone continue to submit to these high-handed tactics? The American Legion called the bluff when its fife and drum corps marched with the Boy Scouts, and nothing has happened. Why do not other groups, when faced by a ukase from this insufferable dictatorship, simply ignore it for the preposterous thing it is? If the facts are then made known public opinion will do the rest.

THE LEATHERNECKS AND THEIR BAND

If anything can emphasize the Herculean gall of the local musicians' union in trying to stop the United States Marine Band from giving a public concert at the Elks' convention here next July it is a look at the proud history and patriotic traditions of that military organization.

The Marine Band—"the President's own"—is almost as old as the Republic. Congress created it in 1798, but its ancestry extends further: to the bands aboard American frigates in the Revolution. Two of its drummers and a fifer, some historians say, are portrayed in Willard's celebrated painting: The Spirit of '76. Historic assemblages gay and grave have heard its stirring music: Dolly Madison's White House fetes, Lafayette's visit, Jackson's cheese-cutting party, Lincoln at Gettysburg, the White House weddings of Nellie Grant, Grover Cleveland, Alice Roosevelt. And what American foot has never kept time to the lively airs created by its former leader, John Philip Sousa, the "March King?"

There is a historic link with St. Louis as well; the Marine Band played at the opening of the Louisiana Purchase Exposition in 1904. Its last appearances here were in 1929 and 1930, when great throngs turned out to hear the Nation's, and perhaps the world's, finest military band. Yet, because of a union's assumption of dictatorial power, demands will be made upon Congress to deny our citizens—taxpayers who help support the Marine Band—an opportunity to hear it again.

The situation poses a question for Bernard Dickmann, in his triple role as mayor of the city, former exalted ruler of the Elks, and former gunnery sergeant of Marines. What does a leatherneck do, Mr. Mayor, when he comes up against an attempted outrage like that?

Restrictions on Shipments Via the Great Lakes to Foreign Markets

EXTENSION OF REMARKS
OF
HON. FRED BRADLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1939

CONCURRENT RESOLUTION OF THE LEGISLATURE OF THE STATE OF MICHIGAN

Mr. BRADLEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution recently adopted by the Legislature of the State of Michigan:

Senate Concurrent Resolution 17

Concurrent resolution memorializing the United States Maritime Commission to restore and enforce the natural and legal rights of the people of the State of Michigan to ship direct from the Great Lakes to foreign markets

Whereas the people of Michigan possess the natural right to ship agricultural and industrial products direct from the Great Lakes to the markets of the world free from artificial and illegal restrictions imposed by groups or interests of other waterways; and

Whereas this right is recognized by existing Federal maritime legislation and court interpretations thereof; and

Whereas North Atlantic Steamship conferences have deprived our people of their natural and legal rights to ship direct from the Great Lakes by compelling our shippers desiring contracts and contract rates with them to deliver such contracted commodities to such steamship lines at Atlantic coast ports; and

Whereas North Atlantic conference contracts prohibit any of our contracting shippers shipping direct from the Great Lakes on the penalty of having the contract canceled and being compelled to pay the open or higher rates of both past and future shipments of the season; and

Whereas such North Atlantic conferences are thereby illegally presuming upon the rights of both our sovereign State and the United States Maritime Commission; and

Whereas the attorneys general of Michigan, Wisconsin, Indiana, and Ohio, the Great Lakes Harbors Association, the Detroit Board of Commerce, and the Detroit Port Authority, acting in behalf of the port cities, have made formal protest to the Maritime Commission against the artificial, abnormal, and illegal restrictions imposed on the Great Lakes by the North Atlantic Steamship conferences: Therefore, be it

Resolved by the senate (the house of representatives concurring), That we do formally and respectfully request the Maritime Commission forthwith to order the North Atlantic Steamship Lines to remove from all contracts all restrictions depriving our people of their legal right to ship direct from the Great Lakes to the markets of the world; and be it further

Resolved, That a formally attested copy of this concurrent resolution be served on the United States Maritime Commission, that copies be forwarded to our Senators and Representatives in the National Congress, to the attorneys general of Wisconsin, Indiana, and Ohio, and to the Detroit Board of Commerce, and the Detroit Port Authority.

The Farm Program

EXTENSION OF REMARKS
OF
HON. WALL DOXEY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1939

RADIO ADDRESS BY HON. MARVIN JONES, OF TEXAS, MARCH 11, 1939

Mr. DOXEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by Hon. MARVIN JONES, of Texas, on March 11, 1939, on the National Farm and Home Hour:

I especially appreciate the generous words of my good friend, Ed O'Neal, who has long been a wheel horse in the farm movement.

During recent years there has been much discussion of the farm program. Many ideas have been suggested. Many remedies have been proposed.

At present there are scores of bills pending before the Committee on Agriculture. Some of these call for minor changes in the present program; some for major changes. Others call for complete substitution. Many speeches have been made. Many promises have been uttered. Many glowing pictures have been painted. Some people seem to think the farm problem is a simple one.

May I remind you that there are some 200 individual basic farm commodities. There are a great many major commodities, each of them divided into many types and grades grown in various sections of the country and in varying quantities. Some of these commodities are produced in what is called surplus quantities; that is, more than is needed for consumption in this country. All together these make up many phases of a most difficult problem that directly affects 30,000,000 people and indirectly affects all the people of this country.

A hundred years of tariffs, freight-rate discriminations, high interest rates, and marketing discriminations are woven into the fabric of this national problem.

Americans always reserve the right to "beef." They like to kick if anything does not suit them. They have a right to complain, and out of these complaints may arise a better plan.

There is one thing, however, that should not be overlooked. A great deal of the complaint of recent months has been from those who have no interest in the farmer. They are interested only in volume production, regardless of the price. They will be completely happy if they can convince the farmer that he has nothing in the present act that is worth while, and thus put an end to the farm movement, which has shown real progress during the past few years.

Let us stop and think.

We have a farm program. Whatever its defects, it has improved farming conditions. Whatever the mistakes of the administration, and these have been made, we have a program that belongs to the farmers.

All great things have simple, crude beginnings. The first railway chartered in America was the Baltimore & Ohio. The original engine, built by Peter Cooper, was matched in a race with a famous gray mare. History records that the boiler sprang a leak and the gray mare won the race. If the locomotive had been discarded because of its imperfections, we would not have the great transportation system of today.

The first automobile, the first electric light, the first reaper, were all crude affairs. Much fun was made of them. Much criticism was offered. They were ridiculed and laughed at, but the genius of America kept on.

In the current discussions of the farm bill many of the most desirable features have been overlooked. Some people have thoughtlessly urged that the whole measure be repealed. They overlook some worth-while features which I do not believe any thinking person would want to sacrifice.

(1) The present act has a freight-rate provision. For many years agriculture has suffered from freight rates that are too high.

Under the act, the Secretary is authorized to file applications to correct these rank discriminations against agricultural products, which have been one of the greatest burdens agriculture has had to bear. I do not believe any thinking person actually interested in the success of the American farm would want this provision repealed.

(2) The present law contains a research provision which sets up laboratories to search for new markets, new outlets, and new channels of distribution for the various farm products. Much of the fine progress in industry in America has been the result of the search by industry for new uses and improvements in the articles which they produce.

(3) The existing farm act contains an export provision which sets aside 30 percent of all tariff collections—more than $100,000,000 per year—to be devoted to exporting farm commodities and to distributing these commodities and their products among the needy people in America. Our country should produce all that it can sell, both at home and abroad. This fund has proved of great benefit. Surely no wise person wants this provision repealed.

(4) We have the soil-building and soil-conservation provisions. Every man, woman, and child in America is interested in the conservation and rebuilding of the soils. Some of the finest work that has been done in this generation has been in connection with the soil-conservation provisions of the act. I do not see how anyone can object to this provision.

(5) Let us not forget that we have the lowest farm-interest rates that have ever prevailed in the history of this country. Thousands of farmers have had their mortgages refinanced and their burden of debt has been eased. They have had a source of current credit when the doors of private lenders were closed to them.

Last year we produced the greatest cotton crop in history. We produced the greatest wheat crop since 1915. In 1932, with a smaller cotton crop than in 1937, cotton sold for 4 and 5 cents per pound. In 1932, with a smaller wheat crop than in 1937, wheat sold at 20 cents per bushel.

Low and unsatisfactory as prices are now, they are infinitely better than they were in 1932. You have only to look at the farm cash income of $4,300,000,000 in 1932 and contrast to that the cash income of $7,600,000,000 in 1938 to realize how great the improvement has been. In addition, the cotton and wheat farmers are receiving soil-conservation payments. The cotton farmer is receiving a price-adjustment payment, and the cotton and wheat and corn farmers are to receive some additional parity payments.

If any cotton or wheat farmer will take his pencil and figure these payments and prices alongside the 1932 tragedy, he will find how much better off he is with the present program than he would be with no program at all.

In 1937, when we had no control program, nearly 19,000,000 bales of cotton were grown. Any program, any plan that may be offered must deal with this tremendous carry-over. It is this production in a year when there was no control that has complicated more than anything else the cotton problem of today.

While it is proper to suggest improvements and changes, any act, for its success, depends upon three things:

(1) The form of the law.

(2) The manner of administration.

(3) The cooperation of those in whose interest it is enacted.

No law, however perfect, can be successful unless it is well administered. No law, however perfect, even if well administered, can succeed unless the people who are affected are willing to cooperate. He does the farmer no service who lights the torch of intolerance and who undertakes to create dissatisfaction at the very time that the most critical part of the work is being done.

The agricultural program today is not a bill. It is a movement, and the bills are but various steps in that movement.

I feel that some improvements can and will be made in administering the program.

The allotments should be made known much earlier so that the farmer can make his plans prior to preparation for seeding.

The payments should be made much more promptly.

It is generally agreed that only minor changes will be made in this year's program. Hearings are being held by the House Committee on Agriculture in reference to any major changes that may be found advisable in connection with the long-range program. Such changes will not be made effective before 1940.

These hearings will be thorough. Every member of the committee is anxious to improve the program in every possible way. We hope that from these hearings definite improvements can be worked out.

We not only expect to devote our time at this sesison but to continue our efforts in the next and succeeding sessions to bring the farmers' returns as nearly as possible to the level of industry.

I hope that you farmers away out there in the open spaces will realize that there are many difficulties. Not only are there many commodities with many types and grades but in the carrying out of any program every effort must be made to protect the small producer, the tenant farmer, and the sharecropper. Many different proposals are pending. Many of these, however, overlook the necessity of protecting the family-size farm, the tenant, and the sharecropper. Any program that increases the prices without protection for these is in grave danger of aggravating an already difficult situation.

The struggle for agriculture has been a long one. Some of us have gone through the period from 1920 on. Through a long period of years many of us worked in season and out urging equality for the farm and ranch and claiming that was all we wanted. We met defeat after defeat, coming back empty-handed, and then finally, after gaining victory, had our bills vetoed.

In carrying on that fight we had two obstacles: First, those who did not want to do anything, and, second, those who wanted to do too much, and by claiming too much wound up by getting nothing. Those who went through that long struggle realize how important it is to keep what we have builded and not, by claiming more than can be attained, lose the substance of what we have.

That was the story of the dog in Aesop's fable which had a good piece of meat in his mouth. Looking down into the water he saw what he thought was a better piece of meat. Turning loose the meat he had in his mouth, he grasped for the reflection in the water and found himself without anything. The moral of the fable was this: Beware, lest in grasping at the shadow you lose the substance.

Aesop said that 2,600 years ago. It was built on folklore and the experience of the human race. True then, it is true today, and will be true tomorrow.

I want to thank the American Farm Bureau Federation for their courtesy in extending this invitation to speak. This fine organization has contributed much to the farm program and farm movement in America. Other farm organizations have also contributed thought, study, and many helpful suggestions.

I also want to say a word about the work of the Committee on Agriculture—the fine group of 25 members representing as many different States.

For more than 6 years I have been chairman of this committee. I have never known a more earnest, hard-working, or sincere group of men anywhere. On the shoulders of these men rests the responsibility, in a large measure, of continuing and improving the farm program. They must endeavor to separate the good from the bad. It is not easy to reject a proposal that sounds good but which, upon analysis, proves that it would do more harm than good.

I know that these men are interested in the farm movement. I know that they are interested in better prices for the farmer. I am proud to be associated with them and to have worked with them in the attempted solution of this most difficult of all national problems.

I do not believe that the solution of this age-old problem can be achieved or even materially contributed to by extreme attacks and bitter personalities. I am sure that if all those who have a simple heart interest in the success of the greatest of all American businesses—American agriculture—will calmly analyze and show a disposition to cooperate in working out the final program, great progress can be made.

Problems of Agriculture

EXTENSION OF REMARKS

OF

HON. WALL DOXEY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1939

RADIO ADDRESS BY EDWARD A. O'NEAL, PRESIDENT OF THE AMERICAN FARM BUREAU FEDERATION, MARCH 11, 1939

Mr. DOXEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by Edward A. O'Neal, president of the American Farm Bureau Federation, on the National Farm and Home Hour, March 11, 1939:

The board of directors of the American Farm Bureau Federation met in Washington during the past week, and I am glad to have the privilege to report today, directly to the membership, some of the important actions taken on various problems of agriculture. To begin with, several of us testified before the House Committee on Agriculture. In my opening statement to the committee, at the direction of the board, I endorsed the principles of law as embodied in the Soil Conservation Act, the Agricultural Adjustment Act of 1938, the Marketing Agreements Act, and the authorization given in section 32 for the use of funds to remove surpluses from market channels.

The principal amendments we suggested for the A. A. A. of 1938 were (1) an amendment that will make available for export Government loan cotton in amounts necessary to regain and maintain our normal share of the world market without depressing the domestic market; (2) an amendment placing wheat under the same market classification and restriction as corn when marketing quotas are in effect; (3) an amendment raising the bushelage exemption for wheat in marketing quota restrictions from 100 bushels to 200 bushels; and (4) an amendment to eliminate nonquota years in determining tobacco allotments and quotas in nonquota years in order that the minority may not rule the majority.

We also favored amendment of the Marketing Agreements Act which will permit the producers of any commodity to utilize the advantages of the act.

Probably the most important of all our recommendations to the House committee was one asking for such additional appropriations as may appear necessary under present disturbed world-trade conditions to permit this Nation to regain and maintain the normal percent of the world markets for our exportable farm surpluses without, however, affecting adversely domestic markets. We favored also such additional restrictive measures as may be necessary and workable to reduce competitive imports to their normal share of our home markets.

I will discuss in this talk only our cotton recommendations for the reason that cotton is the immediate problem, and because only 2 days ago the Senate Committee on Agriculture voted to report out the bill sponsored by Senator SMITH, of South Carolina, a bill which we fear would if enacted into law cause serious decline in the market price of cotton and would tend to nullify the loan program. In addition, the Smith bill would require huge appropriations which we are convinced would be simply impossible to obtain from Congress. Our plan would be very much less costly, it would continue the loan program, and it would not involve additional cuts in cotton acreage. We feel that the cotton producers have gone as far as they can in reducing acreage. Everybody knows how serious is the weight of the surplus cotton on both the world and the domestic markets. Our plan would require no additional legislation except an amendment to "unfreeze" the loan cotton, authorization of a Government agency to handle the cotton, and a comparatively moderate appropriation to absorb any possible loss on the cotton that is moved into world-trade channels.

Here is the plan in its entirety. It is called the "ever-normal warehouse export plan":

(1) To merchandise the excessive cotton stocks governmentally controlled which resulted from the huge 1937 crop in such a way as to put our export cotton on a fully competitive basis with foreign growths in all the import countries of the world and maintain our fair share of the world market.

(2) To sell chiefly, but not necessarily exclusively, through regular commercial channels for export.

(3) To hold the domestic price up to at least the loan value.

(4) To acquire a substantial amount of Government loan cotton as soon as possible, classify it, and make it available to the world trade in an orderly but competitive manner.

(5) Employ such measures as may be necessary to restrict imports to their normal position in the domestic market.

Our board drew up its plan only after deliberate and detailed consideration of the entire cotton problem and careful examination of the provisions of the Smith bill. We took the position that the immediate problem is to sell cotton. If we have to sell it at a loss in order to get rid of it, then let's sell it at a loss, but sell it. It's costing the Government almost $50,000,000 just to carry the surplus now, and it seems like plain common sense to spend some money now to get rid of this drain on public funds.

Nobody knows just how much the loss will be on foreign sales. It is almost certain that the world price will go down below the loan level once we start selling abroad, but we are not recommending flooding the foreign market to such an extent as to cause serious price breaks. If the American cotton is fed into the market in an orderly way, we are convinced that enormous quantities can be disposed of without any great damage to the price structure. Experience has demonstrated that the market behaves much better when free movement according to market demands is permitted. The mountainous accumulation of surplus American cotton has been a heavy drag on market movements, and we are convinced that once these surpluses have been made available for foreign selling the market will regain a buoyancy that it has lacked for a long time.

Our plan calls for safeguarding the American market at the loan level or above. It is fundamentally essential to protect our own producers in their price. The loan level is not a high price, and garments made out of cotton at that price should sell to consumers at very moderate prices. In fact, the parity price for cotton, which is a price representing a fair exchange value with respect to goods and services purchased by the farmer, is nearly double the loan figure.

If we sell cotton in foreign markets at less than the American price some folks will wonder if our own cotton would not be sold back to us in the form of raw cotton to American spinners or in the form of finished textiles. That contingency is already taken care of, for the original Agricultural Adjustment Act contained a provision in section 22 which was not affected by the Supreme Court decision of 1936, which permits the President to impose such limitations on imports as may be found necessary to prevent such imports from interfering with or rendering ineffective the adjustment program with respect to any commodity in the A. A. A. program. Under this provision the President could, by proclamation, reduce the importation of such imports to 50 percent of the average quantities imported during the 1928–33 period. It is fortunate for our plan that the means for protecting our own market is available without further legislation.

Our board has taken the position that the time has arrived, in the face of demoralized world-trade conditions, when we simply must demand and fight for our fair share of the export market. We want to be fair about it, and we will reciprocate by permitting other nations to have their normal share of our markets for certain products, but we can see no virtue in permitting other nations to raid our markets while we stand by with millions of bales of unsold cotton which normally should move into the markets of the world. We are faced with the necessity of selling this cotton, and the American Farm Bureau Federation intends to do everything in its power to see that it is sold, so that the cotton industry, upon which the entire South depends so heavily for its prosperity, may be permitted to operate once more in a normal manner.

I want to repeat, and I can't say it too emphatically, that this surplus cotton must be sold. It won't rot, you can hardly burn it, and it is utter folly to keep on paying nearly $50,000,000 a year to carry it. We can't get rid of all of it in 1 year or even in 2, but for the sake of the cotton industry and everybody connected with it, let's make a start.

Many of our own Farm Bureau people in the South have looked with favor on the Smith plan. I ask those people in all kindness if they want their leaders to endorse a plan that would call for the appropriation of hundreds of millions of dollars which we know we can't possibly get from this Congress, when our own plan will do the job better and will require much more moderate appropriations, appropriations which we have a fair prospect of getting?

Let us frankly face a fact that all of you know, namely, that since the new A. A. A. program has been in effect, the loan has furnished an effective floor under prices. Every cotton grower knows that the price following our 19,000,000-bale crop in 1937 would have gone down to a perilously low level if there had been no Government loan. The Smith plan would practically nullify the loan, and I don't believe that there is a cotton grower anywhere who, if he knows the facts in the situation, would be willing to cooperate in a plan which will certainly reduce the market price for cotton. We are told that the Government will make up the difference in cash payments but must remember that huge amounts of money would be needed to do this, and how many of you really believe that this Congress will give us the hundreds of millions of dollars that this would require?

People seem to forget the fundamental philosophy of the A. A. A. of 1938. The purpose of the act is to control production and marketing in such a way that the crop will sell for a fair price. It gives us an opportunity to run our business so that we can maintain prices. Government payments are incidental. I am not one of those who believes that the Government should not help farmers with cash benefit payments, but I do believe that there is a limit beyond which our Congress will not go in the matter of appropriations for agriculture. This is known as an economy Congress, and there is very little to indicate that Congress this year would be disposed to make the huge appropriation necessary to make the Smith plan effective. It is reasonable, however, to expect, and we are demanding, that Congress give us sufficient funds for soil conservation, for parity payments, and additional funds to move surpluses into export and relief channels.

The Smith plan might cost the Government nearly as much as the entire appropriation for the Soil Conservation Act amounts to at present. Under the A. A. A. of 1938 all commodities covered receive equitable treatment. The Smith plan singles out one commodity for preferential treatment. We must remember that whatever gains we have made through farm legislation have been made because of the unity of agriculture. We have gotten legislation because all of the great producing regions have united on a program for all. The corn growers alone are helpless to get legislation for themselves, because there are not enough votes in the Corn Belt to put over a bill. The same thing is true for wheat and tobacco and cotton and rice. Now, if the cotton growers try to go it alone on a plan that the other regions cannot endorse, they are going to get into trouble.

My plea to cotton farmers is that they support the present cotton program as it is, and in addition a workable plan to unfreeze the cotton in the loan and move it gradually into foreign markets. That is all we need to make the present program function 100 percent. The rest of the plan—acreage control, cotton loans, marketing quotas—is working. All we need is to get rid of the cotton that has been piling up in the loan and costing the Government nearly $50,000,000 a year to carry.

As a cotton farmer myself, and as the president of the great organization that has honored me with its presidency, I appeal to southern farmers to continue their almost 100-percent cooperation under the present program, and to refuse to listen to plans for fundamental changes that might wreck the entire program.

The record does not bear out the contention that cheap cotton means greater domesic use. In 1931–32, with prices at a 10-year low of 5.66 cents a pound, our domestic consumption was only 4,866,000 bales. In the 1936–37 season, with a price of 12.3 cents a pound, our domestic use was 7,950,000 bales. Every cotton farmer knows the tragedy of cheap cotton, not only to himself, but to the entire South. Are you going to back up a plan which, if enacted into law, will inevitably mean cheap cotton for our southern farmers?

Under the present program, cotton farmers last year received just as much, in price and benefit payments, for their cotton as the Smith bill contemplates, if Congress will give them a lot of money, namely three-quarters of parity price, or around 12 cents a pound on their normal production. Why jeopardize what you have, namely, a plan that has worked, for an untried plan which, even if it works, offers you no more than you are now getting?

One Hundred Percent Reserves Back of Demand Deposits as a Means of Preventing Booms and Depressions and Bank Failures

The plan whereby the 50,000,000 demand depositors can all go to their bank at the same time and check out all their money without the slightest loss or inconvenience to the banks or to the Government.

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1939

RADIO DISCUSSION BY SENATOR GEORGE W. NORRIS AND PROF. IRVING FISHER

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the second of a series of discussions of the congressional breakfast talks presented each Tuesday morning from 8:15 to 8:30 over WOL under the personal supervision of former Congressman Charles G. Binderup, of Nebraska.

This particular broadcast took place on Tuesday, March 7, 1939, the guest speakers being Senator GEORGE W. NORRIS, of Nebraska, and Prof. Irving Fisher, professor emeritus of economics at Yale University, both of whom are depended upon in a great degree to guide our great Nation in the solving of its economic and social difficulties.

Before I present the remarks of Senator Norris, Professor Fisher, and Mr. Binderup, allow me to comment briefly on the continuing efforts of Mr. Binderup toward the correction of our monetary system to the end that it will be in agreement with the provisions of the National Constitution.

As president of the executive business council of the Constitutional Money League, Mr. Binderup is now conducting a Nation-wide educational program to combine the forces interested in our economic problems; to bring together the views and policies of groups and individuals of the highest caliber regarding stabilization of the dollar; and, finally, to arrive at the best method of restoring to Congress its unquestioned authority to discharge the duty imposed upon it by the Constitution "to coin money and regulate its value."

Such a program is indeed of the very utmost importance at this particular time.

The particular broadcast herewith included is especially interesting to me, since I have today introduced a bill which contains so exactly the provisions advocated in this talk that I feel greatly encouraged by what the speakers have had to say.

It is with pleasure, therefore, that I include the following in my remarks:

RADIO DISCUSSION OVER WOL BY SENATOR GEORGE W. NORRIS AND PROF. IRVING FISHER

ANNOUNCER. Last week the city of Washington was treated to a new feature on WOL, known as the Congressional Breakfast Chats. This morning once again we present Mr. Charles Binderup, former Member of the United States House of Representatives who will introduce this morning's speaker—Mr. Binderup.

Mr. BINDERUP. Morning greetings to the President and the Congress of the United States and with hearty appreciation to this broadcasting station WOL in the Nation's Capital City.

It is with great pleasure I introduce the guest speakers this morning: First our Senator GEORGE W. NORRIS. He came to the Senate, drafted by the people of our State, Nebraska. We didn't ask about his political platform for he had long since built for himself a platform, a monument of righteousness in the hearts of his fellow citizens, and it is with equal pleasure I introduce Prof. Irving Fisher, professor emeritus of economics at Yale University, from whose words and pen we have gleaned the plan for constitutional money, Government monetary control, and in whose philosophy the Nation sees today the only hope for continued democracy.

The subject for discussion this morning is 100 percent reserves back of demand bank deposits; preventing booms and depressions and bank failures. The plan that will make it possible for all the 50,000,000 depositors in the United States to go to their local bank all at the same time and get all their money without the slightest disturbance to our monetary or our banking systems, and without the slightest cost to either the banks or the Government.

I now present Senator GEORGE W. NORRIS, from Nebraska, who will open the dicussion.

Senator NORRIS. Professor Fisher, I believe we are agreed that our economic and political systems need to be consistent with each other. Political democracy cannot live in an economic system in which substantially equal opportunities are denied our citizens because of monopolies on the one hand and because of the frequent break-down of our monetary system on the other. If we wish to keep our most precious heritage handed down to us, namely, our constitutional liberties, we must wake up to the fact that this can't be done by trying to operate our streamlined economy with a "horse and buggy" monetary system. When violent booms and depressions rob millions of people of their savings and deny millions of people of the opportunity to work, constitutions become mere scraps of paper. We have seen this happen in other countries. It can certainly happen here. It is no accident that the world depressions coincided with destruction of democratic systems of government the world over. What is your suggestion, Professor Fisher?

Professor FISHER. My suggestion is this: Let us try, above all, to do away with violent booms and depressions. I am not speaking in a partisan way. Quite the contrary. We want to get all that is good in the New Deal and at the same time not discard anything that is good in the old deal. Primarily, we want to reach the causes of these violent booms and depressions, which threaten to destroy our liberties, as they have destroyed the liberties of other peoples in other lands.

Senator NORRIS. I agree with you, Professor Fisher, that the problem of depression, with its inevitable toll of evils—unemployment, bankruptcies, hunger, distress, and suicides—is the central problem which must be solved if we are to preserve the doctrine of individual freedom of initiative. Just how do you propose to attack this problem, Professor Fisher?

Professor FISHER. Years of study have convinced me that the depression has been primarily a monetary matter. The simple failure to have a sound and stable monetary system has been the most fundamental reason for business and bank failures, foreclosures, bankruptcies, and unemployment—in a word, for the depression. It was the depression, the pressure of starving and disillusioned men and women, which mainly caused and still causes the great world upheavals—economic, political, social, and even religious.

Senator NORRIS. But how can our money system have such a powerful influence?

Professor FISHER. Simply because money has become a prime necessity in our civilization. Without it, goods cannot be sold and will not be produced. There may be crying need for the necessities of life; there may be all the iron, coal, lumber, and other raw materials used for manufacturing; there may be millions of able-bodied men anxious to work, yet, if there is no money there is no production; there is unemployment and starvation. You have witnessed all this. Scarcity of money is called deflation. It is just as great an evil as its opposite, superabundance of money, called inflation. Inflation makes booms; deflation makes depressions.

Senator NORRIS. I agree with you, Professor Fisher. I judge that you believe the first step toward preventing future booms and depressions is to find a practical method of scientifically controlling the amount of money available for the production and distribution of goods and services which are necessary to sustain the American high standard of living. To do this we must first understand what we use for money.

Professor FISHER. You are quite right, Senator NORRIS. The greatest confusion comes from a general lack of understanding of what we use for money. Our principal money has no existence whatever, except in the figures on the ledgers of our commercial banks. We call it bank credit. It is the credit balances in the checking accounts of the individuals, firms, and corporations of the Nation. It is created and destroyed by the commercial banks. When you borrow $500 from a commercial bank, it is quite different from borrowing $500 from a friend. When you borrow from a friend, the transaction adds $500 to your cash and takes $500 from the cash of your friend. The total sum of money in circulation is not changed, but borrowing $500 from a commercial bank is an entirely different transaction. The bank creates the $500 credit which it enters on its ledgers, and you enter on the stub of your checkbook. It is, in effect, $500 of new money. The purchasing power of the Nation has increased $500. It is almost as if the bank had printed $500 of new bank notes to lend to you. Actually, there is no such money in the bank, but only that pen-and-ink record on the bank's books. It is merely a promise of the bank to furnish you $500 of currency and coin on demand. You transfer the title to that promise by drawing checks against it just as if it were real money, and those to whom you pay these checks accept them as money. We may therefore call these promises checkbook money, as contrasted with real or pocketbook money. The important fact, however, is that, call it what you will, this $500 you have borrowed is new money. It never existed before you borrowed it. Your act of borrowing added $500 to the circulating medium of the United States.

Senator NORRIS. What really happened when you borrowed that $500 is that you and the bank swapped promises. You promised to pay the bank $500 in 3 months with interest, and in return for this promise the bank promised to furnish $500 in money upon demand at any time. You really do not want the actual money ordinarily. You really want this credit upon which you can draw checks and transfer to others. The recipients of your checks do not ordinarily want the money in actual cash. They, too, want the credit, which they in turn can transfer by check, and so this credit continues to circulate in the continuous transfer of goods and services and serves just as actual currency and coin. And yet, as you have stated, it has no actual existence excepting in figures upon the ledgers of the banks.

Professor FISHER. Precisely. Nine-tenths of our money consists of such debt-created checkbook money instead of real or pocketbook money. It is in continuous circulation. Checks are drawn against most of these checking accounts almost daily. Other checks drawn against other accounts which were created by other loans are deposited. Later on when you pay your note to your bank you draw a check on the balance in your checking account payable to the bank itself, and your promise to the bank is paid, and in return the bank's promise to furnish money on demand is canceled. Now, the cancelation of the bank's promise is a cancelation of $500 of checkbook money. That $500 no longer circulates as money. It no longer exists. The purchasing power of the Nation decreases by $500.

Senator NORRIS. So what really happens is that making bank loans creates checkbook money and paying these loans destroys checkbook money. That is the reason that the volume of checkbook money and the volume of bank loans fluctuate together as is shown by bank statements.

Professor FISHER. Precisely. If the banks loan freely so as to generate money, we have a boom. If there are few borrowers or if the banks do not wish to lend we have a depression. Creating money and lending money used to be wholly separate. They ought to be separate. But under our present system in our commercial banks the two functions are tied together. If the volume of bank loans fluctuates then the volume of our checkbook money fluctuates too. Fluctuations in the volume of our active money do great harm. Our checkbook money shrank $8,000,000,000 between 1929 and 1933, causing the great depression. That eight billions was more than a third of our money—more than a third of the Nation's purchasing power. How can we expect to buy the same amount of goods with two-thirds of our money? The restoration of a portion of this destroyed checkbook money by Government borrowing from the banks made our partial recovery. A second destruction of checkbook money in 1937 caused the recent recession while a second restoration is making a second partial recovery.

We should never have permitted the destruction of the vast sum of checkbook money which was destroyed in 1929 to 1933. We should not have permitted the destruction of checkbook money which caused the recent recession. These fluctuations of checkbook money could not occur if there were 100-percent real pocketbook money in the banks in our checking accounts—if the banks were not permitted to create this imaginary money—bank credit. That 100-percent reserve was the original banking system. Banks did not create credit. They received for deposit actual cash and they loaned actual cash, but they loaned only the cash which was deposited in time deposits, and which were deposited for the specific purpose of being loaned by the bank. There were no low-reserve checking accounts in those days. All business was transacted with actual cash. Deposits of cash which the depositor expected to use in his business remained in the bank in cash at the disposal of the depositor.

Senator NORRIS. As I understand your proposal, Professor Fisher, you propose that we return to the old banking system under which the banks would receive and lend actual money. The balance shown on your checking account would be real money actually issued by the Government as authorized by Congress—100-percent money. There would be no more of this peculiar imaginary money which you call checkbook money. The total of the Nation's purchasing power could not fluctuate. It could be regulated by Congress to just balance our productive capacity with everyone employed.

Professor FISHER. You have correctly stated my proposal, Senator. That was the original principle on which banks operated. We had relatively stable money. The old Bank of Amsterdam operated on this basis for over a hundred years. When it finally failed, it was said to be because its managers had finally violated their trust and had secretly loaned out the money of their depositors.

Senator NORRIS. Would it not be very difficult to change over to the system you advocate? Would it not be necessary to issue a large amount of new currency?

Professor FISHER. The answer is no to both your questions. There was never a time in our recent history when the change could be effected so simply. The banks now, as a system, hold cash and Government bonds equal to the total balances in the Nation's checking accounts—what we call demand deposits. If all these bonds were made instantly convertible into cash at the demand of the banks, the banks would now have, as a system, all their checking account balances in cash or its equivalent. A very simple law would preserve this desirable situation. Thereafter it would only be necessary for the Government to issue any additional money needed to promote full recovery, this would be in cash, which the Government would deposit in the banks and spend into circulation. If this is done, it is my belief that we shall never again see another depression like the 10-year depression which we have just had, and if this had been done 10 years ago we would never have had this depression at all. Senator NORRIS, if you will get such legislation enacted in the Senate and your fellow Congressmen at the other end of the Capitol will do their part, you will have accomplished, in my opinion, more for the good of your countrymen than has been accomplished by legislation for a generation. I take this opportunity to express my gratification that you are now adding this problem to the many which you have handled so successfully already.

ANNOUNCER. Be with us again next Tuesday morning at this same time for another congressional breakfast chat, arranged and conducted by Mr. Charles Binderup, former United States Congressman from Nebraska. Mr. Binderup, can you tell us now the name of your guest next Tuesday?

Mr. BINDERUP. I am pleased to announce for our next Tuesday morning congressional breakfast talk, we shall have the Honorable Robert L. Owen, former Senator from Oklahoma, and for a number of years chairman of the Committee on Banking and Currency in the Senate; Senator M. M. LOGAN from Kentucky, who introduced Senate bill No. 31, a bill for monetary reform; and we hope Congressman PATMAN, in a three-way discussion.

ANNOUNCER. Fine; we'll be here waiting for your visit. This is a special presentation of the Musical Clock.

Loans to Small Industries

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, March 14 (legislative day of Monday, March 13), 1939

RADIO ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK, MARCH 13, 1939

Mr. O'MAHONEY. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD a speech delivered last evening by the junior Senator from New York [Mr. MEAD], over the facilities of the National Broadcasting Co., on the problem of loans to small industries.

I recommend the reading of this speech to all Members of the Senate and of the House, and, indeed, to all those to whom copies of the CONGRESSIONAL RECORD may come. It deals with one of the most important problems before the Nation. The studies of the Temporary National Economic Committee have already developed a fact probably known to a great many persons before the committee started its proceedings, namely, that there has been a tremendous concentration of financial assets. It is not necessary to criticize anybody, any institution, or any person with respect to this condition; but certainly one result has been that small business throughout the country has been unable to secure the credit facilities which it needs to maintain itself in its present economic status.

My own feeling is that, while loans to small industry are of primary importance, it is also necessary that Congress take whatever steps may be eventually found to be necessary to protect small business, after it has been sustained by Government aid, from the restrictive effects of what we have commonly called antitrust practices.

Without trespassing further upon the time of the Senate, I renew my recommendation to Members of the body that they give consideration to this most excellent speech by the junior Senator from New York.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Small business is the backbone of America. The little plant, factory, and shop contributes to the prosperity of thousands of our communities. The successful operation of small enterprise means employment and spells economic well-being. We know the tragedy that comes to a village when the local plant, which has been hiring the bulk of that community's employables, closes its doors. In some instances, that tragedy could not be prevented, but in a great many cases, if adequate financial aid, reasonably offered, were available, the story would have been a happier one.

Congress is trying to do something for small business. I believe it is vitally necessary that the problem be immediately and thoroughly considered and that helpful legislation be adopted.

At the last session of Congress I introduced a bill which had for its purpose the establishment of Federal industrial banks to make direct loans to small enterprise on a long-term, low-interest-rate basis. Admittedly there was room for improvement in its provisions, but I was astounded at the widespread and favorable reaction to the proposal. Since that time I have received hundreds of letters from every State of the Union coming from shopkeepers, tiny merchants, remote factory owners explaining their financial plight, and in nearly every instance, pleading for easier and more available credit. These letters portray the plight of small business more vividly than all the statistically prepared reports and economic reviews that have ever been published. They say in unmistakable terms that private credit is not available to them and that the Federal Government must become the resuscitating agent to rescue them from financial strangulation.

For example, a small employer at Rochester, N. Y., writes: "I have a small business employing seven people and I have tried to borrow money from the local banks for expansion where it is needed. I am unable to get any money for this expansion, although I can submit a net worth statement of $18,000. The banks generally tell me that nothing that I have, such as my real estate or accounts receivable, are worth anything, and that the only thing on which they can loan me money is my insurance policies."

A merchant in Phoenix, Ariz., cites his problem: "The banks do little at this time to help the small merchant, no matter what his standing may be in the community. In 1920 I got $8,500 on my personal note. In 1929 I went into the bank and asked for $4,000 on a personal note and got it without any trouble. Now, recently, I went to the same bank and asked for $2,000, but all they would allow me was $1,000. Now, nothing has happened to my personal record. I have had a clear record since I entered business in 1912. I want to say that the fear that existed from 1930 to 1933 is returning and some law must be enacted to relieve small-business men."

A small Philadelphia manufacturer is having his credit troubles. He states: "Our business is small. We employ 10 employees steadily. We could add 5 to 8 more employees if we could procure $5,000 to $8,000. This is not guesswork. We have developed new products but need money to produce and market the products. Like most small-business men, we want to stay in business, but we have consumed most of our working capital trying to hold our business together through the bad years and we are now unable to proceed without assistance. The papers state that the banks are bulging with money. That is easy to understand because they won't loan it out."

A Georgia businessman discusses his problem and remarks: "As a rule, when bank loans are available for the small-business man, it is for a period of 60 to 90 days, and when repaid, leaves him in about the same condition as when the loan was made. The banks have plenty of money to loan. Loans on long terms to solvent concerns would, in my opinion, immediately create a demand for more goods, which would put more people to work and would be a substantial aid to reemployment, to the banks, and to their stockholders."

An Omaha, Nebr., firm explains that it has been refused a loan of $15,000 because it failed to show profits during the depression years. A long-term loan at a reasonable interest charge would put this important little industry back on its feet. But it cannot be obtained, either through private banks or through the Reconstruction Finance Corporation. The concern writes: "We feel our case is typical of a great number of businesses in this country. It is the reason why the Federal Government should take more action in providing capital for small business so that labor can be employed, plants can be equipped, and materials can be purchased."

Another Pennsylvania company explains present-day credit needs. Here is the company president's story: "I have been in the manufacturing business since 1906. I always employed between 160 and 170 employees 9 or 10 months a year. I was a depositor for 20 years in a large bank, and I established a credit of $30,000 with this institution. By having this credit I was in a position to solicit business, make up my orders in time for delivery, and meet my weekly pay roll without difficulty, embarrassment, or fear. Today, I am still in the manufacturing business and have the facilities to employ from 60 to 70 people. However, because I lack the financial assistance and credit which I formerly enjoyed, I am forced to run my plant only 3 or 4 months out of the year and only employ 20 people. This situation is common here and probably is true throughout the country. Therefore, there is a steady increase in unemployment. The sooner the forgotten small-business man gets some kind of financial assistance the quicker business generally will improve and the quicker unemployment will be reduced."

Typical of hundreds of similar instances, just consider the situation confronting this Ohio manufacturer: "Up until this year, I operated two small mills, employing about 40 men. But because I could not raise or secure from banks a capital loan of only $2,500, I was closed out."

When we realize the practical effect of idle plants and wholesale community unemployment, we can grasp the imperativeness of legislative action to relieve such situations.

If it is true, as it is time after time indicated, that the unavailability of adequate credit lies at the bottom of this appalling dilemma, then why not make such credit available and why not take positive action immediately?

It is perfectly true that we would not be discussing this problem, for it would not exist, if the banks were loaning for capital purposes in any appreciable amount. We know that this is not due to lack of money in our banks. The causes of present banking policies constitute a long story, but the fact remains that small business is being slowly smothered for want of credit.

The bank in your village or city contributed vastly to the development of America. Its principal contribution was to loan money for the creation, operation, and expansion of small business. So-called character loans used to be common. The banker and the businessman were close together. They understood each other's needs, and they worked harmoniously to fill those needs. The banker built up his community because he had faith in it and faith in his neighbors. It is an unhappy circumstance that that relationship no longer applies. Today character loans are a thing of the past. Today, although 10-year credit terms satisfy the law, banks make few long-term loans. The result is they are not of great practical assistance to small industry, and they have, in effect, lost much of their former value to the community.

The investment banker is of little or no assistance to the types of small business about which we have been talking. He floats security issues, which are easily salable, for large and well-known companies. As a rule, he is not interested in the flotation of capital loans of less than $1,000,000, and he is not interested in aiding new and unknown concerns. He is probably correct in pointing out that the cost of distribution of small amounts would be prohibitive. But, again, the fact remains that he is proving of no direct help to smaller business and is, in effect, contributing to their difficulties through his assistance to large firms that often approach the monopoly size.

Therefore we have the deplorable absence of any reasonable credit facilities for our small-business man. Neither the local, commercial, or investment bank will give him the helping hand he so sorely needs.

An important New York banker wrote to me last week stating that his bank is giving increased attention to loans for small business. He intimated that they were satisfying most requests and that not many were being received. The numerous letters in my files plus the flood of applications filed with the Reconstruction Finance Corporation would not bear out the assumption that this is generally true. In fact, running through innumerable cases is the complaint that banks cannot or will not approve loan applications. The record of the R. F. C. fails to furnish evidence that it has been of any significant or widespread assistance to small enterprise. Congress endeavored to liberalize the original R. F. C. Act and to provide additional loans to industries. Some aid has been granted under this liberalization, it is true, but it is not a drop in the bucket so far as a really effective program is concerned.

In the face of these circumstances it does seem beyond question that we lack an adequate mechanism through which small industry can satisfy its capital and credit needs.

Several bills are now pending in Congress to cope with this problem and to assist small business in obtaining its required capital. Representative ALLEN of Pennsylvania and myself are jointly sponsoring a measure which has for its purpose the insurance by the R. F. C. of loans made by banks to business enterprises for the increasing of production, extension of operation, modernization of plants, etc. If enacted, such a law would insure banks against losses they might sustain in making such industrial loans. We have endeavored to be liberal in the amortization requirements. Insurance will be provided banks in cases where their industrial loans are not in excess of $200,000. A 7-year amortization period is permitted and an interest rate in excess of 4 percent may not be charged. A service charge may not exceed 1 percent and the loans or advances of credit may be secured by a first mortgage upon real estate or by a chattel mortgage upon personal property.

We have presented this bill with the thought that it would stimulate small business loans and involve the expenditure of no Federal funds. It is, in many respects, similar to the program of the Federal Housing Administration which is now insuring bank loans for the construction of homes. The F. H. A. has been popular with the banks because it uses Federal credit to secure loans made by the banks at a profitable rate of interest. If it has proven practical to extend long-term loans for home building, why will it not likewise prove practical to extend long-term loans to business? A man may now borrow $10,000 to build a home, repaying it perhaps on a 20-year installment basis. Why should he not be able to borrow $10,000 for industrial capital purposes and pay it back on a 7-year installment basis? That, in effect, is the reasoning behind our proposal. Of course, the whole picture is disappointing because it should not be necessary to establish such means to obtain a free flow of private credit. Nevertheless, the necessity obviously does exist and steps must be taken along this line.

Another interesting proposal has been advanced by Senator PEPPER, of Florida, who is sponsoring a bill to establish a system of regional industrial credit banks to furnish additional direct credit and capital facilities for business purposes. He would provide liberal terms for the extension of such loans—not dissimilar to the procedure now employed by the Federal land banks in making loans for the refinancing of farm mortgages. Senator LOGAN, of Kentucky, is likewise sponsoring legislation for the establishment of intermediate credit banks to make industrial loans.

A new bill which I am introducing this week will attack the problem in still another manner. This measure will provide for the organization of bank affiliates, expressly set up to extend loans to industry.

These are some of the legislative suggestions that are being made to assist business enterprises in the United States. They

demonstrate that among Members of Congress there is a definite realization of the lack of industrial credit and that there is a genuine desire to do something about it.

Congress is concerned with providing more adequate credit facilities for small business because the problem is national in scope and acute in its serious effect upon our economy.

To get a picture of the immensity of those affected, we must understand that over 400,000 companies in this country may be classified as "small business" concerns. Such a number have assets of less than $5,000,000, and approximately 386,000 companies have assets of less than $1,000,000. Companies with assets of less than $5,000,000 make up 26 percent of the total assets of all corporations in this country. In addition to the small corporations, there are many business partnerships and individual proprietorships, the great majority of which fall into the "small business" class.

It is, therefore, self-evident that the well-being of our economy cannot be divorced from the well-being of these small and medium-sized corporations.

Big business is, to a great extent, dependent upon small industry for its raw materials and its markets, and likewise for its basic prosperity. With this in mind, it is true that small industries in our medium-sized towns and cities are fundamental to the successful functioning of our economic system. Therefore, it is of the utmost importance to consider the means by which small business can be revitalized, and the method by which its importance to the economic welfare of the whole Nation can be increased. The essence of the revitalization of small business requires that they be provided with more capital and with better credit facilities.

We are inclined to overlook the fact that without an adequate and properly directed flow of capital into industry there can be no efficient operation of our national economy. New capital investment is not only required for the construction of additional plants and for the purchase of new machinery so that industry may expand and maintain employment, but such investment is also necessary in order to provide for the proper maintenance and modernization of existing plants so that business may be in a position to continue the employment of those who are now at work.

To secure the full benefit of capital investment a private business enterprise which will use capital is required, as well as a credit mechanism which will make it available to business. It is at this point that small business enterprises are of vast significance to our national economy. New enterprises are usually small units and their financing sets into motion a spiral of economic activity which encompasses a wide area and brings into play other business enterprises. Healthy small business enterprise, adequately financed, is essential to the stability of our whole national structure.

The small-business man is by nature adventurous. His organization is relatively flexible. He can take chances. He likes to generate new methods for increased profits. We depend upon him for the continued progress and development of our industrial and economic system. If he is ill from financial malnutrition, our entire economic system suffers likewise.

I have said that there is an increasing demand by small business for intermediate capital—a demand that is not being met by either private or existing public agencies. I have mentioned that this demand is reflected in the numerous applications for industrial advances and participations being filed with the R. F. C. The Federal Reserve banks are likewise reviewing hundreds of loan applications. I repeat that the extension of $50,000,000 or even $100,000,000 annually by these public agencies has been helpful. They have not, however, been able to provide the necessary credit that small business so badly needs. Whether the law is not sufficiently liberal or whether the administering officials are overly conservative is beside the point. The fact is credit needs are not being satisfied and some means must be found to accomplish that purpose.

Small business concerns represent a desirable channel through which funds for additional capital investment may flow, thereby enabling us to employ more people and to keep at work those who are now employed.

I consider the solution to this problem of adequate financing for small- and intermediate-sized business most vital to our national welfare. For this reason, without attempting to destructively criticize, I am frankly disturbed by the lack of adequate financial mechanisms on the part of public agencies and of existing banking institutions. Something is drastically wrong when, at a period when bank deposits are close to a record high, the small-business man is unable to depend upon his banks for his credit and capital requirements.

A source of capital must therefore be brought into existence which can be tapped by new and small enterprises which, even though they may not yet have established high credit ratings, do nevertheless constitute good risks and do offer promising prospects.

I am not sniping at any public or private agency, nor am I discrediting the efforts that many of our banks have put forth, but which, unfortunately for the most part have proved futile. I am simply asserting that, in my judgment, a definite need for easier credit does exist, and that it is incumbent upon Congress to recognize that demand and to effectively deal with it at the earliest possible date.

Too many small shops and plants are closing their doors; big business in many instances is growing bigger; our small communities are directly suffering. Mass production is not frequent in small industry. They should be healthy little units, providing gainful employment in villages and hamlets throughout the United States. The trend is in the opposite direction, and I, for one, do not think it is a salutary trend. It is definitely our job to help correct the ills of small business.

Jackson Day Celebration

EXTENSION OF REMARKS
OF
HON. CHARLES O. ANDREWS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 14 (legislative day of Monday, March 13), 1939

ADDRESS BY HON. JAMES A. FARLEY AT MIAMI, FLA.

Mr. ANDREWS. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by Hon. James A. Farley at the Jackson Day celebration at Miami, Fla., on Saturday, February 18, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Before addressing you this evening I wish to read the following message which I have just received from President Roosevelt:

Hon. JAMES A. FARLEY,
Miami Biltmore Hotel:

It fills me with sincere regret that, although I am within the hospitable borders of the State of Florida, I cannot participate in a more direct way in the deferred Jackson Day dinners being held tonight. But the U. S. S. *Houston* is lying at anchor in the main ship channel off Key West ready to take me to the fleet maneuvers in the Atlantic to the eastward of the West Indies, and I must be off. It gives me, however, the greatest pleasure, through you, to extend to our fellow Jacksonians in Miami or wherever they are assembled tonight my hearty felicitations and warmest personal greetings. Once more I desire to remind the faithful that the chief duty of the Democratic Party is to make democracy work. The present administration is following in the Jackson tradition, and therefore will not recede from its determination to advance the national unity by promoting the security and happiness of the greatest number of the people.

FRANKLIN D. ROOSEVELT.

It is an honor and a privilege to talk to my friends of Florida in general and Miami in particular on such an occasion as this. You are so practiced in hospitality, so skilled in making your visitors feel at ease, that the stranger in your midst catches the spirit unconsciously and feels that he is one of the family. I do not have to tell you that from the moment I step from the train here I count myself at home, and it is a comfortable sensation. So, surrounded by familiar faces, and warmed by the generous welcome you have accorded me, it is easy to discuss our mutual problems, enjoy our mutual satisfactions, and, with the security of intimacy, talk over our desires, political and otherwise.

Every community contributes something to the national total of comfort and well-being. One city affords us the convenience of passing along the goods of overseas; another distributes to us the products of the farm; a third sends out its quota of manufactured things—fabrics, automobiles, and the thousands of other materials and utilities that give our country the highest standard of living in the world. We accept these matters as being merely in the natural course of events—like sunshine and air—never stopping to realize that they are all elements in the build-up of general content, made possible by orderly government and the ingenuity and enterprise of our people.

Who will say that the contribution of this section is not as important as any of the elements suggested? Miami and its sister Floridian communities are merchants of entertainment, diversion, and relaxation. Not that they do not perform other functions that help in the comfort of the country at large. You enable us in New York, for example, to get your delicious fruits and vegetables, while we are still in the stern grip of winter. That form of activity you share with other Southern States; what you do not share largely is your tourist trade. Your chambers of commerce and kindred organizations give the statistics of your winter visitors. Some come in their yachts, some come in their automobiles, and some come whose means of getting here is a puzzle. But, rich and poor, they come to revel in your sunshine, to swim at your beaches, and enjoy whatever form of entertainment they can afford. In one way or another probably you furnish the world with more direct happiness than any other division of the United States. Of course, the distribution of happiness is not without its flaws.

If you have followed the recent debates of the economists referring to the difficulties of restoration of prosperity, you will have observed that the one point on which these experts agree is that in the shortcomings of the system of distribution lie most of our troubles. We produce an abundance of goods and commodities and yet millions of our people cannot buy the things they need. So Miami has no reason to be discouraged in its distribution of pleasures, because the dweller in the trailer camp cannot have the seaside palace that a millionaire enjoys. In a world of inequalities there must always be these contrasts. The remedy does not lie in making things difficult for the palace tenant, and nobody in authority has any such notion, despite the view voiced by some of our economic royalists, that every measure calculated to im-

prove the lot of the poor chap is an assault on wealth and an approach to confiscation.

The meaning of democracy is the persistence of effort to improve conditions of the underprivileged; a constant striving to get to him the things he ought to have, which, of course, includes a job.

Among the other absurdities that the opponents of democracy advance is that the present Democratic administration is an enemy to business. It is perfectly obvious to everybody, except those who refuse to see, that the only means of attaining more comfort for the have-nots is to nurture business. In no other way can the jobs be supplied, and joblessness is our biggest handicap today. Nurturing business, however, does not consist in giving additional opportunity to exploit those who have already been exploited into penury.

In our advance toward permanent prosperity we must all rise together—business and its customers, capital and labor, industry and agriculture. The consumer must have the means to buy if the producer is to make money. There is neither wealth nor progress in shelves full of goods with an inadequate number of purchasers. The remedy lies with business. The purchasing power of the people comes mainly from the wages the people receive. If private industry holds back, the Government must supply the lack of wages in one form or another, but a bare subsistence wage is not enough to do the job. Business is coming to an appreciation of this self-evident fact. It is moving—too slowly perhaps—but gradually the slack is being taken up. I haven't the statistics at hand, but generally we know that employment is increasing and that the big industries are progressing. Whenever I hear anybody moaning over the state of the country I go back to where we stood when the Democratic administration took over the business of government. The comparison should not be between where we are and where we would like to be, but where we are and where we were. That is the true measure of the national trend.

This is an Andrew Jackson occasion. You know what that great Democrat did for Florida away back yonder when it was Spanish. I have been told that what he did then offended the legalists of his day. He even quarreled with the Supreme Court over the title of the American settlers to their lands.

As President he was accused of pretty much everything Franklin D. Roosevelt is accused of today by his enemies. Business was intensely shocked when he took on the Biddle Banks and insisted on the independence of the Federal Government as against the domination of the great bank. Business learned in time that he was right and they were wrong. They said he was going ahead in his advancement of real democracy too rapidly When he saw a job that needed to be done, he did it, and he put the Democratic Party on such solid ground that it has been alive and active for a century. It was only at such times as the party ceased to be genuinely democratic that the people turned to the opposition.

It is our business today to heed that warning. Our political foes are seeking to discredit what this administration has done. It is eagerly striving to promote such a rift in our party as will give them a look-in in 1940. It has all the money in the world to work with. It is putting up a front of progressivism in some sections, to mask its purpose of reestablishing a reactionary regime that would undo what the Democrats have done. It is skillfully avoiding any declarations of policy or principle, and making its campaign solely on criticism without offering anything approaching a remedy. I am sure their effort will be unsuccessful, but it would be foolish to underestimate the perils of the coming campaign. We must put up as intensive a fight for the retention of the gains of real democracy as if the perils were doubly apparent.

It is the job of the Democratic national organization to carry on this battle. The affairs being held throughout Florida tonight are part of the movement to provide us with funds to meet the assault, and I want to thank you on behalf of our party for that service. I deem it as part of your splendid hospitality, that you combine this delightful occasion with the really important contribution to our cause. I have no misgivings as to what is going to happen in 1940. In the nature of things every party in power has to meet a test of its popularity whenever the 4-year period rolls by. As chairman of your national committee I can take nothing for granted. Our opposition is well-organized, resourceful, and unscrupulous. With no responsibility it can and will make every promise that suits its purpose, and even though its promises are contradictory in different sections and before different audiences, they cannot be ignored safely.

We can and will meet these assaults, and repel them, but to do so is going to involve a lot of work, and while we cannot possibly match their campaign fund—for the massed wealth of every privilege-seeking agency and individual will be at their disposal—we are going to need every dollar we can raise to keep the people advised as to the real issues of the campaign. For this reason Florida's patriotic generosity is doubly welcome.

What they are striving for is to undermine and nullify the New Deal measures. Our task is to preserve what has been accomplished and to finish the job so auspiciously conducted by our great President. His courage and devotion to the people's welfare, his infinite patience and matchless energy has brought us far on the road to recovery. He has not pleased all the people all the time. Errors have been made, for in an enterprise of the magnitude of the task that was placed on his shoulders some mistakes were inevitable. But taken in its full aspect, no administration since the founding of the Republic has accomplished so much for the well-being of the Nation. He has kept us at peace in a disturbed world. He has so handled the affairs of the United States to make us the envied of all the states on earth. He has kept our national credit at the top and preserved for us respect and prestige among the powers, great and small.

That is our strength; that is why I feel that regardless of the ill will of every exploiter among our people, and all they can muster to their support, the Democratic Party can look forward to another endorsement by our people next year.

Admission of German Refugee Children

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, March 14 (legislative day of Monday, March 13), 1939

RADIO ADDRESS BY ALEXANDER WOOLLCOTT, MARCH 7, 1939

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD a very scholarly address by a distinguished American writer, Alexander Woollcott, on the subject of the admission of German refugee children into this country.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ANNOUNCER. [Bell] Hear ye! [Bell] Hear ye! [Bell] Hear ye! Alexander Woollcott, the town crier.

Mr. WOOLLCOTT. This is Woollcott speaking. The old bell you've just heard—I found it under the galoshes in the hall closet and brought it to town with me because I've something on my mind. Indeed, I've come hat in hand to this network and asked for a chance to be heard. You see, I have a story to tell—a story first told me nearly half a century ago by a neighbor and dear friend of mine. That neighbor was a warm-hearted and altogether delightful woman who's been dust in the churchyard these many years. I submit her story now—I know she would have wished me to—as a free-will offering to a cause which is close to my heart. A cause important enough in all conscience for its own sake; important in terms of the wounds it will heal, the eyes it will dry, the hearts it will reassure. But also a cause which as a symbol—most of all as a symbol—is of an importance I have no words to convey. My story is a parable which was good and true when first it was set down on paper, but which has never, I think, had so many overtones as it has at this moment—this anxious moment in the history of the world.

This anxious moment. In Prague the other day a young Jewish university student went to a travel agency there and asked to buy a ticket. "Where to?" said the clerk. "Well," said the young man, "what kind of tickets have you got?" Yawning, the clerk pushed forward a globe on which was spread a map of the entire world. The boy looked thoughtfully over every inch of it before he pushed it back, and asked, "Haven't you anything better?"

In London the other day two refugees came face to face in Picadilly. One of them told how he'd just succeeded in booking passage to Australia. At this his friend was aghast. "Isn't that terribly far off?" "Far off?" the first refugee repeated. "Far off from where?"

Well, we will have our little jokes. For, mark you, folks laugh at the most unlikely times. Have to. Remember the *Cavalier*? That air liner from New York to Bermuda? The one which, on a day in January, 200 miles off Cape May, sank in a trackless sea? Remember how, buoyed up by life belts and clinging close to one another for comfort and support, these pieces of human flotsam rode those desolate waters for 10 mortal hours until the candle of their hope was guttering in its socket? Did you note—of course you did; we all did and with a certain pride—how, even when hope was dimmest—especially when hope was dimmest, and their strength almost gone, they told one another stories and cracked jokes and sang songs? Cracking jokes and singing songs on the very edge of eternity. That, you'll agree, must have taken a bit of doing. They were, you will say, of the stuff that can joke and laugh on the rim of the pit of despair. Well, aren't we all? What else do you think is going on tonight under the evening lamps in any house in England or France? Or in Holland? Don't forget Holland.

These rescued 10 from the *Cavalier*—they had helped one another. It's not always the easiest thing in the world for shipwrecked men on a raft to hold out a hand to people floundering in the sea.

None know that better than some who survived the maiden voyage of the *Titanic*—the proud palace now lying full fathom five in the North Atlantic. When she struck the iceberg 25 years ago—no, 27; the *Titanic* went down in 1912—some of her passengers got away in lifeboats. More jumped with life belts and of those a few were still alive in the icy sea at sunrise when ships came steaming to the rescue. But the best life preservers were the rafts—the collapsible rafts. So many were able to get aboard them. No wonder they became dangerously overloaded. Men and

women standing and kneeling upon them, awash with the sea. Surely the most dreadful memories of the *Titanic* were those brought ashore at last by the haunted men and women on the rafts who had fought off with oars the desperate people in the sea who tried to climb up beside them. Why, sitting in his comfortable chair beside the fire, there may be listening to me now—there is always something fateful, you know, in the reach of any broadcast—there may be listening to me at this moment some aging survivor of the *Titanic* who did just that. One wonders how well he sleeps o' nights. Even after 7 and 20 years one does not envy him his memories.

Beating the drowning people off our raft, striking them with our oars so that their despairing hands let go and they slip back into the sea—that is what happens at time of shipwreck. Time of shipwreck. For great multitudes, what else, my friends, is this? Beating the drowning people off our raft. Isn't that just what we, the luckier nations of the world, are doing every day to the refugees in flight from the despotism of middle Europe? Barring the road to the most pitiful migration since the world began? What else are we doing, and, in heaven's name, what else can we do? Not much. But a little more than we are doing—a little more. So little—but something.

I think every decent person in this country felt a wave of relief when the news came from Washington the other day that Senator WAGNER had introduced the bill now known as the Wagner-Rogers bill. This, with no hurt to anyone anywhere, will, at least take care of some of the children. It is proposed for this year and next so to raise the German quota that 20,000 youngsters—the oldest no more than 14—can come into this, a free country. Here is a small boy adrift because his folks are Catholics. Here is a little girl whose black crime is that her grandfather was a Jew. Here's a kid whose dad is in a concentration camp because he had the spunk to show a little of that independence which you and I take for granted as our birthright. Twenty thousand kids. Homes here are waiting for them and would be waiting hungrily for as many more. The Quakers, those friends in gray who always stand by in time of trouble—the Quakers will see that all creeds and all kinds are represented. The only difficulty is a technical one. All that is needed is a temporary change in the immigration law. The Wagner-Rogers bill takes care of that.

I assume that bill will pass. Yet I could wish that before they go to bed tonight every voter within the sound of my voice would send word to Congress in its behalf. For I hope it passes unanimously, a fresh reminder that this country is still strong enough to be—as it was in the beginning—a refuge for the oppressed. The Wagner-Rogers bill. It's the least we can do for the least of these.

When I heard the bill had been introduced, I found myself wishing that someone among its spokesmen would tell the story of Miss Vilda's dream. That story seemed to me meant for this moment. Then I knew I must tell it. Must? Had to; on my own hook, if not on my own hook-up. So here it is. I first came across it in a dog's-eared old book called Timothy's Quest by the late Kate Douglas Wiggin.

I don't know who reads Timothy's Quest today, but if you don't know it by heart you can probably get it at the library 'round the corner. It wouldn't hurt you to read it.

Timothy was a shabby and stout-hearted foundling—a 9-year-old ragamuffin who played knight-errant in behalf of a girl called Gay. Gay needed a protector, for she was very beautiful and only 4 and, like Timothy himself, she, too, had been left on the doorstep of the world—left on the windy doorstep by someone who rang the bell and ran away. In a swarming alley in the meanest part of Boston a blowsy old wanton had, for a time, been paid by some person or persons unknown to look after Timothy and Gay, but when she died there was no one to say who the kids were nor where they had come from. So among the neighbors who laid her out there was talk of shipping them off to an orphanage. When the anxious Timothy overheard that talk, he and the lady, Gay, lit out for parts unknown, the boy pulling her in a home-made cart that was just an old clothes basket on wheels. Gay must go to no orphanage. She must have a home, and he was going to find one for her.

It was close to sundown when, after a wild ride on a freight train and another on a hay wagon, this lady in distress and her champion, stained with the dust of the road and now almost tuckered out, passed through a village and paused before a neat farmhouse with elms standing sentinel beside it and a white picket fence 'round about. The apple trees drooped with the weight of their fruit, and the shining milk cans winked in the reddening sunlight. "This," Timothy said, "will do." And he knocked at the door.

In that house so spotless, so cheerless, there lived a bitter and lonely old maid, Miss Vilda Cummings. Imagine her feelings when she opened the door and found those two refugees standing expectant on her front stoop. Land o' liberty. "Please," said Timothy, "do you need any babies here, if you please?" Dear me, suzz, what a commotion. Out in the barn, milking cows, the hired man thought it was a good idea. Might make Miss Vilda human. And in the kitchen, Samantha Ann 'lowed as how it was a good idea, too. But Miss Vilda, rocking furiously, would not listen to such balderdash. What? Take in two dirty little waifs from heaven knew where? They must be crazy. Would she turn the children out then? Well, no, not exactly. Not with night coming on and them so hungry and tired. She was a good Christian woman, and she hoped she knew her duty. She'd wash them and feed them and give them a bed for the night. But in the morning she'd send them to an orphanage. That's what she thought. Yes, that's what Miss Vilda thought when she went to bed. But before morning the stone had been rolled away from the sepulcher of her heart. For in the night Miss Vilda had had a dream.

She dreamed that on a day of blinding heat it was her doom to climb a mountain. The way was steep and the road was rough and the briars caught at her skirt. A little girl, with a face like Gay's, came running toward her, holding out her hands as if she wanted to be taken up into Miss Vilda's arms. But Miss Vilda pushed her aside. It was all she could do to go on alone. The merciless sun beat down upon her and her back was lame. The sharp stones cut through her shoes and the briars caught at her skirts. Again the child appeared before her and again she pushed her away and again she went on with the weary climb, her spirit fainting, her strength almost gone. When once more the child reappeared Miss Vilda was too weak to put her aside and the child crept into her arms. And then, quite suddenly, Miss Vilda felt no more the heat of the sun. The stones scattered before her step. The briars parted to make a path for her. She lost all sense that she was climbing at all, the way now seemed so easy, so easy. Before she knew it she had reached the top. And there an angel was waiting and took the child from her. Stooping, the angel dipped a finger in the dust and with it wrote on Miss Vilda's forehead a single word. And the word that the angel wrote was "inasmuch."

Admission of German Refugee Children

EXTENSION OF REMARKS
OF
HON. ROBERT F. WAGNER
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Tuesday, March 14 (legislative day of Monday, March 13), 1939

EDITORIAL AND LETTERS CONCERNING GERMAN REFUGEE CHILDREN

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Galveston (Tex.) News of February 20, 1939, entitled "German Refugee Children," and also letters on the same subject from A. S. Langsdorf, dean of the School of Engineering and Architecture of Washington University, St. Louis, Mo; Susan M. Kingsbury, president of the American Association of University Women; and Mary Riis, of New York.

There being no objection, the editorial and letters were ordered to be printed in the RECORD, as follows:

[From the Galveston (Tex.) News of February 20, 1939]

GERMAN REFUGEE CHILDREN

No decisive objection can be offered to the proposal to admit 10,000 German refugee children into the United States during each of the calendar years 1939 and 1940. Introduced into the Senate as a joint resolution by Senator WAGNER, and referred to the Committee on Immigration, the proposal has the support of many prominent Catholic and Protestant churchmen, and also of the leaders of both branches of organized labor.

Admission of these refugee children, all of whom would be 14 years of age and under, would not affect the domestic unemployment situation. The stipulation that none should be admitted until provision for their care had been made by responsible American citizens or private organizations would insure against their becoming public charges.

It should be emphasized that the Wagner law would not suspend existing quota restrictions on the immigration of adults. Its sole effect would be to make possible the rescue of 20,000 hapless and helpless children whom Nazi persecution deprived of parental protection. In giving some of those children a chance to grow up free and self-supporting, with the help of kindly Americans, our country would be following the lead of England and Holland. Despite their crowded populations, those countries are admitting refugee children as rapidly as arrangements can be made to accommodate them.

Among the victims of Europe's politically inspired hate none are more pathetic than the German children whose parents have been sent to concentration camps or who, for other reasons, have been thrown upon the mercy of the world. It is estimated that 50,000 children under 14 have suffered that dreadful fate. About half are Jewish and the rest are Catholic and Protestant. Some of the latter group are treated as outcasts because they had one Jewish grandparent. Others of pure Aryan ancestry had the misfortune of being born to parents who insist upon thinking for themselves, which in the Nazi code is a crime as great as the possession of Jewish blood.

Much as Americans sympathize with the oppressed peoples of Europe, it is impossible to offer sanctuary in this country to all refugees, however urgent their need. It would dishonor our traditions of humanity and freedom, however, to refuse the small measure of help contemplated by the Wagner resolution.

WASHINGTON UNIVERSITY,
St. Louis, March 7, 1939.

Senator ROBERT F. WAGNER,
Washington, D. C.

DEAR SENATOR WAGNER: I am very much interested in favorable action by the Congress on the Wagner-Rogers bill permitting the admission of German refugee children during the calendar years 1939 and 1940. I hope very much that every effort will be made to expedite action on this important matter.

Very respectfully,

A. S. LANGSDORF, *Dean.*

WOMEN'S UNIVERSITY CLUB,
Philadelphia, Pa., March 11, 1939.

Senator ROBERT WAGNER,
United States Senate, Washington, D. C.

MY DEAR MR. WAGNER: On behalf of the Women's University Club, Philadelphia branch of the American Association of University Women, composed of 1,100 women, I am writing you in support of the resolution you have introduced and that has been referred to the Committee on Immigration.

The bill authorizes, as I understand it, the admission into the United States of a limited number of refugee children; that is, 1,000 in the calendar year 1939 and 1,000 in the calendar year 1940. Arrangements would be made for the placement of these children in families of their own nationality or religion. They would not become dependent upon the United States as they will be guaranteed care. Thus there is no danger of their becoming a public charge. Also, they would in no way affect our labor problems as they would not reach, within 5 years, the age at which they would enter the labor market.

Again, therefore, may we express our approval of the legislation.

Cordially yours,

SUSAN M. KINGSBURY, *President.*

NEW YORK, *March 10, 1939.*

Hon. ROBERT WAGNER,
United States Senate, Washington, D. C.

MY DEAR SENATOR: May I send my profound hope that the Wagner-Rogers bill, providing for the admittance to this country of 10,000 children from Germany, meets with immediate and enthusiastic passage.

Surely we are not so niggardly that we hesitate to share whatever we may have with innocent children unable to help themselves.

With appreciation of your altruistic and sympathetic stand, believe me,

Very sincerely,

MARY RIIS.

President Roosevelt's Words in Europe

EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 14 (legislative day of Monday, March 13), 1939

ARTICLE BY HAROLD CALLENDER IN THE NEW YORK TIMES MAGAZINE OF MARCH 12, 1939

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the RECORD an article written by Mr. Harold Callender, of London, published in the New York Times Magazine of March 12, 1939, entitled "Roosevelt's Words Re-echo in Europe."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times Magazine of March 12, 1939]

ROOSEVELT'S WORDS RE-ECHO IN EUROPE

(By Harold Callender)

If the question "Who are the men who most influence European affairs?" were asked at random in London, Paris, Berlin, and Rome, the overwhelming answer in all these capitals and among all classes would be: Hitler, Mussolini, Chamberlain, and Roosevelt.

By many subjects of totalitarian states, as well as by citizens of constitutional countries, President Roosevelt's necessary inclusion among the leading four is regarded as a reassuring sign in uncertain times. For millions of people living on both sides of the ideological frontier look upon the man in the White House as a powerful, possibly a decisive, force for peace; and it is this very fact which partly explains the fury with which he has been attacked by the government-controlled press in the unconstitutional countries.

In many European minds America has taken on somewhat the shape of a good fairy who, having once changed the course of history at a crucial moment and then vanished from the European scene, might conceivably turn up again to fill the role of a deus ex machina by insuring a favorable ending of the European drama—next time, it is hoped, not by turning the tide of battle but by preventing it.

Few informed Europeans can discern many hopeful signs amid the darkness of pessimism and fear which armaments and aggression have spread over an entire continent; but America seems to them to be one, perhaps the greatest, of such signs. It is to her that many look to save Europe, not merely from the dominion of any one power or creed but from war itself—from a war which, as many, including Mr. Chamberlain, believe, would bring chaos from which Europe might not recover.

It is highly significant that, whereas after August 1914 it was the rallying of a transatlantic ally in war that was awaited with natural impatience, today it is the mobilization of America's sympathy and resources for the preservation of a threatened civilization which some hope for and some count upon. The last great war came suddenly, taking Europe by surprise. The so-called next war has been steadily and visibly approaching for years, like a sinister comet announcing its measured advance; some believe it has already struck in spots; and the problem is to check or avoid it.

When Europeans think of America's preventive role they think chiefly of her tremendous economic resources and the moral power with which they have endowed her. As they see it, the mere probability that those resources will be thrown against an aggressor will cause him to pause before making war. They believe that probability already exists, and that the pause may have begun. They feel certain that Mr. Roosevelt's outspoken note to Berlin last September greatly helped to prevent an invasion of a small neighbor, and that his plain words since have strengthened the hands of all those in many countries who are struggling to keep Europe from exploding.

They think the President has stiffened the backs and raised the spirits of Britain and France, who have repeatedly paid such heavy prices for peace that none can doubt their pacific intentions. They think his words and acts have served to restrain the impulses toward violence which only too obviously exist.

But it would be unfair and inaccurate to assume that in championing peace and democracy Mr. Roosevelt has necessarily spoken on behalf of one group of powers. He has not adopted the British or the French foreign policies; in some respects he has cut sharply across them. He has expressed the thoughts and desires not only of the bulk of the British and French but of the bulk of the Germans and Italians. For the subjects of dictators—though many dare not say so—are as fearful of war and as desperately eager for peace as citizens of freer countries. This correspondent has visited in the last year or so all the four great capitals of western Europe mentioned above, as well as a score of other cities in Germany, Italy, Spain, Britain, and France; and his deepest impression is of the obvious and profound longing for peace that exists even in the most warlike of states.

Thus Mr. Roosevelt, in pleading for peace and for the tolerance and the live-and-let-live freedom associated with democracy, has expressed the yearnings of most Europeans, whatever flags they live under. Peace is an almost universal human desire today in spite of the unprecedented proportion of national incomes which governments are spending to prepare for war.

Like Woodrow Wilson, who in 1917 and 1918 called upon the Germans to overthrow the Kaiser (the most effective single bit of wartime propaganda), Mr. Roosevelt today has appealed to the German and Italian people over the heads of their governments. And how those governments hate it! Many of his appeals have been kept out of the German and Italian press; others have been indignantly answered by somewhat irrelevant attacks on the domestic vices of the United States. But many have been heard. This is quickly discovered by anyone who travels in those countries and understands their languages.

In this sense Mr. Roosevelt has set the pace for Mr. Chamberlain, who, in a milder way, has followed suit by saying that all the peoples of Europe wanted peace, but he could not be sure those feelings would always be shared by their governments.

But the President's attitude has been fundamentally different from the official British one. The British Government, even when Anthony Eden was at the Foreign Office, repeatedly argued that nations should not be divided into hostile camps on ideological lines, that internal regimes of other countries were none of Britain's business; and Mr. Roosevelt's Ambassador in London spoke in this same vein when he said that the doctrinal differences between dictatorships and democracies should not be allowed to grow into unrelenting antagonisms.

Mr. Roosevelt, on the other hand, frankly draws a sharp line between the theory and practice of dictatorship and those of democracy. He insists that internal regimes concern the whole world when they spill over frontiers and menace free countries. His antagonism to dictatorship is, in this sense, already unrelenting. And many Europeans are glad of it.

Nor have the President's policies been in close harmony with those of the French Government. M. Bonnet, the French Foreign Minister, takes a much more complacent view of the Munich agreement than Mr. Roosevelt takes. Only a fortnight after Mr. Roosevelt withdrew the American Ambassador from Berlin M. Bonnet welcomed the German Foreign Minister to Paris and signed with him an agreement which to some suggested a rapprochement between the French Republic and the Nazi Reich. There are numerous Frenchmen besides M. Bonnet who think France must somehow make friends with Hitler and refrain from irritating him.

There are still some in Britain who agree with M. Bonnet. On the other hand, there are many who agree with and applaud Mr. Roosevelt.

The British, like the French, however, are chary of vociferous enthusiasm for two reasons: First, they wonder whether Mr. Roosevelt is not several jumps ahead of his own people and Congress; second, they fear that excessive jubilation on their part might be misconstrued.

"It's too bad we haven't settled those war debts," said an Englishman recently. "Why not do so now?"

"Oh, no; it's too late," said another Englishman. "If done now it would look as if we were paying because we wanted America's help in an emergency."

Everywhere one travels in Europe one is asked whether the neutrality law will be repealed, whether Mr. Roosevelt will "get away" with his policy of backing the European democracies by selling them arms and by warning the dictators. Many Europeans—including Germans and Italians—hope and believe America will support the President's policy, but they recall their disillusionment when the Senate rejected the peace treaty and the League. This seems to justify certain doubts.

"It is wonderful how Roosevelt talks up to Hitler," said a distinguished German. "He is the only one who seems to know how or to be willing to do it. He is a valuable restraining influence, for Germans have reason to respect the power and the opinion of the United States."

The Nazi press may inveigh against Mr. Roosevelt as a "war monger" and as a spokesman of "Jewish capitalism" (which seems to be oddly allied in the Nazi mind with "Jewish bolshevism"). The Italian Fascist press may overflow with venom, calling Roosevelt a madman. But millions of Germans and Italians are cheered by his utterances, while in speeches by Hitler and Mussolini they find only grounds for apprehension.

After Munich, pessimism seized many in democratic countries. "If we sell the pass, why should be expect America to help us?" they asked. "If the European democracies abandon a small nation and continue to retreat, Americans can no longer regard Britain and France as the first-line defenses of the democratic world. We shall now lose the respect and sympathy of the United States."

Since then the British and French have recovered much of their equilibrium and confidence. They have convinced themselves that Europe is not yet lost; that the line can be held against the forces of militarism, even though the Czech defenses have been sacrificed. They still hope that war can be avoided, though some would avoid it by further concessions, while others feel that a show of strength is the only way.

It is America's influence which probably will decide between these two policies. If in the next crisis America seems to stand firmly behind the democracies, holding out the promise of her resources to reinforce them if need be, Britain and France will be less disposed to submit to further extortions. But if the hope of American backing should diminish, the "spirit of Munich" would be more likely to revive and the demands of the dictators would be pressed more boldly.

In this sense it is correct to say that British and French foreign policies, and with them the fate of Europe, depend largely upon the attitude of the United States. The potential aggressors know they could not win a war if America's economic power were against them, and the prospect of winning by a sudden air attack dwindles with every week that passes. They know also that massacre of civilians with aerial bombs would be sure to incense Americans and would tend to insure their support for the democracies. Consequently, the dictators are reduced to bluffs and threats which they can only hope will not be called.

Many Europeans, including specialists in foreign affairs, believe Mr. Roosevelt has greatly contributed to the hesitation to make war. He has so far committed the United States to nothing excepting sympathy for free countries and for victims of attack. He has simply shown his own dislike of dictatorship, which most Americans share, and his aversion to a neutrality statute which might actually aid an aggressor. He has suggested that Americans cannot be indifferent to the triumph of violence and brutality in Europe and has hinted that America's economic power should be used to restrain them. He has implied that the most satisfactory way of all for America to keep out of war is to insure that no great war takes place.

In 1933 Mr. Roosevelt appeared to Europeans as a stubborn and unaccommodating nationalist, since he flatly refused to assist in the world currency stabilization proposed at the economic conference in London; and to conservatives, notably in Britain, he seemed almost a revolutionary, or at least an economic heretic, because of his bold ventures in public works and currency manipulation and an unbalanced Budget. At that time he was widely feared in Europe for the strange things he seemed bent upon doing to the economy of the United States, which was so vital to Europe's recovery.

Today, when he seems disposed to utilize that economy to buttress the menaced structure of peace in the interest of both America and Europe, whose destinies seem more closely linked than ever before, Europeans generally look to him and America as bearers of hope to an imperiled world. And this is no less true—the point cannot be overemphasized—of Germans and Italians than of British and French. It may be even more true of the subjects of dictators; for the compulsory silence imposed upon their opinions by ruthless governments probably intensifies the comfort they derive from hearing (through illicit radio hook-ups) their own sentiments expressed by a fearless voice in the White House.

Economic Data Concerning Brazil

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 14 (legislative day of Monday, March 13), 1939

INFORMATION AND DATA SUBMITTED BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the CONGRESSIONAL RECORD some information and data which I have gathered concerning our sister Republic of Brazil, which was the subject of discussion on the floor of the Senate on yesterday and which subject was so ably discussed by my honorable colleague the senior Senator from Illinois [Mr. LEWIS], at which time he—displaying his usual courtesy—permitted me, along with others of this body, to join with him from time to time. The data submitted will, no doubt, prove of interest to the Members of Congress as a whole since the eyes of America have been turned southward in a study of world commerce, in which we are all naturally vitally interested.

There being no objection, the data were ordered to be printed in the RECORD, as follows:

Brazil is the largest South American country in area and population. In size it slightly exceeds that of the United States, not including Alaska. The population is estimated at approximately 45,000,000, of which 75 percent live in rural areas. The standard of living is low, and probably not more than 15 percent of the people are able to purchase anything beyond meager living necessities.

Coffee has been Brazil's leading export product for approximately a century. During the decade 1924–33, coffee accounted for 71 percent of the total value of exports. Owing to the rise of cotton cultivation, the relative importance of coffee has trended downward for several years and in 1937 it accounted for only 42 percent of the total value of exports. Cotton was the second largest export in 1938, accounting for 19 percent of the total. Cacao is also an important item of export.

In recent years Brazil has made a strong effort at diversification both in agriculture and in industry. Manufacturing is confined principally to the simpler types of consumer goods, but some headway has been made with quality articles and with heavy industry. The progress of diversification is of special interest on account of its effect on the character of the foreign trade and its distribution by countries. With the decline in the relative importance of coffee, the United States has taken a smaller proportion of Brazil's exports while Europe, particularly Germany, has taken a large proportion. Nevertheless, the United States is still by far Brazil's best customer, taking 36 percent of her total exports in 1937. Germany was second with 17 percent.

The United States was also in first place in Brazil's import trade from the time of the war down to 1936, when Germany took first rank by a slight margin, according to the official Brazilian statistics. Germany was also slightly in the lead in 1937.

During the 3 years 1935–37 the average total value of Brazilian imports was $267,300,000, of which the United States furnished $61,100,000 (22.8 percent).

The average value of Brazilian exports during the period 1935–37 was $312,300,000, of which $118,900,000 (38.1 percent) went to the United States. Thus exports to the United States exceeded imports from us by $57,800,000.

Brazil normally has a large surplus of exports which provides exchange to cover debt services, remittances of profits on foreign investments, etc. However, Brazil was in partial default on its foreign obligations down to November 1937 when all debt service was suspended. Remittances of profits and dividends have also been restricted through exchange control measures. Imports were

unusually heavy during the first half of 1938, while the value of exports declined, reflecting the declining world market prices for Brazilian products, with the result that there was an import balance during the January-June period of $11,234,465.

WHAT BRAZIL NEEDS FROM THE UNITED STATES

Brazil in recent years has been making a strong effort to achieve diversification of production through new crops and the promotion of manufacturing. Emphasis is also being placed upon the improvement of transportation and communication facilities, both as a means of bringing about a greater degree of national unity and for the purpose of opening up undeveloped resources. The Government has recently formulated a 5-year economic plan, which calls for large outlays for communications equipment, industrial machinery, and other forms of capital goods. No official statement of the probable amounts of these goods which will be required has been issued by the Brazilian Government, but on the basis of estimates it appears likely that upward of $50,000,000 additional might be used to advantage during 1939.

Principal capital goods needed are as follows:

Railroad materials equipment and supplies	$25,000,000
Industrial machinery	11,000,000
Iron and steel	4,000,000
Motor vehicles	2,500,000
Transport planes	1,000,000
Airport construction	2,000,000
Army planes	3,200,000
Total	48,700,000

Furthermore, if it were possible to regain even part of our lost markets in Brazil for wheat, coal, office appliances, and many other goods, a very considerable increase in trade would result.

Railway equipment

Brazil has long been one of our leading foreign markets for railway equipment. During the 25-year period, 1910–34, about 38 percent of Brazil's total imports of railway equipment came from the United States. The 5-year economic plan puts particular emphasis on the improvement of transportation and communication facilities. In an area larger than the United States, Brazil has only about 21,000 miles of railways, and present facilities are inadequate to handle the demands made upon them. It is estimated that approximately $25,000,000 is needed in the immediate future for the purchase of locomotives, rolling stock, and construction materials. This estimate does not include labor costs, which, it is assumed, would be met by the Brazilian Government. Furthermore, the figures relate only to the needs for rehabilitating the present net. New construction designed to tap undeveloped resources, particularly iron, manganese, nickel, and other mineral deposits, would involve expenditures of far greater magnitude.

Industrial machinery

Brazil's imports of industrial machinery from the United States have been greatly reduced in recent years by the diversion of orders to Germany—this despite the fact that the United States is the logical supplier by reason of world leadership in technology of the equipment involved.

In addition to this current business Brazil has need of additional equipment for the economic development of the country. Purchases from the United States for these purposes might be approximately as follows:

Road-building machinery	$2,000,000
Construction, pumping, and other equipment for irrigation program	3,000,000
Mining machinery for developing Itabira iron-ore deposits	2,500,000
Vegetable oil extracting and processing machinery	1,000,000
Total	8,500,000

Iron and steel products

Consumption of iron and steel has shown an upward trend for some years, owing to its greater use in connection with building construction and to the demand from numerous secondary metal-working industries which have sprung up in recent years. Domestic production of pig iron, steel, and rolled goods is also expanding, but local plants are able to supply only a part of the total demand. Imports of the major items of iron and steel in 1937 amounted in value to about $40,000,000, of which the United States furnished approximately one-fourth. The inauguration of extensive economic developments would entail an additional demand for approximately $4,000,000 of iron and steel products which the United States is in a position to supply.

Motor vehicles

Brazil has steadily increased its purchases of American motor vehicles since the low point reached in 1932, but American participation in the Brazilian markets has declined continuously from 98 percent in 1934 to 87 percent in the first 9 months of 1938. In 1938 these purchases will approximate only 30 percent of the 1929 peak. More automotive highway transport equipment is a pressing need in Brazil and this need will be supplied practically 100 percent from the United States providing means can be found to overcome German trade practices. Under these conditions, we might expect the following increased American automotive business in Brazil during 1939 as measured against our 1938 volume:

	Number	Value
Passenger cars	1,000	$590,000
Trucks and busses	700	390,000
Assembly parts		500,000
Total		1,480,000

The automotive replacement parts and accessory business would presumably show a proportionate advance, possibly by $1,000,000, because this class of business has been seriously affected by fluctuating exchange rates and the delays in effecting dollar settlements.

Aeronautical equipment

Because of the time and expense involved in providing more extensive access to the Brazilian hinterland by land transport, aviation development is also a matter of prime consideration to the Brazilian Government, as a part of its program of national unification. For some time there has been under consideration a supplementary air transport network which would be operated by the Brazilian Army. It is well known that American planes are preferred for these proposed operations. Our estimate of the Brazilian requirements for American transport planes for this purpose are:

Year	Under 12-place	12- to 25-place	Over 25-place	Total	Approximate total cost
1939	17	5	2	24	$1,000,000
1940	20	6	2	28	1,100,000
1941	34	4	2	40	1,250,000

To make possible this more extensive and efficient operation of schedule transport services considerable airport construction (by American engineers) and airport-airways equipment (lights, hangars, radio aids to flying, etc.) would be needed. Such American services and materials as could be used for these purposes might cost about $2,000,000 annually.

Coal

Brazil currently consumes around two to two and one-half million tons of bituminous coal, of which two-thirds is imported. In 1926 the greater part of these imports were American coal worth about $10,000,000. In 1937 our coal exports to Brazil were approximately 190,000 tons, valued at $900,000, while the bulk of the trade was divided about equally between Great Britain and Germany. Although considerable British capital is invested in railways, gas plants, and electric-power plants in Brazil, there are other public utilities, the state railways, and federal shipping lines which might be buyers of American coal under favorable conditions.

Consumer goods

Although Brazil's principal requirements for United States merchandise are in the capital goods field, particularly in connection with the development of the country's vast resources, there are a number of instances in which the present competitive situation regarding consumer goods deserves special consideration.

An important example is the market for breadstuffs, which is one of the largest items of Brazil's import trade. Only 13 percent of Brazilian consumption of wheat and wheat flour is supplied by domestic production. Most of our market from Rio de Janeiro south was lost to Argentina before the World War, but American flour (and to some extent wheat) was preferred in the Northeastern States prior to 1931. In 1926 Brazil's imports of breadstuffs from the United States amounted to over $18,000,000. Since that year Brazil has developed its milling industry, and Argentina wheat has largely replaced American flour.

Brazil normally sells considerably more to the United States than it buys from this country. This export surplus enables Brazil to buy its breadstuffs elsewhere, principally in Argentina. On the other hand, Argentina normally buys more from the United States than it sells to this country. Recently, Argentina has been insisting upon a policy of bilateral-balancing; that is, that imports from the United States must not exceed in value its exports to the United States; and restrictions have been placed on imports from the United States. However, Argentina has an export balance in its trade with Brazil, owing to large sales of wheat. Argentina should not expect "to have its cake and eat it, too." Unless it is willing to admit United States' goods in excess of United States purchases in that country, it cannot consistently demand that Brazil buy Argentine breadstuffs in preference to American wheat or flour.

The market for office machines also deserves special consideration. Prior to the outset of subsidized Germany exporting, the United States supplied 80 percent of the Brazilian market for office machines, but this proportion has subsequently declined to around 50 percent. Brazil's annual requirements average about $4,000,000, of which the normal share of the United States is $3,000,000. Under normal competitive conditions the United States could also increase its share of the Brazilian market for scientific instruments, photographic and projection goods, and miscellaneous specialties—markets, which, in the aggregate, amount to about $6,000,000.

Trade Agreement With Brazil

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, March 14 (legislative day of Monday, March 13), 1939

ARTICLE BY WALTER LIPPMANN

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Walter Lippmann appearing in the Washington Post this morning concerning economic conditions in Brazil.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of March 14, 1939]

TODAY AND TOMORROW

(By Walter Lippmann)

THE GOLDEN KEY

As a contribution to the peace of the world and to general recovery the agreement just made with Brazil has great importance. It inaugurates what may fairly be described as a positive and constructive phase of American foreign policy.

Up to this point we have had moral exhortation and moral judgment. They were necessary. They have helped to keep alive in the minds of men the elementary principles of law and justice and decency. We have had a program of rearmament. It is essential. It has made clear to the world that in the regions where we are concerned these principles are not pious sentiments but effective convictions. We have had Mr. Hull's trade agreements. They have been useful in promoting some trade; they have been even more useful in preserving the theory and the practice of normal and peaceable commerce. We have had the declarations and the demonstrations of the good-neighbor policy toward Latin America. They have done much to persuade the peoples of this hemisphere that the United States genuinely desires in its own national interest that they should remain independent self-governing republics.

KEY CAN UNLOCK NUMEROUS DOORS

But this Brazilian agreement, which has grown out of negotiations between Dr. Aranha and Mr. Hull, is in principle the most constructive measure that has yet been taken to restore peace and prosperity in the world. For here at last we are using the key which can unlock so many of the doors that are now closed against an economic revival.

That key is the stupendous hoard of gold we have been accumulating only to bury it in the vaults of the United States. Out of $26,000,000,000 worth of monetary gold in the whole world, more than half, over fourteen billions, are in the United States. The fact that this gold has poured into the United States and has been buried in the ground has been both the result of and a cause of the closing of the doors to normal trade. With this gold much can be done to open those same doors.

NOT MUCH OF GOLD WAS MINED IN UNITED STATES

In order to appreciate the importance of the Brazilian agreement we must see in its simplest form what has happened to bring to the United States more than half the gold of the world. For not much of that gold was mined in the United States. The gold has come here because we have bought it.

Some of it we have bought because we offer $35 an ounce to anyone who will sell us gold. But more of it we have bought by giving foreigners automobiles and cotton and tobacco and other goods that we export. Unable or unwilling to exchange our products for their ordinary products, we have been willing to exchange our products for one special product, namely, their gold.

FOURTEEN BILLIONS EARN NOTHING FOR NATION

So we possess $14,000,000,000 worth of a metal that everybody would be glad to have but that nobody is able to touch. This gold will not buy anything anywhere. It is the greatest single supply of universal purchasing power in existence, and at considerable expense to ourselves we have buried it carefully and made it totally useless. This is an absurdity. If there is nothing produced anywhere in the world that we wish to buy with it, or with any substantial part of it, then the only sane thing to do is to lend it to someone who will buy something with it and make a profit and repay us with interest.

A man who stuffs his savings in the mattress of his bed or buries it in the back yard is known not as a businessman but as a miser. And a nation which buries its surplus savings, for that is just what this gold is, so that its savings earn nothing for the Nation, is doing the same thing, however much the reality may be disguised by technical words about gold reserves and what not.

CONCRETE MEASURE TO REVIVE TRADE

Because the Brazilian agreement signifies our realization that the gold has some function beside that of being buried in Kentucky, it is an event which will have favorable effects all over the world. For it demonstrates that we have passed from preaching about the revival of trade to concrete measures which will in fact revive trade.

We have started with Brazil because we have such friendly relations with Brazil that this was the best opportunity to enter upon a new and initially difficult undertaking. But now that Dr. Aranha and Mr. Hull have shown how the operation can be done there is a practical precedent for extending it to other countries, the technical details of the agreement need not concern us here. The thing that matters is the fact that we have begun to use a little part of an inert and hitherto useless horde of gold as a loan to enable Brazil to reconstruct a normal financial system and to restore normal commercial practices. If anyone can think of a better use for our gold than that, it would be interesting to know what it is.

LIKELY TO AFFECT GERMAN BUSINESS

This is the real value of the agreement, that it inaugurates a movement to revive world trade by normal methods rather than by the highly artificial methods which are now so widely practiced. It would be a gross misinterpretation of this agreement, therefore, to say that we are using our gold to wage economic war against Germany in South America.

For this thing would be desirable and necessary if Germany were not in the grip of the Nazis. No doubt it will make Nazi trading methods less successful. No doubt it will make less effective Nazi political agitation in Brazil. But it will accomplish these results by methods that a German like Dr. Schacht, for example, would have to regard as wholly legitimate and entirely orthodox.

REMEDY MUST NOT CREATE DISORDER

No doubt the restoration of normal commerce between Brazil and the United States, and also between Brazil and the other free nations, will handicap the abnormal commerce of the totalitarian states. But there is only one remedy for that. The remedy is not to leave the world in disorder. The remedy is not to imitate the abnormal trade methods of the Nazis. The remedy is for Germans to restore in Germany the capacity to take part in normal commerce.

When they have done that they will be able to benefit, along with the rest of us, from a genuine revival of world trade.

Importation of Commodities Produced in America

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Tuesday, March 14 (legislative day of Monday, March 13), 1939

EDITORIAL FROM THE HOLY CROSS TRAIL, REDCLIFF, COLO., FEBRUARY 10, 1939

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a startling editorial, which appeared in the February 10 issue of the Holy Cross Trail, published at Redcliff, Colo. Mr. Patterson, Assistant Secretary of Commerce, has checked the figures used and finds them to be correct.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Holy Cross Trail, Redcliff, Colo., February 10, 1939]

It is almost unbelievable that we imported from other nations in 10 months in 1938, $184,012,000 worth of silver; that we imported in 11 months in 1938, 367,173,650 pounds of copper valued at $33,564,140, and with the same volume of purchases still continuing.

But this is unexplainable. We imported:

Hay	$103,590
Cotton, manufactured	27,751,391
Wool:	
Unmanufactured	15,951,486
Manufactured	13,084,916
Paper	91,383,959
Coal	3,501,981
Lead, all types	1,479,105

Time and time again we have deplored the fact that we are importing millions of commodities which should be produced at home to give our home-owned people a job. American people will come to life again with a bang, and soon we hope. We are playing one extreme of the game at present; the pendulum will swing back soon to the other extreme and eventually settle down to a happy medium.

It is true we are exporting many more millions of dollars of commodities than we are importing, but the goods we are exporting comes from the outer rim of the United States. We could set the Nation afire with business by shipping our commodities

through the transportation companies across the continent to where they can be consumed. The sooner all this comes to a show-down the better. It would relieve the ten or fifteen million unemployed people, the several unemployable, and the ten or fifteen million undernourished children—"So mote it be."

Just think a minute. The Panama Canal is taking an immense toll of the traffic that should go cross country by rail. The St. Lawrence River, the Great Lakes, and the Canadian rails are taking another toll of cross-continental traffic. We know the long way around is wrong, we know it by results.

The Only "Ism" for America—Americanism

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1939

Mr. BENDER. Mr. Speaker, there are those who argue that America must choose between fascism and communism, that we have no other alternatives in the drama of the future. To hear them say it, democracy is a dying institution. Its stream of vitality has dried up. Its day is done. They point to the rapidity with which the "isms" have conquered Asia and most of Europe. In the brief 20 years since the World War Russia, Italy, Germany, and Spain have succumbed to the fantastic pretensions of Karl Marx and Benito Mussolini. Their cry has been, "Anything to bring order out of chaos, even the loss of liberty. Bread before spirit." And from the increasing examples of the Old World the prophets of gloom have drawn their own inspiration. They insist that in this great age of international commerce, when goods and ideas alike circulate easily from continent to continent, America cannot resist the invasion of the "isms."

But their reasoning is faulty. Neither history nor logic rushes to their defense. America has led a life apart from Europe since the first days of her independence. To be sure, we have been drawn into conflicts across the seas, but the reasons for our participation have never been the reasons which motivated Europe. We have fought only for principles which were part of the American tradition; never for lands, never for "racialism," never for the spread of a creed of state supremacy. When the revolutions of 1830 and 1848 shook Europe to its foundations, American ideals were never threatened. The spirit of intolerant nationalism which welled up in Italy and Germany in their struggle for unification did not penetrate the basic conceptions of American living. America has never accepted the fanaticism of the Old World in 150 years. There is no reason why America must accept today.

Our people have developed a system of living in the years since our Nation was born, a system which we call "the American way." It has never been formulated into a creed, yet it has all the elements of a religious faith. We believe here in America in the glory of the individual. For us the submergence of our individual personalities into a blind worship of the state is unthinkable. We know that the "ideal" society of Plato, in which there would be no "happy" individuals but a "happy" state, is incredible. Every American shares in this feeling of glory and confidence in his right to freedom, to opportunity, to live as he desires. We know full well that there are times when opportunity seems lacking, when freedom seems a paltry goal, when living as one desires seems impossible. All of us have moods of pessimism; yet we know deep within ourselves that these ideals cannot be surrendered because of the emergency of the moment; that they must rather be restated with new vigor, and that we must rededicate ourselves to the task of giving them real meaning.

We believe in America in the right to work, in the right to think and speak our thoughts without let or hindrance; and it is the objective of every true American to make work possible for our people without danger to the rights of free speech, free thought, and free conduct. No less than the foreign nations which have bowed to alien gods, we too could find work for our unemployed at European wage levels, on the huge projects designed to intimidate the world. We refuse to take this course, because it is not the American way. We refuse to subscribe to these alien methods because they do not accord with our conceptions of the relation between state and people.

America is rallying to the side of its own flag these days. We have discovered at long last that the bait of the Communist and the Fascist will not feed American workers and American children as they must be fed. The entire Nation is wakening from its moment of shock at the spectacle of a Europe clawing itself to bits, and is uniting to reassert its belief in the fundamentals which have made us a great people. Over the radio, on the stage, in our literature, there are signs of this awakened public consciousness. A new burst of patriotism, not a blind chauvinism, not a romanticized pageantry, but a solid, earnest expression of the Nation's spirit, is sweeping America. Such plays as The American Landscape are reviving the pride of our people in the heritage of the New World. We have re-declared our freedom from the bitter passions which have made Europe a cauldron of seething hatreds. We have decided for ourselves that we cannot create in America a new set of Balkans. Our land can be no place for the intolerance of Nazi Germany, nor for the living standards of Soviet Russia.

Our destiny is not linked to Europe forever and a day. We have built on this North American continent a nation apart. It must remain apart. It must continue to chart an independent course through history, unfettered by the geographic restrictions which have made Europe a perpetual battlefield. Our way must be the American way. We, too, have our "ism." But it is Americanism. It is not national socialism, intolerance, and saber rattling. It is not Soviet communism, restraints upon religious freedom, and the suppression of human freedom. It is not fascism, with its emphasis upon the state and its contempt for the individual. Ours is the tradition of America, with a love of liberty, with an ideal of equality, and with the practice of human brotherhood. We fall short all too frequently in our approach to these ideals; but the ideals are part of America. They must be preserved for the sake of mankind. They will be preserved in America.

A. F. of L. and C. I. O. Peace Negotiations

EXTENSION OF REMARKS
OF
HON. SHERMAN MINTON
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 14 (legislative day of Monday, March 13), 1939

EDITORIAL FROM THE WASHINGTON POST OF MARCH 14, 1939

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Washington Post of this morning entitled "Peace Comes First."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post of March 14, 1939]

PEACE COMES FIRST

When the Senate Committee on Labor meets in executive session this morning it will doubtless accede to the stated desire of its chairman, Senator THOMAS, for a postponement of the hearings on proposed amendments to the Labor Relations Act.

It was after these hearings were scheduled that the President urged the appointment of representative committees from the A. F. of L. and the C. I. O. to negotiate a constructive peace between the two embittered labor factions. These committees have now been appointed and are in conference in New York. The difficulties confronting their negotiations are formidable. But the desirability of a successful outcome is a matter of Nation-wide concern.

Continued warfare between the C. I. O. and the A. F. of L. means much more than a weakened labor movement. It means, additionally, an unstable and disorganized labor movement, characterized by irresponsible leadership, indulging in unauthorized and

destructive strikes, impeding the forces of recovery at a time when their smooth operation is of vital importance to all.

On no issue has dissension between the two labor factions been more pronounced than on the functioning of the Labor Relations Act. Designed on the assumption of a unified trade-union movement, the working of this act, and that of the Board which it established, has been damaged at every turn by the hostility between the A. F. of L. and the C. I. O. Naturally the legislation has operated to favor now one, now the other, of these factions. Because of the consequent recriminations the Wagner Act has had less than a fair chance to prove its worth.

If there were no cleavage in the ranks of labor this act would undoubtedly still be in need of amendment. But to make rational changes under the present circumstances is impossible. One line of revision is desirable if organized labor unites its forces and another will be necessary if the split continues. Indeed there is ground for arguing that without a merger between C. I. O. and A. F. of L. it would be well to repeal the Labor Relations Act in its entirety.

Obviously, therefore, no good can come out of opening the projected hearings until the upshot of the peace negotiations between the two factions is known, or at least clearly foreshadowed. At this moment, indeed, the hearings can only serve to stimulate irritation, on one side or the other, and thereby render a satisfactory compromise even more difficult to achieve.

Senator THOMAS has acted wisely in suggesting postponement of the scheduled hearings. The burden of proving their desirability at this time will weigh very heavily on any Senator who opposes the chairman's sensible lead.

The Cotton Problem

EXTENSION OF REMARKS

OF

HON. HUGH PETERSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1939

ARTICLE BY H. W. NALLEY, OF ALAMO, GA.

Mr. PETERSON of Georgia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on the cotton problem prepared by Hon. H. W. Nalley, of Alamo, Ga.:

For the past 6 years the farm problem has been pursued in a bold, experimental course, and yet the cotton problem of the South still remains in an unsettled and chaotic condition from the standpoint of the producers and a headache to the administration in Washington. One of the greatest obstacles in the pathway of the production of cotton and rendering it a problem of uncertainty is the pest known as the boll-weevil pest. No cotton grower knows what he is going to reap when he plants his fields to this important plant in the world's productivity.

In the solution of the boll-weevil problem the remainder of the cotton problem may be solved by regulating production to conform to consumption.

IS THERE A SOLUTION TO THE PROBLEM OF BOLL-WEEVIL CONTROL?

If you are a cotton grower, there is hardly anything you had rather know. I offer an affirmative answer to this question, which has been eagerly sought since the boll weevil crossed the Rio Grande practically a half century ago.

There is only one feasible remedy, easily accessible and practical, whereby the boll weevil may be brought under control and totally exterminated, and at the same time bring about a condition whereby cotton production will be kept on a parity with consumption.

In a speech in the United States Senate in 1858, John H. Hammond said: "No, sir; you dare not make war on cotton. No power upon earth dares to make war upon it. Cotton is king. Until lately the Bank of England was king, but she tried to put her screws upon the cotton crop and was utterly vanquished. The last power has been conquered."

But, alas, not so. War has been made on cotton by an enemy upon earth whose line of march has been one steady advancement against all opposition since the tocsin of war was sounded in 1892. Over 650,000 square miles of territory have been traversed and much of it laid waste by this enemy not only of "King Cotton" but of the entire human race. Prior to the advent of the boll weevil from Mexico the cotton crop had a valuation approximately of two thousand million dollars annually. The boll weevil cut this valuation in half as a direct annual toll to the cotton growers of the South, not to speak of the millions and billions which resulted as a consequential damage each year throughout the world.

THE BIG FOUR

Cotton is one of the big four of the great industries upon which the world's trade rests. Coal, iron, cotton, gold—these are the four cardinal foundation stones upon which has been built the gigantic commerce of the twentieth century, and cotton is by no means the least of these mighty four. For the entire century cotton has been the mighty dam which controlled and diverted a Pactolian stream of wealth toward our shores, and if payment had been made in gold instead of barter, the South would have long since bankrupted the world and gathered to itself all of its gold. From the invention of the cotton gin to the advent of the boll weevil this enormous wealth continued to flow southward completely dominated by cotton.

While coal and iron and other industries have grown up under the fostering shelter of a tariff wall, cotton, unprotected and unfostered by law, has fought its way on its merits alone, clothing the world with fabrics suited to the purposes of the poor and displaying for the rich a multitude of beautiful weaves, lighter than linen, softer than silk, lustrous as satin, in designs that rival the lilies of the valley, so that woman, arrayed in one of these fabrics, would cast into despairing envy a queen arrayed in Tyrian purple.

So vast was the cotton industry in its proportions until a few years ago it was estimated that fully 100,000,000 people over the world lived off cotton alone in its various ramifications, and the total value of manufactured cotton goods reached the staggering sum of six and a half thousand million dollars annually. The sorrowful fact in connection with this great industry is that the producers have not reaped a fair share of the profits arising from the great commerce which they have been instrumental in creating. Their cotton-growers' cooperative associations have gone a long way to remedy this evil, and the bow of achievement that spans this apartment looms large in the heavens in the future for the long-overburdened producers.

But I do not stop here to discuss and feret out the question of equalizing the benefits of industrial consolidation. Neither do I need to enter into a discussion to refute the oft-expressed opinion held by many southern people who contend that the boll weevil is "a blessing in disguise." I merely point them to the thousands and millions of impoverished southern homes as a crushing refutation of this violent and ignoble opinion. Low yield means high cost of production. My own State, Georgia, for instance, in 1911, the last year before his entrance into Georgia, with five and a half millions of acres planted to cotton, gathered 2,700,000 bales, while in 1923, with practically the same acreage planted, harvested only 600,000 bales of cotton—less than one-fourth of the yield in 1911, yet at practically the same costs of production. There is no "blessing in disguise" in figures like these. The depredations of the boll weevil in 1938 here in the Southeast were as severe as they have ever been since his advent into the Cotton Belt in 1892, and with the acreage cut down from 40,000,000 to 27,000,000 acres added to the ravages of the boll weevil has left the people of the South in bankruptcy and starvation. The funeral dirge has been pronounced and nothing remains but the interment of King Cotton's producers into the cemetery of the dead, unless the National Congress changes the administrative measures and comes quickly to the rescue in both the eradication of the boll-weevil pest and the curtailment of production in keeping with the consumption of cotton.

The great interest manifested in boll-weevil control brought forward a multitude of preparations and machines in almost every region infested with boll weevils. Many farmers have been exploited, and many useless devices have been sold to them in every section in which the boll weevil first made his appearance, and the direct losses sustained by the boll weevil have been increased by the expense of buying nostrums of various kinds, most of which have been cast aside as worthless, because not based upon scientific tests.

Heretofore we have talked much of boll-weevil control through the agencies of State and Federal Governments. These methods of control have been based upon extensive study and much field experimentation. They represent all that is known about combating this all-important enemy of the cotton plant. They form a system composed of several parts, but the grower cannot insure success, though combining all of these different parts. These agencies summarize by saying, "with restricted acreage, good seed bred for fast growing, high fertilization and poison used properly, cotton could hold its own as a money crop in the South." But all of these methods are inadequate and ineffective to bring about boll-weevil control or add one penny to the pockets of the cotton producers of the South.

The boll-weevil problem is not an individual problem. It is a social problem and must be solved as such. In thousands of instances the individual grower is too poor to apply the remedies that are the most effective in an attempt to constantly rid the fields of this enormous pest. There is nothing compulsory on the part of any farmer requiring him to join with his neighbor to effect boll-weevil control. One planter will make a huge effort to rid his fields of this pest while his indolent neighbor just across the fence will do absolutely nothing to rid his fields. Thus the efforts of the industrious farmer are destroyed by his neighbor who raises enough boll weevils to destroy a whole community of cotton. One farmer may be ever so anxious and willing to do his part in an effort to bring about boll-weevil control, but he has no cooperation of a sufficient number of his neighbors in the industry to make a dent in the line of march of this pesky pest.

Conscious of the tremendous depredations caused by the boll weevil during past years, and confident that some plan should be devised for the complete eradication of the evil, I offer this solution. In doing so may I presume that there is not a child in the public schools of the South but who could give an accurate description and history of an adult boll weevil, for it is in this stage of his existence that the boll weevil reaches his winter quarters after a summer's busy life of propagation and devastation.

From winter quarters the boll weevil emerges in the spring, and throughout the fruiting season of the cotton plant the eggs of the female are deposited in the cavities formed by eating into the fruit of the cotton plant. An egg thus deposited hatches in 3 days, when it begins immediately to feed upon the fruit in which the egg has been deposited. In 7 days the larva or grub develops into the pupa stage, where it remains from 3 to 5 days, when the adult boll weevil appears and begins a life of reproduction of a generation of new offspring. We know by experimental tests that an adult boll weevil is produced in 15 to 20 days.

The age to which this adult boll weevil attains varies according to conditions. During the winter months, during which the boll weevil is in hibernation, its longevity is much longer than in the summer months. During the hot days of the summer the boll weevil does not live longer than 50 days, but during the cooler seasons of the year many of them live as long as 6 months. The longest-lived boll weevil on record lived from the 10th of November to the following October, a period of time less than 11 months.

Scientific research has shown also that a boll weevil can subsist and propagate on no plant other than the cotton plant. It has proven that this plant is absolutely essential to the development of an adult boll weevil. There is no other plant known to science that affords just the conditions whereby an adult boll weevil can be developed under any circumstances.

Accepting both of these truths at their full face value—that the life of a boll weevil is in no instance longer than a single year, and that he can propagate in no plant other than the cotton plant, it is easy to arrive at no other conclusion, to wit, that the best method for boll weevil control is the creating of a cessation period from production for a period of 1 year over a noncotton zone covering the entire cotton-growing States. This method will absolutely guarantee the extermination of the boll weevil pests. By the cessation period from production we destroy the source of the boll weevil's life by taking away from him the only plant upon which he can subsist and propagate.

The best method to secure this cessation period from production is through the agency of the Federal Government. Let the National Congress pass a law empowering the Secretary of Agriculture to adopt the cessation period from production over a noncotton zone covering the cotton-growing States. This would rid the cotton fields of the South of this awful pest as well as all others, and at the same time and through a continuation of the cessation period from production at specified intervals or at irregular intervals, keep the production of cotton within the bounds of consumption.

"If the cotton grower is to be saved as a farmer, cotton must be saved as a commodity. Up until now, acreage restrictions, market quotas, Government loans, and the payments on benefits to farmers have all been directed toward the farmers' immediate welfare, while the welfare of cotton as an object of commerce and a commodity of consumption has been left to shift for itself," says Dr. Claudius T. Murchison, president of the Cotton Textile Institute, "and now faces the prospect of virtual extinction unless there is an early change in Government policy."

May I conclude with the confident hope that we can all join in the formation of this broad plan in a solution of the cotton problem for the ultimate restoration of our dear old Southland to that high state of productivity that characterized it when it was the seat of a civilization and an aristocracy of wealth that is one of the immortal traditions of the old ante bellum South.

Uncle Sam Should Get Out of the Rum Business

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1939

Mr. LUDLOW. Mr. Speaker, in recent years of unprecedented governmental expansion, with new and unpredictable activities springing into existence overnight like mushrooms, the Federal Government has injected itself amazingly into fields of competition with private industry which it should never have entered. I have in mind particularly one governmental venture which, in my opinion, is indefensible, either from the standpoint of sound morals or sound governmental policy, and that is the Government's rum activity.

The extraordinary conditions existing in our country in recent years have necessitated new policies and new machinery of Government to cope with dire emergencies, but I believe thinking people everywhere will agree that nothing has occurred, or ever will occur, to justify the Government's foray into the rum business. Surely that is one business the Government should stay out of. There are two convincing reasons why it is wrong.

First. It is contrary to good morals.

Second. It is a wrongful policy because it puts the Government in direct competition with legalized, privately owned distilleries.

I am especially concerned with the first reason, although I do not believe that the Government has any right to finance enterprises that compete with legitimate private business and the repeal of the eighteenth amendment made distilling a legitimate business.

I have introduced a resolution to take the Government out of the liquor manufacturing field which I wish to bring to the attention of the House and the country. It is known as House Joint Resolution 4, of the Seventy-sixth Congress, and it reads as follows:

Joint resolution prohibiting the manufacture and sale of rum by any activity financed by funds from the United States Treasury

Resolved, etc., That the manufacture and sale of rum by the Virgin Islands Co., or by any other activity that is financed in whole or in part by funds from the United States Treasury, is hereby prohibited.

It is a duplicate of a resolution I introduced in the Seventy-fifth Congress.

The Government's rum operation is under the control of the Virgin Islands Co., which received a P. W. A. grant of $2,000,000 as a capital fund with which to buy cane-producing land in the Virgin Islands and to rebuild and recondition sugar mills and the distillery.

Two additional grants, one for $200,000 in July 1934 and one for $170,000 in July 1936, and a loan for $150,000 in July 1934, have furnished a capital fund of $520,000 from the United States Treasury to carry on the operations of the company.

I do not know the exact size of the liquor flood—90 proof—which the United States Government-promoted distillery has turned loose on the people of the United States during the years since the Government undertook the financing of the enterprise, but I do know that it has been prodigious and that this tide of high-powered rum has overrun 36 States and the District of Columbia.

Under the head of "Rum Sold," the annual report of the Virgin Islands Co. to the Secretary of the Interior for the year ended June 30, 1938, submitted the following information:

	Cases
Government House Gold Label in bottles	19,751
Government House White Label in bottles	7,479
Government House Gold Label in bulk (5,256 gallons which is the equivalent of 2,190 cases)	2,190
Total	29,420
	Gallons
Proof gallons of rum manufactured	88,265
Proof gallons of rum on hand, June 30, 1938	478,554
Special distillate manufactured	26,619
Special distillate sold for Angostura Bitters	17,280

This report covers only 1 year, and I have not been able to get the statistics of production for the entire period of operation. A New York liquor house has a monopoly of distributing the rum to the trade throughout the United States under a perfectly systemized plan. It is sold under the name of Government House Rum in bottles with highly colored ornate labels, which tempt the purchaser with suggested recipes for mixed drinks, using this product. Over the rum factory at St. Croix floats the Stars and Stripes, and a member of the Cabinet at Washington is chairman of the board.

I know that the purpose of those who originated this enterprise was to improve the distressing economic conditions prevailing in the Virgin Islands, and I cannot find it in my heart to criticize them too severely, though I disagree with them.

At most, it is a strange and ill-starred experiment, which should not be permitted to continue under the American flag. The moral sense of America ought to arise and demand that it be terminated. It places our Government before the boys and girls of the Nation as sanctioning the use of rum, and that should not be. As I said in the House last year, if one poor inebriate, crazed by Government House rum, should seize an ax and brain his children, it would take all of the success out of this experiment.

For Boys and Girls

EXTENSION OF REMARKS
OF
HON. WILLIAM L. NELSON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1939

Mr. NELSON. Mr. Speaker, Missouri, with three recreational demonstration areas, is one of 22 States anxious that funds be provided for continuance of this work, which has meant so much to thousands, principally boys and girls, including the underprivileged from the large cities. Among the many who have written me in support of this work is Gov. Lloyd C. Stark, of Missouri.

The three Missouri recreational areas are Lake Ozarks, Miller, and Camden Counties, 15,983 acres; Cuivre River, Lincoln County, 5,751 acres; and Montserrat, Johnson County, 3,444 acres.

On the shores of the beautiful Lake of the Ozarks, with its 1,400 miles of shore line, additional camp grounds, with modern facilities for health and pleasure, have been provided under Federal direction. To these camps come each year Boy Scouts, Camp Fire Girls, and those belonging to similar organizations. In addition, arrangements are made whereby groups of children, mainly from homes of limited means in the large cities, are afforded brief vacations. In some instances, entire families come together. The fathers and mothers, who, otherwise, would have no opportunities to get out for a little while and enjoy nature, come with the children and pay their way by doing some work at the camp.

In the Lake of the Ozarks area, with which I am most familiar, as this lies entirely within the district which I have the privilege to represent, there is, in addition to the camps made available for organizations, an area open to the public generally, where the individual family may come and camp. All activities are under careful supervision and strict rules for health and safety, and law and order are enforced.

Everywhere complete organized camping and day-use developments on the projects are receiving most intensive public use. Bathing beaches and picnic areas were used by approximately 1,000,000 people in a single year. Both types of use of these areas can be reasonably expected to increase greatly during the coming year as developments now under construction are completed and as facilities available become better known to the public in the large centers of population near which most of the projects are located.

States other than Missouri having recreational areas are Alabama, Georgia 3, Kentucky, Maine, Maryland, New Hampshire, North Carolina, Pennsylvania 5, Rhode Island, South Carolina 8, Tennessee 3, Virginia 8, Illinois, Indiana 2, Michigan 2, Minnesota, North Dakota 2, South Dakota, Oklahoma, California, and Oregon, a total of 400,000 acres.

Although the Federal Government has spent large sums in developing these recreational areas in more than 20 States, no appropriation to make them further available to those for whose pleasure and benefit they were created has been provided for 1940. The National Park Service, I understand, has prepared an estimate, showing that $249,000 will be sufficient. Surely it seems that it would be a serious mistake, now that these health and recreational centers have been provided, to see that they are no longer open to the public.

Just here it might be stated that, in accordance with Executive Order No. 7496, dated November 14, 1936, the Secretary of the Interior, through the National Park Service, was authorized by the President to complete and administer the recreational demonstration projects.

The National Park Service has no regular funds for administration, operation, and protection. They have used funds made available through the emergency-relief acts. They have no assurance of any additional funds after July 1, nor have they any legal authority to dispose of the areas. Consequently they must have either regular appropriation or provision must be made in the 1939 proposed emergency-relief appropriation act to allow funds for the National Park Service not only for development but for administration, operation, and protection.

I cannot understand why no appropriation has been approved to maintain and operate these recreational centers. Rather do I prefer to think of them as health centers—health of mind, body, and heart. The America of tomorrow will be what the boys and girls of today make it. If these young people are given an opportunity to know nature, to enjoy the beauty of hill and stream, to get out of the crowded cities, even for a little while, to live among flowers and birds and growing things, it will mean for America a better tomorrow.

While putting hundreds of millions of dollars into war material, surely we can afford to spend a fraction of this to brighten and better the lives of our young people. City congestion leads to civic indigestion. As our great cities pile up in population, the problem of what to do with our young people takes on added importance. It is disease, not health, that is contagious. Surely, then, this Congress should not fail to provide funds as needed for the operation and care of recreational areas already established.

Pros and Cons on Exportation of Peeler Logs

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1939

LETTER FROM MACKIE & LEWIS, OF SEATTLE, WASH., AND REPLY THERETO

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a letter from the firm of Mackie & Lewis, of Seattle, Wash., addressed to myself, and my reply thereto. These letters discuss a matter of tremendous importance to the people of the Pacific Northwest in particular and to the citizens of the entire Nation in general. I have introduced a bill, known as H. R. 3579, providing for the limitation of the export of what we denominate as old-growth Douglas fir peeler logs. Just now the State of Washington is very much excited about the pendency of this measure because of the opportunity its passage would provide, not only for conservation of a God-given resource but likewise for added employment to our skilled workers. But let the letters speak for themselves. Here they are:

MACKIE & LEWIS,
Seattle, March 1, 1939.

Hon. JOHN M. COFFEE,
House Office Building, Washington, D. C.

DEAR SIR: In connection with the pending bill, Senate bill No. 1108, regarding which we wrote you yesterday, and the House Resolution No. 3579, which you introduced in connection therewith:

There are certain results that would develop in your district from the passage of this bill that may not have been called to your attention. Tacoma, which is in your district, is the center for the exporting of logs from the Puget Sound area, and more logs are shipped from there than from all of the other sound ports combined. There are at least five different booms maintained in Tacoma for this purpose, all of them employing union boom men; the towing both into Tacoma and to the ships is done by union towboat men, largely by Tacoma firms; the longshoremen employed in handling these logs are all Tacoma men and members of the union there; some of the loggers who produce these logs in the woods are in your district. All of these men would be thrown out of employment, as far as this business is concerned, and would suffer loss of income accordingly.

Presumably there should be some gain to offset this loss, but this is not possible.

The 1938 Review of the United States Foreign Trade in Logs, Lumber, and Allied Products shows that Douglas fir log exports have been decreasing for the past 4 years and in 1938 totaled 67,062

M. B. M. only, of which 30,529 M. B. M. went to Canada, 28,736 M. B. M. went to China, 5,028 M. B. M. to Japan, 55 M. B. M. to Australia, and 3,213 M. B. M. to all other countries.

From Canada we imported 104,437,000 feet board measure of fir, spruce, and hemlock logs in the same period. China takes only small, common logs to be used in rebuilding their country, Japan imports most of her logs from the Philippines, and this leaves 3,213,000 feet board measure, which are not all peeler logs. Our total exports are about 1 percent of our total log production and some part of one-twentieth of this may be peeler logs.

When we say that it is not possible for anything to replace this, we are speaking advisedly. To our knowledge the export log business which we previously enjoyed with Japan has been lost to the Philippine Islands, where they can purchase many fine timbers at prices, delivered in Japan, cheaper than our Douglas fir, with the result that last year our total exports to Japan were 5,028,000 feet board measure of Douglas fir. Also to our knowledge, British Columbia ships far greater quantities of Douglas fir logs, peeler and otherwise, than does the United States of America. Also, to our knowledge, Africa ships logs to the European factories of a type satisfactory to compete with Douglas fir.

Should this bill become a law, these countries could supply the entire demand of the factories that would be affected, in fact, we are advised that this demand could be supplied without British Columbia or the Pacific Northwest, so that the competition would be the same as at the present time and the net result, as far as the United States of America is concerned, would be nothing.

Very truly yours.

P. D. MACKIE.

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 11, 1939.

Mr. P. D. MACKIE,
Mackie & Lewis, American Bank Building,
Seattle, Wash.

DEAR MR. MACKIE: I have your letter of March 1 in which you comment on the peeler log bill (H. R. 3579). I shall endeavor to answer the points raised in your letter in the order you mention them.

The log-export trade unquestionably gives employment to a number of boom men, but the extra work involved in transporting the logs from boom to ship's side is a very small item and is far outweighed by the increased employment given to labor in this district if the high-grade logs now exported were processed in our own conversion plants. You have observed that the bill specifically excludes logs not suitable for peeler purposes; and according to your own statement, the percentage of such logs is deemed by you to be very inconsequential. Therefore the argument that it would benefit labor to export logs suitable for peeling purposes is hardly resting on a substantial basis.

You seem to overlook the growing scarcity of high-quality timber which has been so acute in this part of the State that a large organization owned by workers have found it necessary to move their plant from Puget Sound to Oregon in order to cope with this log situation. I am also informed that the increasing demand from foreign countries for high-grade Douglas fir logs has seriously upset the plywood industry in particular. There are innumerable instances where Japanese, German, and other foreign interests have offered a premium on high-grade logs for which our own mills are paying as high as $35 per thousand. You also know that the logging companies are not complaining that the plywood industry is not paying what the logs are worth and that in comparison pulp logs are selling at $8.50 to $10 per thousand, which is considerably below the cost of production.

If you will consider the high-grade timber supply on this basis—that it is a resource which can never be replaced—I am sure that you will admit that from a national point of view, as well as from that of business and labor, it is shortsighted, to say the least, to have timber owners cut this supply at a faster rate than is demanded by our own mill requirements.

The plywood industry has grown from 200,000,000 feet in 1932 to about 650,000,000 feet in 1938, and all indications are that this industry will expand in the future if the raw material supply permits. Therefore, to export a single log of high-grade Douglas fir timber is indefensible from any point of view, except from the point of view of the person directly engaged in this trade. Labor can certainly not be tempted by an immediate gain of $2 per ton in wages for logs exported when it is a well-known fact that we have a well-developed industry needing these logs, and in a position to add $25 per ton in labor in conversion charges.

While you did not mention it, I have at times been told by logging interests that the plywood industry is seizing upon this opportunity of depressing the log market. I am sure as a practical operator, you have no such idea, since it is a well-known fact that several of the large logging companies, both on Puget Sound and in Oregon, are ready to start their own plywood plants should this happen. We may, therefore, dismiss this possibility of concerted action to depress log prices through the passing of this bill.

You do not seem to know that our plywood exports from the Northwest have dropped from 68,000,000 feet in 1933 to 18,000,000 feet in 1938, and that the largest single contributing cause has been the production of Douglas fir plywood in foreign countries, coupled with high tariffs and even import bans levied against the American product. Since we have been the sole country in the world having a highly developed wood conversion industry and willing to furnish the raw material for export without restrictions, we have naturally lost our foreign markets. I am reliably informed that a considerable portion of this lost plywood export trade will automatically be recuperated the moment our logs are not available to the foreign plants. This, of course, will mean increased employment for our labor, now laid off as a direct result of this log export trade.

You mention the 1938 statistics, showing the exports of Douglas fir logs, but you are not correct in your statement that during the last 4 years our Douglas fir log exports have declined. Quoting from the Department of Commerce statistics, I find that in 1932 the total exports of fir logs was 9,870,000 feet, which increased rapidly until they reached 131,995,000 feet in 1936. In 1937 they dropped to 78,999,000 feet, and in 1938 to 67,062,000 feet. The reason for this drop during the last 2 years has been a decrease in the purchases from Japan and China, which is a natural consequence of the war. Japanese purchases of logs in 1936 amounted to 74,584,000 feet, but dropped in 1937 to 22,877,000 feet, and in 1938 to 5,028,000 feet.

It may interest you to know that Japanese companies, with reported Government support, are operating their own logging camps on Vancouver Island and that these Japanese interests have approached American plywood mills in regard to the sale of peeler logs since, on account of the financial conditions in Japan, the Japanese mills were unable to take their own logs. In view of the extremely limited quality of peeler logs available in British Columbia, this action on the part of the Japanese clearly shows how hard-pressed their own industries are for the moment.

You do not seem to have the correct slant on the uses to which fir logs are put in China. Both in China and in Japan there are important plywood factories using Douglas fir as raw material and exporting their products to the markets of the world. The logs which you say are used for the rebuilding of China are, to a large extent, moving into Shanghai, in which district a number of plywood factories are maintained, using this type of material. Whether the logs are to be used for manufacture into lumber or into plywood in China is immaterial as far as our national interests are concerned. We have lost a market for our manufactured wood products, and American labor and American industry is suffering accordingly. You do not mention that the imports into China and Kwantung have increased appreciably in 1938 over 1937 and that in the case of China alone, the exports of fir logs to that country showed 13,434,000 feet in 1937 and 28,736,000 feet in 1938. Unquestionably, a number of medium- and low-grade logs are shipped to China, but you will also notice that the bill only covers logs suitable for plywood manufacture and that all other logs and all other species than fir and Port Orford cedar may be freely exported. Your statement that only one-twentieth of 1 percent of our total log production is represented by Douglas fir peeler logs for export is unsubstantiated and is not in accordance with facts as developed by an analysis of foreign plywood manufacturing conditions. The misunderstanding on your part may possibly rest upon the misconception of the term "peeler log," which in this bill is specifically defined as a log of Douglas fir 24 inches and over at either end and suitable for peeling purposes. In other words, consideration has been given to the ultimate use of the logs in the foreign country rather than to the classification of logs for domestic purposes.

In regard to the Japanese imports of peeler logs you undoubtedly know that war has brought about important changes in the Japanese industry and that it would be a fallacy to base our future calculations on what has taken place during the past 2 years in that country. Once normal conditions are restored in Japan, the Japanese will again make their demands on our timber industry for raw material just as they did before the present hostilities.

You mention the exports of peeler logs from British Columbia, but you entirely overlook the fact that our exports to British Columbia of high-grade Douglas fir logs have increased from 4,041,000 feet in 1935 to 13,523,000 feet in 1936 and 31,522,000 feet in 1937, and dropping only to 30,529,000 feet in 1938—this in spite of the world-wide depressed conditions last year. I am sure you fully realize that these logs shipped to Canada are nearly all high-grade fir logs, since by your own admission you state that Canada is furnishing larger quantities of fir logs for export than does the United States. You also know that the Canadian fir timber is different in character from that available in Washington and Oregon, that it is smaller in size, is more knotty, and that as a consequence the percentage of peeler timber is very limited. The exportation from British Columbia of peeler logs is, to a large extent, a reexport of American supplies, especially in the case of Germany.

You mention the supply of African logs and the shipment to European countries where these logs compete with Douglas fir. I noticed your article in the Seattle Times a short time ago and the answer correcting your misinformation. You presumably refer to Okume logs of African origin, more familiarly known as Gaboon mahogany. This wood, as is well known to anyone in the trade, is a cabinet wood, and it does not in the least compete with Douglas fir either in the form of logs or in plywood. As a matter of fact, Okume plywood made in the European countries under a low scale of wages costs 50, 75, and even 100 percent more than imported American Douglas fir plywood of the same sizes and grades. This African supply is nothing new. The logs have been on the European market one or two generations, and the supply is tightening up and the prices are constantly increasing. It is regrettable that you should have made this statement, since it has misled some people unfamiliar with the facts and assuming that you had reference to comparable softwood timber.

You are likely unfamiliar with the fact that every country in the world possessing high-grade softwood timber is diligently conserving these timber resources and is drawing on us for its supplies in order to conserve its own. Do you not think that one should take a broader point of view in these matters and have in mind that without these high-grade Douglas fir timber resources the economic position of the Northwest would be in jeopardy? I shall not discuss the question of conservation with you since your letter indicates that you are more interested in the log export trade. However, our people have finally come to the realization that the Pacific coast has the last stand of virgin timber and the time has now come to reserve those supplies for our own use. To take any other viewpoint would be working contrary to public interests, and I am in favor of this bill even if it means a slight shift of labor from the log boom to the wood conversion plants.

You mention the importation of fir, spruce, and hemlock logs from Canada. This is an entirely different question, since it concerns logs beyond the scope of the bill under consideration. You undoubtedly know that the Northwest can develop its industries on the basis of its own raw material supply and that the bulk of the importations from Canada is made up of low-grade or very cheap logs, which I am told has a depressing effect on the log market in the United States and on labor employment conditions. I am purposely not touching on this matter any further because the conservation of our high-grade Douglas fir timber is of paramount importance.

Very cordially yours,

JOHN M. COFFEE, M. C.

Envoys of Good Will in the East

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1939

ARTICLE BY MR. PORFIRIO U. SEVILLA, LL.B., PUBLISHER-TREASURER OF THE PHILIPPINE-AMERICAN ADVOCATE

Mr. CARTWRIGHT. Mr. Speaker, I ask unanimous consent to have printed in the RECORD the article Envoys of Good Will in the East, published in the March 1939 issue of the Philippine-American Advocate. The article is interesting and informative. I am glad to place this in the RECORD, by request.

[From the Philippine-American Advocate]

ENVOYS OF GOOD WILL IN THE EAST—THE AMERICAN WAY

Notwithstanding the fact that the Philippine question is of such great interest and that it will be difficult to settle tariffs and trade agreements until committees iron things out, we should not overlook the fact that, no matter what the outcome will be, the United States should have an official High Resident Commissioner in the Philippine Islands, for daily we are seeing new instances of the growing importance of these islands.

As the commercial gateway to the entire Orient, the Philippines are fast assuming international importance both economically and politically. It is necessary as a political representation and gesture of good will, that the United States have as its representative one who has more than the necessary background and connections.

The representative decidedly should have lived and traveled extensively in the east, for in no other way is it possible to understand the outlook and attitude of the peoples in the Orient and Near East.

As we check the list of possible candidates for this post, we find only one who is ideally suited and fills all the main requirements to perfection. For the past several years, this man and his wife have traveled widely and lived in practically every country in the Orient. Painstaking study and careful observation during these years of travel, have given their well-trained minds a broader outlook and richer understanding of the peoples of the east.

In their travels in the Far and Near East this man and his wife have brought to those many countries a better understanding of Americanism and good will than 100 trade agreements. He is the type we must have in the Philippines to represent the United States. We refer to James H. Cromwell and his thoroughly American wife, Doris Duke Cromwell.

The Cromwells are now living in the Hawaiian Islands, the crossroads to the Orient. Although American, the Hawaiian Islands have the feel of the Orient and many of its ways. The democratic and tactful Cromwells have won the complete admiration of everyone. This is a remarkable accomplishment when we realize that many people live there for years and, regardless of their influence, are never accepted. So unassuming is James H. Cromwell, few realize that, in addition to a fine character and great personal charm, he has a tact for diplomatic and political understanding that is really uncanny (and would do credit to some of our ablest officials).

Never have either of the Cromwells abused or taken advantage of the power and wealth at their command. Doris Duke Cromwell is a splendid example of true American womanhood—this American Psyche has kept both her character and personal life free from all unsavory front-page sensationalism.

While other American heiresses cavorted with everything, from gangsters to questionable titles from mythical countries, buying the titles and then their freedom, and at times creating such scandals by their actions in certain foreign countries that they were asked to leave the country, Doris Duke Cromwell was studiously preparing and training for a life of usefulness and accomplishments. Her marriage to prominent but equally conservative James H. Cromwell has proven ideal. Their interests are alike—to be useful to humanity, to serve mankind and their country, and to always be true Americans. We need the Cromwells for this position.

President Roosevelt has shown that he knows ability when he sees it. He has led the way by appointing Miss Ruth Bryan, daughter of William Jennings Bryan, thrice Presidential candidate of the Democratic Party, as Ambassadress to Denmark. Daily we read that women in politics are proving themselves to be capable and understanding, and fighters when necessary.

Many women now hold important political positions in American politics. We feel Doris Duke Cromwell would be perfectly suited for the position of High Resident Commissioner to the Philippines, if a woman can be chosen, and why not? And let it be understood that if a Cromwell is appointed and given plenipotentiary authority, it will be administered with tact and understanding toward the natural feeling of the people in the Philippines.

In choosing Government representatives to go to other countries, it is of the utmost importance the choice be of one who has kept personal dignity and character above criticism and reproach, for we can be certain such an individual will never fail in his duty to his country. Both James H. Cromwell and Doris Duke Cromwell have proven themselves acceptable and capable by their natural inbred dignity and understanding. To appoint James H. Cromwell to the commissionership, would bring not only the ability and prestige necessary to the office, but with it, the intuition and clear understanding of his brilliant wife. Today, as in the past, many threatening political situations are warded off by a woman's intuition. Let us not forget that, when given the chance, women in Government service have proven themselves equal to men.

James H. Cromwell has in his blood the frontier spirit of the American man, a spirit that enables the American to stand and fight for honor, righteousness, and country even though alone and at the farthest end of the earth. This American spirit in James H. Cromwell would unquestionably give a bulwark of prestige and dignified power to the office of the commissionership.

The United States has never been reluctant to give any man a chance to hold public office, and it is common knowledge that many a high official continues to hold power and office because of the wise counsel he receives from his wife.

Doris Duke Cromwell, in her travels in the Far East, has been received by the most powerful potentates in the Orient. Although these men have traveled throughout the world, it was only when Doris Duke Cromwell was a guest that these international cosmopolitans were able to, for the first time, realize the grace, charm, and dignity of this brilliant American woman.

The United States should take every advantage possible of the splendid impression created by the Cromwells in their Far East good-will tour. There is no doubt whatsoever this intimate personal contact with the East, combined with true American spirit and clear understanding, would be invaluable to problems requiring an understanding of how to bring the American methods and the Filipino methods to an amiable working plan.

It would be almost unpardonable if advantage were not taken of this unusual opportunity to appoint either James H. Cromwell or his wife, Doris Duke Cromwell, as High Commissioner in the Philippines.

No one can dispute the fact that each is splendidly equipped and thoroughly able to maintain the dignity and uphold the prestige of the United States in the Islands.

PHILIPPINE POST A BUILDER OF AMERICAN POLITICAL LEADERSHIP

This suggestion, to appoint either of the Cromwells as Resident Commissioner to the Philippines, might bring forth some criticism. But before these critics speak, let them weigh the matter very carefully, and they will see that today's conditions in the Islands are very different from the time when the United States first took over the job as protector.

In the beginning of the American administration, we had from military to governors general, such distinguished Americans as Gen. Douglas MacArthur and William Howard Taft.

We have, for example, the life of William Howard Taft, the first Governor General of the Philippines. After serving his term as Governor General, Taft was appointed Secretary of War, then elected as President of the United States. Afterward he became Chief Justice of the Supreme Court of the United States. Who

was Mr. Taft before his appointment as Governor General of the Philippines? He was just a practicing attorney.

Then we have Governor General Henry L. Stimson. After he became Governor General of the Philippines it is a matter of public knowledge that he was recalled by former President Herbert Hoover to head the Cabinet as Secretary of State. Prior to the appointment of Mr. Stimson as Governor General, he was credited as being one of the most distinguished international and corporation lawyers in New York City.

Then we have the latest successor to American Governors General in the Philippines, in the person of Attorney General Murphy, an illustrious American. Attorney General Murphy, before his appointment as Governor General of the Philippines, was only a city mayor, of Detroit, Mich. We believe that everyone will agree with us that prior to the ascendancy of Murphy as American representative, no one had heard much of him, except after he served the term as Governor General of the Philippines.

In 1936, Attorney General Murphy was recalled by the chief of his party, Franklin D. Roosevelt, to carry the banner of democracy in the State of Michigan. He succeeded and was elected Governor of the State of Michigan. After his defeat for reelection, he was appointed to his present post of Attorney General to head the Department of Justice.

The Filipinos are often oriental in their ways; Murphy had no training that would enable him to understand this difference in ideas, yet he fulfilled the position up to expectations. But, at that time, the Philippines were not going to be given their freedom in a few years. Now the picture is vastly changed—they will be independent shortly—more certain and positive in all affairs. Things will have to be seen more through their outlook; their attitudes will be more definitely pronounced; they will stand firmly on any position affecting them; they will be unshaken in many beliefs foreign to the American people; they will refuse to be browbeaten in any manner or form.

The strength of feeling that comes with new-found independence brings forth unbendable defiance. They will be entitled to and demand attention as a nation. Interference and disregard will be fatal to friendly understanding. Thinly veiled coercion of any sort will be characterized as a cause for breaking off negotiations. They will not be on the defensive, but will be proud and conduct themselves as an independent country and will weigh matters more precisely.

The general and complex disposition of the Filipinos will require tactful handling. The United States representative must have great self-command and equanimity but remain sensitive and understanding of the rights of others.

The United States cannot appoint to this vital position a man who is inclined to be imperiously confident that he is always right. Many foreign countries will be competing against the United States for advantageous agreements with this nation of 16,000,000 people. The American people must never forget that for a second. The United States must not only keep but try to better this advantageous position it now holds in the Philippines.

SUCCESS TO THE CROMWELLS

It is suggested that James H. Cromwell, because of his exceptional ability, be given the position of Commissioner in the Philippines. But, if it is felt that Doris Duke Cromwell, because she is such a brilliant woman, would give a new tenor to this position, she should be appointed. In either instance, one of these two should definitely be appointed to the office because then there would be two brains working toward one goal—a better and more complete understanding of affairs between the Filipino people and the American.

We cannot overstress the fact that at this time national affairs move so quickly those in Government office must have training and understanding in order to avert strained diplomatic relations. The East is always the East, although it is fast becoming accustomed to American ways of thinking and acting. Nevertheless, at times, situations arise between eastern and western interpretations which require extreme tact and complete understanding of racial differences.

The wide personal contact the Cromwells have had with peoples in the near Orient would undoubtedly guide them to a brilliant, successful, and peaceful solution in any strained and tense disagreement or problem.

Mr. James H. Cromwell has been interested in politics for some time and his political activities as a nonprofessional politician have given him great training and understanding of political problems. He is very highly thought of in political circles, and his energetic ability and high-minded character is representative of the type of men that we definitely need to represent the United States as Commissioner to the Philippines.

The Filipino people have confidence that the Cromwells as Commissioners would make for a clearer interpretation of Philippine ideas and feelings on any matter. Proof and evidence of American good will can only be shown in this matter by appointing a Commissioner capable of understanding the Oriental interpretation of Americanism. It would be a smart political maneuver for the United States to show its respect and understanding of the importance of the coming Philippine independence by appointing as Commissioner either of the Cromwells, as this would bring a closer and better understanding between the two countries.

A Tribute to the Memory of Hon. J. Burrwood Daly

EXTENSION OF REMARKS

OF

HON. CHARLES F. RISK

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1939

Mr. RISK. Mr. Speaker, on Sunday the Lord took from our midst our beloved friend and colleague, Hon. J. BURRWOOD DALY, of Pennsylvania. I am without adequate words to express my deep sorrow at the passing of this noble man. Judge DALY was one of the finest men that I have ever been privileged to know.

His great humanitarianism, his innate kindliness, and his respect for his fellow man was evidenced in his every activity, public or private. It was given to some of us to know him intimately and thereby have the opportunity to look within him and see a man of great heart, loyal and true to his friends, possessed of a fine sense of honor, and impelled by pure patriotism and a strong sense of duty to give of his time, his boundless talent, and unlimited energy in a fearless endeavor to render to this country of ours the highest possible service.

I first met Mr. DALY during the Seventy-fourth Congress, and out of that meeting there was born a friendship never to be severed but by death. Death has come to him and severed that friendship. I have lost my closest friend in this House.

But his gracious wife at home has lost a faithful and loving husband and his children a devoted and generous father who felt keenly and carried with head high his responsibilities to his family. The bench and bar of Pennsylvania has lost one of its outstanding lawyers. This House has lost one of its broadest and most whole-souled Members.

Mr. Speaker, Judge DALY was truly one of God's noblemen.

The Legion Counts 20 Years

EXTENSION OF REMARKS

OF

HON. ANDREW C. SCHIFFLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1939

ARTICLE BY SAMUEL T. WILLIAMSON

Mr. SCHIFFLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Samuel T. Williamson, published in the New York Times Magazine of March 12, 1939:

[From the New York Times Magazine of March 12, 1939]

THE LEGION COUNTS 20 YEARS

(By Samuel T. Williamson)

It makes no difference whether the landscape is rolling prairie, southwestern vastness, or chilly New England stone walls; everywhere in this country some things are the same. In every American settlement is at least one church, schoolhouse, town hall, chain store, filling station, and American Legion hall.

Among more than 4,000,000 still living who served in the United States Army or Navy (or Marine Corps) during the World War are slightly less than a million Legionnaires; and their posts are at almost every whistle stop. It wouldn't be Memorial Day, Fourth of July, or Armistice Day without them. Politicians of both parties court them, doctors of philosophy examine them as social phenomena, chambers of commerce display symptoms of coronary thrombosis at their bonus campaigns, and left-wing comrades strain both larynxes and adjectives in expression of

extreme distaste. The Legion is as American as tomato juice, chewing gum, drug-store sandwiches, and cigarettes in packages of 20.

It has grown up. It celebrates its twentieth birthday this week. The years have brought a change in the members who joined up in 1919 and the early nineteen-twenties. Then most of them were ramrod-backed youngsters. They were yet to get their first jobs, or else were wondering about getting their old ones back. Today, shoulders have slumped forward, waistlines show greater expansion than chests; what hair remains worth shearing is turning gray. Some members are still worrying about jobs. Their children are growing up, and new grandfathers are more usual than new fathers. Legion squads are called out with greater frequency to fire three volleys over freshly-dug graves, but another 50 years will pass before the Legion becomes a pathetic little remnant like the Grand Army of the Republic.

And it appears destined to have a different history from the G. A. R. The majority of Union veterans of the Civil War voted as they shot—the straight Republican ticket. G. A. R. and G. O. P. were inextricably entwined. No such propensity exists among the men who wear the Legion's blue overseas cap. The Legion has its own politics. Its State and National conventions are scarcely different from similar meetings of political parties—standards in the aisles, "demonstrations" for candidates, delegate hunts, and trades and logrollings. Many a party politician has graduated from Legion affairs to public office. World War veterans comprise more than one-quarter of the membership of the House of Representatives. A score are United States Senators. The Legion has produced politicians, but it has been free from party politics. Every attempt of a political party to capture the Legion has been blocked by Legionnaires.

It has been that way since the beginning. The Armistice found 2,000,000 American soldiers in France, an equal number executing "squads right" in the United States, and 1,000,000 who wore sailor suits and squirmed every night into Navy hammocks. In France everybody wanted to go home at once, but there was barbed wire to be rolled up, a Rhine bridgehead at Coblenz to be guarded. Technically the war was still on, for there was no telling whether the Germans would sign a peace.

The A. E. F. was as homesick as a boy on his first night at boarding school; and if it couldn't see the Statue of Liberty, it had heard a lot about Paris. Courts martial were busy trying case after case of absence without leave. Company clerks, if they weren't in that status themselves, marked "A. W. O. L." on thousands of service records. Officers and men were as touchy as though they had hives. John Pershing wouldn't have been sure of the soldier vote for dog catcher.

Persons who didn't sleep well of nights feared what would happen when the soldiers were demobilized, and the specter of "bolshevism" Suzie-Q'd over their blankets. They had heard of soldiers' and sailors' councils in other armies, and they wondered. As a matter of fact, although the A. E. F. was somewhat rough and forgetful of Sunday-school lessons, it was no more bolshevistic than Bishop Manning. It merely wanted to go home.

There was no denying that morale was considerably frayed and that further unraveling must be stopped. Mere general orders could not assuage a winter of discontent. The people at G. H. Q. took a leaf from civilian practice; they decided to call a conference. Twenty officers from 10 Infantry divisions and as many other units in the A. E. F. were summoned to Paris. They included Lieut. Cols. Bennett Champ Clark, Theodore Roosevelt, David M. Goodrich, Franklin D'Olier, Col. William J. (Wild Bill) Donovan, and Capt. Ogden L. Mills. All were former civilians of prominence who held National Guard or Reserve commissions, and 2 days were consumed in telling Regulars what was wrong with the Army and what should be done in the way of less restriction, more leaves and programs of athletics, entertainment, and study.

On February 15, the night before the officers were to return to their commands, Roosevelt invited them to dinner. Until little cups of what the French fondly believed was coffee were passed, the guests were occupied with the A. E. F.'s favorite conversational exercise; their own division had won the war single-handed. Roosevelt interrupted these historical liberties with announcement that he had something on his chest. Steps would be taken at once to lift Army morale, but what would happen when the soldiers returned to civilian life? He proposed a veterans' organization comprised of all—officers and men—who had served with the colors, at home or abroad, during the World War.

Although a few diners sought to attach their pet ideas to the project, the group agreed to put the whole question of a veterans' organization before a meeting to be held in Paris a month from then, a meeting of officers and men representing all elements of the A. E. F.

In the shadow of Eiffel Tower lay the gas house-shaped Cirque de Paris. There acrobats once allez-ooped and little white dogs walked on their hind legs and leaped through paper hoops, and there in the presence of the future King of the Belgians (who was chewing gum), Pvt. J. J. Tunney, United States Marine Corps, was soon to win the light-heavyweight championship of the A. E. F. Five hundred officers and a like number of enlisted men were expected there March 15, 16, and 17. The thousand delegates arrived in Paris, but a third of them never reached the hall. Pressure of other engagements.

The virtuous two-thirds chose Lieutenant Colonel CLARK (now United States Senator from Missouri) temporary chairman. Motion was made and carried that all matters of rank be waived during the caucus, and one bogy that the proposed veterans' organization would develop into an "officers' only" affair was definitely laid. Buck privates were entitled to the same voice as wearers of Sam Browne belts, and the men in hob-nailed hikers were not slow in expressing their minds. There were few reticences.

The committee on name failed lamentably to rise to the occasion. The best it could propose was "Legion of the Great War." Second choice was "Veterans of the Great War." Another high favorite was "Liberty League," and the committee's report was thrown to the wolves. Long after it was time for lunch, Maurice K. Gordon suggested "American Legion," which was adopted, amid cries of "When do we eat?"

The committee on constitution submitted a preamble beginning with a slight run of fancy: "We, the members of the military and naval service"—fancy because, with the exception of a few Marines, all delegates to the caucus were soldiers. But on the last day of the session a lone sailor poked his head through the door. He looked surprised, and "I thought there was a show going on here," and immediately was made representative of "the naval service."

Roosevelt returned with a group to the United States to lay the groundwork for a meeting in St. Louis which should be a duplicate of the Paris affair, while in France Col. Milton J. Foreman, of Illinois, found himself "the temporary head of an interim committee of a proposed organization."

Which was as it should be. Few great organizations were as free of self-seeking founders as the Legion. The group of 20 officers at the Roosevelt dinner in February had deferred to a caucus at the A. E. F. at which enlisted men would be represented. And now the A. E. F. veterans left results of their 3-day meeting to the verdict of the men at home.

Every State but one was represented by the 1,000 delegates who met in St. Louis on May 8. For 6 months the country had been "welcoming the heroes home" and now the heroes were a problem. For more than a year between 4,000,000 and 5,000,000 men had been taken out of productive work while others filled their places; now they wanted their old jobs back again. If they were united behind one leader, they could take things into their own hands. The St. Louis caucus gave the country its answer.

"The floor is open," said young Theodore Roosevelt, "for nomination for permanent chairman." The floor was of but one howling mind. It went crazy over "young Teddy." Then and there the American Legion might have committed suicide in willing to become a personal organization of a man who bore a magic name. Roosevelt was not without political ambition and the temptation must have been enormous. "He rose to meet it superbly," Marquis James chronicles in his history of the Legion, "and guided the Legion for the last time it needed one man's guidance."

He declined nomination. He was elected unanimously. He declined to serve, was renominated, declined again. That clinched it, and later the caucus made sure that the Legion never could become a one-man organization by stipulating that the national commander should serve for 1 year only and might not succeed himself.

The Legion's next answer was to those who feared that demobilized service men "were poisoned by radicalism." The caucus heard, then shouted down an earnest delegate from the soldiers and sailors council. The Legion had shown that it would not be an officers-only group; now it refused to have any truck with an outfit that sought other class distinctions.

Finally the caucus quieted down to the one-two-three-fours of a constitution. Again it declined outside assistance. One delegate brought from New York a proposed draft, written by the country's greatest constitutional lawyer, Elihu Root. It was masterly, but it left the veterans cold. A committee set to work upon a new draft. The committee emerged with a document containing a preamble that ranks with the most eloquent statements of American principles. No one hand produced it; the phrasing and thought came from 20 or 30 men, most of them young lawyers. But with that preamble the Legion went proudly to the country and to its comrades; and within 18 months it had 800,000 members.

Today, 20 years later, that preamble seems more than ever worthy of attention and adherence, for it reads:

"For God and country we associate ourselves together for the following purposes: To uphold and defend the Constitution of the United States of America; to maintain law and order; to foster and perpetuate a one hundred-percent Americanism; to preserve the memories and incidents of our association in the Great War; to inculcate a sense of individual obligation to the community, State, and Nation; to combat the autocracy of both the classes and the masses; to make right the master of might; to promote peace and good will on earth; to safeguard and transmit to posterity the principles of justice, freedom, and democracy; to consecrate and sanctify our comradeship by our devotion to mutual helpfulness."

The first matter to which the Legion, with rapidly growing membership, gave its attention was the plight of the ex-service man. The Federal Government's vocational training board was snarled in its own red tape. Likewise engulfed was the War Risk Insurance Bureau, with 300,000 unacted-upon cases before it. Congress was so bogged down that its leaders "deeply regretted" that legislation for care of the disabled must wait; but a Legion delegation boiled into Washington, with the result that within 2 days rules were suspended and the bill was passed setting up the Veterans' Bureau.

Folks on Capitol Hill soon discovered in the Legion's legislative committee a persuasive force. The committee's Washington representative, who is still John Thomas Taylor, reaches congressional ears with little difficulty, because legislators have found that his arguments are repeated in a flood of letters from their home districts. Contrasted with other lobbies, the Legion's Washington lobby is small. It knows what few pressure groups realize, that the voice of a home constituency is louder than all the noise of organized pilgrimages and marches on Washington.

For the first few months the young organization handled the bonus problem gingerly. Its first convention at Minneapolis declared veterans entitled to "an adjustment of compensation," which was referred "with confidence to the Congress" because the Legion "could not ask for legislation in its own selfish interests." But as the weeks of the next legislative session dragged on without action, the Legion lost its "confidence" in an unpersuaded Congress. It turned on the heat. Congressmen were toasted on both sides, and for 4 years the bonus ranked with prohibition as a subject impossible of discussion without loud words, bad names, and high blood pressures. After two Presidential vetoes, it was passed in the form of a 20-year endowment policy. Hard times brought demands, not officially sponsored by the Legion, for a 50-percent loan upon these policies in 1931, and by 1936 bonds were issued which veterans might cash for the remainder.

Legion insistence was behind successive appropriations for what is now the greatest Government hospital system in the world—$150,000,000 worth of veterans' hospitals. Only once was the Legion lobby set back on its heels; the 1933 Economy Act took away much of what the Legion had pressed for, but another year came by and Congress restored most of it over a Presidential veto. Thus far Legionnaries have not demanded pensions for all veterans; their present goal is annuities to widows and orphans.

A bad time would be in store for anyone who should say that Legion legislative influence had helped to make it possible for some veterans to get more from their Government than they gave to their country. In behalf of that influence it may be claimed that without the powerful voice of the Legion care for the disabled or rehabilitation of jobless veterans might have been mere pious promises.

The Legion has given as well as compelled aid. The part that it plays in community undertakings depends considerably upon the quality of its local leadership. It has not been found wanting in rising to emergency responsibilities; in many a disaster the Legion has raced with the Red Cross to be first at the scene. As an organization it has taken part in no labor wars or strike-breaking activities.

Few persons realize the social-welfare work undertaken by the veterans. Almost from the Legion's start it had a child-welfare program. Last year it had 30,000 volunteers at work among 320,000 needy children, and spent $4,000,000. More than 3,000 Boy Scout troops are Legion sponsored.

In fact, the Legion on parade and at play has been better known than the Legion at work. Its annual conventions capture a city like an invading army, but each year the horseplay tapers off. Maybe it's because the Legionnaires are now middle-aged. Maybe it's because they now take their wives and children with them; the Legion's women's auxiliary now numbers nearly a half million, and the 6-year-old organization, Sons of the American Legion, with a monthly publication, the Legion Heir, has a membership of 60,000. For the Legion is becoming a family affair.

In times of need and distress it can be counted upon to do more than its part. It does not hesitate to say what it wants. No love is lost between it and comrades of the left wing who call those who don't like them Fascists. But anyone who has ever seen an American Legion convention with its accompanying didos knows that Legionnaires would laugh themselves sick at the suggestion of wearing shirts all of the same color. They did once, and that's what's the matter with them.

The Importance of Hunters Point, San Francisco Bay, As an Essential Part of Our National Defense

---

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1939

Mr. WELCH. Mr. Speaker, the strategic value of San Francisco Bay has been emphasized by the highest naval and military authorities of our Government for a great many years, and more particularly during recent years.

The importance of the San Francisco Harbor and Hunters Point drydocks has been stressed by the War and Navy Departments on every occasion when legislation was under consideration before the Committee on Naval Affairs, Committee on Rivers and Harbors, and other congressional committees, and for reasons which I shall give, the Hunters Point drydocks should be purchased and maintained at their highest efficiency by the Navy.

For years the War Department, joined by the Navy Department, opposed any bridge across San Francisco Bay north of Hunters Point. The objection was based primarily on the desire to avoid any possible obstruction to navigation between the fleet anchorage including the Hunters Point drydocks, and the open sea.

In confirmation of the foregoing, I read the following from the hearings before the House Committee on Interstate and Foreign Commerce when it was considering a bill to authorize the construction of a transbay bridge from San Francisco to the Oakland side of the bay. This quotation is from a statement made by Admiral Charles F. Hughes, then Chief of Naval Operations:

The Navy Department has endeavored to weigh the real needs of the bay cities for a bridge against the requirements of the national defense and has always come to the conclusion that the construction of a bridge across San Francisco Bay, north of Hunters Point, would be such a detriment to the national defense that the Navy Department must oppose it.

The Navy Department is charged with the preparation of the fleet for war and would be derelict in its duty if it assented to any action on the part of any community that would curtail the mobility of the fleet or unduly restrict its readiness to meet any emergency. San Francisco Bay is, as you know, the principal harbor of the Pacific coast. To my mind, it belongs to the Nation; it is not the property of California nor of the cities that are on its shores. From its natural advantages and its location, San Francisco Bay is certain to be the major continental fleet base for any extensive campaign in the Pacific. It will be the point where the fleet will concentrate at the beginning of a war.

I also wish to bring to the attention of Members of the House of Representatives the report from the Helm Commission with reference to Hunters Point when it was proposed to establish a naval base on the southerly end of San Francisco Bay. Admiral J. W. Helm was senior member of this commission and I quote from this report, which was submitted on December 7, 1919:

The strategic map of the Pacific Ocean clearly indicated the advantageous position of San Francisco Bay. This is the only capacious harbor near the central and most salient section of our Pacific coast, available for the establishment of a naval base.

San Francisco is approximately 300 miles nearer Honolulu than San Diego, 125 miles nearer than the mouth of the Columbia River, and 300 miles nearer than the Puget Sound Navy Yard.

San Francisco is now, or can be made, secure from attack by a hostile fleet. Flank attack by land forces which may effect a landing either to the northward or southward can be provided against. Its present fortifications are extensive and powerful and are being increased.

San Francisco Bay is the only body of water on the Pacific coast south of Cape Flattery offering a safe anchorage from wind and weather to a large number of ships, which can be entered under all ordinary conditions of wind and sea, except possibly in a combined dense fog and heavy sea.

San Francisco Bay has ample anchorage with a good holding ground for a fleet of any size.

The report makes reference to a 1,000-foot dock at Hunters Point as being the only dock on the Pacific coast north of the Panama Canal capable of accommodating the six battle cruisers of the then building program. From careful inspection of the site and after weighing all information received, the commission reached the conclusion that Hunters Point possessed the following important advantages, among others, in considering its development for naval purposes:

First. It adjoins permanent deep water.

Second. It adjoins the largest and best anchorage ground in the bay. Drydocks can be constructed there at a saving of fully a million dollars per dock as compared with docks constructed elsewhere owing to more favorable material.

Hunters Point is the end of a promontory extending into the Bay of San Francisco and covering over 40 acres of level land of rock foundation. To those of you who are unfamiliar with San Francisco Bay, may I state that Hunters Point, which is within the city and county of San Francisco, extends to an easterly direction into the Bay of San Francisco to a distance equal to Yerba Buena—Goat Island—from the San Francisco shore line. It extends into the main channel of San Francisco Bay where there is a depth in excess of

70 feet and where dredging never was and never will be necessary.

Hunters Point drydocks in San Francisco Bay and the Bremerton Navy Yard drydocks are the only docking facilities along our entire Pacific line—extending more than 2,000 miles from the Canadian-Mexican borders—which are capable of handling large ships, such as men-of-war, airplane carriers, or large merchant vessels for repairs. The Hunters Point drydocks are advantageously located about midway between the Canadian and Mexican borders, while the Bremerton facilities are 815 miles north of San Francisco Bay and near the Canadian border. The drydock facilities at the Bremerton Navy Yard are considered inadequate in this respect and another large dock is now under construction at that yard. As a matter of fact, if you will follow the great triangle, extending from the Aleutian Islands to Hawaii and thence to the Panama Canal, often referred to by the Navy Department, there are only four battleship docks within the triangle—two on the Pacific coast, one at Pearl Harbor, and one at the Panama Canal. The dock at Pearl Harbor can accommodate only the smaller, obsolete battleships.

The Navy pays approximately $45,000 a year for a prior or preferential use of Hunters Point drydocks in the form of docking charges based on tonnage. All repairs are in addition to the docking charge. In the year 1938 the Navy paid the Bethlehem Shipbuilding Corporation approximately $89,000, which included dockage and repairs.

When the *President Coolidge* recently needed repairs before sailing from the port of San Francisco on a round-the-world trip it was necessary for the American President Lines, formerly the Dollar Lines, now owned and operated by the United States Maritime Commission, to secure permission from the Navy Department to use the facilities of the Hunters Point drydocks while a United States naval vessel waited in the stream. This emphatically indicates the necessity for increasing drydock facilities in the San Francisco Bay area.

There are two graving docks at Hunters Point—the larger of the two will dock any ship that can pass through the Panama Canal. The smaller dock can accommodate ships of the cruiser type.

The Bremerton Navy Yard drydock, like Hunters Point drydock, can receive the larger ships of the Navy, such as the aircraft carriers *Lexington* and *Saratoga*, and battleships. The Mare Island Navy Yard drydocks can dock ships of the cruiser type, limiting, as you can see, the facilities on the entire Pacific coast to two docks which can provide for carriers and battleships.

The fact that the Hunters Point drydock is the only dock, in addition to the Bremerton Navy Yard, 815 miles to the north, that can accommodate a battleship or similar large naval or merchant ship, is tantamount to a monopoly on the part of the Bethlehem Shipbuilding Corporation, which owns and operates these docks. This may account for the present inadequate facilities necessary to meet the requirements of the Navy. This naval national defense necessity was referred to in the following statement of Admiral Leahy, Chief of Naval Operations, on March 9 during the hearings on H. R. 2878, known as the naval public works authorization bill:

> The program does not provide for a naval drydock in the San Francisco Bay area capable of taking a major capital ship. The privately owned drydocks at Hunters Point, lacking in the equipment necessary for repairs to our large war vessels, are not a satisfactory solution to the Navy's problem in time of war.
>
> In my opinion, the Navy should acquire the Hunters Point drydocks and should provide weight-handling facilities, power connections, galley, latrines, storehouse, and an assembly plant to permit the overhaul of our largest vessels in conjunction with the Mare Island Navy Yard.

Compare the inadequate facilities on the west coast with the Atlantic, which has 18 drydocks, 3 of which will take carriers and battleships, namely, the South Boston Dock, Drydock No. 3 at the Philadelphia Navy Yard, and Drydock No. 4 at Norfolk. In addition, Brooklyn Drydock No. 4 will take a battleship but not a carrier. The other 14 drydocks are of various sizes.

During recent years the American merchant marine, which is our auxiliary navy, has undergone a complete change. In the interest of national defense, it has become imperative that the Federal Government, through the Maritime Commission, take over and operate steamship lines, such as the Dollar Line, now known as the American President Lines.

The Hunters Point drydocks are between 2 and 3 miles by water from the Union plant of the Bethlehem Shipbuilding Corporation. At the present time all materials used for the repairing of ships have to be conveyed from the shipbuilding plant to Hunters Point.

It should also be borne in mind that if Congress authorizes the Navy to take over these docks they will become self-liquidating. As I have stated, the Navy now pays a large sum for the use of these docks. The Maritime Commission's ships and other American-flag ships would reimburse the Navy in the same manner that they pay the Bethlehem Shipbuilding Corporation for the use of Hunters Point drydocks.

I have quoted the highest naval authorities of the past 20 years as to the strategic importance of San Francisco Bay and Hunters Point relative to the security of this Nation on the Pacific Ocean. They have consistently emphasized the great naval value of these facilities and, more recently, they have in unqualified terms strongly recommended that they be acquired by the Navy.

The Fascist Menace to the Americas

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1939

RADIO COLLOQUY BETWEEN HON. EMANUEL CELLER, OF NEW YORK, AND DR. MAX WINKLER, ASSOCIATE PROFESSOR OF ECONOMICS, CITY COLLEGE, CITY OF NEW YORK

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following colloquy broadcast over station WMCA at New York City and the intercity chain, March 11, 1939:

Mr. CELLER. We are agreed, are we not, that owing to the important position which the United States occupies in the field of commerce and finance with regard to Latin America, we cannot remain indifferent to happenings south of the Rio Grande. Can you tell us, Dr. Winkler, what the extent is of America's commitments in Latin America?

Dr. WINKLER. According to most reliable estimates, American investments in Latin America amount to more than $4,500,000,000. Of this, $3,300,000,000 represent investments in plants and properties, and about $1,300,000,000 in the bonds of Latin American Governments, States, cities, and corporations.

Mr. CELLER. What is the present status of these investments?

Dr. WINKLER. Our direct investments, that is, American money placed in plants and properties have, on the whole, given a reasonably satisfactory account of themselves. That is to say, American creditors are, to a certain extent, receiving interest and dividends on their investments. Unfortunately, Mexico seems to constitute the only real sore spot. Perhaps, Congressman, you could enlighten us on the position which Mexico has taken and the reasons, if any, which she advances for her attitude toward American creditors?

Mr. CELLER. The present Mexican Government, headed by General Cárdenas, has decreed the expropriation of American oil properties, basing or justifying this move upon article 27 of the country's constitution. This article provides that "In the nation is vested the direct ownership of * * * petroleum, and all solid, liquid, or gaseous hydrocarbons."

Dr. WINKLER. Do you mean to imply that Mexico's Constitution permits confiscation of foreign property without compensation?

Mr. CELLER. Theoretically, no; because the same article 27 also provides that "Private property shall not be expropriated except for reasons of public utility and subject to payment of indemnity." Furthermore, article 14 of the Mexican Constitution provides that "No law shall be given retroactive effect to the prejudice of any person whatsoever." However, for all practical purposes, Mexico has seen fit to disregard her own constitution and the rights of her American creditors as well.

Dr. WINKLER. Nevertheless, Congressman, it would seem to me that neither Mexico, nor any other foreign country for that matter, is free to destroy without adequate compensation valid titles obtained by foreign citizens under Mexico's laws.

Mr. CELLER. I quite agree with you, Dr. Winkler; I contend that a policy of expropriation, regardless of who may be pursuing it, strikes at the very foundation of international law and order. I further maintain that it is only on the basis of property rightfully owned under the laws existing at the time of acquisition that commercial transactions between two nations are possible. I am, therefore, wholeheartedly in agreement with the protests which our Government has lodged with Mexico, and I hope sincerely that General Cárdenas will soon see his way clear to restore confiscated oil property, representing, as I am informed, an investment of over $200,000,000, to the rightful owners, or offer them, in place of vague promises, adequate and concrete compensation.

Dr. WINKLER. How do you view the sale by Mexico of oil taken out of confiscated properties to Germany and Italy?

Mr. CELLER. I see no difference between these transactions and those represented by the sale of stolen property to "fences." The trouble is that these despicable characters are subject to the law while Germany and Italy may unfortunately indulge in such practices with impunity. International brigandage is what I should call it, and that is putting it mildly. How about American investments in Latin-American bonds?

Dr. WINKLER. It is regrettable that the major portion of these investments, aggregating about $1,300,000,000, is now in complete or partial default.

Mr. CELLER. But Dr. Winkler, from your study of and familiarity with Latin-American affairs, would you say that nonpayment of debts owing to American citizens constitutes willful repudiation on the part of our neighbors, and is it not a fact that default is the result of a set of circumstances over which the countries in question have little or no control?

Dr. WINKLER. I wonder, Congressman, could you possibly be somewhat more explicit?

Mr. CELLER. Indeed, I can, or at least, I shall try. It is a fact that the totalitarian countries are broke, that their finances are in a hopeless condition, and that their currencies have no backing or substance. This is especially true of Germany, a highly industrialized country to whom foreign trade is the sine qua non of her very existence. Even Der Fuehrer was forced to admit in a speech the other day that Germany must export or die.

Dr. WINKLER. But is it not true that in order to carry on trade one needs capital or credit? We know that Germany has no capital except what she manages to take away by force from helpless minorities, while her credit has been destroyed as a result of her repudiation of practically all legitimately contracted commitments.

Mr. CELLER. That is absolutely so, but in order to overcome these obstacles Germany has entered into a series of so-called barter agreements with a number of Latin American countries. These agreements provide that the nations affected sell their raw materials to Germany, receiving in payment therefor German marks which must remain blocked in Germany and be employed in the purchase of German merchandise. Since Germany does not pay real money for raw materials acquired in this manner, she is in a position to offer what looks like a higher price than anyone else is willing to to pay and who has to make payment with real coin of the realm—that is, dollars or pounds or guilders. Many of the Latin American countries with which Germany has barter arrangements are debtor nations, owing large sums abroad, especially to the United States. Since the temptation, at least in the early stages of a barter deal to sell to Germany is very great, the country does not receive any real money for its exports with which to meet its obligations held by American creditors. In this way Germany may be held directly responsible for the default by Latin American countries on their bonds outstanding in the hands of American investors.

Dr. WINKLER. This is most illuminating, and I am wondering why one does not hear more about this. Is it not also true, Congressman, that Germany, in order to secure a foothold in Latin America, is offering her own manufacturers and exporters all sorts of bounty? Only the other day it was announced in dispatches from Berlin that all losses which German exporters may or will sustain as a result of foreign-exchange fluctuations will be taken care of by the German Government. Now, where does Germany obtain funds for such purposes? You said only awhile ago that the Reich is hopelessly insolvent.

Mr. CELLER. The answer is not difficult. For the past several years Germany has pursued a systematic, methodical policy of confiscating the assets belonging to certain of her people, forcing them to turn over their property for a figure set by the German Government, payments to be made in German currency at a rate determined by the Government. In other words, whereas the German monetary unit is officially quoted at above 40 cents, the German Government is buying from or, to put it more accurately, is forcing certain of its people to sell marks for less than 2½ cents a mark. It is therefore obvious that so long as the German Reich can purchase quantities of its own money for less than one-fifteenth of its official quotation, Germany can afford to be liberal with money derived in this manner.

Dr. WINKLER. How long can such a process last? In other words, when will Germany find herself unable to loot and pillage helpless people, employing the spoils to interfere with the normal channels of commerce?

Mr. CELLER. Unfortunately, it may last for quite a while. After she will take all that is left in the hands of the Jews, she will turn to the Catholics. Can you tell us, Dr. Winkler, of the extent to which the Fascist nations, especially Germany, have penetrated Latin America, and the seriousness of the competition which we are obliged to meet there?

Dr. WINKLER. Penetration by Nazi Germany—Italy and Japan, the two other Fascist nations, do not yet play an important part—of Latin American commerce and interference therewith has, so far, at least, not been sufficiently marked to cause serious apprehension. For example, last year German exports to Latin America amounted to 623,000,000 marks, compared with 235,000,000 in 1932; that is to say, for over 100 reichsmarks' worth of merchandise shipped to Latin America in 1932 last year's sales amounted to RM265. American sales to Latin America during the same period increased from $220,200,000 in 1932 to $564,200,000 last year. America's gain is just as impressive as that registered by the Reich. In other words, penetration in the commercial field is as yet no ground for apprehension or objection.

Mr. CELLER. The United States has never objected, and never will object, to honest competition. On the contrary, we welcome it as a healthy stimulus to the incentive of the Nation. What we are objecting to is the sinister methods employed by some of our competitors, who aim not alone at undermining American commerce but also at the undermining of American ideals and institutions.

Dr. WINKLER. Are not the Latin American countries themselves aware of this menace and, if so, what have they done or what are they doing to combat it?

Mr. CELLER. Indeed, they are, as is abundantly clear from the many resolutions which were adopted at the Eighth Pan-American Conference, which was held at Lima, Peru, only a short while ago. It was at this conference where the so-called Lima Declaration was adopted, which consists of a pledge on the part of the representatives of all 21 American Republics to defend continental solidarity against any aggression, to prevent the infiltration of foreign ideas in the Western Hemisphere, and to fight against any persecution because of one's race or religion.

Dr. WINKLER. Although these declarations are commendable and although it is sincerely hoped that all the Americas will live up to them, I am afraid that they are not enough.

Mr CELLER. Apparently, what you mean is that we should contrive to meet our competitors who use unfair methods on the same grounds. Fight fire with fire. If they hit below the belt, and there is no referee, we must take matters into our own hands. If Germany can afford to extend credits or to grant concessions to Latin America, we must be prepared at least to equal, if not to better, Germany's terms. If it pays Fascist nations to do so, it should pay us to do likewise. It may and probably will cost much more later. Do you not think, Dr. Winkler, that America's economic destiny lies in this hemisphere rather than in the Old World?

Dr. WINKLER. I do, Congressman. It has been said, and I believe rightly so, that the Western Hemisphere constitutes the most perfectly self-sufficient economic unit in the world, and that America's most logical and profitable field is located here, and not in Europe, which is torn asunder by national antagonism, political animosity, and racial hatred. So long as totalitarian nations are willing, and apparently able, to aid financially Latin America, it should be incumbent upon us to better, or at least equal, the terms offered by our competitors. I hope that you and your colleagues in the House will appreciate the desirability—nay, necessity—of such aid, and that you will take such steps as will bring this about.

Mr. CELLER. I believe that most of us do, and that the arrangement which has just been concluded with the spokesman from Brazil, relative to a credit on behalf of our neighbor, bears out this view. I am particularly gratified because in the arrangement for aid to our southern neighbor we appear to manage that the credit granted will be used for the financing of constructive and strictly revenue-producing projects, affording a stimulus for the maintenance and enhancement of America's commerce and providing new sources of income for the faithful discharge of whatever obligations our neighbors may be permitted to contract.

Now, I should like to ask you this: Will our concentration upon Latin America hurt us in Europe?

Dr. WINKLER. I do not believe so. Our trade with Europe has been steadily declining while our trade with Latin America has been going up. In 1913, our exports to Latin America were only 14½ percent of our total exports. Last year, they amounted to 18¼ percent. Our sales to Europe in the last pre-war year were 60 percent of the total. In 1938, they dropped to a little over 33½ percent. Furthermore, much of Europe's buying has been paid for by American investors who together with our Government now hold Europe's I O U's on which they may never see any payment made. I wonder whether one realizes that our total of defaulted Latin American bonds is very much less than the total of defaulted bonds of Germany alone? If we were to be as liberal toward Latin America as we were to Europe, the results would be far more satisfactory.

I am certain they will. I therefore applaud the efforts of the President and our Secretaries Hull and Morgenthau, who were instrumental in making the new accord with Brazil. It is the first step to block the infamous Nazi inroads into South American trade, a beginning which may well prove a suitable pattern to be adopted with respect to other American nations. We have not yet forgotten that our losses in Latin America are relatively small compared with the billions of dollars of American money poured into the Old World—money which is not only irretrievably lost but which has enabled Europe seriously to compete with and undermine American economy and threaten American ideals and institutions. We need entertain no such fears as regards Latin America. While losses have been sustained by American investors, these losses are insignificant compared with the benefits derived from the increase in American trade with the southern republics and

also compared with the income which Americans derive from their so-called direct investments in Latin America.

I can see how aid to our neighbors, carefully planned and properly used, can do a great deal to restore normality and bring back prosperity not alone to the United States but to all the Americas.

Gullible America

EXTENSION OF REMARKS
OF
HON. JAMES SECCOMBE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1939

EXCERPT FROM ADDRESS BY HON. FELIX HINKLE, OF CANTON, OHIO

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excerpt from an address by Hon. Felix Hinkle, of Canton, Ohio, as follows:

Not since 1917 has there been so much agitation in this country about war—about guns and battleships and fortifications. Congress is appropriating millions of dollars to strengthen our position—to manufacture munitions and to train men to fight.

But what is all this war excitement about? Whom are we going to fight and why? As far as I know, no country has even threatened to take anything away from us and, most certainly, we want nothing from any other nation. Just why, then, are we placing this big chip on Uncle Sam's shoulder?

One reason we hear advanced is based on the theory that Europe is about to become embroiled in a major war, and that we must get ourselves into a position to protect our rights against an aggressive victor.

It appears to me that there are a lot of "ifs" in this supposition. In the first place, the odds are about even that there will be no immediate European war. In the second place, there is no assurance that the unfriendly nations would wind up on the winning side. And, in the third place, if such a war should occur, the victorious countries would be so horribly mutilated, so utterly exhausted, that they could not possibly wage an effective campaign against us even if they so desired.

The other excuse in support of our becoming mixed up in this foreign quarrel is based on the nonsense that we should fly to the aid of the so-called European democracies. According to the present line-up, this would place us on the side of England, France, and Russia and against Germany, Italy, Japan, and possibly Franco's Spain.

Herein lies the greatest hazard in the whole matter. First, because it presents an emotional appeal, and, second, because there really are no democracies in Europe as we Americans understand the term. The background of the European is different—different culturally, economically, and socially. This explains England's King and House of Lords. Even though they have little to do with government, yet the very fact that these social distinctions exist marks a vast psychological difference between the English people and us. Down in France the Government may change overnight. The dissent of any one member can dissolve the entire administrative cabinet. One of the strongest parties in France is the Anarchist Party—a political situation our country would not tolerate for one instant; and, as far as Russia is concerned, there is absolutely nothing comparable to our idea of freedom and individual initiative in the Soviet Union.

So what do we mean when we say that we should assist our sister democracies?

Besides this, I have a feeling that England and France are deliberately conforming to the Rome-Berlin axis. I think that there is a lot of diplomatic maneuvering going on under cover between these two factions—understandings that we know nothing about. How else can one explain the Munich pact? Why has there not been a war before now? How is it that England and France can stand by while Germany and Italy actually fight Franco's civil war—a war against a so-called democracy—right in their front yards? Why was Franco's government recognized even before the Spanish war is over?

Whether we like it or not, Europe is rapidly coming under the influence of the totalitarian powers. Old World democracies, such as they are, appear to be on the way out. To me it seems the height of folly for our country to become involved in this mad scramble upon the mere pretext of saving democracies. If we should go so far off balance, I predict that we shall be left holding the bag for the whole outfit.

I have a hunch that we could trace the roots of all this war propaganda to the other side of the Atlantic. Furthermore, I believe that what we read about the mammoth European preparations for war is largely window dressing, promoted with the idea of involving the United States in some way or another.

It must be remembered that the nations of Europe are practically bankrupt. They have little to gain from fighting each other. On the other hand, Uncle Sam holds most of the world's gold and most of the developed natural resources. Should there be any doubt what the objectives in Europe really are?

There may be some excuse for bolstering our defenses; maybe we should build a few more airplanes and train a few more flyers, but by all means we should turn a deaf ear to this jargon about saving the European democracies. It's nothing but a come-on.

The most helpful and worth-while program we can follow is one of complete neutrality, insofar as possible, and then turn our attention exclusively to the pressing matter of saving our own democracy. God knows it neeeds serious attention.

Taxation, Confiscation, Repudiation?

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1939

ADDRESS BY DR. R. J. C. DORSEY

Mr. JENKINS of Ohio. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing an address on Taxation, Confiscation, and Repudiation, by Dr. R. J. C. Dorsey, an able attorney, bank specialist, and tax authority, as follows:

Taxation without representation was one of the causes of our American Revolution. Prior to its commencement the colonists maintained that the navigation acts were not applicable to them because the people of the colonies were not represented in the English Parliament that enacted them. Because of this lack of representation they held that they could not be justly taxed by England. Apparently the lack of representation was more the foundation of their objection than the amount of taxes levied. After the American Colonies had won their independence from England care was taken that our Federal Constitution should provide that the people and the States should be represented in the Federal Congress. The constitutions of the several States likewise provide for the representation of the people in their respective State legislatures. Both limited representation but failed to place any limit on the powers and amount of taxation. The Federal Constitution, in giving Congress the power to lay and collect taxes, duties, imposts, and excises, did not place any limit thereon. The framers of our Federal Constitution apparently did not apprehend that at a future time a clique of political buccaneers would take advantage of this unlimited power to tax and embark upon such a reckless spending expedition as to involve the inheritance of our people. True, they had experienced that taxation without representation was tyranny, but evidently did not consider that taxation with representation might result in partial or complete confiscation of property. It is possible that they did not visualize that the time would come when the American people would only control their representatives as to local matters and that national affairs might be left to the legislators' individual discretions or dictated by group pressure.

Under correct theory taxes are imposed for the support of the Government in return for the general advantages derived from the protection which a government should afford the taxpayer and his property. There should be no just right to tax where there is a partial or total failure of such benefit or exchange of equivalents. There should be a quid pro quo; the taxpayer must receive a legal consideration of a pecuniary or protective nature to his person or his property for the taxes he pays.

Today the basic principles underlying taxation have been willfully ignored. No longer is the taxpayer's money entirely used for protection. It is used to provide sinecures for party faithfuls and those who advocate changing our Government from a representative republican form of government to a socialist state. It is used to politically seduce the minds of the masses to cause them to become discontented, so that they may be made the instruments to wreck the very institutions that try to protect them. Under the many laws recently enacted to pick the pockets of the American people it is impossible to discover any quid pro quo for the taxes paid. Without that, the taking of one's property, though under the disguise of taxation, and so, in form, by due process of law, is tantamount to confiscation. The aim of both Federal and State Governments today is to ignore the basic theory underlying taxation and to replace it with subtle confiscation. In gangster parlance, American taxation has degenerated into a vicious "racket."

The fifth amendment to the Federal Constitution provides that no person shall be deprived of property without due process of law. This provision is a restraint upon the Federal powers only. The fourteenth amendment supplements this by providing that no State

shall deprive any person of property without due process of law. Due process of law, in reference to taxation, is that which is due and appropriate in that class of cases as demonstrated by our experience in the enjoyment of self-government. There is no doubt that due process of law applies to tax proceedings. However, it must be exercised so as to deprive no person of property without due process of law. In the taking of property for unpaid taxes legal proceedings must be followed and the law must have been enacted by the proper legislative authority. A tax should be held to be unconstitutional and in violation of the due-process clause when it results in such flagrant and palpable inequality between the burden imposed and the benefit received as to amount to an arbitrary taking of property without compensation; also when it attempts to raise money for private use or for public use by methods contrary to reason and justice. The crux of the whole New Deal is to distribute and control what the people have by means of excessive taxation. This has given rise to two sets of judges—conservative and liberal. Conservative justices refuse to permit confiscation of property under the disguise of taxation. Liberal judges would permit it. This is why liberal Justices are sought for the bench of the Supreme Court of the United States. The question now presents itself: Shall the United States Constitution be used as an instrument to impoverish us through an unjust interpretation of the general-welfare clause by liberal Supreme Court Justices?

The New Deal is a system of government based upon Marxian fundamentals. In the end individuals and private property shall be subject to the wills of those who at any given moment may constitute the compelling power. In present political parlance "new dealer" and "liberal" are synonymous in meaning and interchangeable in use and indicate persons favorable to constitutional change coupled with legal and administrative reform.

Our Federal Constitution provides that "no money shall be drawn from the Treasury, but in consequence of appropriations made by law." Congress has the power to pay the debts of the United States, and when the money is raised may appropriate it to the same object. Congress appropriates; sets money aside for special use. Congress raises money through taxation. It has the power to commit the country to a huge debt, so large that it would be impossible to liquidate it. This is now the result of our uncalled-for spending program. Excessive taxation makes the people the slaves of the state, for what they earn goes to pay their taxes. There is no limitation on the amount of congressional appropriation. There is no limitation on the amount of taxation except the endurance of a people. Our United States Supreme Court has never attempted to set any limitation to the power of our Federal Congress to appropriate money. Montesquieu wrote: "The effect of excessive taxes is slavery." We, the people, are to become slaves. The American worker must carry most of the burden, for much of his wages must go to pay the high prices for the necessaries of life, for their cost contains scores of hidden taxes. Dr. Paul Henry Nystrom, in the American Weekly, has analyzed this situation and even now estimates that 25 percent of the wage earner's income goes for hidden taxes. This cripples purchasing power and lowers the standard of living. He lists the many necessities of life and the hidden taxes in their price—even one's funeral contains 157. Many schemes under as many distinct terms have been evolved to pick the pockets of the American people.

The American taxpayer is bewildered by the maze of tax technicalities and the legion of appellations used to distinguish one type of tax from another. We evidently are no longer a free people, but have degenerated into a vast congeries of taxable entities who are being exploited by a highly organized group of liberals.

The prevalence of this taxing mania is due to the accelerated cost of maintaining the intricate political machine of Federal and State Governments rather than a rise in the cost of protection. Expenditures far exceed annual income. Between March 4, 1933, and March 4, 1938, the Federal Government spent over $38,000,000,000. The huge deficit reflects itself in our gargantuan national debt. The disease continues its ravages, for our estimated expenses for 1939 will be $9,492,000,000, or $18,000 a minute—far more than most people save in a lifetime. Our revenues are estimated to be $5,520,000,000. It is estimated that our annual deficit will amount to $3,972,000,000, which will cause our total national debt to be at least $41,132,000,000.

Our pre-war debt was $1,282,044,345 on March 31, 1917. Our post-war high debt was $26,596,701,648 on August 31, 1919. In 11 years and 3 months we reduced this to $16,026,087,087 and no contingent liabilities. The average rate of reduction per annum was $932,701,284. This was a period of conservative government and not one of reckless spending and managed poverty. From $16,000,000,000 our public debt has now reached to over $41,000,000,000.

All this has nothing to do with the States, for most of them are spending far more than they receive in taxes. The gross State and local debt is well over $20,000,000,000. The taxpayer paid over $7,000,000,000 in taxes to his State government, in addition to the five billion to his National, in 1937. The Federal Government has practically forced the States to spend, and many of the objects must now be maintained. A grant to the States by the Federal Government cannot be considered a gift. The past 5 years have seen many grants to the States by the National Government. These are in the nature of a first trust or mortgage on the property of the citizens in each of our 48 States—not only the principal but the interest must be paid. The State must raise this by taxing its people and at the same time must secure money by the same method to run the State.

From 1877 to 1913—36 years—our total ordinary and postal expenditures amounted to $18,582,966,317 ($516,935,508.80 per annum as an average).

From 1934 to 1938—5 years—our total ordinary and postal expenditures amounted to $42,499,056,561 (about $8,500,000,000 per annum as an average).

Our total estimated expenditures for 1939 are $9,492,000,000. Two questions logically arise: 1. Where is the money to come from to liquidate our National and State debts? 2. Where is the money to come from to pay the current expenses of our National and State Governments? The $60,000,000,000 of acknowledged debt of the National and State Governments shall surely vex not only the present but future generations if this is liquidated. The only legal means of raising this money is by taxation. Confiscation and repudiation would be possible. Our people could not withstand both Federal and State taxation at a rate they will have to be taxed. Something has to give way at some point. The assistance of a few so-called wealthy persons would avail little, for much they have consists of largely representative values. Forty-six persons have reported in 1933 to have net incomes of over a million dollars annually (since the advent of the present huge Government expenditures, 60 are now listed). In 1933 there were 84 individuals with incomes of between $500,000 and $1,000,000, and 139 with incomes of $300,000 to $500,000 annually.

We have been skillfully guided into our present financial predicament. Some liberals have been quite frank in reference to their ultimate objective, which is confiscation of our property. Norman Thomas wrote: "No Socialist Party can renounce under any and all circumstances the right to confiscate." Earl Browder wrote: "After this first step of taking State power has been realized, the workers make use of the State power to take possession of the instruments of production." Paul Blanchard wrote: "Having once captured the Government and shelved the Supreme Court, we Socialists would nationalize as many large industries as we could chew." Harry W. Laidler wrote: "Should capitalism suddenly collapse and the people decide to socialize the essential industries at one fell swoop, peacefully or otherwise, transfer would probably be effected without compensation."

Our people evidently thought that force would be used and apparently never thought that the same ends could be attained through other methods. Partial confiscation was the theme of the N. I. R. A. and the A. A. A. That the wealth of the people could be sapped by indirect means was evidently unthought of by most conservatives. They never realized that there would be set up over 75 new Government establishments such as bureaus, boards, commissions, divisions, and corporations, to help attain such end—that our Government would become a vast holding company; that for 5 years the pump would be primed with borrowed money; that a high Government official would say, "The more you borrow and spend the more prosperous you are," and "A public debt is a public blessing."

The annual report of the Secretary of the Treasury for the fiscal year ending June 30, 1938, reported the public debt issues of bonds outstanding as of that date to be $37,167,487,451.30. Of this amount, $36,578,684,982 bore interest. The annual interest charge on this to the public is enormous, that for the fiscal year ending June 30, 1938, being $947,164,071. The Treasury estimates that our gross public debt for the fiscal year ending June 30, 1939, will be $41,132,000,000 and the interest charge at least $976,000,000. The interest charge on our public debt for the fiscal year ending June 30, 1916, was $23,084,635. The whole public debt on June 30, 1916, was $971,562,590, and we now pay more than this amount in 1939 for interest alone. Our interest-bearing debt is in the possession of the public and is evidenced by United States bonds of various types: Treasury notes, certificates of indebtedness, Treasury bills, and other I O U's. Under normal conditions serious apprehension might not be present, for a conservative Congress would arrest the increase of debt and make some provision for its slow liquidation. But our Government being in the grasp of a liberal group who have avowed their antagonism toward it and may gain in event of financial chaos, there is a well-founded basis for fear. When we dwell on the ruthless slaughter of swine and cattle, the plowing under of crops, the debauching of our currency, and the attacks upon those advocating a conservative government, repudiation would be consistent with liberal tactics.

Repudiation of Government obligations would seriously affect our banks, which aggregated on June 30, 1937, 15,580, with a total of $7,359,638,000 of capital, surplus, and undivided profits. These banks held securities directly and indirectly guaranteed by the United States Government amounting to $16,967,486,000. This is $9,607,848,000 more than their combined capital, surplus, and undivided profits, and after these were eradicated the loss would have to fall on the $59,822,370,000 deposits to the extent of 16 percent plus.

The report of the Board of Governors of the Federal Reserve System at the beginning of 1938 showed that it held United States Government bonds, Treasury notes, and bills amounting to $2,564,015,000. It also showed that it held United States Treasury gold certificates in the amount of $9,119,981,000, most of which amount represents paper payment for confiscated gold. In addition there was in actual circulation Federal Reserve notes amounting to $4,283,611,000. These represent a contingent liability of the Government. The Treasury gold certificates are not carried as part of the public debt. Repudiation would work havoc with the Federal Reserve bank and its members, who might lose at least

the sum of $11,683,906,000, and included a loss of their total deposits of $7,026,809,000 and their capital stock in the Federal Reserve bank of $674,000,000. All of this would fall on the depositors. Our banking system is completely at the mercy of the liberals in power. Our bankers are our highest type of citizens.

On December 31, 1937, our 49 legal reserve life-insurance companies held $4,416,000,000 in United States Government bonds. They also held in State and municipal bonds $1,424,000,000—a total of $5,840,000,000. Their admitted assets were $24,250,000,000. Repudiation would affect these companies.

The widely advertised Federal Deposit Insurance Corporation, which is supposed to insure certain amounts of preferred bank deposits, has over $350,000,000 in United States securities, which represent about all of its assets. Repudiation would terminate this financial venture.

On June 30, 1938, there was held by the 20 funds created under various provisions of law $2,832,083,000 in United States securities. Repudiation would work havoc here and cause great distress to those depending on many of them for an existence.

On June 30, 1937, the Postal Saving System, out of total assets of $1,307,134,961.51, had invested in United States securities directly secured by the Government $933,382,570.97, and indirectly $166,546,483.85. Repudiation might cause considerable financial embarrassment to the 2,791,371 depositors. The Secretary of the Treasury's report of June 30, 1938, shows that United States savings bonds sold were $1,355,412,432.40, and redeemed $114,980,377.25—a balance of $1,240,432,055, largely held by the poorer classes.

We thus are able to trace $29,303,398,625.97 of the evidences of the public debt. The balance is held by individuals and trust estates.

While considering the direct liability of the United States Government, we must also bear in mind the contingent as that may become direct in whole or in part.

The forces that advocate liberalism, change of government, distribution of wealth, confiscation, and repudiation are undoubtedly aware of the condition of the financial structure of our country. It is imperative that the conduct of our affairs pass into conservative direction at once. Even then it shall take years before an approach to normalcy is possible. The liberals have no sympathy, and, once given the opportunity, would be as ruthless here as in Russia. In any event we must continue to carry on the cost of government. In the event of civil war or invasion, there necessarily would be outright confiscation.

Just what method of repudiating the national debt may be followed is purely speculative. In any event, it would be as effective as was the repudiation of the gold clause in the bonds. There is no constitutional provision to prevent our National Government from repudiating its contracts; there is of the States. No one may sue the Government without its consent. There are situations that might arise; it might become impossible to meet the interest charges through taxation, or as obligations mature it may be impossible to refund. The unpaid interest and principal would affect the market price and banks and other holders of these securities would have a depreciation as to market value. This the banks would have to charge off against their capital, surplus, and undivided profits as long as they lasted. The integrity of the bank being impaired, it would have to close. The interest from Government obligations may be taxed and thus depreciate the market and holders suffer a loss. We know that every bank in the United States was made to close its doors once; such is the power of the liberals. True, 90 percent of them reopened shortly and 50 percent of those remaining closed opened later. We also know the fate of the German mark, French assignat and mandat.

Our Treasury Department publishes no statement of assets and liabilities as such. Most of the report is in reference to liabilities. But we do have some assets. They report a gold value of $12,962,953,931, against which the Federal Reserve banks hold Treasury gold I O U's of $9,119,981,000, the alleged value of the gold being fixed by legislation. We have some silver bullion and subsidiary silver. Then one must not forget the obligations of 15 foreign countries in the amount of $11,157,796,272.30. We also own $654,354,250 in German bonds as well as $204,561,214.86 unfunded indebtedness due from Russia (including Armenia, $11,959,917.49), all of which are in the "try and get it" class.

The Federal Government set up a series of corporations and credit agencies and holds stock in these 24 entities in the amount of $2,851,437,427.04 as of June 30, 1938. These corporations have authority to issue bonds, debentures, and notes to the amount of $16,229,325,000 which our Government must guarantee in full. It is computed that about $8,000,000,000 worth of these have been sold to the public. The Government should make good its guaranty.

There is also reported $33,315,915.88, capital stock of certain war emergency corporations, composed of: United States Housing Corporation stock, $33,414,915.88; United States Spruce Production Co., $100,000; and War Finance Corporation, $1,000 stocks. It is difficult to say what value these have, if any.

As for other assets, a sale of the Panama Canal might pay for the maintenance of the T. V. A. There are a few dams whose pools could be used to breed mosquitoes until stopped by the birth-control section of the Agriculture Department. These dams may become a valuable adjunct to the W. P. A. as the waters therefrom may be used to irrigate crops that must necessarily be plowed under with hired labor. Just the value of the miles of proposed trees in the shelterbelt is problematical. Each little village has its imposing post offices, and these, if well located, might be used for filling stations.

But why criticize political insanity when complacent voters put men in public office to be liberal with our liberties and money?

Disunity Is Fascism's Weapon

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1939

EDITORIAL FROM THE PHILADELPHIA RECORD

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following. The world has seen defenseless nation after defenseless nation fall before the onslaught of Hitler. He has a technique all of his own that it would do well for all who believe in the democratic principles as we practice them in America to examine.

His methods might be termed the policy of "oozement." That procedure has already started in America and it is high time we take notice of it. An editorial from the Philadelphia Record so ably describes his way of working that I submit it for the consideration of all. It is as follows:

[From the Philadelphia Record of March 14, 1939]

DISUNITY IS FASCISM'S WEAPON

The current disorder in Slovakia should be carefully studied by all who fear fascism. They will find it an illuminating example of the skillful use of fascism's chief weapon, the deliberate creation of disunity.

Slovakia, the central, autonomous Province of Czechoslovakia, is vital to the Nazi "drive toward the east." If it goes Nazi, there would be a clear road, through Austria and Slovakia, to Carpatho-Ruthenia and to Rumania and Russia. Therefore, in German reasoning, Slovakia must become Nazi soil.

Out of nowhere a violent "separatist" movement flared up last week in Slovakia, hitherto content with its new autonomy. Speeches demanding independence flooded the Province's radio receivers—they came from the official Nazi broadcasting station in Vienna. The Premier of Slovakia, Joseph Tiso, joined in the demands after a trip to Vienna.

At the same time (the Nazi strategists never miss a bet) the tiny German minority in Slovakia began to stage provocative parades, hoisting the swastika. When the parades were stopped by loyal Slovak police, they cried out against "Czech" outrages and, as by a signal, the German press began to denounce "atrocities by the Czech monsters," the same phony stories printed in the September crisis. German mobilization began.

By the time these lines appear, Slovakia may be no more. Tiso, ousted as Premier, is conferring with Hitler in Berlin, asking Hitler to "free Slovakia." The German news agency is pumping the wires full of lies about "chaotic" conditions in the Province, so that Hitler may have the excuse that he wants only to "preserve order"—the excuse he used when he took Austria.

Thus, by setting Nazi Germany against Catholic Slovak, Slovak against Protestant Czech, Czech against Jew, Hitler weakens what is left of the little country, makes his entry easy. It is the technique of disunity. It is what Hitler hopes to accomplish by creating anti-Semitism in this country through his bunds.

But we are not afraid. If you want to see a true picture of a unified United States, look at the poll conducted last week by the Gallup Institute of American Opinion, on the question of our foreign policy. The poll showed that so far we have avoided deep divisions and that most Americans are following the same line of thought.

Gallup reports that while 3 voters out of 4 favor selling food to Britain and France during a war in which those nations might be involved, and while 52 percent favor selling arms to these countries, even during a war, 83 percent are opposed to sending our Army and Navy abroad to help either country.

Only 1 percent of all the people say their sympathies would be with Germany and Italy in a war.

That picture makes sense. Help the democracies while we can safely do so, but no more shipment of American soldiers to foreign soil to fight. No sympathy for fascism and yet no disposition to risk American lives in settling European quarrels. The Record is proud that this national show of opinion coincides almost exactly with its own editorial position on foreign affairs.

The Territory of Hawaii

EXTENSION OF REMARKS
OF
HON. SAMUEL W. KING
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1939

ADDRESS BY HON. SAMUEL W. KING, DELEGATE FROM HAWAII, FEBRUARY 15, 1939

Mr. KING. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include a portion of a speech I made recently at the Departmental Auditorium here in Washington as part of a program sponsored by the National Park Service of the Department of the Interior on the subject The Territory of Hawaii. It is as follows:

Hawaii has been a part of the United States of America for over 40 years, having been annexed, with the consent and upon the application of its people, by a joint resolution of Congress approved July 7, 1898. On April 30, 1900, Congress passed "An act to provide a government for the Territory of Hawaii," which organized the former Republic of Hawaii as an incorporated Territory of the United States. It may be of interest to note that Hawaii and Texas are the only two parts of the United States that came in by voluntary annexation.

The hoisting of the American flag over the Hawaiian capitol, Iolani Palace, an event I witnessed as a boy, occurred during the Spanish-American War, and was perhaps hastened by America's venture in imperialism at that time, but it was the culmination of over 50 years of negotiations. In the words of the then President, McKinley, "Under such circumstances annexation is not a change, it is a consummation."

From the time of Daniel Webster America had followed a policy of protecting the native kingdom against outside interference and had obtained the consent of Great Britain and France to a joint guaranty of independence for Hawaii. During a part of this period of the independence of the islands there was a possibility of their coming under the sovereignty of some other power—Great Britain or France; possibly Russia, when that country still owned Alaska and was making abortive efforts to extend its authority to California; or even, at a later date, possibly Japan.

But "manifest destiny" brought Hawaii eventually under the American flag. It must be remembered that British and American explorers and traders were the first to bring the islands into touch with the world, after centuries of isolation; and that American missionaries from New England first carried the message of Christianity to its people. The rapid acceptance of Christianity by the Hawaiian people, the gradual evolution of their government from an absolute monarchy to a constitutional monarchy and then to a republic was greatly influenced by this early association.

During the 100 years of Hawaii's independence its industries and trade were controlled principally by British and American citizens, pioneers in developing in the islands a new industrial economy to replace the old subsistence and barter economy of the Hawaiians. The reciprocity treaty between the United States and the Kingdom of Hawaii, approved January 30, 1875, granting to each country a free market for the other's products, gave a great impetus to this development in Hawaii. The economic ties this treaty brought about, already very close, now became even closer; and made it certain once and for all that Hawaii would, sooner or later, and in some manner, come under the American flag. From this time on American influences steadily outgrew all others, and annexation became simply a matter of time.

It may be of interest to mention that during the negotiations over this reciprocity treaty our then ruler, King Kalakaua, visited Washington, and attended a joint session of Congress held in his honor, December 18, 1874, where mutual greetings were exchanged, the Speaker of the House, Hon. James G. Blaine, expressing the felicitations of Congress, and our Hawaiian Minister to the United States, Mr. E. H. Allen, replying for the king, who was too hoarse from a bad cold to speak for himself.

The background of Hawaii comprises no period of domination by any foreign nation and its culture, therefore, is fundamentally Anglo-Saxon. The ancient Polynesian culture of its native people, the contribution of immigrant groups, add color and variety to our local life; but our institutions and concepts of life, our customs and standards of behavior, were rooted in English and American principles long before annexation took place. I, myself, illustrate that fact, born in Hawaii of Scotch, New England, and Hawaiian ancestry, descended in the fifth generation from a Yankee who settled in Hawaii in 1793, when George Washington was still President, and this city of Washington had not yet become the Capital of America.

Annexation brought no great changes and required no material readjustments. Under the Constitution of the United States and the Hawaiian organic act we simply took our place as another organized Territory, of which there were three then in existence—Arizona, Oklahoma, and New Mexico—Alaska at that date being still a district. Our statute law, based on the common law, remained in full effect where not inconsistent with the Constitution and the organic act. The reorganization of our local government was easily carried out, because we already had most of the features of American governmental institutions, including free public schools, established in Hawaii soon after they had been started in Massachusetts. The President of the Republic of Hawaii, Sanford B. Dole, son of an American missionary, became the first Governor of the Territory of Hawaii; public employees of the Republic continued in their positions as employees of the Territory. All of the citizens of the former little nation became American citizens, and joined that brotherhood already well versed in the principles of democracy.

The basis of this community of interest and thought is primarily a matter of geography. Hawaii lies closer to America than to any other nation; its natural dependence is upon the North American mainland; and its location makes it inevitably an outpost of America. From the earliest days this physical association was recognized; a hundred years ago American naval officers surveyed Pearl Harbor and urged their Government to obtain exclusive rights to its use by treaty; America's concern that no other nation should trespass where it had such imperative interests dictated America's foreign policy as expressed by Daniel Webster and his successors in office, and America, unprepared to consummate annexation, supported Hawaii's independence against any efforts to terminate it in favor of some other nation. On the other hand, Hawaii, willing to become completely a part of the American Nation, desired only that the terms of such inclusion should be fair to its people; no alternative destiny was sought, but every effort was made to cultivate even closer relations with the nation that so long had been its inspiration and model.

Now, after 40 years as an American community, Hawaii has justified the record of the past and the wisdom of our former leaders who worked for annexation. The establishment of a fleet naval base at Pearl Harbor, protected by military forces which render that base impregnable from attack, gives America the control of the North Pacific, so essential for the security of its western shores. In Hawaii, as the western outpost of America's plan for national defense, there is being created one of the greatest naval bases under the American flag. Projects completed and pending will equip the navy yard at Pearl Harbor to handle all of the requirements of the United States Fleet as to repairs and supplies. Except for actual shipbuilding, which is not contemplated will be done in the islands, the fleet naval base will have every other facility required to keep the vessels of the Navy ready for any service. In order that this base may not fall as a rich prize to any enemy attack, the United States has stationed on the island of Oahu, where Pearl Harbor is located, the largest number of soldiers grouped under one command, organized as the Hawaiian Department of the United States Army. This force comprises several Coast Artillery forts on the south shore of Oahu and a mobile Hawaiian division, consisting of all branches of the Army, stationed at Schofield Barracks, near the center of the island, ready to oppose the enemy at any point of the coast line. The air force will be sufficient when present plans are carried out to repel any air raid and to give our defense forces ample warnings of the advance of enemy sea forces. America has built here on Oahu a base that extends its frontier 2,000 miles into the Pacific and places a screen in front of the mainland from Alaska to Panama, through which no enemy is likely to penetrate.

The growth of the Territory in trade and commerce, supporting an exchange of goods and commodities in excess of $200,000,000 annually, makes Hawaii a valuable unit of the American economy. We sell to our fellow Americans on the mainland in excess of $100,000,000 annually of our products, principally sugar and pineapples, and we buy back within the tariffs that include us with the rest of the United States the products of American farms and factories in excess of $100,000,000 annually. Our per capita consumption of American foods and merchandise is higher than that of many States, and our total purchases exceed that of all but the six or seven great nations of the world, being greater than that of any nation of the three Americas except Canada. In addition, Hawaii supports from local taxes the entire cost of its local governments, Territorial and county, except for the salaries of a few federally appointed Territorial officers, and pays into the Federal Treasury annually as its proportionate share of the cost of the National Government an amount greater than that paid by many States; sometimes as many as 19 paying less Federal taxes than Hawaii.

All national laws apply with equal force in Hawaii as on the mainland. Federal revenue tax laws, including both corporate and individual income taxes, and other imposts, have full effect in the Territory and bring a substantial revenue to the Federal Treasury, averaging about $10,000,000 annually. The immigration laws, the customs laws, and more recent legislation, such as the Social Security Act and the Fair Labor Standards Act, are all applicable to the Territory of Hawaii as an integral part of the United States. I am sometimes amused by the letters I receive, in many cases addressed to me as the Hawaiian ambassador or consul, asking me what coinage we use, and requesting Hawaiian stamps, which indicates a belief on the part of the writer that we are a semiforeign community under the general protection of the United States but not fully incorporated as a part of this Nation. Of course, not many are so uninformed, but it may be worth while to mention the fact that we in no way differ from the rest of the country in these national features of American life. We pay the same tariffs

on foreign goods that our people may buy, and the United States customs in Hawaii collects nearly $3,000,000 annually on such imports. We use American postage, and the receipts of the Honolulu Post Office run annually close to $1,000,000. Our commerce with the mainland ports of America is coastwise trade, just as is the trade between New York and Miami. Foreign vessels may not engage in freight and passenger traffic between mainland ports and Hawaii any more than they can between two ports on the mainland, as the coastwise navigation laws include Hawaii in its prohibition against foreign competition with American vessels. Honolulu is one of the great American seaports, and its commerce helps maintain the American flag on the Pacific.

All of this is evidence of Hawaii's complete inclusion in the American scheme of things, without exemptions or special subsidies, and connotes an industrious and thrifty population, some 400,000 people, busy creating wealth and using that wealth to maintain themselves. The 100,000 school children in Hawaii's public and private schools, 85,000 in the former and 15,000 in the latter, the public institutions of all kinds, the splendid physical condition of Hawaii in all of the aspects of American life, is further evidence that Hawaii's standards are American and not that of some exotic tropical community; and that its prosperity—for on the whole it is a prosperous country—has been extended to include a large number of its people. The high ratio of persons who file Federal income-tax returns is another evidence of the wide distribution of Hawaii's wealth.

Of course, Hawaii has its local problems, and all is not perfection in our paradise of the Pacific. A readjustment of its labor economy and a greater diversification of its agriculture are perhaps the two major subjects where improvements should be sought. But the aptitude for self-government its people have shown in the past, and the current study being made of its faults by local civic and governmental agencies are sufficient assurance that Hawaii will solve its own difficulties successfully, and in accordance with the best American principles.

I have touched on the history back of annexation and upon Hawaii's economic status as matters concerning which mainland people usually are not well informed. A workaday world of business and trade, of finance and labor, of taxes and politics, exists in Hawaii as elsewhere. The joy that is Hawaii, the beauty of the land and the sea, the mild climate, the vivid colors of flowers and green hills, the music and dancing, have all been so well advertised that the average mainland resident thinks of us only in such terms.

I would not spoil this picture one iota, because it is all true; but I would like our mainland fellow citizens to give some thought also to the high standards of the islands in other phases of life. Again our location has brought us great natural advantages. Situated in the north Pacific just within the Tropics, we are subtropical rather than truly tropical. The northeast trade winds, which blow for nearly 10 months of the year, mitigate the heat of the sun; and we enjoy a climate that ranges from 65° to 85° temperature, with a mean of 75°, nearly always tempered by a cooling breeze off the north Pacific. We are too far north for the hurricanes that sometimes sweep the islands that lie south of us; we are too far south for the gales that originate in the Bering Sea and rage north of us. Our rainfall, while extreme in a few localities high on our mountains, is never excessive over the greater part of the islands. The humidity is not as great as right here in Washington, and we suffer neither from heat nor cold. We have neither snow nor ice, except at the highest elevations reached by two or three of our great mountains, where, curious as it may seem, skiing may be enjoyed for a few weeks during our winter season a few miles away from summer beaches and fields of sugarcane and coffee.

The eight islands of the Hawaiian group proper have been built up from the bottom of the North Pacific Ocean by volcanic action through a fissure in the earth's crust, and today the last remaining action of this ancient volcanic process is visible on the southernmost island, Hawaii, in the great volcano of Kilauea, at an elevation of about 4,000 feet, on the slopes of the mountain, Mauna Loa, which is nearly 14,000 feet high; and at the peak of that mountain, which terminates in a huge crater. Kilauea volcano, and a large part of the mountain on whose slopes it is located, is contained within the boundaries of the Hawaii National Park. Its beauties have been preserved and made available to the sightseer by the National Park Service in its usual efficient manner, and it is the Mecca of thousands of tourists and local visitors annually. On another island, Maui, another huge but extinct crater, at the summit of a 10,000-foot mountain, Haleakala, is also a separate section of the Hawaii National Park. From a lookout station at the top of the rim of this crater, 10,000 feet above the sea and often above the clouds, one may see a panorama of six islands of the eight that comprise Hawaii proper, and look down into a crater 3,000 feet deep and about 20 miles in circumference. Hawaii offers great mountains, deep valleys, and rolling plateaus, all within the eye of the beholder at one time, a rare panorama of varied color and beauty.

The total area of these eight islands is about 6,500 square miles, equal to that of Connecticut and Rhode Island together, and not so much less in size than several of the smaller States. The islands extend in a general southeastern-northwestern line over a distance of about 350 miles; and extending beyond the northernmost, Kauai, for another 1,000 miles there are a line of volcanic peaks and coral atolls which are also a part of the Territory of Hawaii. Midway Island, a cable station for many years, is located near the end of this leeward chain and has now become of considerable importance as a way station on the trans-Pacific air route. Directly south of Hawaii nearly 1,000 miles away is Palmyra Island, also a part of the Territory, and possibly also to be used as an air station for the proposed American-Australian air route. Somewhat southwest of Hawaii lies Johnston Island, another coral atoll of potential value as a base for our air defenses. Quite recently America perfected its title to several other islands in this Pacific area—Howland, Baker, Jarvis, Canton, and Enderbury Islands—which, while not properly a part of Hawaii, may eventually be grouped for convenience within the jurisdiction of the Territory. They lie along and south of the Equator and are sometimes referred to as the American Equatorial Islands. The development of air commerce in the Pacific may give these islands a value which they do not now possess.

Hawaii is organized into four counties, the largest island, Hawaii, comprising one county of the same name; the four islands lying close together, Maui, Molokai, Lanai, and Kahoolawe, comprising the county of Maui; the island of Oahu, organized as the city and county of Honolulu, and including all of the small islets I have already described as extending north and south of Hawaii; and, last, the county of Kauai, comprising the island of Kauai and the adjacent smaller island of Niihau. The islets within the jurisdiction of the city and county of Honolulu extend 2,200 miles in distance from the southernmost to the northernmost, and this gives rise to the boast that Honolulu is the largest city in the world. This is, of course, true, if linear distance is the criterion of size. The Territorial government and the four county governments function as does the State and county governments on the mainland, except that a few of the principal Territorial officials, including, of course, the Governor of Hawaii, are appointed by the President of the United States instead of being elected by the people of Hawaii. It is also true that Congress has final legislative jurisdiction, our legislature operating within the limitations prescribed in the Hawaiian organic act, the constitution of the Territory, which can only be amended or modified by the Congress. The transition from our present Territorial government to that of a full-fledged State, when Congress decides that such a change is justified, can be accomplished by the same procedure followed by the 29 former Territories. An enabling act authorizing the adoption of a State constitution would be the first step. The approval of that constitution by Congress would complete the process, and this document would provide the manner in which the first State officials and representatives to the two Houses of Congress would be elected. A Territory has an anomalous position. In the words of Champ Clark: "A perpetual chrysallis existence as a Territory is repugnant to the genius of our institutions and out of harmony with our entire history. Home rule has been our policy from the beginning."

Hawaii has long aspired to admission into the sisterhood of States, and is working, and will continue to work, for that ultimate goal, the final justification for its annexation and organization as an incorporated Territory.

The people of Hawaii, nearly 80 percent American citizens, while composed of many racial elements, are united in their loyalty and allegiance to the United States. The voters for the most part are divided between two national political parties, as on the mainland. We have no separate or local political party, but join with our fellow citizens in being Democrats and Republicans. Political campaigns are waged much the same as here, with rallies, newspaper advertisements, radio speeches, and other means of soliciting the support of the electorate. However, we do add one special feature to our campaigns by providing at our rallies groups of musicians, who sing and dance in honor of their special candidates; and the latter are bedecked with flower wreaths, our Hawaiian leis, the number of which denotes in some degree their respective popularity.

With the exception of minor local variations, such as exist between different sections of the mainland, Hawaii is very completely a part of the American body politic, desires no other destiny, and aspires only to the closest possible union with the sisterhood of States.

Business Needs Tax Reform

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1939

JOINT DISCUSSION BY HON. EMANUEL CELLER, OF NEW YORK, AND HON. JOHN W. McCORMACK, OF MASSACHUSETTS, BROADCAST OVER A COAST-TO-COAST NETWORK FROM WASHINGTON, D. C., MARCH 14, 1939

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following joint discussion by Hon. JOHN W. McCORMACK and me, which was

broadcast over a coast-to-coast network from Washington, D. C., on March 14, 1939:

Mr. CELLER. Business has been waiting for some time to receive assurances on any changes that may be contemplated so far as tax legislation is concerned. The recent statements made by President Roosevelt and Secretaries Morgenthau and Hopkins, each following the other and each promising tax relief, were welcomed by business and the Nation as an intention to prove the administration's policy of business understanding.

Mr. MCCORMACK. It is timely, therefore, to discuss this evening some of the tax proposals business is talking about and see how they fit into the picture.

Mr. CELLER. May I digress for a moment, Congressman MCCORMACK, to publicly compliment you on the splendid work you did in working for tax relief for business during the writing of the 1938 revenue measure? Your personal leadership in the fight against the proposed punitive tax on closely held or family owned corporations, which resulted in its rejection, won the admiration of the public, who now regard you as one of the constructive leaders in tax legislation. This is fitting, in view of the important part played by the Ways and Means Committee, of which you are a distinguished member, in framing tax bills.

Mr. MCCORMACK. Any part I may have played in bringing about tax relief and in opposing unsound tax proposals was freely contributed, and the results in the business field during the past year have confirmed my beliefs, expressed during the writing of the measure, and also shared by associates of mine on the committee and in the House.

Mr. CELLER. Since a very large part of Federal revenue is derived from corporate and individual income taxes, I think it is proper that in our discussion this evening emphasis should be on income taxation. Every tax measure requires earnest consideration of the effect it will have on individual savings and business savings, as well as upon their relation to other major factors of our enterprise system.

Mr. MCCORMACK. There is another point, Congressman CELLER, that must be borne in mind in any discussion of this subject. The fiscal condition of the Government requires that we must have due regard for the amount of revenue required to carry on Government operations. We must keep in mind, therefore, the fact that the Government cannot stand any loss of revenue at this time, and this must be considered when suggestions are made for further tax revision.

Mr. CELLER. That, of course, is a proper attitude. It is my feeling, however, that if through tax revision there should be a temporary loss of revenue but a stimulation of business, Congress should still favor such changes, even at the cost of a small deficit to the Treasury. Increased business activity will quickly absorb such temporary losses, and the Government will in the long run profit greatly from increased future revenue receipts.

Mr. MCCORMACK. Suppose we discuss briefly, first, corporate income taxes and, second, individual income taxes. What changes do you think could be made in the corporate income-tax structure without serious loss of revenue?

Mr. CELLER. Many suggestions have come to my attention in recent weeks; however, I believe that one tax only should be imposed on corporate income. Included in this tax would be the corporate income tax, the capital-stock tax, and the excess-profits tax. I am assuming, of course, that no effort will be made to reenact the undistributed-profits tax.

Mr. MCCORMACK. The undistributed-profits tax automatically expires at the end of this year, and so far as I am concerned I am opposed to the continuance of even its limited application of 2½ percent contained in the present law. The plan you suggest for incorporating the other taxes into one tax possesses merit. It should not be difficult to arrive at a flat rate which would bring into the Treasury as much revenue as is now received from these various separate taxes. The repeal of the capital-stock tax and corporate excess-profits tax would be a tremendous stimulant to business, removing the grave uncertainty that these taxes now impose upon business. In addition to the fact that there would be no loss of revenue, an important factor would be the tremendous savings in the preparation of tax returns. Such a plan would reduce very greatly the records which business is now forced to maintain; would eliminate many reports now required; and, in addition, the administrative problems of the Government would also be greatly simplified.

Mr. CELLER. Bravo! Congressman MCCORMACK. Permit me to suggest that your committee could also very properly give consideration to other changes. For example, provision should be made for permitting business to carry over its net losses for at least 2 years as an incentive to expansion and to assume risks. A major obstacle to business expansion is the reluctance to venture into new enterprises with a prospect of 2 or 3 experimental years resulting in losses which could not be deducted or offset against subsequent years' gains. Such a provision was contained in previous revenue measures.

Other worthy suggestions made to me by business groups include the filing of consolidated returns by parent and subsidiary corporations and the elimination of taxes on intercorporate dividends.

Mr. MCCORMACK. So far as I am concerned, Congressman CELLER, I am very sympathetic to such suggestions. The abuses which brought the repeal of the consolidated returns were confined to a limited field. That situation has now been substantially adjusted. We now allow banks, railroads, and street railway companies to make consolidated returns. Study of the extension of that principle is clearly in line.

I agree with you, Congressman CELLER, that an immediate study of the carry-over of corporate losses should be given by the appropriate committees.

Secretary Morgenthau stated that extensive tax studies have been made by his Department, and that he would place this information at the disposal of congressional committees. I assume the studies made by the Treasury Department include data on the items you have just mentioned. If so, I am sure the Ways and Means Committee will be glad to examine this material very thoroughly when it comes to a consideration of tax revision.

The studies of the Treasury Department will, undoubtedly, be presented to the committee by Hon. John W. Hanes, Under Secretary of the Treasury. Mr. Hanes is a man of great capacity, courage, vision, and is a businessman who understands and appreciates the problems of business. Our great leader, President Roosevelt, and the country are fortunate indeed in having John Hanes in the public service.

Mr. CELLER. I agree thoroughly with you, Congressman MCCORMACK, in your complimentary reference to Under Secretary Hanes, which he so justly deserves. There has been much discussion recently of the tax rates on individual income; particularly the surtax rates, and the thought has been freely expressd that these rates are too high. It is contended that government cannot take away everything a man makes and, at the same time, encourage business. The first object of taxation, of course, is to secure revenue. When the problem is approached with that purpose in view the next step is to find a rate which will produce the largest returns. What suggestions have you to offer here, Congressman MCCORMACK?

Mr. MCCORMACK. In the matter of encouragement to private enterprise, I am of the opinion that our surtaxes on incomes are too high. There is a saturation point beyond which we should not go. Taxes that limit or restrict the incentive to invest in private enterprise are not wise. Not only do such taxes reduce sharply the amount of revenue that Government receives, but, insofar as they prevent capital investments in production, they increase unemployment, or to put it in converse language they prevent reemployment.

I believe in the right of individual initiative, of the profit system, and that an individual is entitled to the legitimate profits of his or her efforts.

Mr. CELLER. Experience shows that high rates do not produce the largest revenue. Experience is all the other way. The truth of this statement is found in the striking comparisons that may be made in the tax yield during the years 1924 and 1927.

Mr. MCCORMACK. Reference is frequently made to experience during those years as demonstrating that a rate lower than now exists will produce increased revenue and will release private investment capital so that it can function in private industry and business in a constructive way. Suppose, Congressman Celler, you give the radio audience a few additional details covering the official record in those years.

Mr. CELLER. In the year 1924 the maximum rate, normal and surtax, under the Federal income-tax law was 46 percent. It produced revenues aggregating $704,000,000. In 1927 the maximum rate, normal and surtax, was reduced to 25 percent, and it produced revenues aggregating $831,000,000. A further break-down of the figures for those 2 years is illuminating. It will show that the 25-percent maximum rate in effect in 1927 produced $38,000,000 less from taxes levied on the salaries and earnings of those with taxable income ranging from $1,000 to $25,000, while from those whose taxable income ranged from $25,000 to $1,000,000 and over there was collected $175,000,000 more.

Mr. MCCORMACK. Analyzing the figures you have just given, Congressman CELLER, it is apparent that the $175,000,000 increase in revenues from levies on those in the higher brackets is a levy on many times that amount invested in productive industrial and commercial activities, and those investments were making jobs. At the same time, also, this system was reducing the levies on the incomes in the lower brackets, thereby releasing more to the individuals in those groups for their own comforts, pleasures, and savings, and resulted in greater purchasing power.

Mr. CELLER. That is correct, Congressman MCCORMACK. In other words, the lower tax rates encouraged investment capital to finance private business and industry, produced more governmental revenues, and removed the "incubus" to which Chairman O'MAHONEY, of the Temporary National Economic Committee, referred in a recent speech in Chicago, during which he said: "We have got to replace Government spending with private spending. Taxation is the great incubus upon the back of enterprise." We have a wealth of precedents to support our contention in this matter.

Mr. MCCORMACK. It is difficult for many persons to understand that you can reduce tax rates and at the same time increase revenues. Yet such is the fact. By such action you are simply offering an incentive to production and trade and a stimulation to the flow of capital, and that is what creates jobs. This fact was clearly recognized by the late President Wilson when he stated in his message to Congress in 1918: "The Congress might well consider whether the high rates of income and profits taxes can in peacetime be effectively productive of revenue and whether they may not, on the contrary, be destructive of business activity and productive of waste and inefficiency. There is a point at which, in peacetime, high rates of income and profits taxes discourage energy, remove the incentive to new enterprise, encourage extravagant

expenditures, and produce industrial stagnation with consequent unemployment and other attendant evils."

Mr. CELLER. The late President Coolidge also supported President Wilson in this position. He went further and fixed the rate at which Treasury experts estimated the maximum revenue would be produced at 25 percent.

I believe this is sound doctrine. I see no element of danger to Federal revenue. If past experience is any criterion, revenues should actually be increased very materially. This system—the American enterprise system—gave the American people the highest living standard in the history of the world and, what is more important, a living standard that was still the best in the world even at the depth of the depression.

Mr. MCCORMACK. You seem to have made out a good case for a reduction in the surtax rates, Congressman CELLER, and I believe it is a matter that the Ways and Means Committee should take into consideration.

At this time I should like to refer briefly to the capital-gains and losses tax. The United States is the only important nation in the world that imposes such a tax. It has been asserted by some economists that the outright repeal of the capital-gains tax would induce such a tide of investment that the Government would be floated right off the financial reefs it now faces. It is asserted that this one act would create a sufficient prospect of profit to overcome the inertia of businessmen about which Secretary Morgenthau complained. Because of its actual effect in dollars and cents, it alone might exert the kind of power which will unfreeze the great mass of capital now lying idle in banks and seeking profitable investment. Such a step would permit men to take profits commensurate with the risks.

It is my opinion that the tax on capital gains and losses should be sharply amended so as to induce the existing frozen capital to invest in productive enterprise, thereby resulting in reemployment and at the same time bringing in greater revenue to the Government.

Mr. CELLER. That is a bold suggestion, Congressman MCCORMACK. We must not lose sight of the fact, however, that this administration is accustomed to taking bold measures to meet any crisis, and I am convinced that the present situation warrants such a step. Certain it is that the investment of capital would produce immediate and general benefits that far outweigh all the theoretical disadvantages. It seems to boil right down to this: The resumption of private investment is absolutely necessary. None of our other problems can be dealt with unless we can bring about the resumption of private investment. That being the case, we ought to use whatever proper means are necessary to achieve the end. There is too much at stake to jeopardize the future by half-way measures.

Mr. MCCORMACK. Above all, what we need is tolerance and understanding on the part of all of our people—on the part of employer, employee, and Government itself. Legislation along the lines we have discussed will go a long way toward restoring confidence and will insure a speedy return to prosperity for all of our people. That is what we all seek—that is what we want.

The Reorganization Bill

EXTENSION OF REMARKS

OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1939

Mr. KUNKEL. Mr. Speaker, our democratic form of government has been preserved by the system of checks and balances between the branches of the Government established in the Constitution. This equilibrium can best be preserved by a jealous insistence by each branch of the Government upon those rights and powers given it by the Constitution. Consequently I conceive it to be the duty of Congress and my individual duty as a Congressman to refuse to yield any power to the Executive office. It is, therefore, impossible for me to support the reorganization bill unless it is amended by the Sumners amendment, because, in my opinion, the bill involves a grant of power by the legislative to the executive. If one branch of the Government fails to preserve its powers and yields them to another branch, there is grave danger that the delicate equilibrium which has so successfully maintained our democracy during the past century and a half may be thrown out of balance and that our free institutions may in time cease to exist.

Clear the Slums Everywhere and Build Better Homes

EXTENSION OF REMARKS

OF

HON. WILLIAM I. SIROVICH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1939

SPEECH OF HON. WILLIAM I. SIROVICH, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES, JUNE 12, 1934

Mr. SIROVICH. Mr. Speaker, under leave granted me to extend my remarks in the CONGRESSIONAL RECORD I include the following speech which I delivered in the House of Representatives on June 12, 1934:

Mr. SIROVICH. Mr. Speaker, when a future historian shall record the great messages that have been sent by the different Presidents to the Congress of the United States, outside of the Emancipation Proclamation, in my humble opinion, the greatest message thus far sent to any Congress is the stirring and humane communication sent by President Franklin D. Roosevelt, calling for consideration of the great triad, old-age pensions, unemployment insurance, and preservation of the home. [Applause.]

Since the Seventieth Congress, during each session, I have repeatedly spoken upon this floor in behalf of and appealed to the membership of this House to enact legislation providing for the adoption of old-age pensions, unemployment insurance, and preservation of the home. [Applause.]

Mr. Speaker, back of our Government, back of our religion and custom is the home. The home is the foundation of all society. Upon it the superstructure of all civilization rests. The home is the institution where the father is the king, mother the queen, and the children are the subjects. In every home, whether it be in the large cities or upon the plains, valleys, farms, or mountain sides, there is a little sentiment upon the walls which inspires every man, woman, and child, which says, "God bless our home." What sweet, tender memories this sentiment always evokes in our heart and mind. Faith and hope should never depart from these humble firesides. The home is the cradle that nurtures our offspring. The home is the institution that shapes the destiny of our brood. As go the parents, so go the children; as go the children, so goes the home; as goes the home, so goes the Nation and the world. Destroy the home, and you destroy society, civilization, and everything that goes with it. [Applause.]

Everyone is praying for happiness, for comfort, and prosperity to return to all who struggle for their daily bread in order that their home may be maintained. We are hoping for a new day to break in upon all of us. Today the mortgages upon the homes of millions of our people are being foreclosed. Hunger, penury, want, and destitution stare these millions in the face. Today the homes of these unfortunate people are being threatened as never before. Economic conditions threaten to achieve what fire, flood, wind, and invasion have never done before. Property is gone, fortunes have been swept away, men and women beyond the middle age are back where they started, helpless and hopeless, not knowing where to turn for tomorrow's bread and shelter. And what is the cause of it all? It is the lack of money with which to preserve the home, rebuild the home, and build new homes.

Our honest and self-respecting citizens living in their modest homes have been imposed upon through chicanery, high-pressure salesmen of stocks and bonds, fraudulent investments in guaranteed mortgages, failures of mismanaged banks and investment organizations that have fleeced them of their life savings. Thus 10,000,000 of our American citizens are still helpless and hopeless, the tragic victims of this frightful economic depression that has deprived millions of their homes and their farms and robbed them of their economic security now and in old age. But the message of President Franklin D. Roosevelt pleading for old-age pensions, unemployment insurance, and the protection of the home has given them renewed faith, hope, and courage.

Mr. Speaker, I sincerely hope the housing bill, now under debate and discussion, which will provide for the improvement of Nation-wide housing standards, make possible employment of labor, stimulate industry, improve conditions with respect to home-mortgage financing, prevent speculative excesses in new-mortgage investment, eliminate the necessity for costly second-mortgage financing, create a system of mutual mortgage insurance, and by making provision for the organization of additional institutions to handle home financing will promote thrift and protect savings, amend the Federal Home Loan Bank Act, amend the Federal Reserve Act, and for other purposes that would be instrumental in bringing about clearance of all slums and the building of new homes, will pass the House today and mark the triumphant victory of human rights over property rights. [Applause.]

Mr. Speaker, the slums of great cities are the most terrible sores on the body politic. There is nothing that requires reformation more than the block tenements that are the pestholes of proud cities. The marble halls of business and finance, the splendid buildings that are the terminals of great railroads, the broad streets and fine highways that cities, States, and the Federal Government have built to make easy and comfortable the means of traffic communication between centers of population are futilities if the abodes of those who use them are foci of infection and of disease.

Starting at Eastport, Maine, and coming down all along the Atlantic coast are sections unfit for human beings to live in. Tenements, some of them built a hundred years ago, with dark rooms into which the sun never casts its health-giving rays, with filthy hallways and so-called "courts," into which an outstretched arm touches the opposing wall, with sinks in the hallways and no provisions made for bathing or other necessary needs greets you everywhere. From these disease-breeding slums owned and operated by old aristocratic family estates and other heartless landlords the last penny that can be extracted in the form of rent is extorted that their owners may bask in the sunshine of Florida or find pleasure at St. Moritz, Monte Carlo, Nice, Villefranche, Cannes, Deauville, or other centers of play and amusement to the everlasting shame of the Nation and the degradation of its people.

Take New York City as an example—the Battery gives out on one of the most fascinating harbor views in the world. The Statue of Liberty stands with uplifted torch against the sunset sky, a promise of faith and hope to all mankind. Broadway stretches away to the north, lined with magnificent towers of beauty and splendor. West Street, buttressed with great piers to which the shipping of the world harbors with the products of every nation. But between Broadway and West Street are some of the worst tenements of which any city should be ashamed. Here some of the poorest and least adaptable of our immigrants for generations have found temporary shelter, if it can be called such, a shelter unfit for animals much less for human beings to live in.

Two great bridges spring from the shores of Manhattan to the strands of Brooklyn. One, the Brooklyn Bridge, is famous the world over; the other, the Manhattan Bridge, is a remarkable example of magnificent engineering; yet between these two splendid structures exists 200 acres of land comprising over 50,000 dilapidated old buildings, some of the worst tenements known to mankind. There are no words in the English language vile enough to describe the living conditions that are offered, at high rentals, to those who came to the land of freedom seeking health and happiness for themselves and their children. For more than a century in these frightful pestholes crime, disease, and immorality have festered together.

"Hope springs eternal in the human breast", as Pope expressed it, and that eternal hope has been the beacon light that has led some of our best citizens from these terrible tenements to the great places in the life of the Nation. These men and women could not look back with anything but loathing to the days of their childhood and youth. No vine-clad cottage lured their memories back to lovely and happy days. No rose gardens spread their blossoms in the first days of summer to lift their hearts to higher aspirations. If some of them succeeded in escaping from their early environment, it was because of that eternal hope for better things that animated them and not because of memories of a lovely home.

The East Side of New York, the district which nurtured Al Smith, its beloved, honored, and famous son—yes, its idol—has produced many splendid men and women, yet these people had their impetus within themselves and not from their environment. If they did as well as they have done with all these inhibitions, what might they not have accomplished if their initiation into life were under fine, healthy, and uplifting conditions instead of the depressing and unwholesome status from which only their determination to succeed enabled them to escape?

I have pointed out this section in which I live as an example. But there are other districts in New York City, as there are in other cities, cheap walk-up flats as well as unfit tenements, that are menaces to public health and decent citizenship. Boston, Providence, Springfield, Hartford, New Haven, Albany, Newark, Philadelphia, Baltimore, Chicago, St. Louis, Cleveland, even the great Capital of our Nation, Washington, are infested with slums in alleys and back streets that will equal in squalor anything of which New York can be ashamed. Nor is this condition limited to the Atlantic coast. The same situation exists in the wide Mississippi Valley, in the Gulf States, and along the west coast. No city can point the finger of scorn at any other city and forget its own alley and back-street pestholes.

The greatest problem facing mankind today should not only be the restoration of prosperity, the increase in commerce, the expansion of industry, the curtailment of crops, but, above all, it should comprise a provision for decent homes in cities; homes for the man who works with his hands; homes for the men and women who are in the so-called white-collar class; homes for children and for the youth of the land; homes for which they need make no apology in their later years, the sort of homes that youth can look back to when maturity is reached with a decent and wholesome pride, and not with apology. [Applause.]

Such homes cannot be built by idealist dreamers filled with the aspirations of the Beaux Arts in Paris, the classicism of the Parthenon and Pantheon; the stately grandeur of St. Paul's in London; the splendor of St. Peter's in Rome; the Beauty of St. Stephen's in Vienna; the mysterious beauty of St. Sophia in Constantinople; or the dignity and majesty of St. Patrick's Cathedral in New York City. Human beings cannot live in comfort in monuments. A monument of architectural magnificence cannot be a home.

Stately colonnades do not balance with cozy kitchens, nor pediments with comfortable living rooms or nurseries. The line of the poet Moore, "I dreamt that I dwelt in marble halls," does not compare in its appeal to the human heart of the simple words of Payne's, "Be it ever so humble, there's no place like home."

In this House of Representatives of the Congress of the United States there are men from every walk in life. Men who come from the congested areas of large cities; men who come from the lesser cities, where life is less emphatic and who find time to think; men who come from small communities, where their commune with Nature is so constant that they feel its impulses following them to this Capital, and who apply to their problems of legislation the great common sense of the soil, men who do not know from actual experience that slums are in great cities. To them, as well as to my colleagues who do know, I appeal for cooperation to demolish and stamp out these pathological slums, dark, foul, pest-ridden tenements, humanity's deadliest foe.

We are all human beings striving to do the best we can with what nature has given us to work with. Let me appeal to you, my colleagues, you who are familiar with the open fields, the paths through the sweet woods, the green banks of streams, the feel of the bare earth through unshod feet, I invite the sympathetic cooperation of you men who have beheld the glory of the myriad stars at night, the splendor of the dawn and sunset, unmarred by high buildings, I beseech you who have felt the quiet of the still ponds and the serenity of lakes and the soft silence that comes when the sun has set at its place in the west—to you, as well as to my colleagues who know only hard-paved streets, bare parks, ground to brown earth by the feet of playing children, I entreat you all to wipe out our slums, our national disgrace.

I insist that the slums of cities be eradicated and that the festering sores of large communities be excised. I demand that the children of the cities be given fresh, clean air to breathe, wholesome places to sleep, open grounds in which to play, a chance to see the sky clear and undisturbed, a place to sit, not on the curbstone with feet in the putrid gutter, but where their feet may find solace and comfort from the clean earth—that good mother earth from which we all come and to which we shall all return—that place in the sun, a place in the air, a place in the home. Only a few days ago our great and beloved President Roosevelt said, "The slums must go," and go they will. The call of civilization and our American humanity must be heeded. [Applause.]

Mr. Speaker, you have provided for all that I have asked by the appropriation you have made for the purposes I set forth, but these appropriations have not been put to the purposes that you intended—the eradication of the slums of great cities. Instead of practical application of the money granted to produce the results you intended, great dreams have been dreamed, great plans have been planned—to do what? Not to eradicate the festering slums of great cities, but to build utopian communities outside these cities in their suburbs, in the outlying districts, from which to his place of employment it will take a man in his car from half to an hour and a half to reach his job. Look at the advertisements in the "help wanted" columns in any newspaper—what do you find? "Man wanted—with car." It is not enough that the man wanted supplies his services, but he also must supply his transportation. No wonder Mr. Hoover wanted two cars in every garage. One to take the man to his job and the other to take the children to school, the wife to market, and all on a bare subsistence wage. Could you do it? Could any man do it on a mere subsistence wage? No.

Forty years ago in New York City, when the region west of Central Park and north of Fifty-ninth Street was being developed with apartment houses, tiled baths, electric lights, telephones, gas ranges, steam heat, hot water, with janitor service, five-room apartments rented for less than $30 a month in new buildings in good neighborhoods. There were no superintendents in those peaceful halcyon days; just janitors, and good ones, too. Tenants were usually from month to month. No long leases were required. Often from 1 to 3 months rent free were given for the first year if the incoming tenant only promised to stay for the second year without a lease being asked.

These apartment houses still exist, and, as they were well built, most are yet in fair to good condition. They are 40 years older They have long since paid up their original cost and an income since then. But are the rents what should be asked for 40-year-old apartment houses? They are not. Their rents have been doubled, tripled, and quadrupled. Their assessed value has not been increased much but the amount asked when they are sold has risen in price comparable to the rise in rents. They have been sold and resold many times, each time at greater price. There are exceptions, of course, but in the majority of cases the facts are as I have given them. These apartments are used by the white-collar class in New York and are given fair care by their present owners although at extortionate rentals. Years ago leases were shifted from May 1 to October 1 by the owners, to avoid vacancies in the summer—vacancies that came when residents of New York began, about the first of this century, to go to bungalows at beaches, or suburbs, or country. The tenant usually got the worst of the deal when any shift was made—as he or she does today. Nor is this confined to New York. When President Coolidge approved

the Welch Act, giving increases to Federal employees, the majority of landlords in Washington immediately raised their rentals to the amount of the increase so the Welch Act betterment was absorbed by the landlords.

I have spoken of the white-collar class of apartments in New York to use them as a comparison to the slum tenements. These apartments are usually halfway decent, but if you want to see humanity at its worst housing, take a trip through any of the tenement districts in any of the five boroughs and you will be astounded at what is offered by greedy landlords, at exorbitant rentals, for human beings to live in. Yes; to live in. Crowded and herded together in never ventilated, small rooms, whole families swelter in the summer heat and shiver in the cold of winter. The fire escapes are their front lawns; the roofs are their parks; and for the children, in the summer, the hydrant furnishes their beaches.

The worst conditions do not show from the street, but in the back yard, where old law tenements are crowded into spaces once used for gardens, now, often, more fit for garbage. Sing Sing Prison at Ossining provides for convicts better housing than do most of these tenements. One sink in the hall often is the entire water supply for many families. Oil lamps are still used for lighting. The halls are seldom swept or scrubbed, though many of the womenfolk keep their rooms as clean as it is possible to make them, encrusted with the dirt and grime of many preceding generations. Air spaces often are less than the square of the two-pane wide window. I have seen stables, cow barns, and public garages that were superior to these dens as living places.

To these slums in past generations came peasants from the green fields of Erin; from the lovely Rhineland; from the plains of Hungary; from the slopes of the Alps; from the lovely coasts of Italy; from the fjords of Norway; from the Welsh hills and the highlands and lake region of Scotia; from the isles of Greece and the age-hoary mountains of Armenia; from The Steppes of Russia, and the vales of Poland, and with them also came artisans from the greater and lesser cities of Europe, North Africa, and the two Asias, all seeking happiness, peace, and liberty in a free country. [Applause.]

How many young brides trying a hazard of new fortunes in the America of their dreams have found the sordid reality of the slums so soul-destroying, so heart-breaking, so terribly different from the humble but pleasant homes of their native country, that they have cried as only a homesick woman can cry, in deadly loneliness, in a strange country, speaking a strange language, and among strange people.

How many young husbands among these immigrants have eaten their hearts out with disappointment over their inability to provide better homes for their young brides and the mothers of their babes? And this not in some poverty-stricken country wasted by the ravages of centuries old wars, or rigid class distinctions, of life and death, of men and women, in the same status into which they were born, but in the wealthiest city the world has ever known, the commercial capital of the most prosperous of nations, the seat of three great and many lesser institutions of learning, of splendid museums and galleries of art, of magnificent theaters, of every convenience of modern civilization except those of decent housing for the poor.

Who is responsible for this state of affairs in which poor and hard-working men and women and children growing up into life and its opportunities are compelled to live in squalor amid surroundings unfit for human beings? The greed of landlords is primarily responsible. The laxity of local legislation controlling the existence of what can only be called "pesthouses" is partly responsible. The lack of voice crying from the housetops that these folks shall be provided with fit homes within their means has been partly responsible.

The lassitudinous dilettantism of the man in whose charge these matters have been put for solution has been very much responsible, since there has been earmarked for the use of the Housing Authority, by the Public Works Administration, the sum of $25,000,000 definitely for slum clearance and rebuilding of the slum sections in New York, which money was provided by Congress so that no responsibility can be laid at the door of the Members of this honorable body.

In addition to the twenty-five millions earmarked for slum clearance, there has been allotted $11,485,000 for other projects in better neighborhoods in Manhattan, the Bronx, and Queens. Congress has not been lax. Public Works Administration has not been lax. Secretary of the Interior Ickes has been very gracious, and the laxity lies at the door of the architect who should have prepared practical plans for the clearance of slum sections and the building thereon of model and modern apartment houses, if not of the type, along the lines of those erected in late years in Berlin, Vienna, London, and Moscow.

The name of the dreaming, pussyfooting, and dilatory architect is Robert D. Kohn, director of housing, Public Works Administration. He solely is responsible for this crying and tragic delay.

Slum clearance and rebuilding on the cleared area is not a new thing that has to be thought out over a long period of time and that involves difficult technical planning. In New York City the building of apartment houses in the last 40 years has almost been standardized into fixed-price classes. All the lighting, heating, plumbing, and cooking accessories are practically as standard as a pound of granulated sugar. Flooring of wood, tiling, terrazza, or other form is also standardized. The steel structure or the concrete structure involves no problem. Steel framework for any requirement is sold like coal by the ton and delivered as quickly. Concrete is as simple as sifting ashes. Elevators, stairways, gutters, fire escapes, shutters, interior trim, window framing are equally standard.

The money is ready as soon as plans are ready. What is there to dream about? A monument to architectural aestheticism? We have enough architectural monuments now in New York. What New York needs is slum clearance and the building of decent apartment houses, with modern equipment, on the slum sites.

The people who are anxiously waiting for such decent housing do not care whether the style of the curtain walls or the coping is modernistic, arabesque, paleo-renaissance, neo-renaissance, or Mozambique. What they want is immediate clearance of slums and decent houses put in their place—5-story walk-ups or 10-story elevator apartments—the type of housing that is applicable to suburban development, as the rows of houses in Philadelphia, Baltimore, and Washington. Apartment houses are what are wanted. The apartment house is eminently suitable to Manhattan Island.

Manhattan Island is almost a solid block of gneiss. A central ridge runs through it from north to south. This gives a surface drainage into the three rivers, the North River, the East River, and the Harlem River, which makes Manhattan Borough of New York City one of the healthiest civic communities in the world. There is very little soil to absorb sewage, or the street dirt of a city, or any of the effluvia common to great cities.

Sailor's Snug Harbor, which owns a large tract of land in lower central Manhattan, and which is in my congressional district, has shown what can be done to provide decent housing at reasonable rates of rental.

Action, quick action, is what is needed. It may be a delightful occupation to dream of Sir Christopher Wren, Inago Jones, the Adams brothers, or to dally over the loveliness of Westover, Webley, Shirley, Haworth House, Red Hill, Poplar Forest, or other architectural anachronism.

Manhattan is New York. It will always be New York. The four sister boroughs in Greater New York are splendid sections, but Manhattan is New York. In the days before the consolidation that formed Greater New York, from the close of the Civil War to the start of the War with Spain, the heart of residential Manhattan was the region lying north of Twenty-third Street and between Broadway and Lexington Avenue, where beautiful residences were erected and occupied by old-time New Yorkers—a region now given over to great retail stores, theaters, Radio City, fine churches, and small, smart shops.

REBUILDING OF SLUMS

Then came the development of Riverside Drive, with great apartment houses facing the North River, and this was succeeded by the tearing down of the old-style apartment houses and private residences on Park Avenue and the erection over the tracks used by the New York Central and the New Haven Railroads, but still owned by the old New York & Harlem Railroad, which controls the north rail entrance to New York.

The pessimists said that people would never live in costly apartment houses built over railroad tracks. But the pessimists were in error, as they usually are, and the optimists won, as Park Avenue is now the finest residential street in the five boroughs that form New York City. If proper housing were built in the regions I have mentioned on the East Side, many who have moved away from Manhattan would return. Small parks for adults, playgrounds for children, would add to the attractiveness of the section, and while it will not rival Park Avenue, it would give decent, self-respecting people proper housing. But dreaming of architectural splendor never built any apartment house.

The East River, which is really a strait joining New York Bay with Long Island Sound, is one of the most attractive and busiest stretches of water courses in the United States. Every form of watercraft, from junk boats to stately sound steamers, plies its waters day and night. In the summer the Detroit River is a busy place, but with winter its interlake traffic stops, but the East River, like Tennyson's Brook, goes on forever, and it gives a beautiful outlook for the East Side through the four seasons of the year. If an east Riverside Drive, with a wide sidewalk on the waterfront, were built, it would pay—not only provide fine, healthy breathing space for the residents of the section but would increase the value of adjoining property, as did Riverside Drive on the west side of Manhattan. The development of Morningside Park from One Hundred and Tenth Street to One Hundred and Twenty-first Street was the primary cause of the selection of the heights to the west of Morningside Park as the site for Columbia University.

The transformation of Seventh Avenue from Twenty-third Street to Forty-second Street and the region abutting thereon was due to the location of the Pennsylvania Terminal on Seventh Avenue between Thirtieth and Thirty-third Streets. The city post office back of it, on Eighth Avenue, is another example of what may be done by the substitution of good buildings for shabby and unfit old ones.

Even when good buildings are replaced by better ones—Fourth Avenue from Twenty-third Street to Thirty-fourth Street being one example of this, and the substitution of the present buildings on Fifth Avenue from Twenty-third Street to Fifty-ninth Street for the old, stodgy brownstone fronts that lined that thoroughfare up to the beginning of this century, is a conclusive example not only of improvement in the status of the region but a strong appreciation in value of the land.

Nearly every city in the United States needs to be rebuilt in part. There are East Side pestholes in many of the largest cities of our Republic.

Suppose a great conflagration, like those at San Francisco and Baltimore, were to strike Manhattan and level the East Side to ruins and ashes; would the people of New York sit amid the wreck and weep, or would they begin to make plans, as did San Francisco and

Baltimore, before the ruins were cooled off—as Boston and Chicago did before them? There is only one answer—New York would be rebuilt even better than before.

Why wait for a holocaust to clear the way? Must catastrophe lay a heavy hand on our great city before action is taken, to make its residential sections what they ought to be—the equal, if not the superior, of any model houses found today in all the world.

Must disaster overtake a city before the civic pride of all its citizens is aroused to reform abuses that are the results of generations of greed and neglect?

God forbid!

London began its work of rebuilding in 1666, after the great fire. It extended it at the end of the nineteenth century, when the Duke of Westminster of that time, the greatest landlord in London, tore out miles of rookeries and alleys back of Trafalgar Square and replaced them with decent buildings and fine streets. Manchester, Birmingham, Bristol, Liverpool all cleaned up, as also did Edinburgh and Glasgow in Scotland. Berlin has replaced poor buildings and narrow streets with good buildings and wide streets. Vienna has done the same, as has Moscow on a much larger scale.

Why must the United States lag behind Europe? Why must New York follow the procession in improvements in living quarters, instead of leading it to splendid results along practical lines; instead of dallying with aesthetic sketches on drafting paper that are not even definite plans?

Why? Because Robert D. Kohn, director of the housing authority, who ought to be thoroughly familiar with the urgent needs of New York in the matter of slum clearance and the building of decent apartments to replace ramshackle buildings—buildings, I repeat—that are unfit to house animals, much less human beings, plays with pencil and paper on an idealistic drafting board, instead of getting out practical plans that would put thousands at much needed work, and that would give proper housing to the poor and the moderately circumstanced people of New York, not only in the East Side but in other sections of the city.

Manhattan is proud of its citizens. They are proud of their city. A community that in less than 100 years has risen by its own energy and capacity, as well as its natural advantages, from a population of about 100,000 to be the focus of a cosmopolitan area containing 10,000,000 persons needs no explanation nor apologia from me, nor from anyone else. Manhattan is a cross section of the peoples of the world—the adventuresome; the challengers of fortune and fate; the seekers of freedom of person and liberty of thought and speech; the youth and the mature of all the races of the world.

They are not alien to each other as many carping critics assume. They were and are all inspired with optimism and the search for greater opportunities than were possible in their original homelands. Many of them brought little to the city but their capacity to work at many trades or at any work obtainable.

In their inexperienced, greenhorn, immigrant days they were exploited, often by shrewder and less honest members of their own races. But they have outgrown all that. Children came and these children went to American public schools and universities, and what they learned there they often taught their parents at home after school. Many a foreign-language immigrant has learned to speak English from his school-taught son. Many a mother has learned from her daughter how to speak and know the difficult new tongue.

As the children of the immigrants grew to manhood and womanhood and married they sought better homes in other sections of the city. In Brooklyn, Queens, the Bronx, Staten Island, and in Long Island, New Jersey, Westchester, and in Fairfield. The old folks remained in the old home, the home of their youth in this country. As other immigrants came in they took the places made vacant by the removal of the second generation, and this has gone on since the Civil War.

If these residents are to become Americanized, are to become citizens, they need some practical demonstration of the pledges made in the Declaration of Independence and the Constitution of the United States. Their bill of rights should start with the right to live in a decent home amid decent and healthy surroundings.

The money has been earmarked for the purpose of providing such homes. The United States Government by its appropriation of funds has shown in the most emphatic way—by the allotment of money—how to achieve this purpose. Why should its intention be delayed in execution by the errant will of a single individual—one who from experience should be most sympathetic—is the director of the housing authority a friend of the poor and lowly or is he a little brother to the exploiting landlord who seeks no change in the pesthole slums of our cities?

Second Avenue, which is in the heart and center of my congressional district, was planned to be when originally laid out what Fifth Avenue has become today—the greatest thoroughfare in New York. On Eighth Street and Second Avenue is the old St. Mark's Church in the Bowery, which was the garden spot of New York and where lie the mortal remains of the famous Dutch Governor, Peter Stuyvesant, who was the ancestor of our distinguished colleague HAMILTON FISH, colloquially known to us as "HAM FISH," the ferocious nimrod of modern communism.

Americanized continental Europe to the extent of the third and fourth generation is well represented in my district—German, French, Spanish, Italians, Swiss, Austrians, Hungarians, Poles, Ukranians, Swedes, Danes, Czechs, Slovaks, English, Scots, Irish, Jewish are all represented as courageous and patriotic Americans in the Fourteenth Congressional District of New York. The best blood of Europe, who came here to seek adventure and fortunes in America, whose sons and daughters and their descendants represent today the highest grade of modern civilization, are found in our midst.

New York City is the most cosmopolitan city in the world. My congressional district is the most cosmopolitan section of any congressional district in America. Its diversified citizenship represents a cross section of the life of our Nation. Rich and poor, high and low, success and failure are represented in my district. All of my fellow citizens of my community are inspired by one common ideal: "Be it ever so humble, there's no place like home." However, they feel that this home to which they aspire should be in conformity with the high standards of the twentieth century, clean, wholesome, habitable, modern, up-to-date American homes. That is what I, as their Representative, appeal to you to grant to them as their just and human right. [Applause.]

Mr. Speaker, the Tennessee Valley project, which was perfected, elaborated, and developed through the construction of the great Muscle Shoals, is a great pioneer project in public power production. This national experiment cost the taxpayers of the United States hundreds of millions of dollars and will improve the social, economic, and agricultural opportunities of the great States of Louisiana, Mississippi, Alabama, Georgia, Tennessee, and Arkansas. The members of the New York delegation, including myself, voted for that project to help the people of the middle South.

When the tributaries of the Mississippi overflowed their banks and brought ruin and havoc in the homes, hearts, and firesides of most of our Americans living in that section, almost $400,000,000 was voted by the Congress of the United States to prevent the future ravages of the Father of Waters. Our congressional delegation from New York, including myself, voted for that measure.

Boulder Dam, one of the greatest engineering feats in the history of our Republic, that will revolutionize irrigation possibilities of many western arid lands and serve cheap electricity to eight States of the Union, cost the taxpayers of the United States more than $400,000,000. We, the members of the congressional delegation from New York, voted for that project to help the great States of the West.

Hundreds of millions of dollars have been appropriated by the Rivers and Harbors Committee for public-works improvements for harbors and rivers that will bring happiness and prosperity to different sections in our country. Our delegation in Congress from the State of New York has voted for these improvements that will benefit our neighboring and far-distant States throughout the Union.

Mr. Speaker, the time has arrived when the great Empire State of New York, talking through its congressional delegation for the greatest city in the world, New York City, appeals to the membership of the Congress of the United States to help it eradicate and clean out the 150-year-old slums and pestholes that are still called homes and are found in every part of Greater New York. We should concentrate on the Nation's greatest slums in New York City, comprising over 1,000 acres in Greater New York, as a major experiment in improving housing and living conditions of the working classes through the securing of cheap rentals that will be within the reach of the great producing masses. We should immediately perfect a comprehensive long-range housing program that will act as a guide for the rest of the country to follow. This program will act as the foundation of the "new deal." Upon it the superstructure of new homes will be reared. It will end unemployment and help to bring us back to prosperity. [Applause.]

Greenwich Village, originally one of the early settlements of the English in New York City, later the home of Thomas Paine, and today the home and mecca of the literary and artistic colonies of our Republic, is also in my congressional district.

All these locations today need rehabilitation. They are crying aloud for clean, wholesome, modern homes that have the equipment and appurtenances that modern civilization demands.

Mr. Speaker and fellow colleagues in the House, think of it! At this very moment 2,000,000 New Yorkers still live in old slum-law tenements. Fifty percent of the tenements condemned by the tenement house commission of 1885 are still standing, harboring unfortunate people who have to live in these contaminated and vitiated homes.

England, Germany, Austria, Russia, and Holland are half a century ahead of us in model housing and construction.

A survey of vacant apartments in New York City showed 3 out of 4 without hot water, 4 out of 5 without steam heat, 3 out of 5 served by water closets in the hall. In the slum areas of New York the death rate from TB averages 113 per 100,000, as compared to 27 per 100,000 in nonslum areas.

In the congressional district, the Fourteenth New York, that I have the honor to represent in Congress there still stand houses that were built before the Revolution. In some of these houses still live the descendants of the original builders. In my district stands the splendidly noble Washington Arch, through which the returning soldiers of the last two wars marched in quiet triumph. Fifth Avenue, that street the name of which is known the world over, starts at Washington Square, the site of the Washington Arch.

On Fifth Avenue, in my district, lived the beloved Mark Twain, Samuel Langhorne Clemens, and he was only one of the many thousands who rose to fame and lived at least part of their lives in my community. But my district also has produced many men and women who never rose to public notice but who were and are splendid fathers and mothers, God-fearing, decent, wholesome folk, rearing their families in honesty and truth and bringing their children up to be good, self-supporting, and self-respecting American citizens.

My district is a cross section of the Nation and of the world. Every State of the Union is represented therein by its sons and daughters who have come to New York to test their fortunes. Every nation and race of the world is represented in my district by immigrants who have sought in the United States the freedom they were denied in their own countries.

My district is both east side and west side, and almost runs "all around the town," as the song goes. Much of it has been rebuilt. All of it ought to be rebuilt with deeper and more secure foundations and higher living buildings set in parked spaces, open to the sun and air. The homes of the people of my east side should be as healthy, commodious as the homes of my constituents on the west side. The same number of persons could be housed in tall towers like the present towers of finance and commerce in New York, each in its own park, as are now jammed into wretched, insanitary tenements.

Trinity Church Corporation owns many of the worst of the tenements, and that institution might become more popular than it is if it started the work of rebuilding its slums. That is the gospel of true Christianity.

This is the twentieth century, and the housing in great cities, especially New York, must proceed along twentieth-century lines. Our first thought should be the comfort and happiness of the men and women who are to live in the cities and work at every form of human endeavor and not the amount of profit that may come from extortionate rentals.

Let us therefore build wholesome homes for decent people. Homes that will be clean, sanitary, commodious, and serve as the index of the civilization of our day.

Mr. Speaker, what the Nation needs is a great national drive for the entire eradication of the slums of all the large cities. These places of pest, these tragic sources of disease, these obsolete structures that are not fit to house an animal, much less a human being, should be leveled to the ground and in their places erected housing suitable for the living quarters of the men, women, and children of the American family wherein they can live in decent dignity commensurate with the greatness of the Nation of which they are citizens.

This should be done now, immediately. Not piecemeal and over a period of time, but now, at once, when such great effort is being made to restore employment and to return to prosperity. The building trade is one of our basic industries. It gives employment to all classes of labor, from the lumberman who fells the trees that are made into lumber that goes into construction; the lumber-mill worker who changes the timber into beams, pillars, posts, shingles, and other structural lumber; the trim maker who makes the doors, window sashes, and other trim; the brickmakers and stonecutters and the clay banks and quarries from which they get their base supply; steam and water piping makers; electrical-wire makers, and other supply manufacturers and other building supply makers. It would give new impetus to railroads and motor trucks to transport the material.

Architects and their staffs, stonemasons, bricklayers, tile layers, plasterers, plumbers, painters, pipe fitters, electricians, would be put to work at once. There is not another industry that uses so many different sources of supply, obtained from so many sources all over the country, as does the building industry. It would invigorate these trades I have mentioned at once, start pay rolls going, and do more to restore prosperity and happiness to those who can labor and cannot find work than anything I can think of.

With newer houses would also come modern equipment for living, electrical and gas refrigeration, electrical and gas lighting, better light fittings, new bathtubs and bathroom fittings, radios, telephones, better furniture, rugs, pictures, kitchen utensils, and other innumerable devices, besides modern methods of cooking. All along the line there would be gigantic improvement in means of living. It would be a design for living that would give the American people in the cities what they should have and what they easily could have. Its influence would be Nation-wide. It would put the entire Nation again happily at work.

Competition would force the owners of semislums to reconstruct their properties and to reduce their outrageous rents in competition with the low rentals that would be charged for this new construction. It would force improvement in the single and double houses, since no one would care to live in them unless they met the new requirements of this American pattern of living, which should be national and not local, so that all would benefit.

Had this been done 2 years ago, when, in January 1932, I introduced in the House two bills providing ways by which such a project could be financed under the control and direction of the Government of the United States, and had Robert D. Kohn, director of housing, instead of dilly-dallying over aesthetic dreams, set resolutely to work to do that for which he was given his place in the public service, the work of national building construction, which should be universal throughout the Nation, would have been half done, and there would have been no need for the President to include in his last message to Congress any proposals covering housing in any form.

The Federal Government, of which the citizens of every State are also citizens, should sponsor, finance, and, if necessary, construct the type of collective and single family homes that I have described. It should not turn over many millions to the unscrupulous real-estate mortgage racketeers and criminals who mulcted the investors of America of billions of dollars. Citizens should be able to deal directly with the Government through agencies and not have Federal money advanced to the same group of unscrupulous high binders and their successors who wrecked so many fake real-estate financial projects to the lining of their own pockets.

Much of the money could be obtained from the Postal Savings, on which the depositors get a low interest. The interest charged the borrower should not be over 4 percent per annum. Principal amortization should run not less than 20 years—30 if necessary—the same as is being done today in Europe and in South America. The Postal Savings would be well secured by investment in the homes of American people. This collateral security of the real estate and the home, in my humble opinion, is superior security to most of the paper that is rediscounted in the Federal Reserve banks of our country today.

In each of the States of the Union and in the District of Columbia Federal home-loan agencies could be established and the present Federal home-loan set-up could be modified so that instead of giving the money for homes to these real-estate sharks it would go directly to the people themselves. Details are not needed; they can be worked out later. The general idea is the thing.

By this method there would be no such gigantic collapses of mortgage-loan groups, which has been one of the most distressing and lamentable of the disasters of the depression, because it worked two ways—it wrecked the investor and it wrecked the borrower.

Congress last year created the Home Owners' Loan Corporation. Today it is operating in every State in the Union, and has saved over 200,000 homes from foreclosure worth over $600,000,000, and is operating to save from foreclosure over a million homes, the value of which will run into billions of dollars. The Home Owners' Loan Corporation is paying millions of dollars in delinquent taxes to local communities; is spending millions of dollars in repairs, thus increasing employment; and is restoring income to tens of thousands of investors, thereby aiding and increasing purchasing power.

No word in the English language brings up a more tender sentiment than the word "home." It is the foundation upon which the superstructure of our Government is reared.

If the word "home" has great significance, the actual thing itself, with all its loving associations, has a far deeper hold on the human heart. The saving of a home is a most worthy effort. It keeps the family together and preserves the family and relative ties. Best of all, it provides a secure haven for the young folks. It gives them an incentive to establish another such home when they grow up, meantime protecting those who are not secure in family life. [Applause.]

The operations of the Home Owners' Loan Corporation not only have saved homes for their owners but the obligations it has incurred in so doing will be cleared by the income coming to it by amortization, with no cost to the taxpayer.

Through the Home Owners' Loan Corporation the Federal Government makes it possible for every wage earner to own his own home, in which he will live and be secure, not only while his family is growing up but in his old age, when they have flown to new nests. It has been proven that a single plan of home-mortgage financing, on a long-term basis, insures complete security for the lender and gives the borrower confidence that he can carry through his obligations to the very end.

The 5-day week and the 6-hour day, now on its way, and the shorter hours of labor now in effect and coming on, will give the workingman more time to spend at home, if he has a home. This will mean that he will know his wife and children better, understand and sympathize with their problems and help solve them. It does not mean that the man will be a "nuisance around the house," but it does mean that he can do much of the work that now falls to the lot of the wife, and as four hands are better than two, the work will be done quicker and provide more leisure for them to develop their adult education and interests.

In every great crisis of war, on its own soil or abroad, in which the United States has been engaged since its foundation, it has called on the men of the homes to protect the Government, the wealth of the Nation, and the property of the Nation. Now has come a great crisis of peace, of longer duration than any of the last three wars in which the Nation has been engaged, in which not only the men, but the women and the children of the homes, have endured trial and suffering equal to and superior to that of actual war.

As it was the duty of the men of the homes to rally to the defense of their country in time of combat—war—to which they nobly responded, so now it is the equal duty of their country, and its wealth and property in this time of a prolonged and terrible crisis of peace, to come to the aid of those on whom it and they must always rely for preservation. The home is the basic foundation on which the welfare of our Republic is built. If the homes, single or collective, fell into dilapidation and decay, those who live in the homes will become the victims of destitution and despair. Who, then, will defend the Nation, the Nation's wealth and its property, when our Republic and its wealth and property is not only confronted with enemy attack but, possibly, engaged in a terrific struggle for its very existence and preservation?

Can the Government, as such, defend itself? No! Can wealth, as such, defend itself? No! Can property, as such, defend itself? No! Can the Nation defend itself against a foe determined to conquer a rich and fertile country? They cannot! Men are needed to fight. Today our working classes need homes in times of peace. Not any kind of a structure that a grasping landlord would think fit, but what the American citizen and his family think adequate, just, fair, and proper. Construction is needed. Immediate construction. Now! At once! Let us build new homes for our working classes. [Applause.]

More construction and still more construction, until every American family can live in a decent home and have all the comforts and happiness that such a home will provide. Let the Government build new homes, collective and single, for the men and their families, on whom its very existence depends. Let the building continue over decades, if need be, until the work is complete. Let there not be left in the entire Nation a slum, a dilapidated shack, at which the finger of scorn can be pointed. Then every American family will be housed in healthy and happy habitations and the Government will have done its duty to those who work in every quarry of human endeavor, to make our country great, rich, glorious, and prosperous, the noblest republic in all the world. [Applause.]

Reconstruction, or repair of old structures, is not what public opinion demands. What the great masses of our people are clamoring for is the construction of new buildings and the clearance of slums in our great cities. This problem will not be solved until the old pestholes are deliberately wrecked and in their places are erected newly built homes of which humanity may be proud and the tenants not be ashamed.

The day for expediency has passed away. The moment for action has arrived. Expediency will no longer serve. It only plasters the sore and does not heal it. We must cure these slum sores that exist everywhere in our civic communities. There is only one way to accomplish this purpose and that is to face the housing problem frankly, fearlessly, courageously, honestly, by admitting our errors in the past and starting fresh and anew to accomplish our purposes and our ideals. Will the clearance of slums pay? It certainly will. Not only in improved citizenship but in the health and happiness of our working people as well as in cold financial returns.

In all the great cities of Europe slums have been supplanted by decent, wholesome housing where human beings can live as God intended them to exist. Let us make a new start right here in America. Let the "new deal" be given in housing to those who have been the tragic victims of the "raw deal" in the past.

Congress will soon adjourn. Let us refuse to adjourn until this wholesome human appeal for habitable homes will have been given to the citizens of our Republic, who are entitled to the best that civilization and humanity can give to them. Let the building of new ideal homes be the contribution of the Seventy-third Congress of the United States to the people of our country, when we have been sent here to serve and represent. [Applause.]

The SPEAKER. The time of the gentleman from New York has expired.

Mr. BANKHEAD. Mr. Speaker, I yield the gentleman from New York 2 additional minutes.

Mr. SIROVICH. Mr. Speaker, the home is the place where we are treated the best and grumble the most. Millions of men, coming from every home in our Republic, have been willing to give up their lives upon the altar of war and bare their breasts to shot and shell in order that our homes might be preserved. From the Fourteenth Congressional District, which I have the honor to represent, immigrants from every clime in the world, as well as natives, have gladly made the supreme sacrifice and hallowed our soil and foreign soil with their lifeblood in order that our Republic and our institutions might be preserved.

Mr. Speaker, without our homes we would be a nation of nomads, wanderers on the face of the earth, with no settled habitation nor permanent abode. Every act passed by Congress, no matter how apparently remote, in its final results affects the home. The act may deal with economics, finance, industry, agriculture, or commerce, but it becomes a good or bad law according as it helps or harms the home.

The home must and shall be preserved; on its preservation depends the perpetuation of the Republic itself. We, Members of the Congress of the United States, will do our duty to our Nation and its people only when our first and last thought is, How will our work in Congress affect the home, and how will it affect and maintain the welfare, the happiness, and the contentment of the father, the mother, and the children of the home? Let us give thanks to President Franklin D. Roosevelt for his courageous message to abolish slums and build new homes. God bless the homes in America. Be it ever so humble, God help us to preserve and maintain the American home. [Applause.]

The Reorganization Bill

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1939

Mr. SUMNERS of Texas. Mr. Speaker, while the House has technically lost jurisdiction of the reorganization bill, that bill is still in process; and if the Members of the House should become convinced as I am convinced that some such amendment as that offered by me in the House when the bill was under consideration here should be incorporated before the bill becomes law, that result would probably take place.

The House, by its own bill, has cut itself off from the opportunity itself to prevent the going into effect of a reorganization plan which it may believe to be contrary to the public interest. There can be no question about that. The amendment proposed would not disturb the general plan of the bill to have the Executive work out the details of a proposed reorganization. The necessity for this arrangement, as explained, that the Houses of Congress do not have the time, the knowledge, or the facilities to work out these details, is accepted. Neither would the arrangement in the bill be disturbed which provides that when the Executive shall have worked out a plan it be transmitted to the Houses of Congress, and unless there be positive adverse action within 60 days the suggested plan becomes operative.

The only thing which the amendment proposes, and I am discussing this bill from the House Member's standpoint, is to prevent the House from surrendering its individual constitutional power to prevent that which it is convinced would be to the public hurt.

There is a very definite similarity in relationship and in responsibility between the submission to the Houses of Congress by the President of proposed legislation and the submission by him of a proposed reorganization. Under the Constitution, if the President submits proposed legislation, either House of Congress is possessed of the power and charged with the duty to prevent its enactment if in its judgment the proposed legislation is contrary to the public interest. That arrangement is much older than our own Constitution. It began with the beginning of the British Parliament. That arrangement in the long history of Anglo-Saxon government has helped to preserve stability in government.

This reorganization bill ignores the philosophy of that arrangement, and the House by its own legislation cuts itself off from the opportunity independently to prevent a reorganization from going into effect which in its judgment would be contrary to the public interest. In other words, it proposes by its own bill that if the Executive submits a plan of reorganization and the Senate agrees, that plan may become effective and have the force of law, notwithstanding the objection by the House of Representatives.

The amendment proposed would restore to the House of Representatives its constitutional power and constitutional responsibility with regard to reorganization which is exercised with regard to legislation.

What answer can there be when this action on our part is examined other than that we are afraid to trust ourselves in reorganization matters with our ordinary constitutional powers and responsibilities? And the question seems pertinent that if we are afraid to trust ourselves with that responsibility and power with regard to reorganization, why should the public trust us with them with regard to legislation?

It is a remarkable thing that the House of Representatives by its own bill has made it so that it cannot exercise its individual constitutional power to prevent going into effect of a reorganization plan which it is fully convinced is against the public interest.

The proposed amendment would bring the mechanics of the bill, insofar as power and responsibility are concerned, into harmony with the allocation of constitutional governmental power. If the House does not approve a bill it votes against it and it does not become a law. Under the amendment referred to, if the House should not approve a proposed reorganization it would vote against it, and it would not go into effect. But under the reorganization bill proposed by the House the House could vote against any reorganization plan and it could still go into effect. That would be true only because the House by its own act had cut itself off from its constitutional powers.

This thing which the House proposes to do to itself, to its power, and its responsibility is far more important than its relationship to the particular item of legislation. We know that fundamental changes in governments like ours are brought about by precedents and practice. When we put our feet into the road and begin to walk we are going somewhere, and where we arrive depends upon the direction we take. This bill unamended leads in the wrong direction. It is a bad precedent.

There is no question that in formulating this bill we of the House could either keep or surrender this constitutional power without interfering with the efficiency of the Executive in carrying out the purposes of the bill. Any assumption to the contrary must be based upon the notion that the House as an institution is unfit to be trusted with the exercise of its constitutional powers. We raise the question ourselves that if the House cannot be trusted with its constitutional powers with regard to reorganization, as we seem to believe, why should the House be trusted with regard to legislation?

It is the surrender of the power conferred by the Constitution to protect the people against that which we may believe to be bad which is the vicious thing in this bill unamended.

Considering it from the standpoint of the broadest public interest, the present Members cannot afford to put the House of Representatives in the attitude before the country of being afraid to retain and exercise its constitutional powers when in its judgment the public interest requires their exercise.

Politics in W. P. A.

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1939

ARTICLE FROM THE MUNCIE (IND.) PRESS

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Muncie Press, Muncie, Ind.:

[From the Muncie (Ind.) Press]

POLITICS IN W. P. A.

EDITOR, MUNCIE PRESS:

This talk of taking the W. P. A. out of politics is causing the average W. P. A. worker to laugh. One would think by reading the newspapers that such is the case, but the truth is that politics is being played now as much as ever before.

Supervisors and foremen are selected for their political activities more than because of their ability to handle men or know the work they are assigned to. In one case the foreman assigned to our particular project did not have the least idea what was required to do and had to ask the men under him how to do the work.

I have in mind one man who is classified as a laborer and is using a pick and shovel, although this man is fully capable of filling the job as a supervisor. But he is a Republican, and they know it. This man has been a superintendent, factory manager, and chief engineer in his time, but now is a shovel pusher and has no chance of getting anything better from the W. P. A.

On a project using, say, 100 men, 1 foreman is assigned to the job, and he must appoint 3 or 4 "straw bosses," who each handle a crew of men, but these bosses get no more than the men working under them. Is that fair?

Good carpenters are working for $52 a month, while the union scale is $1.15 per hour.

On the average sewing projects any woman doing anything out of the ordinary gets more than the $52 a month payable to ordinary sewers. The men get nothing more for doing work requiring more than ordinary ability.

Another thing: A large number of men have been sent into the county to work on the highways. The majority of these poor souls have no means of transportation and must pay others to haul them to work. This, of course, reduces their incomes that much.

Don't envy the W. P. A. worker, but pity him.

DISGUSTED.

Tax on Federally Held Land

EXTENSION OF REMARKS
OF
HON. FRED BRADLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1939

CONCURRENT RESOLUTION OF THE LEGISLATURE OF THE STATE OF MICHIGAN

Mr. BRADLEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following concurrent resolution of the Legislature of the State of Michigan:

House Concurrent Resolution 8

Concurrent resolution respectfully memorializing the Congress of the United States to enact legislation providing for a tax of 10 cents per acre on land held by the Federal Government, especially as national forests

Whereas thousands of acres of land in Michigan have been taken over by the Federal Government, especially for national forests, thereby crippling many Michigan communities through loss in tax revenue; and

Whereas the Legislature of the State of Michigan in recognition of this problem, under Act No. 305 of the Public Acts of 1931, which amended Act No. 116 of the Public Acts of 1917, provided for the payment by the State of Michigan of a tax of 10 cents per acre on lands held by the department of conservation, with certain minor exceptions, which tax was to assist local units of government due to the loss of revenue from such lands when taken over by the State; and

Whereas similar action on the part of the Congress of the United States would greatly benefit local units of government in Michigan in such localities where the Federal Government has vast holdings which are not contributing to the cost of government: Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That the Michigan Legislature hereby respectfully memorializes the Congress of the United States to enact legislation providing for a tax of 10 cents per acre on land held by the Federal Government, especially as national forests; and be it further

Resolved, That this resolution be spread on the journals of the house and senate and copies be sent to the President of the United States, the President of the Senate, and Speaker of the House of Representatives of the Congress of the United States, and to the Michigan Members in the Congress of the United States.

Federal Income Taxes

EXTENSION OF REMARKS
OF
HON. ALBERT L. VREELAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 15, 1939

RESOLUTION OF THE NEW JERSEY ASSEMBLY

Mr. VREELAND. Mr. Speaker, up to a few years ago the people of our country had implicit confidence in their Federal Government in believing that their legislators would operate the Government to the greatest efficiency at the least cost, as was evidenced by the passage of the sixteenth amendment without restriction on the power of taxation of incomes.

Lately, however, the public has become tax conscious and become greatly alarmed at the unprecedented expenditures by the Federal Government and the steady increase in the national debt. They have become more and more aware of the fact that the power to tax is the power to destroy. This is evidenced by a resolution passed by the Assembly of the State of New Jersey, introduced February 27, 1939, by Assemblywoman Hand, of Essex County.

The suggestion is well worthy of consideration and serious thought; and, therefore, I ask to have the resolution printed in the RECORD. It is as follows:

Resolution memorializing the Congress of the United States to adjust and regulate the collection of income taxes

Whereas the sixteenth amendment to the Federal Constitution gives to the Congress the power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the States and without regard to any census or enumeration; and

Whereas the Congress has enacted appropriate legislation to enforce the amendment, and has enacted an income-tax statute which in many instances works inequitably, resulting in hardships to citizens and corporations; and

Whereas in order that business may be encouraged and promoted: Therefore be it

Resolved by the house of assembly, That the Congress of the United States is hereby memorialized and requested to provide by proper amendment that in no case shall income taxes levied exceed 25 percent of the total of such income; and be it further

Resolved, That copies of this resolution, signed by the speaker and attested to by the clerk, be transmitted to the Senate and House of Representatives of the United States and to the Senators and Members of Congress from New Jersey in the Senate and House of Representatives.

This resolution shall take effect immediately.

Refugee Children

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, March 16, 1939

RADIO ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the RECORD a radio address which I delivered yesterday in Washington, D. C., from station WOL of the Mutual Broadcasting Co., in acceptance of an invitation extended to me by the local chapter of the Daughters of the American Revolution. The subject deals with Refugee Children, which subject interests itself in Senate Joint Resolution 64, as introduced in the Senate by the distinguished senior Senator from New York [Mr. WAGNER].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good afternoon, ladies and gentlemen; I am deeply indebted to the Mutual Broadcasting Co. for providing me with the facilities of this station, and at the same time I desire to thank with my full heart the committee of the local chapter of the Daughters of the American Revolution for having extended to me this invitation to address the patrons of this broadcasting station upon a subject which, in my opinion, is an extremely important one, and particularly so at this time—I refer to the subject of restricted immigration.

This, I contend, is an extremely important subject with the American people today for the reason that reports reveal that there are approximately 12,000,000 men and women without employment, and of this large number of our citizens who are daily looking for jobs it is appalling to note that one-third are young people of working age under 25 years. And it might interest you to know at this juncture that 600,000 young people reach working age each year in the United States, and, unfortunately, from the present outlook they face a jobless future.
